sequences of DPYSL2 BINDING SITE, designated SEQ ID:7064, to the nucleotide sequence of VGAM1960 RNA, herein designated VGAM RNA, also designated SEQ ID:4671.

[68150] Another function of VGAM1960 is therefore inhibition of Dihydropyrimidinase-like 2 (DPYSL2, Accession NM_001386), a gene which is a member of the dihydropyrimidinase family. Accordingly, utilities of VGAM1960 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DPYSL2. The function of DPYSL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM217.E2F Transcription Factor 3 (E2F3, Accession NM_001949) is another VGAM1960 host target gene. E2F3 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by E2F3, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of E2F3 BINDING SITE, designated SEQ ID:7668, to the nucleotide sequence of VGAM1960 RNA, herein designated VGAM RNA, also designated SEQ ID:4671.

[68151] Another function of VGAM1960 is therefore inhibition of E2F Transcription Factor 3 (E2F3, Accession NM_001949), a gene which binds dna and controls cell-cycle progression from g1 to s phase. Accordingly, utilities of VGAM1960 include diagnosis, prevention and treatment of diseases and clinical conditions associated with E2F3. The function of E2F3 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM475.Coagulation Factor II (thrombin) Receptor (F2R, Accession NM_001992) is another VGAM1960 host target gene. F2R BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by F2R, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of F2R BINDING SITE, designated SEQ ID:7723, to the nucleotide sequence of VGAM1960 RNA, herein designated VGAM RNA, also designated SEQ ID:4671.

[68152] Another function of VGAM1960 is therefore inhibition of Coagulation Factor II (thrombin) Receptor (F2R, Accession NM_001992), a gene which Thrombin receptor; G protein-coupled receptor involved in platelet activation. Accord-

ingly, utilities of VGAM1960 include diagnosis, prevention and treatment of diseases and clinical conditions associated with F2R. The function of F2R and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM140.F-box and Leucine-rich Repeat Protein 2 (FBXL2, Accession NM_012157) is another VGAM1960 host target gene. FBXL2 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by FBXL2, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of FBXL2 BINDING SITE, designated SEQ ID:14454, to the nucleotide sequence of VGAM1960 RNA, herein designated VGAM RNA, also designated SEQ ID:4671.

[68153] Another function of VGAM1960 is therefore inhibition of F-box and Leucine-rich Repeat Protein 2 (FBXL2, Accession NM_012157). Accordingly, utilities of VGAM1960 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FBXL2. Glypican 1 (GPC1, Accession NM_002081) is another VGAM1960 host target gene. GPC1 BINDING SITE is HOST TARGET binding

site found in the 3` untranslated region of mRNA encoded by GPC1, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of GPC1 BINDING SITE, designated SEQ ID:7875, to the nucleotide sequence of VGAM1960 RNA, herein designated VGAM RNA, also designated SEQ ID:4671.

[68154] Another function of VGAM1960 is therefore inhibition of Glypican 1 (GPC1, Accession NM_002081), a gene which may play a role in growth control and differentation. Accordingly, utilities of VGAM1960 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GPC1. The function of GPC1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM125.Hemochromatosis (HFE, Accession NM_000410) is another VGAM1960 host target gene. HFE BINDING SITE1 and HFE BINDING SITE2 are HOST TARGET binding sites found in untranslated regions of mRNA encoded by HFE, corresponding to HOST TARGET binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the comple-

mentarity of the nucleotide sequences of HFE BINDING SITE1 and HFE BINDING SITE2, designated SEQ ID:5985 and SEQ ID:29099 respectively, to the nucleotide sequence of VGAM1960 RNA, herein designated VGAM RNA, also designated SEQ ID:4671.

[68155] Another function of VGAM1960 is therefore inhibition of Hemochromatosis (HFE, Accession NM_000410). Accordingly, utilities of VGAM1960 include diagnosis, prevention and treatment of diseases and clinical conditions associated with HFE. Kinesin Family Member 5C (KIF5C, Accession NM_004522) is another VGAM1960 host target gene. KIF5C BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by KIF5C, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of KIF5C BINDING SITE, designated SEQ ID:10855, to the nucleotide sequence of VGAM1960 RNA, herein designated VGAM RNA, also designated SEQ ID:4671.

[68156] Another function of VGAM1960 is therefore inhibition of Kinesin Family Member 5C (KIF5C, Accession NM_004522). Accordingly, utilities of VGAM1960 include diagnosis, prevention and treatment of diseases and clini-

cal conditions associated with KIF5C. Leucine Zipper-EF-hand Containing Transmembrane Protein 1 (LETM1, Accession NM_012318) is another VGAM1960 host target gene. LETM1 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LETM1, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LETM1 BINDING SITE, designated SEQ ID:14698, to the nucleotide sequence of VGAM1960 RNA, herein designated VGAM RNA, also designated SEQ ID:4671.

[68157] Another function of VGAM1960 is therefore inhibition of Leucine Zipper-EF-hand Containing Transmembrane Protein 1 (LETM1, Accession NM_012318). Accordingly, utilities of VGAM1960 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LETM1. Leukocyte Immunoglobulin-like Receptor, Subfamily B (with TM and ITIM domains), Member 4 (LILRB4, Accession NM_006847) is another VGAM1960 host target gene. LILRB4 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LILRB4, corresponding to a HOST TARGET

binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LILRB4 BINDING SITE, designated SEQ ID:13717, to the nucleotide sequence of VGAM1960 RNA, herein designated VGAM RNA, also designated SEQ ID:4671.

[68158] Another function of VGAM1960 is therefore inhibition of Leukocyte Immunoglobulin-like Receptor, Subfamily B (with TM and ITIM domains), Member 4 (LILRB4, Accession NM_006847). Accordingly, utilities of VGAM1960 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LILRB4. MAD, Mothers Against Decapentaplegic Homolog 4 (Drosophila) (MADH4, Accession NM_005359) is another VGAM1960 host target gene. MADH4 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by MADH4, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of MADH4 BINDING SITE, designated SEQ ID:11834, to the nucleotide sequence of VGAM1960 RNA, herein designated VGAM RNA, also designated SEQ ID:4671.

[68159] Another function of VGAM1960 is therefore inhibition of MAD, Mothers Against Decapentaplegic Homolog 4 (Drosophila) (MADH4, Accession NM_005359), a gene which common mediator of signal transduction by tgf-beta (transforming growth factor) superfamily; smad4 is the common smad (co-smad). promotes binding of the smad2/smad4/fast-1 complex to dna and provides an activation function required for smad1 or smad2 to stimulate transcription. may act as a tumor suppressor. Accordingly, utilities of VGAM1960 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MADH4. The function of MADH4 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM217.Maltase-glucoamylase (alpha-glucosidase) (MGAM, Accession XM_051351) is another VGAM1960 host target gene. MGAM BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by MGAM, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of MGAM BINDING SITE, des-

ignated SEQ ID:35827, to the nucleotide sequence of VGAM1960 RNA, herein designated VGAM RNA, also designated SEQ ID:4671.

[68160] Another function of VGAM1960 is therefore inhibition of Maltase-glucoamylase (alpha-glucosidase) (MGAM, Accession XM_051351), a gene which plays a role in the final steps of digestion of starch. Accordingly, utilities of VGAM1960 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGAM. The function of MGAM and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM791.Neuroepithelial Cell Transforming Gene 1 (NET1, Accession NM_005863) is another VGAM1960 host target gene. NET1 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by NET1, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of NET1 BINDING SITE, designated SEQ ID:12474, to the nucleotide sequence of VGAM1960 RNA, herein designated VGAM RNA, also designated SEQ ID:4671.

[68161] Another function of VGAM1960 is therefore inhibition of Neuroepithelial Cell Transforming Gene 1 (NET1, Accession NM_005863), a gene which is induced morphologic alterations and conferred a malignant phenotype in vitro and in nude mice. Accordingly, utilities of VGAM1960 include diagnosis, prevention and treatment of diseases and clinical conditions associated with NET1. The function of NET1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM1333.Neurotrophic Tyrosine Kinase, Receptor, Type 2 (NTRK2, Accession NM_006180) is another VGAM1960 host target gene. NTRK2 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by NTRK2, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of NTRK2 BINDING SITE, designated SEQ ID:12847, to the nucleotide sequence of VGAM1960 RNA, herein designated VGAM RNA, also designated SEQ ID:4671.

[68162] Another function of VGAM1960 is therefore inhibition of Neurotrophic Tyrosine Kinase, Receptor, Type 2 (NTRK2,

Accession NM_006180), a gene which is involved in the development and/or maintenance of the nervous system. Accordingly, utilities of VGAM1960 include diagnosis, prevention and treatment of diseases and clinical conditions associated with NTRK2. The function of NTRK2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM341.Procollagen-proline, 2-oxoglutarate 4-dioxygenase (proline 4-hydroxylase), Alpha Polypeptide I (P4HA1, Accession NM_000917) is another VGAM1960 host target gene. P4HA1 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by P4HA1, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of P4HA1 BINDING SITE, designated SEQ ID:6625, to the nucleotide sequence of VGAM1960 RNA, herein designated VGAM RNA, also designated SEQ ID:4671.

[68163] Another function of VGAM1960 is therefore inhibition of Procollagen-proline, 2-oxoglutarate 4-dioxygenase (proline 4-hydroxylase), Alpha Polypeptide I (P4HA1, Ac-

cession NM_000917), a gene which catalyzes the formation of 4-hydroxyproline in collagen. Accordingly, utilities of VGAM1960 include diagnosis, prevention and treatment of diseases and clinical conditions associated with P4HA1. The function of P4HA1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM260.PDL2 (Accession NM_025239) is another VGAM1960 host target gene. PDL2 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by PDL2, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of PDL2 BINDING SITE, designated SEQ ID:24923, to the nucleotide sequence of VGAM1960 RNA, herein designated VGAM RNA, also designated SEQ ID:4671.

[68164] Another function of VGAM1960 is therefore inhibition of PDL2 (Accession NM_025239), a gene which is a second ligand for PD-1 and inhibits T cell activation. Accordingly, utilities of VGAM1960 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PDL2. The function of PDL2 has been established by

previous studies. The costimulatory B7 molecules (e.g., B7-1, or CD80; 112203) signal through CD28 (OMIM Ref. No. 186760) family molecules such as CD28, CTLA4 (OMIM Ref. No. 123890), ICOS (OMIM Ref. No. 604558), and programmed cell death-1 (PDCD1, or PD1; 600244). Ctla4-deficient mice are prone to a fatal lymphoproliferative disorder, suggesting that CTLA4 plays a critical regulatory and immunoinhibitory function, and Pdcd1-deficient mice develop lupus-like autoimmune diseases, including arthritis and cardiomyopathy. By searching EST databases with mouse Pd1 ligand-1 (Pdl1, or B7H1; 605402), Latchman et al. (2001) identified cDNAs encoding mouse Pdl2 and human PDL2, which they cloned from a placenta cDNA library. Sequence analysis predicted that the 273-amino acid PDL2 protein, which is 70% identical to the mouse Pdl2 protein, contains a signal sequence, IgV- and IgC-like domains, a transmembrane region, and a cytoplasmic region. Flow cytometric analysis showed that the IgV region of mouse Pdl2, like Pdl1, binds to human PDCD1 but not to CTLA4, CD28, or ICOS. Northern blot analysis detected wide expression of PDL2, with highest levels in placenta, heart, pancreas, lung, and liver, and lower levels in spleen, lymph nodes, and thy-

mus. Stimulation with gamma-interferon (IFNG; 147570) was required to detect expression in monocytes. Stimulation of mouse T cells with anti-CD3 (see OMIM Ref. No. 186740) and Pdl2 or Pdl1 resulted in inhibition of proliferation and cytokine production, and Pdl2 could inhibit T-cell receptor (see OMIM Ref. No. 186880)-CD28 signals at low antigen concentrations. Latchman et al. (2001) proposed that blocking of the PDL-PDCD1 pathway may enhance antitumor immunity, whereas stimulating this pathway may help downregulate graft rejection and autoimmune and allergic reactions. By screening a subtractive dendritic cell-activated macrophage cDNA library, Tseng et al. (2001) isolated mouse and human cDNAs encoding PDL2, which they termed B7DC. Northern blot analysis detected Pdl2 transcripts in mouse dendritic cells but not in primary macrophages or macrophage cell lines. Expression was also detected in human dendritic cells but not in placenta. Functional analysis showed that in the presence of low concentrations of anti-CD3, mouse Pdl2 preferentially costimulates CD4 (OMIM Ref. No. 186940)-positive (Th1) T-cell proliferation and Ifng production to a greater level than does B7.1.

[68165] Full details of the abovementioned studies are described

in the following publications, the disclosure of which are hereby incorporated by reference:

[68166] Latchman, Y.; Wood, C. R.; Chernova, T.; Chaudhary, D.; Borde, M.; Chernova, I.; Iwai, Y.; Long, A. J.; Brown, J. A.; Nunes, R.; Greenfield, E. A.; Bourque, K. : PD-L2 is a second ligand for PD-1 and inhibits T cell activation. Nature Immun. 2: 261-268, 2001. ; and

[68167] Tseng, B. S.-Y.; Otsuji, M.; Gorski, K.; Huang, X.; Slansky, J. E.; Pai, S. I.; Shalabi, A.; Shin, T.; Pardoll, D. M.; Tsuchiya, H. : B7-DC, a new dendritic cell molecule with potent c.

[68168] Further studies establishing the function and utilities of PDL2 are found in John Hopkins OMIM database record ID 605723, and in sited publications numbered 681 and 6909 listed in the bibliography section hereinbelow, which are also hereby incorporated by reference.Pleckstrin Homology, Sec7 and Coiled/coil Domains, Binding Protein (PSCDBP, Accession NM_004288) is another VGAM1960 host target gene. PSCDBP BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by PSCDBP, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity

of the nucleotide sequences of PSCDBP BINDING SITE, designated SEQ ID:10500, to the nucleotide sequence of VGAM1960 RNA, herein designated VGAM RNA, also designated SEQ ID:4671.

[68169] Another function of VGAM1960 is therefore inhibition of Pleckstrin Homology, Sec7 and Coiled/coil Domains, Binding Protein (PSCDBP, Accession NM_004288), a gene which Protein that contains leucine zipper domains and a nuclear targeting sequence. Accordingly, utilities of VGAM1960 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PSCDBP. The function of PSCDBP and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM1924.Secreted Frizzled-related Protein 1 (SFRP1, Accession NM_003012) is another VGAM1960 host target gene. SFRP1 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by SFRP1, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of SFRP1 BINDING SITE, designated SEQ ID:8935, to the nucleotide sequence of

VGAM1960 RNA, herein designated VGAM RNA, also designated SEQ ID:4671.

[68170] Another function of VGAM1960 is therefore inhibition of Secreted Frizzled-related Protein 1 (SFRP1, Accession NM_003012), a gene which is a receptor for wnt proteins that may have an anti-apoptotic function. Accordingly, utilities of VGAM1960 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SFRP1. The function of SFRP1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM250.Tissue Inhibitor of Metalloproteinase 3 (Sorsby fundus dystrophy, pseudoinflammatory) (TIMP3, Accession NM_000362) is another VGAM1960 host target gene. TIMP3 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by TIMP3, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of TIMP3 BINDING SITE, designated SEQ ID:5930, to the nucleotide sequence of VGAM1960 RNA, herein designated VGAM RNA, also designated SEQ ID:4671.

[68171] Another function of VGAM1960 is therefore inhibition of Tissue Inhibitor of Metalloproteinase 3 (Sorsby fundus dystrophy, pseudoinflammatory) (TIMP3, Accession NM_000362). Accordingly, utilities of VGAM1960 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TIMP3. Tropomyosin 4 (TPM4, Accession NM_003290) is another VGAM1960 host target gene. TPM4 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by TPM4, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of TPM4 BINDING SITE, designated SEQ ID:9301, to the nucleotide sequence of VGAM1960 RNA, herein designated VGAM RNA, also designated SEQ ID:4671.

[68172] Another function of VGAM1960 is therefore inhibition of Tropomyosin 4 (TPM4, Accession NM_003290), a gene which plays a central role, in association with the troponin complex, in the calcium dependent regulation of vertebrate striated muscle contraction. Accordingly, utilities of VGAM1960 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TPM4.

The function of TPM4 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM744.Zinc Finger Protein 14 (KOX 6) (ZNF14, Accession NM_021030) is another VGAM1960 host target gene. ZNF14 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by ZNF14, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of ZNF14 BINDING SITE, designated SEQ ID:22018, to the nucleotide sequence of VGAM1960 RNA, herein designated VGAM RNA, also designated SEQ ID:4671.

[68173] Another function of VGAM1960 is therefore inhibition of Zinc Finger Protein 14 (KOX 6) (ZNF14, Accession NM_021030). Accordingly, utilities of VGAM1960 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ZNF14. ADP-ribosylation Factor GTPase Activating Protein 3 (ARFGAP3, Accession NM_014570) is another VGAM1960 host target gene. ARFGAP3 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by ARF-

GAP3, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of ARFGAP3 BINDING SITE, designated SEQ ID:15924, to the nucleotide sequence of VGAM1960 RNA, herein designated VGAM RNA, also designated SEQ ID:4671.

[68174] Another function of VGAM1960 is therefore inhibition of ADP-ribosylation Factor GTPase Activating Protein 3 (ARFGAP3, Accession NM_014570). Accordingly, utilities of VGAM1960 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ARFGAP3. B7-H1 (Accession NM_014143) is another VGAM1960 host target gene. B7-H1 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by B7-H1, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of B7-H1 BINDING SITE, designated SEQ ID:15424, to the nucleotide sequence of VGAM1960 RNA, herein designated VGAM RNA, also designated SEQ ID:4671.

[68175] Another function of VGAM1960 is therefore inhibition of

B7-H1 (Accession NM_014143). Accordingly, utilities of VGAM1960 include diagnosis, prevention and treatment of diseases and clinical conditions associated with B7-H1. Chromosome 1 Open Reading Frame 17 (C1orf17, Accession XM_042965) is another VGAM1960 host target gene. C1orf17 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by C1orf17, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of C1orf17 BINDING SITE, designated SEQ ID:33855, to the nucleotide sequence of VGAM1960 RNA, herein designated VGAM RNA, also designated SEQ ID:4671.

[68176] Another function of VGAM1960 is therefore inhibition of Chromosome 1 Open Reading Frame 17 (C1orf17, Accession XM_042965). Accordingly, utilities of VGAM1960 include diagnosis, prevention and treatment of diseases and clinical conditions associated with C1orf17. Calcium Channel, Voltage-dependent, Gamma Subunit 4 (CACNG4, Accession NM_014405) is another VGAM1960 host target gene. CACNG4 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by

CACNG4, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of CACNG4 BINDING SITE, designated SEQ ID:15746, to the nucleotide sequence of VGAM1960 RNA, herein designated VGAM RNA, also designated SEQ ID:4671.

[68177] Another function of VGAM1960 is therefore inhibition of Calcium Channel, Voltage-dependent, Gamma Subunit 4 (CACNG4, Accession NM_014405). Accordingly, utilities of VGAM1960 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CACNG4. COE2 (Accession XM_034639) is another VGAM1960 host target gene. COE2 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by COE2, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of COE2 BINDING SITE, designated SEQ ID:32129, to the nucleotide sequence of VGAM1960 RNA, herein designated VGAM RNA, also designated SEQ ID:4671.

[68178] Another function of VGAM1960 is therefore inhibition of

COE2 (Accession XM_034639). Accordingly, utilities of VGAM1960 include diagnosis, prevention and treatment of diseases and clinical conditions associated with COE2. Cysteine and Tyrosine-rich 1 (CYYR1, Accession NM_052954) is another VGAM1960 host target gene. CYYR1 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by CYYR1, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of CYYR1 BINDING SITE, designated SEQ ID:27513, to the nucleotide sequence of VGAM1960 RNA, herein designated VGAM RNA, also designated SEQ ID:4671.

[68179] Another function of VGAM1960 is therefore inhibition of Cysteine and Tyrosine-rich 1 (CYYR1, Accession NM_052954). Accordingly, utilities of VGAM1960 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CYYR1. DKFZp434C0328 (Accession NM_017577) is another VGAM1960 host target gene. DKFZp434C0328 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by DKFZp434C0328, corresponding to a HOST

TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of DKFZp434C0328 BINDING SITE, designated SEQ ID:19017, to the nucleotide sequence of VGAM1960 RNA, herein designated VGAM RNA, also designated SEQ ID:4671.

[68180] Another function of VGAM1960 is therefore inhibition of DKFZp434C0328 (Accession NM_017577). Accordingly, utilities of VGAM1960 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZp434C0328. DKFZp434K1210 (Accession NM_017606) is another VGAM1960 host target gene. DKFZp434K1210 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by DKFZp434K1210, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of DKFZp434K1210 BINDING SITE, designated SEQ ID:19103, to the nucleotide sequence of VGAM1960 RNA, herein designated VGAM RNA, also designated SEQ ID:4671.

[68181] Another function of VGAM1960 is therefore inhibition of DKFZp434K1210 (Accession NM_017606). Accordingly,

utilities of VGAM1960 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZp434K1210. Eukaryotic Translation Initiation Factor 4B (EIF4B, Accession XM_071605) is another VGAM1960 host target gene. EIF4B BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by EIF4B, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of EIF4B BINDING SITE, designated SEQ ID:37400, to the nucleotide sequence of VGAM1960 RNA, herein designated VGAM RNA, also designated SEQ ID:4671.

[68182] Another function of VGAM1960 is therefore inhibition of Eukaryotic Translation Initiation Factor 4B (EIF4B, Accession XM_071605). Accordingly, utilities of VGAM1960 include diagnosis, prevention and treatment of diseases and clinical conditions associated with EIF4B. FLJ20094 (Accession NM_017665) is another VGAM1960 host target gene. FLJ20094 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by FLJ20094, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING

SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of FLJ20094 BINDING SITE, designated SEQ ID:19209, to the nucleotide sequence of VGAM1960 RNA, herein designated VGAM RNA, also designated SEQ ID:4671.

[68183] Another function of VGAM1960 is therefore inhibition of FLJ20094 (Accession NM_017665). Accordingly, utilities of VGAM1960 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ20094. FLJ21106 (Accession NM_025097) is another VGAM1960 host target gene. FLJ21106 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by FLJ21106, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of FLJ21106 BINDING SITE, designated SEQ ID:24738, to the nucleotide sequence of VGAM1960 RNA, herein designated VGAM RNA, also designated SEQ ID:4671.

[68184] Another function of VGAM1960 is therefore inhibition of FLJ21106 (Accession NM_025097). Accordingly, utilities of VGAM1960 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

FLJ21106. Fucose-1-phosphate Guanylyltransferase (FPGT, Accession NM_003838) is another VGAM1960 host target gene. FPGT BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by FPGT, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of FPGT BINDING SITE, designated SEQ ID:9930, to the nucleotide sequence of VGAM1960 RNA, herein designated VGAM RNA, also designated SEQ ID:4671.

[68185] Another function of VGAM1960 is therefore inhibition of Fucose-1-phosphate Guanylyltransferase (FPGT, Accession NM_003838). Accordingly, utilities of VGAM1960 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FPGT. KIAA0368 (Accession XM_036708) is another VGAM1960 host target gene. KIAA0368 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by KIAA0368, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of KIAA0368 BINDING SITE, designated SEQ ID:32488, to the nucleotide sequence of VGAM1960

RNA, herein designated VGAM RNA, also designated SEQ ID:4671.

[68186] Another function of VGAM1960 is therefore inhibition of KIAA0368 (Accession XM_036708). Accordingly, utilities of VGAM1960 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0368. KIAA0427 (Accession NM_014772) is another VGAM1960 host target gene. KIAA0427 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by KIAA0427, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of KIAA0427 BINDING SITE, designated SEQ ID:16579, to the nucleotide sequence of VGAM1960 RNA, herein designated VGAM RNA, also designated SEQ ID:4671.

[68187] Another function of VGAM1960 is therefore inhibition of KIAA0427 (Accession NM_014772). Accordingly, utilities of VGAM1960 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0427. KIAA0534 (Accession XM_049349) is another VGAM1960 host target gene. KIAA0534 BINDING SITE is HOST TARGET binding site found in the 3` untranslated

region of mRNA encoded by KIAA0534, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of KIAA0534 BINDING SITE, designated SEQ ID:35387, to the nucleotide sequence of VGAM1960 RNA, herein designated VGAM RNA, also designated SEQ ID:4671.

[68188] Another function of VGAM1960 is therefore inhibition of KIAA0534 (Accession XM_049349). Accordingly, utilities of VGAM1960 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0534. KIAA0644 (Accession NM_014817) is another VGAM1960 host target gene. KIAA0644 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by KIAA0644, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of KIAA0644 BINDING SITE, designated SEQ ID:16785, to the nucleotide sequence of VGAM1960 RNA, herein designated VGAM RNA, also designated SEQ ID:4671.

[68189] Another function of VGAM1960 is therefore inhibition of KIAA0644 (Accession NM_014817). Accordingly, utilities

of VGAM1960 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0644. KIAA0961 (Accession NM_014898) is another VGAM1960 host target gene. KIAA0961 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by KIAA0961, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of KIAA0961 BINDING SITE, designated SEQ ID:17075, to the nucleotide sequence of VGAM1960 RNA, herein designated VGAM RNA, also designated SEQ ID:4671.

[68190] Another function of VGAM1960 is therefore inhibition of KIAA0961 (Accession NM_014898). Accordingly, utilities of VGAM1960 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0961. KIAA0984 (Accession XM_037557) is another VGAM1960 host target gene. KIAA0984 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by KIAA0984, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of

KIAA0984 BINDING SITE, designated SEQ ID:32644, to the nucleotide sequence of VGAM1960 RNA, herein designated VGAM RNA, also designated SEQ ID:4671.

[68191] Another function of VGAM1960 is therefore inhibition of KIAA0984 (Accession XM_037557). Accordingly, utilities of VGAM1960 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0984. KIAA1136 (Accession XM_166110) is another VGAM1960 host target gene. KIAA1136 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by KIAA1136, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of KIAA1136 BINDING SITE, designated SEQ ID:43883, to the nucleotide sequence of VGAM1960 RNA, herein designated VGAM RNA, also designated SEQ ID:4671.

[68192] Another function of VGAM1960 is therefore inhibition of KIAA1136 (Accession XM_166110). Accordingly, utilities of VGAM1960 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1136. KIAA1300 (Accession XM_031744) is another VGAM1960 host target gene. KIAA1300 BINDING SITE is

HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by KIAA1300, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of KIAA1300 BINDING SITE, designated SEQ ID:31481, to the nucleotide sequence of VGAM1960 RNA, herein designated VGAM RNA, also designated SEQ ID:4671.

[68193] Another function of VGAM1960 is therefore inhibition of KIAA1300 (Accession XM_031744). Accordingly, utilities of VGAM1960 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1300. KIAA1598 (Accession NM_018330) is another VGAM1960 host target gene. KIAA1598 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by KIAA1598, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of KIAA1598 BINDING SITE, designated SEQ ID:20331, to the nucleotide sequence of VGAM1960 RNA, herein designated VGAM RNA, also designated SEQ ID:4671.

[68194] Another function of VGAM1960 is therefore inhibition of

KIAA1598 (Accession NM_018330). Accordingly, utilities of VGAM1960 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1598. KIAA1676 (Accession XM_167612) is another VGAM1960 host target gene. KIAA1676 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by KIAA1676, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of KIAA1676 BINDING SITE, designated SEQ ID:44727, to the nucleotide sequence of VGAM1960 RNA, herein designated VGAM RNA, also designated SEQ ID:4671.

[68195] Another function of VGAM1960 is therefore inhibition of KIAA1676 (Accession XM_167612). Accordingly, utilities of VGAM1960 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1676. KIAA1889 (Accession XM_056298) is another VGAM1960 host target gene. KIAA1889 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by KIAA1889, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the

complementarity of the nucleotide sequences of KIAA1889 BINDING SITE, designated SEQ ID:36389, to the nucleotide sequence of VGAM1960 RNA, herein designated VGAM RNA, also designated SEQ ID:4671.

[68196] Another function of VGAM1960 is therefore inhibition of KIAA1889 (Accession XM_056298). Accordingly, utilities of VGAM1960 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1889. l(3)mbt-like 2 (Drosophila) (L3MBTL2, Accession XM_114201) is another VGAM1960 host target gene. L3MBTL2 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by L3MBTL2, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of L3MBTL2 BINDING SITE, designated SEQ ID:42791, to the nucleotide sequence of VGAM1960 RNA, herein designated VGAM RNA, also designated SEQ ID:4671.

[68197] Another function of VGAM1960 is therefore inhibition of l(3)mbt-like 2 (Drosophila) (L3MBTL2, Accession XM_114201). Accordingly, utilities of VGAM1960 include diagnosis, prevention and treatment of diseases and clini-

cal conditions associated with L3MBTL2. LIN-7-C (Accession NM_018362) is another VGAM1960 host target gene. LIN-7-C BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LIN-7-C, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LIN-7-C BINDING SITE, designated SEQ ID:20372, to the nucleotide sequence of VGAM1960 RNA, herein designated VGAM RNA, also designated SEQ ID:4671.

[68198] Another function of VGAM1960 is therefore inhibition of LIN-7-C (Accession NM_018362). Accordingly, utilities of VGAM1960 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LIN-7-C. Mesoderm Development Candidate 1 (MESDC1, Accession NM_022566) is another VGAM1960 host target gene. MESDC1 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by MESDC1, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of MESDC1 BINDING SITE, designated SEQ

ID:22885, to the nucleotide sequence of VGAM1960 RNA, herein designated VGAM RNA, also designated SEQ ID:4671.

[68199] Another function of VGAM1960 is therefore inhibition of Mesoderm Development Candidate 1 (MESDC1, Accession NM_022566). Accordingly, utilities of VGAM1960 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MESDC1. MGC12335 (Accession NM_032744) is another VGAM1960 host target gene. MGC12335 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by MGC12335, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of MGC12335 BINDING SITE, designated SEQ ID:26478, to the nucleotide sequence of VGAM1960 RNA, herein designated VGAM RNA, also designated SEQ ID:4671.

[68200] Another function of VGAM1960 is therefore inhibition of MGC12335 (Accession NM_032744). Accordingly, utilities of VGAM1960 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC12335. Ring Finger Protein 38 (RNF38, Accession

NM_022781) is another VGAM1960 host target gene. RNF38 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by RNF38, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of RNF38 BINDING SITE, designated SEQ ID:23064, to the nucleotide sequence of VGAM1960 RNA, herein designated VGAM RNA, also designated SEQ ID:4671.

[68201] Another function of VGAM1960 is therefore inhibition of Ring Finger Protein 38 (RNF38, Accession NM_022781). Accordingly, utilities of VGAM1960 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RNF38. Solute Carrier Family 6 (neurotransmitter transporter), Member 14 (SLC6A14, Accession NM_007231) is another VGAM1960 host target gene. SLC6A14 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by SLC6A14, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of SLC6A14 BINDING SITE, designated SEQ

ID:14101, to the nucleotide sequence of VGAM1960 RNA, herein designated VGAM RNA, also designated SEQ ID:4671.

[68202] Another function of VGAM1960 is therefore inhibition of Solute Carrier Family 6 (neurotransmitter transporter), Member 14 (SLC6A14, Accession NM_007231). Accordingly, utilities of VGAM1960 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SLC6A14. Synovial Sarcoma Translocation Gene On Chromosome 18-like 1 (SS18L1, Accession XM_037202) is another VGAM1960 host target gene. SS18L1 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by SS18L1, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of SS18L1 BINDING SITE, designated SEQ ID:32567, to the nucleotide sequence of VGAM1960 RNA, herein designated VGAM RNA, also designated SEQ ID:4671.

[68203] Another function of VGAM1960 is therefore inhibition of Synovial Sarcoma Translocation Gene On Chromosome 18-like 1 (SS18L1, Accession XM_037202). Accordingly,

utilities of VGAM1960 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SS18L1. Signal Transducing Adaptor Molecule (SH3 domain and ITAM motif) 2 (STAM2, Accession NM_005843) is another VGAM1960 host target gene. STAM2 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by STAM2, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of STAM2 BINDING SITE, designated SEQ ID:12460, to the nucleotide sequence of VGAM1960 RNA, herein designated VGAM RNA, also designated SEQ ID:4671.

[68204] Another function of VGAM1960 is therefore inhibition of Signal Transducing Adaptor Molecule (SH3 domain and ITAM motif) 2 (STAM2, Accession NM_005843). Accordingly, utilities of VGAM1960 include diagnosis, prevention and treatment of diseases and clinical conditions associated with STAM2. TRAP150 (Accession NM_005119) is another VGAM1960 host target gene. TRAP150 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by TRAP150, corresponding to a

HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of TRAP150 BINDING SITE, designated SEQ ID:11603, to the nucleotide sequence of VGAM1960 RNA, herein designated VGAM RNA, also designated SEQ ID:4671.

[68205] Another function of VGAM1960 is therefore inhibition of TRAP150 (Accession NM_005119). Accordingly, utilities of VGAM1960 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TRAP150. Ubiquitin Specific Protease 8 (USP8, Accession NM_005154) is another VGAM1960 host target gene. USP8 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by USP8, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of USP8 BINDING SITE, designated SEQ ID:11631, to the nucleotide sequence of VGAM1960 RNA, herein designated VGAM RNA, also designated SEQ ID:4671.

[68206] Another function of VGAM1960 is therefore inhibition of Ubiquitin Specific Protease 8 (USP8, Accession NM_005154). Accordingly, utilities of VGAM1960 include

diagnosis, prevention and treatment of diseases and clinical conditions associated with USP8. Zinc Finger Protein 294 (ZNF294, Accession XM_047829) is another VGAM1960 host target gene. ZNF294 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by ZNF294, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of ZNF294 BINDING SITE, designated SEQ ID:35058, to the nucleotide sequence of VGAM1960 RNA, herein designated VGAM RNA, also designated SEQ ID:4671.

[68207] Another function of VGAM1960 is therefore inhibition of Zinc Finger Protein 294 (ZNF294, Accession XM_047829). Accordingly, utilities of VGAM1960 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ZNF294. Zinc Finger Protein 33a (KOX 31) (ZNF33A, Accession XM_166119) is another VGAM1960 host target gene. ZNF33A BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by ZNF33A, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the com-

plementarity of the nucleotide sequences of ZNF33A BINDING SITE, designated SEQ ID:43899, to the nucleotide sequence of VGAM1960 RNA, herein designated VGAM RNA, also designated SEQ ID:4671.

[68208] Another function of VGAM1960 is therefore inhibition of Zinc Finger Protein 33a (KOX 31) (ZNF33A, Accession XM_166119). Accordingly, utilities of VGAM1960 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ZNF33A. LOC112616 (Accession NM_138410) is another VGAM1960 host target gene. LOC112616 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC112616, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC112616 BINDING SITE, designated SEQ ID:28776, to the nucleotide sequence of VGAM1960 RNA, herein designated VGAM RNA, also designated SEQ ID:4671.

[68209] Another function of VGAM1960 is therefore inhibition of LOC112616 (Accession NM_138410). Accordingly, utilities of VGAM1960 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

LOC112616. LOC113763 (Accession NM_138434) is another VGAM1960 host target gene. LOC113763 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC113763, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC113763 BINDING SITE, designated SEQ ID:28804, to the nucleotide sequence of VGAM1960 RNA, herein designated VGAM RNA, also designated SEQ ID:4671.

[68210] Another function of VGAM1960 is therefore inhibition of LOC113763 (Accession NM_138434). Accordingly, utilities of VGAM1960 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC113763. LOC134266 (Accession XM_059701) is another VGAM1960 host target gene. LOC134266 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC134266, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC134266 BINDING SITE, designated SEQ ID:37070, to the nucleotide sequence of VGAM1960 RNA, herein desig-

nated VGAM RNA, also designated SEQ ID:4671.

[68211] Another function of VGAM1960 is therefore inhibition of LOC134266 (Accession XM_059701). Accordingly, utilities of VGAM1960 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC134266. LOC139673 (Accession XM_071645) is another VGAM1960 host target gene. LOC139673 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC139673, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC139673 BINDING SITE, designated SEQ ID:37405, to the nucleotide sequence of VGAM1960 RNA, herein designated VGAM RNA, also designated SEQ ID:4671.

[68212] Another function of VGAM1960 is therefore inhibition of LOC139673 (Accession XM_071645). Accordingly, utilities of VGAM1960 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC139673. LOC144747 (Accession XM_084954) is another VGAM1960 host target gene. LOC144747 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by LOC144747, cor-

responding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC144747 BINDING SITE, designated SEQ ID:37785, to the nucleotide sequence of VGAM1960 RNA, herein designated VGAM RNA, also designated SEQ ID:4671.

[68213] Another function of VGAM1960 is therefore inhibition of LOC144747 (Accession XM_084954). Accordingly, utilities of VGAM1960 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC144747. LOC146856 (Accession XM_096086) is another VGAM1960 host target gene. LOC146856 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC146856, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC146856 BINDING SITE, designated SEQ ID:40299, to the nucleotide sequence of VGAM1960 RNA, herein designated VGAM RNA, also designated SEQ ID:4671.

[68214] Another function of VGAM1960 is therefore inhibition of LOC146856 (Accession XM_096086). Accordingly, utilities of VGAM1960 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with LOC146856. LOC147990 (Accession XM_097358) is another VGAM1960 host target gene. LOC147990 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC147990, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC147990 BINDING SITE, designated SEQ ID:40863, to the nucleotide sequence of VGAM1960 RNA, herein designated VGAM RNA, also designated SEQ ID:4671.

[68215] Another function of VGAM1960 is therefore inhibition of LOC147990 (Accession XM_097358). Accordingly, utilities of VGAM1960 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC147990. LOC152018 (Accession XM_098156) is another VGAM1960 host target gene. LOC152018 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by LOC152018, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC152018 BINDING SITE, designated SEQ ID:41421, to

the nucleotide sequence of VGAM1960 RNA, herein designated VGAM RNA, also designated SEQ ID:4671.

[68216] Another function of VGAM1960 is therefore inhibition of LOC152018 (Accession XM_098156). Accordingly, utilities of VGAM1960 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC152018. LOC157798 (Accession XM_098827) is another VGAM1960 host target gene. LOC157798 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by LOC157798, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC157798 BINDING SITE, designated SEQ ID:41850, to the nucleotide sequence of VGAM1960 RNA, herein designated VGAM RNA, also designated SEQ ID:4671.

[68217] Another function of VGAM1960 is therefore inhibition of LOC157798 (Accession XM_098827). Accordingly, utilities of VGAM1960 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC157798. LOC158709 (Accession XM_088648) is another VGAM1960 host target gene. LOC158709 BINDING SITE is HOST TARGET binding site found in the 3` un-

translated region of mRNA encoded by LOC158709, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC158709 BINDING SITE, designated SEQ ID:39882, to the nucleotide sequence of VGAM1960 RNA, herein designated VGAM RNA, also designated SEQ ID:4671.

[68218] Another function of VGAM1960 is therefore inhibition of LOC158709 (Accession XM_088648). Accordingly, utilities of VGAM1960 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC158709. LOC203365 (Accession XM_114690) is another VGAM1960 host target gene. LOC203365 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC203365, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC203365 BINDING SITE, designated SEQ ID:43034, to the nucleotide sequence of VGAM1960 RNA, herein designated VGAM RNA, also designated SEQ ID:4671.

[68219] Another function of VGAM1960 is therefore inhibition of LOC203365 (Accession XM_114690). Accordingly, utilities

of VGAM1960 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC203365. Fig. 1 further provides a conceptual description of a novel bioinformatically detected viral gene of the present invention, referred to here as Viral Genomic Address Messenger 1961 (VGAM1961) viral gene, which modulates expression of respective host target genes thereof, the function and utility of which host target genes is known in the art.

[68220] VGAM1961 is a novel bioinformatically detected regulatory, non protein coding, viral micro RNA (miRNA) gene. The method by which VGAM1961 was detected is described hereinabove with reference to Figs. 1-8.

[68221] VGAM1961 gene, herein designated VGAM GENE, is a viral gene contained in the genome of Camelpox Virus. VGAM1961 host target gene, herein designated VGAM HOST TARGET GENE, is a human gene contained in the human genome.

[68222] VGAM1961 gene encodes a VGAM1961 precursor RNA, herein designated VGAM PRECURSOR RNA. Similar to other miRNA genes, and unlike most ordinary genes, VGAM1961 precursor RNA does not encode a protein. A nucleotide sequence identical or highly similar to the nu-

cleotide sequence of VGAM1961 precursor RNA is designated SEQ ID:1947, and is provided hereinbelow with reference to the sequence listing part. Nucleotide sequence SEQ ID:1947 is located at position 16323 relative to the genome of Camelpox Virus.

[68223] VGAM1961 precursor RNA folds onto itself, forming VGAM1961 folded precursor RNA, herein designated VGAM FOLDED PRECURSOR RNA, which has a two-dimensional `hairpin structure`. As is well known in the art, this `hairpin structure`, is typical of RNA encoded by miRNA genes, and is due to the fact that the nucleotide sequence of the first half of the RNA encoded by a miRNA gene is an accurate or partial inversed-reversed sequence of the nucleotide sequence of the second half thereof.

[68224] An enzyme complex designated DICER COMPLEX, `dices` the VGAM1961 folded precursor RNA into VGAM1961 RNA, herein designated VGAM RNA, a single stranded ~22 nt long RNA segment. As is known in the art, `dicing` of a hairpin structured RNA precursor product into a short ~22nt RNA segment is catalyzed by an enzyme complex comprising an enzyme called Dicer together with other necessary proteins. A probable (over 42%) nucleotide sequence of VGAM1961 RNA is designated SEQ ID:4672, and

is provided hereinbelow with reference to the sequence listing part.

[68225] VGAM1961 host target gene, herein designated VGAM HOST TARGET GENE, encodes a corresponding messenger RNA, VGAM1961 host target RNA, herein designated VGAM HOST TARGET RNA. VGAM1961 host target RNA comprises three regions, as is typical of mRNA of a protein coding gene: a 5` untranslated region, a protein coding region and a 3` untranslated region, designated 5`UTR, PROTEIN CODING and 3`UTR respectively.

[68226] VGAM1961 RNA, herein designated VGAM RNA, binds complementarily to one or more host target binding sites located in untranslated regions of VGAM1961 host target RNA, herein designated VGAM HOST TARGET RNA. This complementary binding is due to the fact that the nucleotide sequence of VGAM1961 RNA is an accurate or a partial inversed-reversed sequence of the nucleotide sequence of each of the host target binding sites. As an illustration, Fig. 1 shows three such host target binding sites, designated BINDING SITE I, BINDING SITE II and BINDING SITE III respectively. It is appreciated that the number of host target binding sites shown in Fig. 1 is meant as an illustration only, and is not meant to be limit-

ing - VGAM1961 RNA, herein designated VGAM RNA, may have a different number of host target binding sites in untranslated regions of a VGAM1961 host target RNA, herein designated VGAM HOST TARGET RNA. It is further appreciated that while Fig. 1 depicts host target binding sites in the 3`UTR region, this is meant as an example only - these host target binding sites may be located in the 3`UTR region, the 5`UTR region, or in both 3`UTR and 5`UTR regions.

[68227] The complementary binding of VGAM1961 RNA, herein designated VGAM RNA, to host target binding sites on VGAM1961 host target RNA, herein designated VGAM HOST TARGET RNA, such as BINDING SITE I, BINDING SITE II and BINDING SITE III, inhibits translation of VGAM1961 host target RNA into VGAM1961 host target protein, herein designated VGAM HOST TARGET PROTEIN. VGAM host target protein is therefore outlined by a broken line.

[68228] It is appreciated that VGAM1961 host target gene, herein designated VGAM HOST TARGET GENE, in fact represents a plurality of VGAM1961 host target genes. The mRNA of each one of this plurality of VGAM1961 host target genes comprises one or more host target binding sites, each having a nucleotide sequence which is at least partly com-

plementary to VGAM1961 RNA, herein designated VGAM RNA, and which when bound by VGAM1961 RNA causes inhibition of translation of respective one or more VGAM1961 host target proteins.

[68229] It is further appreciated by one skilled in the art that the mode of translational inhibition illustrated by Fig. 1 with specific reference to translational inhibition exerted by VGAM1961 gene, herein designated VGAM GENE, on one or more VGAM1961 host target gene, herein designated VGAM HOST TARGET GENE, is in fact common to other known non-viral miRNA genes. As mentioned hereinabove with reference to the background section, although a specific complementary binding site has been demonstrated only for some of the known miRNA genes (primarily Lin-4 and Let-7), all other recently discovered miRNA genes are also believed by those skilled in the art to modulate expression of other genes by complementary binding, although specific complementary binding sites of these other miRNA genes have not yet been found (Ruvkun G., `Perspective: Glimpses of a tiny RNA world`, Science 294,779 (2001)).

[68230] It is yet further appreciated that a function of VGAM1961 is inhibition of expression of host target genes, as part of

a novel viral mechanism of attacking a host. Accordingly, utilities of VGAM1961 include diagnosis, prevention and treatment of viral infection by Camelpox Virus. Specific functions, and accordingly utilities, of VGAM1961 correlate with, and may be deduced from, the identity of the host target genes which VGAM1961 binds and inhibits, and the function of these host target genes, as elaborated hereinbelow.

[68231] Nucleotide sequences of the VGAM1961 precursor RNA, herein designated VGAM PRECURSOR RNA, and of the `diced` VGAM1961 RNA, herein designated VGAM RNA, and a schematic representation of the secondary folding of VGAM1961 folded precursor RNA, herein designated VGAM FOLDED PRECURSOR RNA, of VGAM1961 are further described hereinbelow with reference to Table 1.

[68232] Nucleotide sequences of host target binding sites, such as BINDING SITE-I, BINDING SITE-II and BINDING SITE-III of Fig. 1, found on VGAM1961 host target RNA, and schematic representation of the complementarity of each of these host target binding sites to VGAM1961 RNA, herein designated VGAM RNA, are described hereinbelow with reference to Table 2.

[68233] As mentioned hereinabove with reference to Fig. 1, a

function of VGAM1961 gene, herein designated VGAM is inhibition of expression of VGAM1961 target genes. It is appreciated that specific functions, and accordingly utilities, of VGAM1961 correlate with, and may be deduced from, the identity of the target genes which VGAM1961 binds and inhibits, and the function of these target genes, as elaborated hereinbelow.

[68234] Inositol 1,4,5-triphosphate Receptor, Type 1 (ITPR1, Accession NM_002222) is a VGAM1961 host target gene. ITPR1 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by ITPR1, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of ITPR1 BINDING SITE, designated SEQ ID:7985, to the nucleotide sequence of VGAM1961 RNA, herein designated VGAM RNA, also designated SEQ ID:4672.

[68235] A function of VGAM1961 is therefore inhibition of Inositol 1,4,5-triphosphate Receptor, Type 1 (ITPR1, Accession NM_002222), a gene which couples cell membrane receptors to Ca2+ signal transduction pathways. Accordingly, utilities of VGAM1961 include diagnosis, prevention and treatment of diseases and clinical conditions associated

with ITPR1. The function of ITPR1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM106.Fig. 1 further provides a conceptual description of a novel bioinformatically detected viral gene of the present invention, referred to here as Viral Genomic Address Messenger 1962 (VGAM1962) viral gene, which modulates expression of respective host target genes thereof, the function and utility of which host target genes is known in the art.

[68236] VGAM1962 is a novel bioinformatically detected regulatory, non protein coding, viral micro RNA (miRNA) gene. The method by which VGAM1962 was detected is described hereinabove with reference to Figs. 1-8.

[68237] VGAM1962 gene, herein designated VGAM GENE, is a viral gene contained in the genome of Camelpox Virus. VGAM1962 host target gene, herein designated VGAM HOST TARGET GENE, is a human gene contained in the human genome.

[68238] VGAM1962 gene encodes a VGAM1962 precursor RNA, herein designated VGAM PRECURSOR RNA. Similar to other miRNA genes, and unlike most ordinary genes, VGAM1962 precursor RNA does not encode a protein. A

nucleotide sequence identical or highly similar to the nucleotide sequence of VGAM1962 precursor RNA is designated SEQ ID:1948, and is provided hereinbelow with reference to the sequence listing part. Nucleotide sequence SEQ ID:1948 is located at position 16962 relative to the genome of Camelpox Virus.

[68239] VGAM1962 precursor RNA folds onto itself, forming VGAM1962 folded precursor RNA, herein designated VGAM FOLDED PRECURSOR RNA, which has a two-dimensional `hairpin structure`. As is well known in the art, this `hairpin structure`, is typical of RNA encoded by miRNA genes, and is due to the fact that the nucleotide sequence of the first half of the RNA encoded by a miRNA gene is an accurate or partial inversed-reversed sequence of the nucleotide sequence of the second half thereof.

[68240] An enzyme complex designated DICER COMPLEX, `dices` the VGAM1962 folded precursor RNA into VGAM1962 RNA, herein designated VGAM RNA, a single stranded ~22 nt long RNA segment. As is known in the art, `dicing` of a hairpin structured RNA precursor product into a short ~22nt RNA segment is catalyzed by an enzyme complex comprising an enzyme called Dicer together with other necessary proteins. A probable (over 44%) nucleotide se-

quence of VGAM1962 RNA is designated SEQ ID:4673, and is provided hereinbelow with reference to the sequence listing part.

[68241] VGAM1962 host target gene, herein designated VGAM HOST TARGET GENE, encodes a corresponding messenger RNA, VGAM1962 host target RNA, herein designated VGAM HOST TARGET RNA. VGAM1962 host target RNA comprises three regions, as is typical of mRNA of a protein coding gene: a 5` untranslated region, a protein coding region and a 3` untranslated region, designated 5`UTR, PROTEIN CODING and 3`UTR respectively.

[68242] VGAM1962 RNA, herein designated VGAM RNA, binds complementarily to one or more host target binding sites located in untranslated regions of VGAM1962 host target RNA, herein designated VGAM HOST TARGET RNA. This complementary binding is due to the fact that the nucleotide sequence of VGAM1962 RNA is an accurate or a partial inversed-reversed sequence of the nucleotide sequence of each of the host target binding sites. As an illustration, Fig. 1 shows three such host target binding sites, designated BINDING SITE I, BINDING SITE II and BINDING SITE III respectively. It is appreciated that the number of host target binding sites shown in Fig. 1 is

meant as an illustration only, and is not meant to be limiting - VGAM1962 RNA, herein designated VGAM RNA, may have a different number of host target binding sites in untranslated regions of a VGAM1962 host target RNA, herein designated VGAM HOST TARGET RNA. It is further appreciated that while Fig. 1 depicts host target binding sites in the 3`UTR region, this is meant as an example only - these host target binding sites may be located in the 3`UTR region, the 5`UTR region, or in both 3`UTR and 5`UTR regions.

[68243] The complementary binding of VGAM1962 RNA, herein designated VGAM RNA, to host target binding sites on VGAM1962 host target RNA, herein designated VGAM HOST TARGET RNA, such as BINDING SITE I, BINDING SITE II and BINDING SITE III, inhibits translation of VGAM1962 host target RNA into VGAM1962 host target protein, herein designated VGAM HOST TARGET PROTEIN. VGAM host target protein is therefore outlined by a broken line.

[68244] It is appreciated that VGAM1962 host target gene, herein designated VGAM HOST TARGET GENE, in fact represents a plurality of VGAM1962 host target genes. The mRNA of each one of this plurality of VGAM1962 host target genes comprises one or more host target binding sites, each

having a nucleotide sequence which is at least partly complementary to VGAM1962 RNA, herein designated VGAM RNA, and which when bound by VGAM1962 RNA causes inhibition of translation of respective one or more VGAM1962 host target proteins.

[68245] It is further appreciated by one skilled in the art that the mode of translational inhibition illustrated by Fig. 1 with specific reference to translational inhibition exerted by VGAM1962 gene, herein designated VGAM GENE, on one or more VGAM1962 host target gene, herein designated VGAM HOST TARGET GENE, is in fact common to other known non-viral miRNA genes. As mentioned hereinabove with reference to the background section, although a specific complementary binding site has been demonstrated only for some of the known miRNA genes (primarily Lin-4 and Let-7), all other recently discovered miRNA genes are also believed by those skilled in the art to modulate expression of other genes by complementary binding, although specific complementary binding sites of these other miRNA genes have not yet been found (Ruvkun G., `Perspective: Glimpses of a tiny RNA world`, Science 294,779 (2001)).

[68246] It is yet further appreciated that a function of VGAM1962

is inhibition of expression of host target genes, as part of a novel viral mechanism of attacking a host. Accordingly, utilities of VGAM1962 include diagnosis, prevention and treatment of viral infection by Camelpox Virus. Specific functions, and accordingly utilities, of VGAM1962 correlate with, and may be deduced from, the identity of the host target genes which VGAM1962 binds and inhibits, and the function of these host target genes, as elaborated hereinbelow.

[68247] Nucleotide sequences of the VGAM1962 precursor RNA, herein designated VGAM PRECURSOR RNA, and of the `diced` VGAM1962 RNA, herein designated VGAM RNA, and a schematic representation of the secondary folding of VGAM1962 folded precursor RNA, herein designated VGAM FOLDED PRECURSOR RNA, of VGAM1962 are further described hereinbelow with reference to Table 1.

[68248] Nucleotide sequences of host target binding sites, such as BINDING SITE-I, BINDING SITE-II and BINDING SITE-III of Fig. 1, found on VGAM1962 host target RNA, and schematic representation of the complementarity of each of these host target binding sites to VGAM1962 RNA, herein designated VGAM RNA, are described hereinbelow with reference to Table 2.

[68249] As mentioned hereinabove with reference to Fig. 1, a function of VGAM1962 gene, herein designated VGAM is inhibition of expression of VGAM1962 target genes. It is appreciated that specific functions, and accordingly utilities, of VGAM1962 correlate with, and may be deduced from, the identity of the target genes which VGAM1962 binds and inhibits, and the function of these target genes, as elaborated hereinbelow.

[68250] A Kinase (PRKA) Anchor Protein 10 (AKAP10, Accession NM_007202) is a VGAM1962 host target gene. AKAP10 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by AKAP10, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of AKAP10 BINDING SITE, designated SEQ ID:14056, to the nucleotide sequence of VGAM1962 RNA, herein designated VGAM RNA, also designated SEQ ID:4673.

[68251] A function of VGAM1962 is therefore inhibition of A Kinase (PRKA) Anchor Protein 10 (AKAP10, Accession NM_007202). Accordingly, utilities of VGAM1962 include diagnosis, prevention and treatment of diseases and clinical conditions associated with AKAP10. Chromosome 11

Open Reading Frame 23 (C11orf23, Accession NM_018312) is another VGAM1962 host target gene. C11orf23 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by C11orf23, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of C11orf23 BINDING SITE, designated SEQ ID:20304, to the nucleotide sequence of VGAM1962 RNA, herein designated VGAM RNA, also designated SEQ ID:4673.

[68252] Another function of VGAM1962 is therefore inhibition of Chromosome 11 Open Reading Frame 23 (C11orf23, Accession NM_018312). Accordingly, utilities of VGAM1962 include diagnosis, prevention and treatment of diseases and clinical conditions associated with C11orf23. C20orf180 (Accession NM_018431) is another VGAM1962 host target gene. C20orf180 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by C20orf180, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of C20orf180 BINDING

SITE, designated SEQ ID:20494, to the nucleotide sequence of VGAM1962 RNA, herein designated VGAM RNA, also designated SEQ ID:4673.

[68253] Another function of VGAM1962 is therefore inhibition of C20orf180 (Accession NM_018431). Accordingly, utilities of VGAM1962 include diagnosis, prevention and treatment of diseases and clinical conditions associated with C20orf180. Fig. 1 further provides a conceptual description of a novel bioinformatically detected viral gene of the present invention, referred to here as Viral Genomic Address Messenger 1963 (VGAM1963) viral gene, which modulates expression of respective host target genes thereof, the function and utility of which host target genes is known in the art.

[68254] VGAM1963 is a novel bioinformatically detected regulatory, non protein coding, viral micro RNA (miRNA) gene. The method by which VGAM1963 was detected is described hereinabove with reference to Figs. 1-8.

[68255] VGAM1963 gene, herein designated VGAM GENE, is a viral gene contained in the genome of Camelpox Virus. VGAM1963 host target gene, herein designated VGAM HOST TARGET GENE, is a human gene contained in the human genome.

[68256] VGAM1963 gene encodes a VGAM1963 precursor RNA, herein designated VGAM PRECURSOR RNA. Similar to other miRNA genes, and unlike most ordinary genes, VGAM1963 precursor RNA does not encode a protein. A nucleotide sequence identical or highly similar to the nucleotide sequence of VGAM1963 precursor RNA is designated SEQ ID:1949, and is provided hereinbelow with reference to the sequence listing part. Nucleotide sequence SEQ ID:1949 is located at position 17595 relative to the genome of Camelpox Virus.

[68257] VGAM1963 precursor RNA folds onto itself, forming VGAM1963 folded precursor RNA, herein designated VGAM FOLDED PRECURSOR RNA, which has a two-dimensional `hairpin structure`. As is well known in the art, this `hairpin structure`, is typical of RNA encoded by miRNA genes, and is due to the fact that the nucleotide sequence of the first half of the RNA encoded by a miRNA gene is an accurate or partial inversed-reversed sequence of the nucleotide sequence of the second half thereof.

[68258] An enzyme complex designated DICER COMPLEX, `dices` the VGAM1963 folded precursor RNA into VGAM1963 RNA, herein designated VGAM RNA, a single stranded ~22 nt long RNA segment. As is known in the art, `dicing` of a

hairpin structured RNA precursor product into a short ~22nt RNA segment is catalyzed by an enzyme complex comprising an enzyme called Dicer together with other necessary proteins. A probable (over 42%) nucleotide sequence of VGAM1963 RNA is designated SEQ ID:4674, and is provided hereinbelow with reference to the sequence listing part.

[68259] VGAM1963 host target gene, herein designated VGAM HOST TARGET GENE, encodes a corresponding messenger RNA, VGAM1963 host target RNA, herein designated VGAM HOST TARGET RNA. VGAM1963 host target RNA comprises three regions, as is typical of mRNA of a protein coding gene: a 5` untranslated region, a protein coding region and a 3` untranslated region, designated 5`UTR, PROTEIN CODING and 3`UTR respectively.

[68260] VGAM1963 RNA, herein designated VGAM RNA, binds complementarily to one or more host target binding sites located in untranslated regions of VGAM1963 host target RNA, herein designated VGAM HOST TARGET RNA. This complementary binding is due to the fact that the nucleotide sequence of VGAM1963 RNA is an accurate or a partial inversed-reversed sequence of the nucleotide sequence of each of the host target binding sites. As an il-

lustration, Fig. 1 shows three such host target binding sites, designated BINDING SITE I, BINDING SITE II and BINDING SITE III respectively. It is appreciated that the number of host target binding sites shown in Fig. 1 is meant as an illustration only, and is not meant to be limiting - VGAM1963 RNA, herein designated VGAM RNA, may have a different number of host target binding sites in untranslated regions of a VGAM1963 host target RNA, herein designated VGAM HOST TARGET RNA. It is further appreciated that while Fig. 1 depicts host target binding sites in the 3`UTR region, this is meant as an example only - these host target binding sites may be located in the 3`UTR region, the 5`UTR region, or in both 3`UTR and 5`UTR regions.

[68261] The complementary binding of VGAM1963 RNA, herein designated VGAM RNA, to host target binding sites on VGAM1963 host target RNA, herein designated VGAM HOST TARGET RNA, such as BINDING SITE I, BINDING SITE II and BINDING SITE III, inhibits translation of VGAM1963 host target RNA into VGAM1963 host target protein, herein designated VGAM HOST TARGET PROTEIN. VGAM host target protein is therefore outlined by a broken line.

[68262] It is appreciated that VGAM1963 host target gene, herein

designated VGAM HOST TARGET GENE, in fact represents a plurality of VGAM1963 host target genes. The mRNA of each one of this plurality of VGAM1963 host target genes comprises one or more host target binding sites, each having a nucleotide sequence which is at least partly complementary to VGAM1963 RNA, herein designated VGAM RNA, and which when bound by VGAM1963 RNA causes inhibition of translation of respective one or more VGAM1963 host target proteins.

[68263] It is further appreciated by one skilled in the art that the mode of translational inhibition illustrated by Fig. 1 with specific reference to translational inhibition exerted by VGAM1963 gene, herein designated VGAM GENE, on one or more VGAM1963 host target gene, herein designated VGAM HOST TARGET GENE, is in fact common to other known non-viral miRNA genes. As mentioned hereinabove with reference to the background section, although a specific complementary binding site has been demonstrated only for some of the known miRNA genes (primarily Lin-4 and Let-7), all other recently discovered miRNA genes are also believed by those skilled in the art to modulate expression of other genes by complementary binding, although specific complementary binding sites of these

other miRNA genes have not yet been found (Ruvkun G., `Perspective: Glimpses of a tiny RNA world`, Science 294,779 (2001)).

[68264] It is yet further appreciated that a function of VGAM1963 is inhibition of expression of host target genes, as part of a novel viral mechanism of attacking a host. Accordingly, utilities of VGAM1963 include diagnosis, prevention and treatment of viral infection by Camelpox Virus. Specific functions, and accordingly utilities, of VGAM1963 correlate with, and may be deduced from, the identity of the host target genes which VGAM1963 binds and inhibits, and the function of these host target genes, as elaborated hereinbelow.

[68265] Nucleotide sequences of the VGAM1963 precursor RNA, herein designated VGAM PRECURSOR RNA, and of the `diced` VGAM1963 RNA, herein designated VGAM RNA, and a schematic representation of the secondary folding of VGAM1963 folded precursor RNA, herein designated VGAM FOLDED PRECURSOR RNA, of VGAM1963 are further described hereinbelow with reference to Table 1.

[68266] Nucleotide sequences of host target binding sites, such as BINDING SITE-I, BINDING SITE-II and BINDING SITE-III of Fig. 1, found on VGAM1963 host target RNA, and

schematic representation of the complementarity of each of these host target binding sites to VGAM1963 RNA, herein designated VGAM RNA, are described hereinbelow with reference to Table 2.

[68267] As mentioned hereinabove with reference to Fig. 1, a function of VGAM1963 gene, herein designated VGAM is inhibition of expression of VGAM1963 target genes. It is appreciated that specific functions, and accordingly utilities, of VGAM1963 correlate with, and may be deduced from, the identity of the target genes which VGAM1963 binds and inhibits, and the function of these target genes, as elaborated hereinbelow.

[68268] Retinitis Pigmentosa 2 (X-linked recessive) (RP2, Accession NM_006915) is a VGAM1963 host target gene. RP2 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by RP2, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of RP2 BINDING SITE, designated SEQ ID:13790, to the nucleotide sequence of VGAM1963 RNA, herein designated VGAM RNA, also designated SEQ ID:4674.

[68269] A function of VGAM1963 is therefore inhibition of Retinitis

Pigmentosa 2 (X-linked recessive) (RP2, Accession NM_006915). Accordingly, utilities of VGAM1963 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RP2. caspr5 (Accession NM_130773) is another VGAM1963 host target gene. caspr5 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by caspr5, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of caspr5 BINDING SITE, designated SEQ ID:28267, to the nucleotide sequence of VGAM1963 RNA, herein designated VGAM RNA, also designated SEQ ID:4674.

[68270] Another function of VGAM1963 is therefore inhibition of caspr5 (Accession NM_130773). Accordingly, utilities of VGAM1963 include diagnosis, prevention and treatment of diseases and clinical conditions associated with caspr5. FLJ11252 (Accession XM_041702) is another VGAM1963 host target gene. FLJ11252 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by FLJ11252, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or

BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of FLJ11252 BINDING SITE, designated SEQ ID:33566, to the nucleotide sequence of VGAM1963 RNA, herein designated VGAM RNA, also designated SEQ ID:4674.

[68271] Another function of VGAM1963 is therefore inhibition of FLJ11252 (Accession XM_041702). Accordingly, utilities of VGAM1963 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ11252. Fig. 1 further provides a conceptual description of a novel bioinformatically detected viral gene of the present invention, referred to here as Viral Genomic Address Messenger 1964 (VGAM1964) viral gene, which modulates expression of respective host target genes thereof, the function and utility of which host target genes is known in the art.

[68272] VGAM1964 is a novel bioinformatically detected regulatory, non protein coding, viral micro RNA (miRNA) gene. The method by which VGAM1964 was detected is described hereinabove with reference to Figs. 1-8.

[68273] VGAM1964 gene, herein designated VGAM GENE, is a viral gene contained in the genome of Rana Tigrina Ranavirus. VGAM1964 host target gene, herein designated VGAM

HOST TARGET GENE, is a human gene contained in the human genome.

[68274] VGAM1964 gene encodes a VGAM1964 precursor RNA, herein designated VGAM PRECURSOR RNA. Similar to other miRNA genes, and unlike most ordinary genes, VGAM1964 precursor RNA does not encode a protein. A nucleotide sequence identical or highly similar to the nucleotide sequence of VGAM1964 precursor RNA is designated SEQ ID:1950, and is provided hereinbelow with reference to the sequence listing part. Nucleotide sequence SEQ ID:1950 is located at position 87983 relative to the genome of Rana Tigrina Ranavirus.

[68275] VGAM1964 precursor RNA folds onto itself, forming VGAM1964 folded precursor RNA, herein designated VGAM FOLDED PRECURSOR RNA, which has a two-dimensional `hairpin structure`. As is well known in the art, this `hairpin structure`, is typical of RNA encoded by miRNA genes, and is due to the fact that the nucleotide sequence of the first half of the RNA encoded by a miRNA gene is an accurate or partial inversed-reversed sequence of the nucleotide sequence of the second half thereof.

[68276] An enzyme complex designated DICER COMPLEX, `dices` the VGAM1964 folded precursor RNA into VGAM1964

RNA, herein designated VGAM RNA, a single stranded ~22 nt long RNA segment. As is known in the art, `dicing` of a hairpin structured RNA precursor product into a short ~22nt RNA segment is catalyzed by an enzyme complex comprising an enzyme called Dicer together with other necessary proteins. A probable (over 40%) nucleotide sequence of VGAM1964 RNA is designated SEQ ID:4675, and is provided hereinbelow with reference to the sequence listing part.

[68277] VGAM1964 host target gene, herein designated VGAM HOST TARGET GENE, encodes a corresponding messenger RNA, VGAM1964 host target RNA, herein designated VGAM HOST TARGET RNA. VGAM1964 host target RNA comprises three regions, as is typical of mRNA of a protein coding gene: a 5` untranslated region, a protein coding region and a 3` untranslated region, designated 5`UTR, PROTEIN CODING and 3`UTR respectively.

[68278] VGAM1964 RNA, herein designated VGAM RNA, binds complementarily to one or more host target binding sites located in untranslated regions of VGAM1964 host target RNA, herein designated VGAM HOST TARGET RNA. This complementary binding is due to the fact that the nucleotide sequence of VGAM1964 RNA is an accurate or a

partial inversed-reversed sequence of the nucleotide sequence of each of the host target binding sites. As an illustration, Fig. 1 shows three such host target binding sites, designated BINDING SITE I, BINDING SITE II and BINDING SITE III respectively. It is appreciated that the number of host target binding sites shown in Fig. 1 is meant as an illustration only, and is not meant to be limiting - VGAM1964 RNA, herein designated VGAM RNA, may have a different number of host target binding sites in untranslated regions of a VGAM1964 host target RNA, herein designated VGAM HOST TARGET RNA. It is further appreciated that while Fig. 1 depicts host target binding sites in the 3`UTR region, this is meant as an example only - these host target binding sites may be located in the 3`UTR region, the 5`UTR region, or in both 3`UTR and 5`UTR regions.

[68279] The complementary binding of VGAM1964 RNA, herein designated VGAM RNA, to host target binding sites on VGAM1964 host target RNA, herein designated VGAM HOST TARGET RNA, such as BINDING SITE I, BINDING SITE II and BINDING SITE III, inhibits translation of VGAM1964 host target RNA into VGAM1964 host target protein, herein designated VGAM HOST TARGET PROTEIN. VGAM

host target protein is therefore outlined by a broken line.

[68280] It is appreciated that VGAM1964 host target gene, herein designated VGAM HOST TARGET GENE, in fact represents a plurality of VGAM1964 host target genes. The mRNA of each one of this plurality of VGAM1964 host target genes comprises one or more host target binding sites, each having a nucleotide sequence which is at least partly complementary to VGAM1964 RNA, herein designated VGAM RNA, and which when bound by VGAM1964 RNA causes inhibition of translation of respective one or more VGAM1964 host target proteins.

[68281] It is further appreciated by one skilled in the art that the mode of translational inhibition illustrated by Fig. 1 with specific reference to translational inhibition exerted by VGAM1964 gene, herein designated VGAM GENE, on one or more VGAM1964 host target gene, herein designated VGAM HOST TARGET GENE, is in fact common to other known non-viral miRNA genes. As mentioned hereinabove with reference to the background section, although a specific complementary binding site has been demonstrated only for some of the known miRNA genes (primarily Lin-4 and Let-7), all other recently discovered miRNA genes are also believed by those skilled in the art to modulate ex-

pression of other genes by complementary binding, although specific complementary binding sites of these other miRNA genes have not yet been found (Ruvkun G., `Perspective: Glimpses of a tiny RNA world`, Science 294,779 (2001)).

[68282] It is yet further appreciated that a function of VGAM1964 is inhibition of expression of host target genes, as part of a novel viral mechanism of attacking a host. Accordingly, utilities of VGAM1964 include diagnosis, prevention and treatment of viral infection by Rana Tigrina Ranavirus. Specific functions, and accordingly utilities, of VGAM1964 correlate with, and may be deduced from, the identity of the host target genes which VGAM1964 binds and inhibits, and the function of these host target genes, as elaborated hereinbelow.

[68283] Nucleotide sequences of the VGAM1964 precursor RNA, herein designated VGAM PRECURSOR RNA, and of the `diced` VGAM1964 RNA, herein designated VGAM RNA, and a schematic representation of the secondary folding of VGAM1964 folded precursor RNA, herein designated VGAM FOLDED PRECURSOR RNA, of VGAM1964 are further described hereinbelow with reference to Table 1.

[68284] Nucleotide sequences of host target binding sites, such as

BINDING SITE-I, BINDING SITE-II and BINDING SITE-III of Fig. 1, found on VGAM1964 host target RNA, and schematic representation of the complementarity of each of these host target binding sites to VGAM1964 RNA, herein designated VGAM RNA, are described hereinbelow with reference to Table 2.

[68285] As mentioned hereinabove with reference to Fig. 1, a function of VGAM1964 gene, herein designated VGAM is inhibition of expression of VGAM1964 target genes. It is appreciated that specific functions, and accordingly utilities, of VGAM1964 correlate with, and may be deduced from, the identity of the target genes which VGAM1964 binds and inhibits, and the function of these target genes, as elaborated hereinbelow.

[68286] UDP-GlcNAc:betaGal Beta-1,3-N-acetylglucosaminyltransferase 3 (B3GNT3, Accession NM_014256) is a VGAM1964 host target gene. B3GNT3 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by B3GNT3, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of B3GNT3 BINDING SITE, designated SEQ

ID:15533, to the nucleotide sequence of VGAM1964 RNA, herein designated VGAM RNA, also designated SEQ ID:4675.

[68287] A function of VGAM1964 is therefore inhibition of UDP-GlcNAc:betaGal Beta-1,3-N-acetylglucosaminyltransferase 3 (B3GNT3, Accession NM_014256). Accordingly, utilities of VGAM1964 include diagnosis, prevention and treatment of diseases and clinical conditions associated with B3GNT3. Microtubule-associated Protein 7 (MAP7, Accession NM_003980) is another VGAM1964 host target gene. MAP7 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by MAP7, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of MAP7 BINDING SITE, designated SEQ ID:10118, to the nucleotide sequence of VGAM1964 RNA, herein designated VGAM RNA, also designated SEQ ID:4675.

[68288] Another function of VGAM1964 is therefore inhibition of Microtubule-associated Protein 7 (MAP7, Accession NM_003980), a gene which Microtubule-associated protein 7; stabilizes microtubules, may help establish epithelial cell polarity. Accordingly, utilities of VGAM1964 in-

clude diagnosis, prevention and treatment of diseases and clinical conditions associated with MAP7. The function of MAP7 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM1373.Retinal Pigment Epithelium-specific Protein 65kDa (RPE65, Accession NM_000329) is another VGAM1964 host target gene. RPE65 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by RPE65, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of RPE65 BINDING SITE, designated SEQ ID:5872, to the nucleotide sequence of VGAM1964 RNA, herein designated VGAM RNA, also designated SEQ ID:4675.

[68289] Another function of VGAM1964 is therefore inhibition of Retinal Pigment Epithelium-specific Protein 65kDa (RPE65, Accession NM_000329), a gene which May play a role in vitamin-A metabolism of the retina. Accordingly, utilities of VGAM1964 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RPE65. The function of RPE65 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM66.ERp44 (Accession XM_088476) is another VGAM1964 host target gene. ERp44 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by ERp44, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of ERp44 BINDING SITE, designated SEQ ID:39722, to the nucleotide sequence of VGAM1964 RNA, herein designated VGAM RNA, also designated SEQ ID:4675.

[68290] Another function of VGAM1964 is therefore inhibition of ERp44 (Accession XM_088476). Accordingly, utilities of VGAM1964 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ERp44.

KIAA0266 (Accession NM_021645) is another VGAM1964 host target gene. KIAA0266 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by KIAA0266, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of KIAA0266 BINDING SITE, designated SEQ ID:22309, to the nucleotide sequence of VGAM1964 RNA, herein designated VGAM RNA, also designated SEQ ID:4675.

[68291] Another function of VGAM1964 is therefore inhibition of KIAA0266 (Accession NM_021645). Accordingly, utilities of VGAM1964 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0266. LOC113523 (Accession XM_054378) is another VGAM1964 host target gene. LOC113523 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC113523, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC113523 BINDING SITE, designated SEQ ID:36152, to the nucleotide sequence of VGAM1964 RNA, herein desig-

nated VGAM RNA, also designated SEQ ID:4675.

[68292] Another function of VGAM1964 is therefore inhibition of LOC113523 (Accession XM_054378). Accordingly, utilities of VGAM1964 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC113523. LOC145786 (Accession XM_096860) is another VGAM1964 host target gene. LOC145786 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by LOC145786, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC145786 BINDING SITE, designated SEQ ID:40591, to the nucleotide sequence of VGAM1964 RNA, herein designated VGAM RNA, also designated SEQ ID:4675.

[68293] Another function of VGAM1964 is therefore inhibition of LOC145786 (Accession XM_096860). Accordingly, utilities of VGAM1964 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC145786. LOC146332 (Accession XM_085413) is another VGAM1964 host target gene. LOC146332 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC146332, cor-

responding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC146332 BINDING SITE, designated SEQ ID:38128, to the nucleotide sequence of VGAM1964 RNA, herein designated VGAM RNA, also designated SEQ ID:4675.

[68294] Another function of VGAM1964 is therefore inhibition of LOC146332 (Accession XM_085413). Accordingly, utilities of VGAM1964 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC146332. LOC158527 (Accession XM_088594) is another VGAM1964 host target gene. LOC158527 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by LOC158527, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC158527 BINDING SITE, designated SEQ ID:39865, to the nucleotide sequence of VGAM1964 RNA, herein designated VGAM RNA, also designated SEQ ID:4675.

[68295] Another function of VGAM1964 is therefore inhibition of LOC158527 (Accession XM_088594). Accordingly, utilities of VGAM1964 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with LOC158527. LOC91408 (Accession XM_038290) is another VGAM1964 host target gene. LOC91408 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC91408, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC91408 BINDING SITE, designated SEQ ID:32792, to the nucleotide sequence of VGAM1964 RNA, herein designated VGAM RNA, also designated SEQ ID:4675.

[68296] Another function of VGAM1964 is therefore inhibition of LOC91408 (Accession XM_038290). Accordingly, utilities of VGAM1964 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC91408. Fig. 1 further provides a conceptual description of a novel bioinformatically detected viral gene of the present invention, referred to here as Viral Genomic Address Messenger 1965 (VGAM1965) viral gene, which modulates expression of respective host target genes thereof, the function and utility of which host target genes is known in the art.

[68297] VGAM1965 is a novel bioinformatically detected regula-

tory, non protein coding, viral micro RNA (miRNA) gene. The method by which VGAM1965 was detected is described hereinabove with reference to Figs. 1-8.

[68298] VGAM1965 gene, herein designated VGAM GENE, is a viral gene contained in the genome of Rana Tigrina Ranavirus. VGAM1965 host target gene, herein designated VGAM HOST TARGET GENE, is a human gene contained in the human genome.

[68299] VGAM1965 gene encodes a VGAM1965 precursor RNA, herein designated VGAM PRECURSOR RNA. Similar to other miRNA genes, and unlike most ordinary genes, VGAM1965 precursor RNA does not encode a protein. A nucleotide sequence identical or highly similar to the nucleotide sequence of VGAM1965 precursor RNA is designated SEQ ID:1951, and is provided hereinbelow with reference to the sequence listing part. Nucleotide sequence SEQ ID:1951 is located at position 100137 relative to the genome of Rana Tigrina Ranavirus.

[68300] VGAM1965 precursor RNA folds onto itself, forming VGAM1965 folded precursor RNA, herein designated VGAM FOLDED PRECURSOR RNA, which has a two-dimensional `hairpin structure`. As is well known in the art, this `hairpin structure`, is typical of RNA encoded by

miRNA genes, and is due to the fact that the nucleotide sequence of the first half of the RNA encoded by a miRNA gene is an accurate or partial inversed-reversed sequence of the nucleotide sequence of the second half thereof.

[68301] An enzyme complex designated DICER COMPLEX, `dices` the VGAM1965 folded precursor RNA into VGAM1965 RNA, herein designated VGAM RNA, a single stranded ~22 nt long RNA segment. As is known in the art, `dicing` of a hairpin structured RNA precursor product into a short ~22nt RNA segment is catalyzed by an enzyme complex comprising an enzyme called Dicer together with other necessary proteins. A probable (over 42%) nucleotide sequence of VGAM1965 RNA is designated SEQ ID:4676, and is provided hereinbelow with reference to the sequence listing part.

[68302] VGAM1965 host target gene, herein designated VGAM HOST TARGET GENE, encodes a corresponding messenger RNA, VGAM1965 host target RNA, herein designated VGAM HOST TARGET RNA. VGAM1965 host target RNA comprises three regions, as is typical of mRNA of a protein coding gene: a 5` untranslated region, a protein coding region and a 3` untranslated region, designated 5`UTR, PROTEIN CODING and 3`UTR respectively.

[68303] VGAM1965 RNA, herein designated VGAM RNA, binds complementarily to one or more host target binding sites located in untranslated regions of VGAM1965 host target RNA, herein designated VGAM HOST TARGET RNA. This complementary binding is due to the fact that the nucleotide sequence of VGAM1965 RNA is an accurate or a partial inversed-reversed sequence of the nucleotide sequence of each of the host target binding sites. As an illustration, Fig. 1 shows three such host target binding sites, designated BINDING SITE I, BINDING SITE II and BINDING SITE III respectively. It is appreciated that the number of host target binding sites shown in Fig. 1 is meant as an illustration only, and is not meant to be limiting - VGAM1965 RNA, herein designated VGAM RNA, may have a different number of host target binding sites in untranslated regions of a VGAM1965 host target RNA, herein designated VGAM HOST TARGET RNA. It is further appreciated that while Fig. 1 depicts host target binding sites in the 3`UTR region, this is meant as an example only - these host target binding sites may be located in the 3`UTR region, the 5`UTR region, or in both 3`UTR and 5`UTR regions.

[68304] The complementary binding of VGAM1965 RNA, herein

designated VGAM RNA, to host target binding sites on VGAM1965 host target RNA, herein designated VGAM HOST TARGET RNA, such as BINDING SITE I, BINDING SITE II and BINDING SITE III, inhibits translation of VGAM1965 host target RNA into VGAM1965 host target protein, herein designated VGAM HOST TARGET PROTEIN. VGAM host target protein is therefore outlined by a broken line.

[68305] It is appreciated that VGAM1965 host target gene, herein designated VGAM HOST TARGET GENE, in fact represents a plurality of VGAM1965 host target genes. The mRNA of each one of this plurality of VGAM1965 host target genes comprises one or more host target binding sites, each having a nucleotide sequence which is at least partly complementary to VGAM1965 RNA, herein designated VGAM RNA, and which when bound by VGAM1965 RNA causes inhibition of translation of respective one or more VGAM1965 host target proteins.

[68306] It is further appreciated by one skilled in the art that the mode of translational inhibition illustrated by Fig. 1 with specific reference to translational inhibition exerted by VGAM1965 gene, herein designated VGAM GENE, on one or more VGAM1965 host target gene, herein designated VGAM HOST TARGET GENE, is in fact common to other

known non-viral miRNA genes. As mentioned hereinabove with reference to the background section, although a specific complementary binding site has been demonstrated only for some of the known miRNA genes (primarily Lin-4 and Let-7), all other recently discovered miRNA genes are also believed by those skilled in the art to modulate expression of other genes by complementary binding, although specific complementary binding sites of these other miRNA genes have not yet been found (Ruvkun G., `Perspective: Glimpses of a tiny RNA world`, Science 294,779 (2001)).

[68307] It is yet further appreciated that a function of VGAM1965 is inhibition of expression of host target genes, as part of a novel viral mechanism of attacking a host. Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of viral infection by Rana Tigrina Ranavirus. Specific functions, and accordingly utilities, of VGAM1965 correlate with, and may be deduced from, the identity of the host target genes which VGAM1965 binds and inhibits, and the function of these host target genes, as elaborated hereinbelow.

[68308] Nucleotide sequences of the VGAM1965 precursor RNA, herein designated VGAM PRECURSOR RNA, and of the

`diced` VGAM1965 RNA, herein designated VGAM RNA, and a schematic representation of the secondary folding of VGAM1965 folded precursor RNA, herein designated VGAM FOLDED PRECURSOR RNA, of VGAM1965 are further described hereinbelow with reference to Table 1.

[68309] Nucleotide sequences of host target binding sites, such as BINDING SITE-I, BINDING SITE-II and BINDING SITE-III of Fig. 1, found on VGAM1965 host target RNA, and schematic representation of the complementarity of each of these host target binding sites to VGAM1965 RNA, herein designated VGAM RNA, are described hereinbelow with reference to Table 2.

[68310] As mentioned hereinabove with reference to Fig. 1, a function of VGAM1965 gene, herein designated VGAM is inhibition of expression of VGAM1965 target genes. It is appreciated that specific functions, and accordingly utilities, of VGAM1965 correlate with, and may be deduced from, the identity of the target genes which VGAM1965 binds and inhibits, and the function of these target genes, as elaborated hereinbelow.

[68311] ATP-binding Cassette, Sub-family D (ALD), Member 4 (ABCD4, Accession NM_020323) is a VGAM1965 host target gene. ABCD4 BINDING SITE1 through ABCD4 BINDING

SITE4 are HOST TARGET binding sites found in untranslated regions of mRNA encoded by ABCD4, corresponding to HOST TARGET binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of ABCD4 BINDING SITE1 through ABCD4 BINDING SITE4, designated SEQ ID:21583, SEQ ID:21585, SEQ ID:21588 and SEQ ID:21591 respectively, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68312] A function of VGAM1965 is therefore inhibition of ATP-binding Cassette, Sub-family D (ALD), Member 4 (ABCD4, Accession NM_020323), a gene which Putative peroxisomal ATP binding cassette transporter. Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ABCD4. The function of ABCD4 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM1924.Acid Phosphatase, Testicular (ACPT, Accession NM_080790) is another VGAM1965 host target gene. ACPT BINDING SITE1 and ACPT BINDING SITE2 are HOST TARGET binding sites found in untranslated re-

gions of mRNA encoded by ACPT, corresponding to HOST TARGET binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of ACPT BINDING SITE1 and ACPT BINDING SITE2, designated SEQ ID:28049 and SEQ ID:35054 respectively, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68313] Another function of VGAM1965 is therefore inhibition of Acid Phosphatase, Testicular (ACPT, Accession NM_080790). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ACPT. Adenylate Cyclase 6 (ADCY6, Accession NM_015270) is another VGAM1965 host target gene. ADCY6 BINDING SITE1 and ADCY6 BINDING SITE2 are HOST TARGET binding sites found in untranslated regions of mRNA encoded by ADCY6, corresponding to HOST TARGET binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of ADCY6 BINDING SITE1 and ADCY6 BINDING SITE2, designated SEQ ID:17592 and SEQ ID:43182 respectively, to the nucleotide sequence of VGAM1965 RNA, herein desig-

nated VGAM RNA, also designated SEQ ID:4676.

[68314] Another function of VGAM1965 is therefore inhibition of Adenylate Cyclase 6 (ADCY6, Accession NM_015270), a gene which this a membrane-bound, ca(2+)-inhibitable adenylyl cyclase (by similarity). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ADCY6. The function of ADCY6 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM22.S-adenosylmethionine Decarboxylase 1 (AMD1, Accession NM_001634) is another VGAM1965 host target gene. AMD1 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by AMD1, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of AMD1 BINDING SITE, designated SEQ ID:7346, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68315] Another function of VGAM1965 is therefore inhibition of S-adenosylmethionine Decarboxylase 1 (AMD1, Accession

NM_001634), a gene which catalyzes the removal of the carboxylate group of S-adenosylmethionine in the polyamine biosynthesis pathway. Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with AMD1. The function of AMD1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM1016.Aminomethyltransferase (glycine cleavage system protein T) (AMT, Accession NM_000481) is another VGAM1965 host target gene. AMT BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by AMT, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of AMT BINDING SITE, designated SEQ ID:6091, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68316] Another function of VGAM1965 is therefore inhibition of Aminomethyltransferase (glycine cleavage system protein T) (AMT, Accession NM_000481). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment

of diseases and clinical conditions associated with AMT. Ankyrin Repeat Domain 3 (ANKRD3, Accession NM_020639) is another VGAM1965 host target gene. ANKRD3 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by ANKRD3, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of ANKRD3 BINDING SITE, designated SEQ ID:21798, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68317] Another function of VGAM1965 is therefore inhibition of Ankyrin Repeat Domain 3 (ANKRD3, Accession NM_020639). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ANKRD3. Adaptor-related Protein Complex 1, Beta 1 Subunit (AP1B1, Accession NM_001127) is another VGAM1965 host target gene. AP1B1 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by AP1B1, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2

illustrates the complementarity of the nucleotide sequences of AP1B1 BINDING SITE, designated SEQ ID:6798, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68318] Another function of VGAM1965 is therefore inhibition of Adaptor-related Protein Complex 1, Beta 1 Subunit (AP1B1, Accession NM_001127), a gene which plays a role in protein sorting in the late-golgi/trans-golgi network (tgn) and/or endosomes. Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with AP1B1. The function of AP1B1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM1048.Adenomatosis Polyposis Coli (APC, Accession NM_000038) is another VGAM1965 host target gene. APC BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by APC, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of APC BINDING SITE, designated SEQ ID:5479, to the nucleotide sequence of VGAM1965 RNA, herein designated

VGAM RNA, also designated SEQ ID:4676.

[68319] Another function of VGAM1965 is therefore inhibition of Adenomatosis Polyposis Coli (APC, Accession NM_000038). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with APC. APPL (Accession NM_012096) is another VGAM1965 host target gene. APPL BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by APPL, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of APPL BINDING SITE, designated SEQ ID:14401, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68320] Another function of VGAM1965 is therefore inhibition of APPL (Accession NM_012096). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with APPL. Archain 1 (ARCN1, Accession NM_001655) is another VGAM1965 host target gene. ARCN1 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by ARCN1, corresponding to a

HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of ARCN1 BINDING SITE, designated SEQ ID:7368, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68321] Another function of VGAM1965 is therefore inhibition of Archain 1 (ARCN1, Accession NM_001655), a gene which plays a fundamental role in eukaryotic cell biology. Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ARCN1. The function of ARCN1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM1226.ADP-ribosylation Factor 3 (ARF3, Accession NM_001659) is another VGAM1965 host target gene. ARF3 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by ARF3, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of ARF3 BINDING SITE, designated SEQ ID:7380, to the nucleotide sequence of

VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68322] Another function of VGAM1965 is therefore inhibition of ADP-ribosylation Factor 3 (ARF3, Accession NM_001659). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ARF3. Rho Guanine Nucleotide Exchange Factor (GEF) 7 (ARHGEF7, Accession NM_003899) is another VGAM1965 host target gene. ARHGEF7 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by ARHGEF7, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of ARHGEF7 BINDING SITE, designated SEQ ID:9986, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68323] Another function of VGAM1965 is therefore inhibition of Rho Guanine Nucleotide Exchange Factor (GEF) 7 (ARHGEF7, Accession NM_003899), a gene which acts as a rac1 guanine nucleotide exchange factor (gef) and can induce membrane ruffling. Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment

of diseases and clinical conditions associated with ARHGEF7. The function of ARHGEF7 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM297.ATP10C (Accession NM_024490) is another VGAM1965 host target gene. ATP10C BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by ATP10C, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of ATP10C BINDING SITE, designated SEQ ID:23688, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68324] Another function of VGAM1965 is therefore inhibition of ATP10C (Accession NM_024490), a gene which is phosphorylated in their intermediate state, drives uphill transport of ions across membranes. Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ATP10C. The function of ATP10C and its association with various diseases and clinical conditions, has been estab-

lished by previous studies, as described hereinabove with reference to VGAM801.ATPase, Class VI, Type 11A (ATP11A, Accession XM_085028) is another VGAM1965 host target gene. ATP11A BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by ATP11A, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of ATP11A BINDING SITE, designated SEQ ID:37799, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68325] Another function of VGAM1965 is therefore inhibition of ATPase, Class VI, Type 11A (ATP11A, Accession XM_085028). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ATP11A. ATPase, Ca++ Transporting, Type 2C, Member 1 (ATP2C1, Accession NM_014382) is another VGAM1965 host target gene. ATP2C1 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by ATP2C1, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III.

Table 2 illustrates the complementarity of the nucleotide sequences of ATP2C1 BINDING SITE, designated SEQ ID:15718, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68326] Another function of VGAM1965 is therefore inhibition of ATPase, Ca++ Transporting, Type 2C, Member 1 (ATP2C1, Accession NM_014382). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ATP2C1. ATPase, Class I, Type 8B, Member 2 (ATP8B2, Accession XM_036933) is another VGAM1965 host target gene. ATP8B2 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by ATP8B2, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of ATP8B2 BINDING SITE, designated SEQ ID:32519, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68327] Another function of VGAM1965 is therefore inhibition of ATPase, Class I, Type 8B, Member 2 (ATP8B2, Accession

XM_036933). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ATP8B2. Arginine Vasopressin Receptor 1A (AVPR1A, Accession NM_000706) is another VGAM1965 host target gene. AVPR1A BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by AVPR1A, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of AVPR1A BINDING SITE, designated SEQ ID:6376, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68328] Another function of VGAM1965 is therefore inhibition of Arginine Vasopressin Receptor 1A (AVPR1A, Accession NM_000706), a gene which mediates cell contraction and proliferation, platelet aggregation, release of coagulation factor, and glycogenolysis. Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with AVPR1A. The function of AVPR1A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with

reference to VGAM549.Beta-site APP-cleaving Enzyme (BACE, Accession NM_138971) is another VGAM1965 host target gene. BACE BINDING SITE1 and BACE BINDING SITE2 are HOST TARGET binding sites found in untranslated regions of mRNA encoded by BACE, corresponding to HOST TARGET binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of BACE BINDING SITE1 and BACE BINDING SITE2, designated SEQ ID:29089 and SEQ ID:14421 respectively, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68329] Another function of VGAM1965 is therefore inhibition of Beta-site APP-cleaving Enzyme (BACE, Accession NM_138971), a gene which is responsible for the proteolytic processing of the amyloid precursor protein. Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with BACE. The function of BACE and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM173.Bromodomain Adjacent to Zinc Finger Domain, 2B (BAZ2B, Accession

NM_013450) is another VGAM1965 host target gene. BAZ2B BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by BAZ2B, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of BAZ2B BINDING SITE, designated SEQ ID:15125, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68330] Another function of VGAM1965 is therefore inhibition of Bromodomain Adjacent to Zinc Finger Domain, 2B (BAZ2B, Accession NM_013450). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with BAZ2B. BCL2-like 2 (BCL2L2, Accession NM_004050) is another VGAM1965 host target gene. BCL2L2 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by BCL2L2, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of BCL2L2 BINDING SITE, designated SEQ ID:10264, to the nucleotide se-

quence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68331] Another function of VGAM1965 is therefore inhibition of BCL2-like 2 (BCL2L2, Accession NM_004050), a gene which promotes cell survival. Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with BCL2L2. The function of BCL2L2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM431.B-cell CLL/lymphoma 7A (BCL7A, Accession NM_020993) is another VGAM1965 host target gene. BCL7A BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by BCL7A, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of BCL7A BINDING SITE, designated SEQ ID:21993, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68332] Another function of VGAM1965 is therefore inhibition of B-cell CLL/lymphoma 7A (BCL7A, Accession NM_020993).

Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with BCL7A. BCRP2 (Accession XM_031102) is another VGAM1965 host target gene. BCRP2 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by BCRP2, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of BCRP2 BINDING SITE, designated SEQ ID:31274, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68333] Another function of VGAM1965 is therefore inhibition of BCRP2 (Accession XM_031102). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with BCRP2. Bone Morphogenetic Protein Receptor, Type IA (BMPR1A, Accession NM_004329) is another VGAM1965 host target gene. BMPR1A BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by BMPR1A, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III.

Table 2 illustrates the complementarity of the nucleotide sequences of BMPR1A BINDING SITE, designated SEQ ID:10529, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68334] Another function of VGAM1965 is therefore inhibition of Bone Morphogenetic Protein Receptor, Type IA (BMPR1A, Accession NM_004329). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with BMPR1A. Bassoon (presynaptic cytomatrix protein) (BSN, Accession NM_003458) is another VGAM1965 host target gene. BSN BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by BSN, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of BSN BINDING SITE, designated SEQ ID:9522, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68335] Another function of VGAM1965 is therefore inhibition of Bassoon (presynaptic cytomatrix protein) (BSN, Accession NM_003458), a gene which may be involved in cytomatrix

organization at the site of neurotransmitter release. Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with BSN. The function of BSN and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM638.B-cell Translocation Gene 1, Anti-proliferative (BTG1, Accession NM_001731) is another VGAM1965 host target gene. BTG1 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by BTG1, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of BTG1 BINDING SITE, designated SEQ ID:7466, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68336] Another function of VGAM1965 is therefore inhibition of B-cell Translocation Gene 1, Anti-proliferative (BTG1, Accession NM_001731), a gene which is a member of a new family of antiproliferative proteins. Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with BTG1.

The function of BTG1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM1296.Chromosome 11 Open Reading Frame 8 (C11orf8, Accession NM_001584) is another VGAM1965 host target gene. C11orf8 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by C11orf8, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of C11orf8 BINDING SITE, designated SEQ ID:7303, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68337] Another function of VGAM1965 is therefore inhibition of Chromosome 11 Open Reading Frame 8 (C11orf8, Accession NM_001584), a gene which May function in brain development. Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with C11orf8. The function of C11orf8 has been established by previous studies. Schwartz et al. (1994) identified a gene, which they designated 239FB, from the 11p13-p14 region between PAX6

(OMIM Ref. No. 607108) and FSHB (OMIM Ref. No. 136530) known as the WAGR region (Wilms tumor, aniridia, genitourinary abnormalities, and mental retardation). Schwartz et al. (1995) showed that the predicted 294-amino acid protein shares regions of significant identity to a gene identified in an 8.5-day chicken embryo library and 2 C. elegans loci of unknown function. The gene consists of 6 exons spanning about 87 kb. A CpG island occurs at the 5-prime end of the gene. Northern blots detected a 3.1-kb transcript in fetal brain RNA. The extensive conservation of sequence places 239FB among a group of proteins that contains ancient conserved regions (Green et al., 1993) and is, presumably, functionally important. See also 239AB (OMIM Ref. No. 602112), a related human gene identified in adult brain.

[68338] Full details of the abovementioned studies are described in the following publications, the disclosure of which are hereby incorporated by reference:

[68339] Green, P.; Lipman, D.; Hillier, L.; Waterston, R.; States, D.; Claverie, J.-M. : Ancient conserved regions in new gene sequences and the protein databases. Science 259: 1711-1716, 1993. ; and

[68340] Schwartz, F.; Eisenman, R.; Knoll, J.; Gessler, M.; Bruns, G.

: cDNA sequence, genomic organization, and evolutionary conservation of a novel gene from the WAGR region. Genomics 29: 526-.

[68341] Further studies establishing the function and utilities of C11orf8 are found in John Hopkins OMIM database record ID 600911, and in sited publications numbered 9607-9609 listed in the bibliography section hereinbelow, which are also hereby incorporated by reference.C1D (Accession NM_006333) is another VGAM1965 host target gene. C1D BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by C1D, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of C1D BINDING SITE, designated SEQ ID:13033, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68342] Another function of VGAM1965 is therefore inhibition of C1D (Accession NM_006333), a gene which is similar to murine C1D and may be a component of nuclear hormone receptor complexes. Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with C1D. The function

of C1D and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM78.Complement Component 5 Receptor 1 (C5a ligand) (C5R1, Accession NM_001736) is another VGAM1965 host target gene. C5R1 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by C5R1, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of C5R1 BINDING SITE, designated SEQ ID:7475, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68343] Another function of VGAM1965 is therefore inhibition of Complement Component 5 Receptor 1 (C5a ligand) (C5R1, Accession NM_001736), a gene which has a nonredundant function and is required for mucosal host cell defense in the lung. Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with C5R1. The function of C5R1 and its association with various diseases and clinical conditions, has been established by previous studies, as de-

scribed hereinabove with reference to VGAM484.Calumenin (CALU, Accession NM_001219) is another VGAM1965 host target gene. CALU BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by CALU, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of CALU BINDING SITE, designated SEQ ID:6887, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68344] Another function of VGAM1965 is therefore inhibition of Calumenin (CALU, Accession NM_001219), a gene which binds 7 calcium ions with a low affinity with unidtified function. Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CALU. The function of CALU and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM253.Caspase 3, Apoptosis-related Cysteine Protease (CASP3, Accession NM_032991) is another VGAM1965 host target gene. CASP3 BINDING SITE1 and CASP3 BINDING SITE2 are HOST

TARGET binding sites found in untranslated regions of mRNA encoded by CASP3, corresponding to HOST TARGET binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of CASP3 BINDING SITE1 and CASP3 BINDING SITE2, designated SEQ ID:26872 and SEQ ID:10541 respectively, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68345] Another function of VGAM1965 is therefore inhibition of Caspase 3, Apoptosis-related Cysteine Protease (CASP3, Accession NM_032991), a gene which is one apoptosis-related cysteine protease and is important for the initiation of apoptotic cell death. Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CASP3. The function of CASP3 has been established by previous studies. Nicholson et al. (1995) developed a potent peptide aldehyde inhibitor and showed that it prevents apoptotic events in vitro, suggesting that apopain/CPP32 is important for the initiation of apoptotic cell death.Apoptosis of human endothelial cells after growth factor deprivation is associated with rapid and dramatic upregulation of cyclin

A-associated cyclin-dependent kinase-2 (CDK2; 116953) activity. Levkau et al. (1998) showed that in apoptotic cells the carboxyl termini of the CDK inhibitors CDKN1A (OMIM Ref. No. 116899) and CDKN1B (OMIM Ref. No. 600778) are truncated by specific cleavage. The enzyme involved in this cleavage is CASP3 and/or a CASP3-like caspase. After cleavage, CDKN1A loses its nuclear localization sequence and exits the nucleus. Cleavage of CDKN1A and CDKN1B resulted in a substantial reduction in their association with nuclear cyclin-CDK2 complexes, leading to a dramatic induction of CDK2 activity. Dominant-negative CDK2, as well as a mutant CDKN1A resistant to caspase cleavage, partially suppressed apoptosis. These data suggested that CDK2 activation, through caspase-mediated cleavage of CDK inhibitors, may be instrumental in the execution of apoptosis following caspase activation. Animal model experiments lend further support to the function of CASP3. To analyze the function of CPP32 in vivo, Kuida et al. (1996) generated CPP32-deficient mice by homologous recombination. These mice, born at a frequency lower than expected by mendelian genetics, were smaller than their littermates and died at 1 to 3 weeks of age. Although their thymocytes retained normal susceptibility to various

apoptotic stimuli, brain development in CPP32-deficient mice was profoundly affected, and discernible by embryonic day 12, resulting in a variety of hypoplasias and disorganized cell deployment. These supernumerary cells were postmitotic and terminally differentiated by the postnatal stage. Pyknotic clusters at sites of major morphogenetic change during normal brain development were not observed in the mutant embryos, indicating increased apoptosis in the absence of CPP32. Thus, CPP32 was shown by Kuida et al. (1996) to play a critical role during morphogenetic cell death in the mammalian brain.

[68346] It is appreciated that the abovementioned animal model for CASP3 is acknowledged by those skilled in the art as a scientifically valid animal model, as can be further appreciated from the publications sited hereinbelow.

[68347] Full details of the abovementioned studies are described in the following publications, the disclosure of which are hereby incorporated by reference:

[68348] Kuida, K.; Zheng, T. S.; Na, S.; Kuan, C.; Yang, D.; Karasuyama, H.; Rakio, P.; Flavell, R. A. : Decreased apoptosis in the brain and premature lethality in CPP32-deficient mice. Nature 384: 368-372, 1996. ; and

[68349] Nicholson, D. W.; Ali, A.; Thornberry, N. A.; Vaillancourt, J.

P.; Ding, C. K.; Gallant, M.; Gareau, Y.; Griffin, P. R.; Labelle, M.; Lazebnik, Y. A.; Munday, N. A.; Raju, S. M.; Smulso.

[68350] Further studies establishing the function and utilities of CASP3 are found in John Hopkins OMIM database record ID 600636, and in sited publications numbered 7119-7121, 1211, 7122-7124, 462, 712 and 7128-7127 listed in the bibliography section hereinbelow, which are also hereby incorporated by reference.CD28 Antigen (Tp44) (CD28, Accession NM_006139) is another VGAM1965 host target gene. CD28 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by CD28, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of CD28 BINDING SITE, designated SEQ ID:12782, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68351] Another function of VGAM1965 is therefore inhibition of CD28 Antigen (Tp44) (CD28, Accession NM_006139), a gene which possibly involved in t-cell activation. Accordingly, utilities of VGAM1965 include diagnosis, prevention

and treatment of diseases and clinical conditions associated with CD28. The function of CD28 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM281.CD69 Antigen (p60, early T-cell activation antigen) (CD69, Accession NM_001781) is another VGAM1965 host target gene. CD69 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by CD69, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of CD69 BINDING SITE, designated SEQ ID:7539, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68352] Another function of VGAM1965 is therefore inhibition of CD69 Antigen (p60, early T-cell activation antigen) (CD69, Accession NM_001781), a gene which is involved in lymphocyte proliferation and functions as a signal transmitting receptor. Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CD69. The function of CD69 and its association with various diseases and clinical

conditions, has been established by previous studies, as described hereinabove with reference to VGAM1888.Cadherin 2, Type 1, N-cadherin (neuronal) (CDH2, Accession NM_001792) is another VGAM1965 host target gene. CDH2 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by CDH2, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of CDH2 BINDING SITE, designated SEQ ID:7543, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68353] Another function of VGAM1965 is therefore inhibition of Cadherin 2, Type 1, N-cadherin (neuronal) (CDH2, Accession NM_001792), a gene which may be involved in neuronal recognition mechanism. Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CDH2. The function of CDH2 has been established by previous studies. may be involved in neuronal recognition mechanism.

[68354] Full details of the abovementioned studies are described

in the following publications, the disclosure of which are hereby incorporated by reference:

[68355] Tanaka, H.; Shan, W.; Phillips, G. R.; Arndt, K.; Bozdagi, O.; Shapiro, L.; Huntley, G. W.; Benson, D. L.; Colman, D. R. : Molecular modification of N-cadherin in response to synaptic activity. Neuron 25: 93-107, 2000. ; and

[68356] Miyatani, S.; Copeland, N. G.; Gilbert, D. J.; Jenkins, N. A.; Takeichi, M. : Genomic structure and chromosomal mapping of the mouse N-cadherin gene. Proc. Nat. Acad. Sci. 89: 8443-844.

[68357] Further studies establishing the function and utilities of CDH2 are found in John Hopkins OMIM database record ID 114020, and in sited publications numbered 334 and 11647-11653 listed in the bibliography section hereinbelow, which are also hereby incorporated by reference.Cadherin 6, Type 2, K-cadherin (fetal kidney) (CDH6, Accession NM_004932) is another VGAM1965 host target gene. CDH6 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by CDH6, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of CDH6 BINDING SITE, designated SEQ ID:11377,

to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68358] Another function of VGAM1965 is therefore inhibition of Cadherin 6, Type 2, K-cadherin (fetal kidney) (CDH6, Accession NM_004932), a gene which is a calcium dependent cell adhesion protein. Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CDH6. The function of CDH6 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM60.Cyclin-dependent Kinase Inhibitor 1A (p21, Cip1) (CDKN1A, Accession NM_078467) is another VGAM1965 host target gene. CDKN1A BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by CDKN1A, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of CDKN1A BINDING SITE, designated SEQ ID:27784, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68359] Another function of VGAM1965 is therefore inhibition of

Cyclin-dependent Kinase Inhibitor 1A (p21, Cip1) (CDKN1A, Accession NM_078467), a gene which inhibits cyclin-kinase activity and probably serves as the effector of p53 cell cycle control. Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CDKN1A. The function of CDKN1A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM1912.Carcinoembryonic Antigen-related Cell Adhesion Molecule 6 (non-specific cross reacting antigen) (CEACAM6, Accession NM_002483) is another VGAM1965 host target gene. CEACAM6 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by CEACAM6, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of CEACAM6 BINDING SITE, designated SEQ ID:8311, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68360] Another function of VGAM1965 is therefore inhibition of Carcinoembryonic Antigen-related Cell Adhesion Molecule

6 (non-specific cross reacting antigen) (CEACAM6, Accession NM_002483), a gene which Non-specific cross reacting antigen (. Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CEACAM6. The function of CEACAM6 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM286.Centaurin, Delta 1 (CENTD1, Accession NM_139182) is another VGAM1965 host target gene. CENTD1 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by CENTD1, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of CENTD1 BINDING SITE, designated SEQ ID:29198, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68361] Another function of VGAM1965 is therefore inhibition of Centaurin, Delta 1 (CENTD1, Accession NM_139182), a gene which is nvolved in cell signaling/communication. Accordingly, utilities of VGAM1965 include diagnosis,

prevention and treatment of diseases and clinical conditions associated with CENTD1. The function of CENTD1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM445.CERD4 (Accession NM_012074) is another VGAM1965 host target gene. CERD4 BINDING SITE1 and CERD4 BINDING SITE2 are HOST TARGET binding sites found in untranslated regions of mRNA encoded by CERD4, corresponding to HOST TARGET binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of CERD4 BINDING SITE1 and CERD4 BINDING SITE2, designated SEQ ID:14352 and SEQ ID:14353 respectively, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68362] Another function of VGAM1965 is therefore inhibition of CERD4 (Accession NM_012074). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CERD4. Cholinergic Receptor, Nicotinic, Alpha Polypeptide 4 (CHRNA4, Accession NM_000744) is another VGAM1965 host target gene. CHRNA4 BINDING SITE is HOST TARGET

binding site found in the 3` untranslated region of mRNA encoded by CHRNA4, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of CHRNA4 BINDING SITE, designated SEQ ID:6399, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68363] Another function of VGAM1965 is therefore inhibition of Cholinergic Receptor, Nicotinic, Alpha Polypeptide 4 (CHRNA4, Accession NM_000744), a gene which binds acetylcholine and opens an ion-conducting channel across the plasma membrane. Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CHRNA4. The function of CHRNA4 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM1649.Cholinergic Receptor, Nicotinic, Alpha Polypeptide 5 (CHRNA5, Accession XM_007577) is another VGAM1965 host target gene. CHRNA5 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by CHRNA5, corresponding to a

HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of CHRNA5 BINDING SITE, designated SEQ ID:30057, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68364] Another function of VGAM1965 is therefore inhibition of Cholinergic Receptor, Nicotinic, Alpha Polypeptide 5 (CHRNA5, Accession XM_007577). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CHRNA5. Cholinergic Receptor, Nicotinic, Beta Polypeptide 2 (neuronal) (CHRNB2, Accession NM_000748) is another VGAM1965 host target gene. CHRNB2 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by CHRNB2, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of CHRNB2 BINDING SITE, designated SEQ ID:6403, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68365] Another function of VGAM1965 is therefore inhibition of

Cholinergic Receptor, Nicotinic, Beta Polypeptide 2 (neuronal) (CHRNB2, Accession NM_000748), a gene which mediates fast signal transmission at synapses. Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CHRNB2. The function of CHRNB2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM166.Cytoplasmic Linker Associated Protein 1 (CLASP1, Accession XM_037105) is another VGAM1965 host target gene. CLASP1 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by CLASP1, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of CLASP1 BINDING SITE, designated SEQ ID:32542, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68366] Another function of VGAM1965 is therefore inhibition of Cytoplasmic Linker Associated Protein 1 (CLASP1, Accession XM_037105), a gene which plays a role in the local

regulation of microtubule dynamics . Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CLASP1. The function of CLASP1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM298.Cytoplasmic Linker Associated Protein 2 (CLASP2, Accession XM_035453) is another VGAM1965 host target gene. CLASP2 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by CLASP2, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of CLASP2 BINDING SITE, designated SEQ ID:32271, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68367] Another function of VGAM1965 is therefore inhibition of Cytoplasmic Linker Associated Protein 2 (CLASP2, Accession XM_035453), a gene which is involved in the regional regulation of microtubule dynamics in motile fibroblasts. Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical condi-

tions associated with CLASP2. The function of CLASP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM897.Ceroid-lipofuscinosis, Neuronal 2, Late Infantile (Jansky-Bielschowsky disease) (CLN2, Accession NM_000391) is another VGAM1965 host target gene. CLN2 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by CLN2, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of CLN2 BINDING SITE, designated SEQ ID:5963, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68368] Another function of VGAM1965 is therefore inhibition of Ceroid-lipofuscinosis, Neuronal 2, Late Infantile (Jansky-Bielschowsky disease) (CLN2, Accession NM_000391). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CLN2. 2',3'-cyclic Nucleotide 3' Phosphodiesterase (CNP, Accession NM_033133) is another VGAM1965 host target gene. CNP

BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by CNP, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of CNP BINDING SITE, designated SEQ ID:26978, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68369] Another function of VGAM1965 is therefore inhibition of 2',3'-cyclic Nucleotide 3' Phosphodiesterase (CNP, Accession NM_033133), a gene which can link tubulin to membranes and may regulate cytoplasmic microtubule distribution. Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CNP. The function of CNP and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM443.Collagen, Type IV, Alpha 1 (COL4A1, Accession NM_001845) is another VGAM1965 host target gene. COL4A1 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by COL4A1, corresponding to a HOST TARGET binding site such as BINDING SITE I, BIND-

ING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of COL4A1 BINDING SITE, designated SEQ ID:7579, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68370] Another function of VGAM1965 is therefore inhibition of Collagen, Type IV, Alpha 1 (COL4A1, Accession NM_001845), a gene which is a member of a subfamily of collagen extracellular matrix proteins. Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with COL4A1. The function of COL4A1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM1645.Carboxypeptidase D (CPD, Accession NM_001304) is another VGAM1965 host target gene. CPD BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by CPD, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of CPD BINDING SITE, designated SEQ ID:6986, to the nucleotide sequence of VGAM1965 RNA, herein desig-

nated VGAM RNA, also designated SEQ ID:4676.

[68371] Another function of VGAM1965 is therefore inhibition of Carboxypeptidase D (CPD, Accession NM_001304), a gene which is a membrane-bound metalloprotease. Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CPD. The function of CPD and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM596.Carboxypeptidase N, Polypeptide 1, 50kD (CPN1, Accession NM_001308) is another VGAM1965 host target gene. CPN1 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by CPN1, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of CPN1 BINDING SITE, designated SEQ ID:6991, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68372] Another function of VGAM1965 is therefore inhibition of Carboxypeptidase N, Polypeptide 1, 50kD (CPN1, Accession NM_001308), a gene which cleaves basic amino acid

residues from the C terminal of peptides and proteins. Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CPN1. The function of CPN1 has been established by previous studies. Carboxypeptidase N (arginine carboxypeptidase, EC 3.4.17.3) cleaves basic amino acid residues from the C terminal of peptides and proteins. The enzyme plays a central role in regulating the biologic activity of peptides such as kinins and anaphylatoxins, and therefore is also known as kininase-1 and anaphylatoxin inactivator. Carboxypeptidase N is a 280-kD tetrameric complex consisting of 2 identical 83-kD regulatory subunits (OMIM Ref. No. 603104) and 2 identical 50-kD catalytic subunits Skidgel et al. (1988) and Gebhard et al. (1989) each purified carboxypeptidase N and determined a partial sequence of the catalytic subunit. By screening a liver cDNA library with an oligonucleotide probe based on the protein sequence, Gebhard et al. (1989) isolated a cDNA encoding the catalytic subunit, CPN1. The predicted protein is 458 amino acids long. Riley et al. (1998) stated that carboxypeptidase N is a member of the regulatory B-type carboxypeptidase group (see OMIM Ref. No. CPD, 603102).

[68373] Full details of the abovementioned studies are described in the following publications, the disclosure of which are hereby incorporated by reference:

[68374] Gebhard, W.; Schube, M.; Eulitz, M. : cDNA cloning and complete primary structure of the small, active subunit of human carboxypeptidase N (kininase 1). Eur. J. Biochem. 178: 603-607, 1989. ; and

[68375] Skidgel, R. A.; Bennett, C. D.; Schilling, J. W.; Tan, F.; Weerasinghe, D. K.; Erdos, E. G. : Amino acid sequence of the N-terminus and selected tryptic peptides of the active subunit of.

[68376] Further studies establishing the function and utilities of CPN1 are found in John Hopkins OMIM database record ID 603103, and in sited publications numbered 849 and 8493 listed in the bibliography section hereinbelow, which are also hereby incorporated by reference.CAMP Responsive Element Binding Protein-like 2 (CREBL2, Accession NM_001310) is another VGAM1965 host target gene. CREBL2 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by CREBL2, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide

sequences of CREBL2 BINDING SITE, designated SEQ ID:6996, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68377] Another function of VGAM1965 is therefore inhibition of CAMP Responsive Element Binding Protein-like 2 (CREBL2, Accession NM_001310). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CREBL2. Connective Tissue Growth Factor (CTGF, Accession NM_001901) is another VGAM1965 host target gene. CTGF BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by CTGF, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of CTGF BINDING SITE, designated SEQ ID:7625, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68378] Another function of VGAM1965 is therefore inhibition of Connective Tissue Growth Factor (CTGF, Accession NM_001901), a gene which promotes proliferation and differentiation of chondrocytes. Accordingly, utilities of

VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CTGF. The function of CTGF has been established by previous studies. Bradham et al. (1991) described a new mitogen produced by human umbilical vein endothelial cells, which they termed connective tissue growth factor. The protein, related to platelet-derived growth factor (see OMIM Ref. No. 190040), was predicted from its cDNA to be a 349-amino acid, 38-kD cysteine-rich secreted protein. Martinerie et al. (1992) identified a locus sharing homology with the nov protooncogene overexpressed in avian nephroblastoma and corresponding to the CTGF gene. They assigned the CTGF gene to 6q23.1 by a combination of study of mouse/human somatic cell hybrids and fluorescence in situ hybridization. They showed that CTGF is situated proximal to MYB (OMIM Ref. No. 189990). By analysis of Northern blots, Kim et al. (1997) found that CTGF is expressed as a 2.4-kb mRNA in a broad spectrum of human tissues. Sequence comparison revealed that CTGF belongs to a group known as the immediate-early genes, which are expressed after induction by growth factors or certain oncogenes (see OMIM Ref. No. 164958). The immediate-early genes have significant sequence ho-

mology to the insulin-like growth factor-binding proteins (OMIM Ref. No. IGFBPs) and contain the conserved N-terminal IGFBP motif (see OMIM Ref. No. IGFBP7, 602867). CTGF shares 28 to 38% amino acid identity with IGFBPs 1-6. Kim et al. (1997) demonstrated that CTGF specifically bound insulin-like growth factors (IGFs), although with relatively low affinity. They proposed that the immediate-early genes, together with IGFBP7, constitute a subfamily of IGFBP genes whose products bind IGFs with low affinity Animal model experiments lend further support to the function of CTGF. Nakanishi et al. (2001) generated transgenic mice that overexpressed CTGF under the control of the mouse type XI collagen (see OMIM Ref. No. 120280) promoter. Embryonic and neonatal growth occurred normally, but transgenic mice showed dwarfism within a few months after birth. X-ray analysis revealed that their bone density was decreased compared with that of normal mice. Nakanishi et al. (2001) concluded that overexpression of CTGF affects certain steps of endochondral ossification. In addition, the testes were much smaller than normal and fertility was affected in transgenic mice, indicating that CTGF may also regulate the embryonic development of the testis

[68379] It is appreciated that the abovementioned animal model for CTGF is acknowledged by those skilled in the art as a scientifically valid animal model, as can be further appreciated from the publications sited hereinbelow.

[68380] Full details of the abovementioned studies are described in the following publications, the disclosure of which are hereby incorporated by reference:

[68381] Martinerie, C.; Viegas-Pequignot, E.; Guenard, I.; Dutrillaux, B.; Nguyen, V. C.; Bernheim, A.; Perbal, B. : Physical mapping of human loci homologous to the chicken nov proto-oncogene. Oncogene 7: 2529-2534, 1992. ; and

[68382] Nakanishi, T.; Yamaai, T.; Asano, M.; Nawachi, K.; Suzuki, M.; Sugimoto, T.; Takigawa, M. : Overexpression of connective tissue growth factor/hypertrophic chondrocyte-specific gene produc.

[68383] Further studies establishing the function and utilities of CTGF are found in John Hopkins OMIM database record ID 121009, and in sited publications numbered 497 and 11958-11960 listed in the bibliography section hereinbelow, which are also hereby incorporated by reference.Chromosome X Open Reading Frame 6 (CXorf6, Accession NM_005491) is another VGAM1965 host target gene. CXorf6 BINDING SITE is HOST TARGET binding site

found in the 3` untranslated region of mRNA encoded by CXorf6, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of CXorf6 BINDING SITE, designated SEQ ID:11995, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68384] Another function of VGAM1965 is therefore inhibition of Chromosome X Open Reading Frame 6 (CXorf6, Accession NM_005491). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CXorf6. Deleted In Azoospermia (DAZ, Accession NM_004081) is another VGAM1965 host target gene. DAZ BINDING SITE1 through DAZ BINDING SITE3 are HOST TARGET binding sites found in untranslated regions of mRNA encoded by DAZ, corresponding to HOST TARGET binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of DAZ BINDING SITE1 through DAZ BINDING SITE3, designated SEQ ID:10283, SEQ ID:39946 and SEQ ID:39945 respectively, to the nucleotide sequence of VGAM1965 RNA,

herein designated VGAM RNA, also designated SEQ ID:4676.

[68385] Another function of VGAM1965 is therefore inhibition of Deleted In Azoospermia (DAZ, Accession NM_004081), a gene which may play a role in the germ-cell-specific patterns of RNA splicing and storage. Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DAZ. The function of DAZ and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM206.Dynactin 1 (p150, glued homolog, Drosophila) (DCTN1, Accession NM_004082) is another VGAM1965 host target gene. DCTN1 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by DCTN1, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of DCTN1 BINDING SITE, designated SEQ ID:10286, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68386] Another function of VGAM1965 is therefore inhibition of

Dynactin 1 (p150, glued homolog, Drosophila) (DCTN1, Accession NM_004082), a gene which is a microtubule-based biologic motor protein. Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DCTN1. The function of DCTN1 has been established by previous studies. Cytoplasmic dynein is a microtubule-based biologic motor protein. Holzbaur and Tokito (1996) noted that dyneins were initially discovered as enzymes that couple ATP hydrolysis to provide a force for cellular motility in eukaryotic cilia and flagella. A distinct cytoplasmic form of dynein (OMIM Ref. No. 600112) was subsequently characterized and thought to be responsible for the intracellular retrograde motility of vesicles and organelles along microtubules (Holzbaur and Vallee, 1994). A large macromolecular complex, dynactin, is required for the cytoplasmic dynein-driven movement of organelles along microtubules. Dynactin is composed of 10 distinct polypeptides of 150, 135, 62, 50, 45, 42, 37, 32, 27, and 24 kD, with a combined mass of 10 million daltons. The largest polypeptide of the dynactin complex, p150(Glued), binds directly to microtubules and to cytoplasmic dynein. The binding of dynactin to dynein is critical for neuronal

function, as antibodies that specifically disrupt this binding block vesicle motility along microtubules in extruded squid axoplasm. Holzbaur and Tokito (1996) stated that the dynein-dynactin interaction is probably a key component of the mechanism of axonal transport of vesicles and organelles. Further evidence for a critical role for dynactin in vivo comes from the analysis of mutations in the homologous gene in Drosophila. Mutant alleles of the 'glued' gene induced disruption of the neurons of the optic lobe and compound eye in heterozygotes; null mutations are lethal.

[68387] Full details of the abovementioned studies are described in the following publications, the disclosure of which are hereby incorporated by reference:

[68388] Holzbaur, E. L. F.; Tokito, M. K. : Localization of the DCTN1 gene encoding p150(Glued) to human chromosome 2p13 by fluorescence in situ hybridization. Genomics 31: 398-399, 1996. ; and

[68389] Holzbaur, E. L. F.; Vallee, R. B. : Dyneins: molecular structure and cellular function. Ann. Rev. Cell Biol. 10: 339-372, 1994.

[68390] Further studies establishing the function and utilities of DCTN1 are found in John Hopkins OMIM database record

ID 601143, and in sited publications numbered 2850-2855 listed in the bibliography section hereinbelow, which are also hereby incorporated by reference.DNA Fragmentation Factor, 40kDa, Beta Polypeptide (caspase-activated DNase) (DFFB, Accession XM_113366) is another VGAM1965 host target gene. DFFB BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by DFFB, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of DFFB BINDING SITE, designated SEQ ID:42244, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68391] Another function of VGAM1965 is therefore inhibition of DNA Fragmentation Factor, 40kDa, Beta Polypeptide (caspase-activated DNase) (DFFB, Accession XM_113366), a gene which induces DNA fragmentation and chromatin condensation during apoptosis. Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DFFB. The function of DFFB and its association with various diseases and clinical conditions, has been established by

previous studies, as described hereinabove with reference to VGAM74.Diacylglycerol Kinase, Gamma 90kDa (DGKG, Accession NM_001346) is another VGAM1965 host target gene. DGKG BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by DGKG, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of DGKG BINDING SITE, designated SEQ ID:7027, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68392] Another function of VGAM1965 is therefore inhibition of Diacylglycerol Kinase, Gamma 90kDa (DGKG, Accession NM_001346), a gene which may convert diacylglycerol to phosphatidic acid. Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DGKG. The function of DGKG and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM451.24-dehydrocholesterol Reductase (DHCR24, Accession NM_014762) is another VGAM1965 host target gene. DHCR24 BINDING SITE is HOST TARGET binding site

found in the 3` untranslated region of mRNA encoded by DHCR24, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of DHCR24 BINDING SITE, designated SEQ ID:16526, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68393] Another function of VGAM1965 is therefore inhibition of 24-dehydrocholesterol Reductase (DHCR24, Accession NM_014762), a gene which catalyzes the reduction of sterol intermediates. Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DHCR24. The function of DHCR24 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM235.Dihydrofolate Reductase (DHFR, Accession NM_000791) is another VGAM1965 host target gene. DHFR BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by DHFR, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2

illustrates the complementarity of the nucleotide sequences of DHFR BINDING SITE, designated SEQ ID:6446, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68394] Another function of VGAM1965 is therefore inhibition of Dihydrofolate Reductase (DHFR, Accession NM_000791), a gene which converts dihydrofolate into tetrahydrofolate. Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DHFR. The function of DHFR and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM826.Discs, Large (Drosophila) Homolog 3 (neuroendocrine-dlg) (DLG3, Accession NM_021120) is another VGAM1965 host target gene. DLG3 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by DLG3, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of DLG3 BINDING SITE, designated SEQ ID:22095, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68395] Another function of VGAM1965 is therefore inhibition of Discs, Large (Drosophila) Homolog 3 (neuroendocrine-dlg) (DLG3, Accession NM_021120), a gene which may interact with the cytoplasmic tail of the nmda receptor subunit nr2b . Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DLG3. The function of DLG3 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM782.Discs, Large (Drosophila) Homolog 5 (DLG5, Accession XM_096398) is another VGAM1965 host target gene. DLG5 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by DLG5, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of DLG5 BINDING SITE, designated SEQ ID:40342, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68396] Another function of VGAM1965 is therefore inhibition of Discs, Large (Drosophila) Homolog 5 (DLG5, Accession XM_096398), a gene which may transmit extracellular sig-

nals to inhibit cell proliferation. Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DLG5. The function of DLG5 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM444.Dihydropyrimidine Dehydrogenase (DPYD, Accession XM_017469) is another VGAM1965 host target gene. DPYD BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by DPYD, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of DPYD BINDING SITE, designated SEQ ID:30319, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68397] Another function of VGAM1965 is therefore inhibition of Dihydropyrimidine Dehydrogenase (DPYD, Accession XM_017469). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DPYD. Dopamine Receptor D2 (DRD2, Accession NM_000795) is another VGAM1965 host target gene. DRD2 BINDING SITE is HOST TARGET

binding site found in the 3` untranslated region of mRNA encoded by DRD2, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of DRD2 BINDING SITE, designated SEQ ID:6467, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68398] Another function of VGAM1965 is therefore inhibition of Dopamine Receptor D2 (DRD2, Accession NM_000795), a gene which has a key role in the control of movement. Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DRD2. The function of DRD2 has been established by previous studies. Bunzow et al. (1988) cloned the rat gene for D2 dopamine receptor. Grandy et al. (1989) cloned the human gene from a pituitary cDNA library. The deduced protein sequence is 96% identical to that of the rat receptor with 1 major difference: the human receptor contains an additional 29 amino acids in its putative third cytoplasmic loop. Southern blot analysis demonstrated the presence of only 1 human DRD2 gene. The coding sequence is interrupted by 6 introns. The ad-

ditional amino acids present in the human pituitary receptor are encoded by a single exon of 87 basepairs. Eubanks et al. (1992) found that the DRD2 gene extends over 270 kb and includes an intron of approximately 250 kb separating the putative first exon from the exons encoding the receptor protein. They prepared a physical map spanning more than 1.5 Mb of chromosome 11q23, which demonstrated that the neural cell adhesion molecule gene (NCAM; 116930) is located 150 kb 3-prime of the DRD2 gene and is transcribed from the same DNA strand. High resolution fluorescence in situ suppression hybridization using cosmid and YAC clones localized these genes between the APOA1 and STMY genes at the interface of 11q22.3 and 11q23.1. In situ hybridization studies showed, furthermore, that the DRD2/NCAM complex resides telomeric to the STMY1 gene and centromeric of the APOA1 gene. Animal model experiments lend further support to the function of DRD2. Balk et al. (1995) used homologous recombination to generate D2-receptor-deficient mice. Absence of D2 receptors led to animals that were akinetic and bradykinetic in behavioral tests and showed significantly reduced spontaneous movements. The phenotype resembled Parkinson disease.

Maldonado et al. (1997) studied the behavior of DRD2 knockout mice and showed that there was a total suppression of rewarding behavior with morphine. In contrast, these animals showed normal responses when food was used as a reward.

[68399] It is appreciated that the abovementioned animal model for DRD2 is acknowledged by those skilled in the art as a scientifically valid animal model, as can be further appreciated from the publications sited hereinbelow.

[68400] Full details of the abovementioned studies are described in the following publications, the disclosure of which are hereby incorporated by reference:

[68401] Eubanks, J. H.; Djabali, M.; Selleri, L.; Grandy, D. K.; Civelli, O.; McElligott, D. L.; Evans, G. A. : Structure and linkage of the D2 dopamine receptor and neural cell adhesion molecule genes on human chromosome 11q23. Genomics 14: 1010-1018, 1992. ; and

[68402] Maldonado, R.; Salardi, A.; Valverde, O.; Samad, T. A.; Roques, B. P.; Borrelli, E. : Absence of opiate rewarding effects in mice lacking dopamine D2 receptors. Nature 388: 586-589, 19.

[68403] Further studies establishing the function and utilities of DRD2 are found in John Hopkins OMIM database record ID

126450, and in sited publications numbered 11895-11899, 11886, 1190 and 11786-11804 listed in the bibliography section hereinbelow, which are also hereby incorporated by reference.Desmocollin 3 (DSC3, Accession NM_024423) is another VGAM1965 host target gene. DSC3 BINDING SITE1 and DSC3 BINDING SITE2 are HOST TARGET binding sites found in untranslated regions of mRNA encoded by DSC3, corresponding to HOST TARGET binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of DSC3 BINDING SITE1 and DSC3 BINDING SITE2, designated SEQ ID:23662 and SEQ ID:7651 respectively, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68404] Another function of VGAM1965 is therefore inhibition of Desmocollin 3 (DSC3, Accession NM_024423), a gene which is a component of intercellular desmosome junctions. Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DSC3. The function of DSC3 and its association with various diseases and clinical conditions, has been established by previous studies, as de-

scribed hereinabove with reference to VGAM230.Endothelin 3 (EDN3, Accession NM_000114) is another VGAM1965 host target gene. EDN3 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by EDN3, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of EDN3 BINDING SITE, designated SEQ ID:5582, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68405] Another function of VGAM1965 is therefore inhibition of Endothelin 3 (EDN3, Accession NM_000114). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with EDN3. Endothelin Receptor Type A (EDNRA, Accession XM_034331) is another VGAM1965 host target gene. EDNRA BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by EDNRA, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of EDNRA BINDING SITE, designated SEQ

ID:32057, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68406] Another function of VGAM1965 is therefore inhibition of Endothelin Receptor Type A (EDNRA, Accession XM_034331), a gene which binds endothelins, and induces intracellular calcium flux and arachidonic acid accumulation. Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with EDNRA. The function of EDNRA and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM441.Eukaryotic Translation Initiation Factor 1A (EIF1A, Accession XM_114147) is another VGAM1965 host target gene. EIF1A BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by EIF1A, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of EIF1A BINDING SITE, designated SEQ ID:42725, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ

ID:4676.

[68407] Another function of VGAM1965 is therefore inhibition of Eukaryotic Translation Initiation Factor 1A (EIF1A, Accession XM_114147), a gene which seems to be required for maximal rate of protein biosynthesis. Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with EIF1A. The function of EIF1A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM120.Eukaryotic Translation Initiation Factor 2, Subunit 3 Gamma, 52kDa (EIF2S3, Accession NM_001415) is another VGAM1965 host target gene. EIF2S3 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by EIF2S3, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of EIF2S3 BINDING SITE, designated SEQ ID:7113, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68408] Another function of VGAM1965 is therefore inhibition of Eukaryotic Translation Initiation Factor 2, Subunit 3

Gamma, 52kDa (EIF2S3, Accession NM_001415), a gene which functions in the early steps of protein synthesis. Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with EIF2S3. The function of EIF2S3 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM1254.V-erb-a Erythroblastic Leukemia Viral Oncogene Homolog 4 (avian) (ERBB4, Accession NM_005235) is another VGAM1965 host target gene. ERBB4 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by ERBB4, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of ERBB4 BINDING SITE, designated SEQ ID:11747, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68409] Another function of VGAM1965 is therefore inhibition of V-erb-a Erythroblastic Leukemia Viral Oncogene Homolog 4 (avian) (ERBB4, Accession NM_005235), a gene which may function in growth/differentiation of normal and

transformed cells. Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ERBB4. The function of ERBB4 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM381.Exostoses (multiple) 2 (EXT2, Accession NM_000401) is another VGAM1965 host target gene. EXT2 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by EXT2, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of EXT2 BINDING SITE, designated SEQ ID:5976, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68410] Another function of VGAM1965 is therefore inhibition of Exostoses (multiple) 2 (EXT2, Accession NM_000401). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with EXT2. Fatty-acid-Coenzyme A Ligase, Long-chain 3 (FACL3, Accession NM_004457) is another VGAM1965 host target gene. FACL3 BINDING SITE is HOST

TARGET binding site found in the 3` untranslated region of mRNA encoded by FACL3, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of FACL3 BINDING SITE, designated SEQ ID:10759, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68411] Another function of VGAM1965 is therefore inhibition of Fatty-acid-Coenzyme A Ligase, Long-chain 3 (FACL3, Accession NM_004457), a gene which is required for lipid synthesis and fatty acid degradation. Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FACL3. The function of FACL3 has been established by previous studies. See FACL1 (OMIM Ref. No. 152425) and FACL2 (OMIM Ref. No. 152426). An initial reaction in fatty acid metabolism in eukaryotic cells is activation of fatty acids catalyzed by acyl-CoA synthetase (ACS; EC 6.2.1.3). Fujino et al. (1996) identified a member of the ACS family by PCR of rat brain cDNAs using primers based on the conserved region of the ACS protein, and designated it ACS3. The 720-amino acid, approximately 80-kd rat pro-

tein preferentially utilizes myristate, laurate, arachidonate, and eicosapentaenoate, and is expressed primarily in brain. Minekura et al. (1997) used rat ACS3 cDNA as a probe to isolate a human ACS3 clone from a placental cDNA library. The predicted 720-amino acid human protein is 92% identical to that of rat ACS3. Minekura et al. (1997) used PCR of somatic cell hybrids and fluorescence in situ hybridization to map the ACS3 gene to 2q34-q35.

[68412] Full details of the abovementioned studies are described in the following publications, the disclosure of which are hereby incorporated by reference:

[68413] Fujino, T.; Kang, M.-J.; Suzuki, H.; Iijima, H.; Yamamoto, T. : Molecular characterization and expression of rat acyl-CoA synthetase 3. J. Biol. Chem. 271: 16748-16752, 1996. ; and

[68414] Minekura, H.; Fujino, T.; Kang, M.-J.; Fujita, T.; Endo, Y.; Yamamoto, T. T. : Human acyl-coenzyme A synthetase 3 cDNA and localization of its gene (ACS3) to chromosome band 2q34-q35. G.

[68415] Further studies establishing the function and utilities of FACL3 are found in John Hopkins OMIM database record ID 602371, and in sited publications numbered 8939-8940 listed in the bibliography section hereinbelow,

which are also hereby incorporated by reference.Ficolin (collagen/fibrinogen domain containing lectin) 2 (hucolin) (FCN2, Accession NM_015839) is another VGAM1965 host target gene. FCN2 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by FCN2, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of FCN2 BINDING SITE, designated SEQ ID:17955, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68416] Another function of VGAM1965 is therefore inhibition of Ficolin (collagen/fibrinogen domain containing lectin) 2 (hucolin) (FCN2, Accession NM_015839), a gene which is involved in phagocytosis of pathogens. Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FCN2. The function of FCN2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM493.Ferredoxin 1 (FDX1, Accession XM_016467) is another VGAM1965 host target gene.

FDX1 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by FDX1, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of FDX1 BINDING SITE, designated SEQ ID:30260, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68417] Another function of VGAM1965 is therefore inhibition of Ferredoxin 1 (FDX1, Accession XM_016467), a gene which tcytochromes P450 involved in steroid, vitamin D, and bile acid metabolism. Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FDX1. The function of FDX1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM203.Frizzled Homolog 7 (Drosophila) (FZD7, Accession NM_003507) is another VGAM1965 host target gene. FZD7 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by FZD7, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2

illustrates the complementarity of the nucleotide sequences of FZD7 BINDING SITE, designated SEQ ID:9599, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68418] Another function of VGAM1965 is therefore inhibition of Frizzled Homolog 7 (Drosophila) (FZD7, Accession NM_003507), a gene which enhances beta-catenin mediated signaling. Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FZD7. The function of FZD7 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM1063.G2A (Accession NM_013345) is another VGAM1965 host target gene. G2A BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by G2A, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of G2A BINDING SITE, designated SEQ ID:14989, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68419] Another function of VGAM1965 is therefore inhibition of

G2A (Accession NM_013345), a gene which may mediate some of the effects of extracellular atp on insulin secretion. Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with G2A. The function of G2A has been established by previous studies. G2A belongs to a subfamily of GPCRs that bind to various glycolipids. Kabarowski et al. (2001) determined that expression of G2A induces signaling responses after exposure to lysophosphatidylcholine (LPC) and to sphingosylphosphorylcholine (SPC), a high-affinity ligand for OGR1 (GPR68; 601404). Scatchard analysis indicated that G2A binds LPC with high affinity and SPC with low affinity. Western blot analysis showed that both LPC and SPC activated ERK mitogen-activated protein kinase (see OMIM Ref. No. MAP3K4; 602425) in G2A-expressing CHO cells. LPC, but not SPC, stimulated transmigration of G2A-expressing T lymphocytes. The authors proposed that G2A may act as a sensor of LPC levels at sites of inflammation to limit the expansion of tissue-infiltrating cells promoting overt autoimmune disease. Animal model experiments lend further support to the function of G2A. Le et al. (2001) showed that mice with a targeted disruption of G2a, apart

from enhanced in vitro T-cell proliferative responses, initially appeared normal. With age, however, they developed a progressive secondary lymphoid organ enlargement associated with an abnormal polyclonal lymphocyte expansion. Older animals succumbed to a late-onset autoimmune wasting syndrome

[68420] It is appreciated that the abovementioned animal model for G2A is acknowledged by those skilled in the art as a scientifically valid animal model, as can be further appreciated from the publications sited hereinbelow.

[68421] Full details of the abovementioned studies are described in the following publications, the disclosure of which are hereby incorporated by reference:

[68422] Kabarowski, J. H. S.; Zhu, K.; Le, L. Q.; Witte, O. N.; Xu, Y. : Lysophosphatidylcholine as a ligand for the immunoregulatory receptor G2A. Science 293: 702-705, 2001. ; and

[68423] Le, L. Q.; Kabarowski, J. H. S.; Weng, Z.; Satterthwaite, A. B.; Harvill, E. T.; Jensen, E. R.; Miller, J. F.; Witte, O. N. : Mice lacking the orphan G protein-coupled receptor G2A de.

[68424] Further studies establishing the function and utilities of G2A are found in John Hopkins OMIM database record ID 606167, and in sited publications numbered 6994 listed

in the bibliography section hereinbelow, which are also hereby incorporated by reference.GRB2-associated Binding Protein 2 (GAB2, Accession NM_012296) is another VGAM1965 host target gene. GAB2 BINDING SITE1 and GAB2 BINDING SITE2 are HOST TARGET binding sites found in untranslated regions of mRNA encoded by GAB2, corresponding to HOST TARGET binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of GAB2 BINDING SITE1 and GAB2 BINDING SITE2, designated SEQ ID:14655 and SEQ ID:27850 respectively, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68425] Another function of VGAM1965 is therefore inhibition of GRB2-associated Binding Protein 2 (GAB2, Accession NM_012296), a gene which act as adapters for transmitting various signals. Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GAB2. The function of GAB2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM53.GA Binding Protein Transcription Factor, Beta

Subunit 1, 53kDa (GABPB1, Accession NM_005254) is another VGAM1965 host target gene. GABPB1 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by GABPB1, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of GABPB1 BINDING SITE, designated SEQ ID:11762, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68426] Another function of VGAM1965 is therefore inhibition of GA Binding Protein Transcription Factor, Beta Subunit 1, 53kDa (GABPB1, Accession NM_005254), a gene which activates adenovirus E4 gene transcription. Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GABPB1. The function of GABPB1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM191.UDP-N-acetyl-alpha-D-galactosamine:polypeptide N-acetylgalactosaminyltransferase 3 (GalNAc-T3) (GALNT3, Accession NM_004482) is another VGAM1965

host target gene. GALNT3 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by GALNT3, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of GALNT3 BINDING SITE, designated SEQ ID:10805, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68427] Another function of VGAM1965 is therefore inhibition of UDP-N-acetyl-alpha-D-galactosamine:polypeptide N-acetylgalactosaminyltransferase 3 (GalNAc-T3) (GALNT3, Accession NM_004482), a gene which initiates O-glycosylation of serine and threonine residues. Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GALNT3. The function of GALNT3 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM1565.UDP-N-acetyl-alpha-D-galactosamine:polypeptide N-acetylgalactosaminyltransferase 7 (GalNAc-T7) (GALNT7, Accession NM_054110) is another VGAM1965

host target gene. GALNT7 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by GALNT7, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of GALNT7 BINDING SITE, designated SEQ ID:27652, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68428] Another function of VGAM1965 is therefore inhibition of UDP-N-acetyl-alpha-D-galactosamine:polypeptide N-acetylgalactosaminyltransferase 7 (GalNAc-T7) (GALNT7, Accession NM_054110). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GALNT7. Growth Arrest-specific 7 (GAS7, Accession NM_003644) is another VGAM1965 host target gene. GAS7 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by GAS7, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of GAS7 BINDING SITE, designated SEQ ID:9718,

to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68429] Another function of VGAM1965 is therefore inhibition of Growth Arrest-specific 7 (GAS7, Accession NM_003644), a gene which may play a role in promoting maturation and morphological differentiation of cerebellar neurons. Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GAS7. The function of GAS7 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM232.Glioblastoma Amplified Sequence (GBAS, Accession NM_001483) is another VGAM1965 host target gene. GBAS BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by GBAS, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of GBAS BINDING SITE, designated SEQ ID:7227, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68430] Another function of VGAM1965 is therefore inhibition of

Glioblastoma Amplified Sequence (GBAS, Accession NM_001483), a gene which might be involved in vesicular transport. Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GBAS. The function of GBAS and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM859.GEMIN5 (Accession XM_114471) is another VGAM1965 host target gene. GEMIN5 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by GEMIN5, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of GEMIN5 BINDING SITE, designated SEQ ID:42973, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68431] Another function of VGAM1965 is therefore inhibition of GEMIN5 (Accession XM_114471). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GEMIN5. Gamma-glutamyl Carboxylase (GGCX, Accession

NM_000821) is another VGAM1965 host target gene. GGCX BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by GGCX, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of GGCX BINDING SITE, designated SEQ ID:6482, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68432] Another function of VGAM1965 is therefore inhibition of Gamma-glutamyl Carboxylase (GGCX, Accession NM_000821). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GGCX. Gap Junction Protein, Beta 3, 31kDa (connexin 31) (GJB3, Accession NM_024009) is another VGAM1965 host target gene. GJB3 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by GJB3, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of GJB3 BINDING SITE, designated SEQ ID:23442, to the nucleotide sequence of VGAM1965 RNA, herein designated

VGAM RNA, also designated SEQ ID:4676.

[68433] Another function of VGAM1965 is therefore inhibition of Gap Junction Protein, Beta 3, 31kDa (connexin 31) (GJB3, Accession NM_024009). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GJB3. Guanine Nucleotide Binding Protein (G protein), Alpha Inhibiting Activity Polypeptide 1 (GNAI1, Accession NM_002069) is another VGAM1965 host target gene. GNAI1 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by GNAI1, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of GNAI1 BINDING SITE, designated SEQ ID:7842, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68434] Another function of VGAM1965 is therefore inhibition of Guanine Nucleotide Binding Protein (G protein), Alpha Inhibiting Activity Polypeptide 1 (GNAI1, Accession NM_002069), a gene which is involved as modulators or transducers in various transmembrane signaling systems. Accordingly, utilities of VGAM1965 include diagnosis,

prevention and treatment of diseases and clinical conditions associated with GNAI1. The function of GNAI1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM57.Guanine Nucleotide Binding Protein (G protein), Gamma 2 (GNG2, Accession XM_170743) is another VGAM1965 host target gene. GNG2 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by GNG2, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of GNG2 BINDING SITE, designated SEQ ID:45502, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68435] Another function of VGAM1965 is therefore inhibition of Guanine Nucleotide Binding Protein (G protein), Gamma 2 (GNG2, Accession XM_170743), a gene which is involved as a modulator or transducer in various transmembrane signaling systems. Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GNG2. The function of GNG2 has been established by previous studies. Modar-

ressi et al. (2000) identified GNG2 by differential display RT-PCR of normal testis RNA and RNA from the testis of infertile and azoospermic patients. The full-length cDNA, obtained by 5-prime RACE, encodes a deduced 71-amino acid protein that is 100% homologous with the bovine, mouse, and rat GNG2 proteins. RT-PCR revealed expression in adult testis, adrenals, brain, white blood cells, and lung, but no or undetectable expression in testis from infertile or azoospermic patients, or in adult liver, muscle, or prostate. PCR of fetal tissues revealed highest expression in sternum and brain, intermediate expression in limbs, stomach, intestine, and kidney, and lowest expression in testis, heart, spleen, and lung. High expression was also found in tumor tissues from thyroid and parotid glands, in a squamous cell carcinoma, and in a lymphoid cell line, with little detected in granulation tissue. Yu et al. (2001) independently cloned human GNG2 from a 22-week fetal liver cDNA library.

[68436] Full details of the abovementioned studies are described in the following publications, the disclosure of which are hereby incorporated by reference:

[68437] Modarressi, M. H.; Taylor, K. E.; Wolfe, J. : Cloning, characterization, and mapping of the gene encoding the hu-

man G protein gamma-2 subunit. Biochem. Biophys. Res. Commun. 272: 610-615, 2000. ; and

[68438] Yu, Y.; Zhang, C.; Zhou, G.; Wu, S.; Qu, X.; Wei, H.; Xing, G.; Dong, C.; Zhai, Y.; Wan, J.; Ouyang, S.; Li, L., Zhang, S.; Zhou, K.; Zhang, Y.; Wu, C.; He, F. : Gene expression profil.

[68439] Further studies establishing the function and utilities of GNG2 are found in John Hopkins OMIM database record ID 606981, and in sited publications numbered 5526-5528 listed in the bibliography section hereinbelow, which are also hereby incorporated by reference.Glypican 1 (GPC1, Accession NM_002081) is another VGAM1965 host target gene. GPC1 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by GPC1, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of GPC1 BINDING SITE, designated SEQ ID:7876, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68440] Another function of VGAM1965 is therefore inhibition of Glypican 1 (GPC1, Accession NM_002081), a gene which may play a role in growth control and differentation. Ac-

cordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GPC1. The function of GPC1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM125.G Protein-coupled Receptor 85 (GPR85, Accession NM_018970) is another VGAM1965 host target gene. GPR85 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by GPR85, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of GPR85 BINDING SITE, designated SEQ ID:21044, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68441] Another function of VGAM1965 is therefore inhibition of G Protein-coupled Receptor 85 (GPR85, Accession NM_018970). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GPR85. Glucocorticoid Receptor DNA Binding Factor 1 (GRLF1, Accession XM_085943) is another VGAM1965 host target gene.

GRLF1 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by GRLF1, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of GRLF1 BINDING SITE, designated SEQ ID:38417, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68442] Another function of VGAM1965 is therefore inhibition of Glucocorticoid Receptor DNA Binding Factor 1 (GRLF1, Accession XM_085943), a gene which inhibits transcription of the glucocorticoid receptor gene. Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GRLF1. The function of GRLF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM55.Glutamate Receptor, Metabotropic 6 (GRM6, Accession NM_000843) is another VGAM1965 host target gene. GRM6 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by GRM6, corresponding to a HOST TARGET

binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of GRM6 BINDING SITE, designated SEQ ID:6511, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68443] Another function of VGAM1965 is therefore inhibition of Glutamate Receptor, Metabotropic 6 (GRM6, Accession NM_000843). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GRM6. HCS (Accession NM_018947) is another VGAM1965 host target gene. HCS BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by HCS, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of HCS BINDING SITE, designated SEQ ID:21017, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68444] Another function of VGAM1965 is therefore inhibition of HCS (Accession NM_018947). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment

of diseases and clinical conditions associated with HCS. Huntingtin Interacting Protein 1 (HIP1, Accession NM_005338) is another VGAM1965 host target gene. HIP1 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by HIP1, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of HIP1 BINDING SITE, designated SEQ ID:11811, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68445] Another function of VGAM1965 is therefore inhibition of Huntingtin Interacting Protein 1 (HIP1, Accession NM_005338), a gene which is a membrane protein and interacts with huntingtin. Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with HIP1. The function of HIP1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM474.Heterogeneous Nuclear Ribonucleoprotein D-like (HNRPDL, Accession NM_005463) is another VGAM1965 host target gene. HNRPDL BINDING SITE is

HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by HNRPDL, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of HNRPDL BINDING SITE, designated SEQ ID:11955, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68446] Another function of VGAM1965 is therefore inhibition of Heterogeneous Nuclear Ribonucleoprotein D-like (HNRPDL, Accession NM_005463), a gene which binds to rna molecules that contain au-rich elements. Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with HNRPDL. The function of HNRPDL and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM144.Homeo Box B9 (HOXB9, Accession NM_024017) is another VGAM1965 host target gene. HOXB9 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by HOXB9, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III.

Table 2 illustrates the complementarity of the nucleotide sequences of HOXB9 BINDING SITE, designated SEQ ID:23448, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68447] Another function of VGAM1965 is therefore inhibition of Homeo Box B9 (HOXB9, Accession NM_024017). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with HOXB9. Histamine Receptor H1 (HRH1, Accession NM_000861) is another VGAM1965 host target gene. HRH1 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by HRH1, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of HRH1 BINDING SITE, designated SEQ ID:6527, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68448] Another function of VGAM1965 is therefore inhibition of Histamine Receptor H1 (HRH1, Accession NM_000861), a gene which stimulates the synthesis of inositol phosphate. Accordingly, utilities of VGAM1965 include diagnosis,

prevention and treatment of diseases and clinical conditions associated with HRH1. The function of HRH1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM766.Heat Shock 70kDa Protein 5 (glucose-regulated protein, 78kDa) (HSPA5, Accession NM_005347) is another VGAM1965 host target gene. HSPA5 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by HSPA5, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of HSPA5 BINDING SITE, designated SEQ ID:11822, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68449] Another function of VGAM1965 is therefore inhibition of Heat Shock 70kDa Protein 5 (glucose-regulated protein, 78kDa) (HSPA5, Accession NM_005347), a gene which is involved in the folding and assembly of proteins in the endoplasmic reticulum (ER). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with HSPA5.

The function of HSPA5 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM1782.Inducible T-cell Co-stimulator (ICOS, Accession NM_012092) is another VGAM1965 host target gene. ICOS BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by ICOS, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of ICOS BINDING SITE, designated SEQ ID:14392, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68450] Another function of VGAM1965 is therefore inhibition of Inducible T-cell Co-stimulator (ICOS, Accession NM_012092), a gene which forms homodimers and functions as an inducible T-cell co-stimulator. Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ICOS. The function of ICOS and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM18.Inhibitor of DNA Binding 3, Domi-

nant Negative Helix-loop-helix Protein (ID3, Accession XM_086357) is another VGAM1965 host target gene. ID3 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by ID3, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of ID3 BINDING SITE, designated SEQ ID:38612, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68451] Another function of VGAM1965 is therefore inhibition of Inhibitor of DNA Binding 3, Dominant Negative Helix-loop-helix Protein (ID3, Accession XM_086357), a gene which inhibits DNA-binding of E2A-containing complexes. Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ID3. The function of ID3 has been established by previous studies. Members of the ID family of helix-loop-helix (HLH) proteins lack a basic DNA-binding domain and inhibit transcription through formation of nonfunctional dimers that are incapable of binding to DNA. Ellmeier et al. (1992) isolated a novel human gene encoding a helix-loop-helix protein by molecu-

lar cloning of chromosome 1p36-specific CpG islands. Initially termed HEIR1, the ID3 gene was localized to the neuroblastoma consensus deletion region, 1p36.2-p36.12. Its predicted protein was 95.8% identical to the mouse HLH462 protein and had clear homology to the mouse Id and Drosophila emc proteins. The gene was expressed at high abundance in adult lung, kidney, and adrenal medulla, but not in adult brain. Despite prominent HEIR1 expression in adrenal medulla, which is a prime target for neuroblastomas, 10 of 12 neuroblastoma-derived cell lines showed very low levels of HEIR1 mRNA. Low HEIR1 expression was generally found in tumor cell lines with NMYC (OMIM Ref. No. 164840) overexpression, whereas the 2 cell lines displaying high HEIR1 levels did not overexpress NMYC. Mutually exclusive expression of the 2 genes was also found by in situ hybridization in developing mouse tissues, particularly in the forebrain neuroectoderm. Ellmeier et al. (1992) concluded that HEIR1 expression is reduced specifically in the majority of neuroblastomas and suggested an inverse correlation between HEIR1 and NMYC expression in these tumors and in embryonic development. ID3 is an inhibitor of E proteins, such as E2A (OMIM Ref. No. 147141). By Northern and

Western blot analysis, Kee et al. (2001) showed that transforming growth factor-beta (OMIM Ref. No. 190180) in mouse rapidly induced transient Id3 expression in B-lymphocyte precursors. This induction involved activation of the SMAD (see OMIM Ref. No. 602932) transcription factor pathway. Deed et al. (1994) reported a comparison of the ID3 gene with ID1 (OMIM Ref. No. 600349) and ID2 (OMIM Ref. No. 600386) that showed a highly conserved protein-coding gene organization consistent with evolution from a common ancestral gene. Animal model experiments lend further support to the function of ID3. Id proteins may control cell differentiation by interfering with DNA binding of transcription factors. Lyden et al. (1999) demonstrated that the targeted disruption of Id1 and Id3 in mice results in premature withdrawal of neuroblasts in the cell cycle and expression of neural-specific differentiation markers. Lyden et al. (1999) crossed Id1 +/- and Id3 +/- mice. Offspring lacking 1 to 3 Id alleles in any combination were indistinguishable from wildtype, but no animals lacking all 4 Id alleles were born. The Id1-Id3 double knockout mice displayed vascular malformations in forebrain and absence of branching and sprouting of blood vessels in the neuroectoderm. As angiogenesis both

in the brain and in tumors requires invasion of avascular tissue by endothelial cells, Lyden et al. (1999) examined Id knockout mice for their ability to support the growth of tumor xenografts. Three different tumors failed to grow and/or metastasize in Id1+/-Id3-/- mice, and any tumor growth present showed poor vascularization and extensive necrosis. Lyden et al. (1999) concluded that Id genes are required to maintain the timing of neuronal differentiation in the embryo and invasiveness of the vasculature. Because the Id genes are expressed at very low levels in adults, they make attractive targets for antiangiogenic drug design. Lyden et al. (1999) also concluded that the premature neuronal differentiation in Id1-Id3 double knockout mice indicates that ID1 or ID3 is required to block the precisely timed expression and activation of positively acting bHLH proteins during murine development. Pan et al. (1999) found that Id3-deficient mice had no overt abnormalities but had compromised humoral immunity. After immunization with T cell-dependent or T cell-independent antigens, the responses of Id3-deficient mice were attenuated and severely impaired, respectively. T-cell proliferative responses appeared to be intact, but IFNG expression may have been impaired. The defect in B-

cell proliferation could be rescued by ectopic expression of Id1.

[68452] It is appreciated that the abovementioned animal model for ID3 is acknowledged by those skilled in the art as a scientifically valid animal model, as can be further appreciated from the publications sited hereinbelow.

[68453] Full details of the abovementioned studies are described in the following publications, the disclosure of which are hereby incorporated by reference:

[68454] Kee, B. L.; Rivera, R. R.; Murre, C. : Id3 inhibits B lymphocyte progenitor growth and survival in response to TGF-beta. Nature Immun. 2: 242-247, 2001. ; and

[68455] Lyden, D.; Young, A. Z.; Zagzag, D.; Yan, W.; Gerald, W.; O'Reilly, R.; Bader, B. L.; Hynes, R. O.; Zhuang, Y.; Manova, K.; Benezra, R. : Id1 and Id3 are required for neurogenesis, angi.

[68456] Further studies establishing the function and utilities of ID3 are found in John Hopkins OMIM database record ID 600277, and in sited publications numbered 8421-842 and 10357 listed in the bibliography section hereinbelow, which are also hereby incorporated by reference.Inositol Hexaphosphate Kinase 1 (IHPK1, Accession XM_171045) is another VGAM1965 host target gene. IHPK1 BINDING

SITE1 and IHPK1 BINDING SITE2 are HOST TARGET binding sites found in untranslated regions of mRNA encoded by IHPK1, corresponding to HOST TARGET binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of IHPK1 BINDING SITE1 and IHPK1 BINDING SITE2, designated SEQ ID:45824 and SEQ ID:45825 respectively, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68457] Another function of VGAM1965 is therefore inhibition of Inositol Hexaphosphate Kinase 1 (IHPK1, Accession XM_171045), a gene which is a messenger molecule that releases calcium from intracellular stores. Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with IHPK1. The function of IHPK1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM1061.Interleukin 18 (interferon-gamma-inducing factor) (IL18, Accession NM_001562) is another VGAM1965 host target gene. IL18 BINDING SITE is HOST TARGET binding site found in the

5` untranslated region of mRNA encoded by IL18, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of IL18 BINDING SITE, designated SEQ ID:7292, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68458] Another function of VGAM1965 is therefore inhibition of Interleukin 18 (interferon-gamma-inducing factor) (IL18, Accession NM_001562), a gene which augments natural killer cell activity in spleen cells and stimulates interferon gamma production in t helper type i cells. Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with IL18. The function of IL18 has been established by previous studies. Okamura et al. (1995) cloned an interferon-gamma (IFNG; 147570)-inducing factor that augments natural killer (NK) cell activity in spleen cells. The gene encodes a precursor protein of 192 amino acids and a mature protein of 157 amino acids. Messenger RNAs for the gene, designated IGIF by them, and for interleukin-12 (IL12; OMIM Ref. No. 161560) were readily detected in Kupffer cells and activated macrophages. Recombinant

IGIF induced IFNG more potently than did IL12, which is also a NK-cell stimulatory factor. Administration of anti-IGIF antibodies prevented liver damage in mice inoculated with Propionibacterium acnes and challenged with lipopolysaccharide that induces toxic shock. Okamura et al. (1995) speculated that IGIF may be involved in the development of Th1 cells and also in mechanisms of tissue injury in inflammatory reactions. The mechanism underlying the differentiation of CD4+ T cells into functionally distinct Th1 and Th2 subsets had been incompletely understood. The interferon-gamma-inducing factor is also known as interleukin-18 (Sarvetnick, 1997). Rothe et al. (1997) concluded that IGIF expression is normally regulated in autoimmune NOD mice and is closely associated with diabetes development. They showed that the Igif gene maps to mouse chromosome 9 within the Idd2 interval and is therefore a candidate for the Idd2 diabetes susceptibility gene, a non-MHC gene associated with the acceleration of diabetes development Animal model experiments lend further support to the function of IL18. In transgenic mice, Konishi et al. (2002) showed that IL18 contributes to the spontaneous development of atopic dermatitis-like inflammatory skin lesions independently of

IgE/Stat6 (OMIM Ref. No. 601512) under specific pathogen-free conditions. Overrelease of IL18 initiated atopic dermatitis-like inflammation, which was accelerated by interleukin 1-alpha (IL1A; 147760).

[68459] It is appreciated that the abovementioned animal model for IL18 is acknowledged by those skilled in the art as a scientifically valid animal model, as can be further appreciated from the publications sited hereinbelow.

[68460] Full details of the abovementioned studies are described in the following publications, the disclosure of which are hereby incorporated by reference:

[68461] Okamura, H.; Tsutsui, H.; Komatsu, T.; Yutsudo, M.; Hakura, A.; Tanimoto, T.; Torigoe, K.; Okura, T.; Nukada, Y.; Hattori, K.; Akita, K.; Namba, M.; Tanabe, F.; Konishi, K.; Fukuda, S.; Kurimoto, M. : Cloning of a new cytokine that induces IFN-gamma production by T cells. Nature 378: 88-91, 1995. ; and

[68462] Konishi, H.; Tsutsui, H.; Murakami, T.; Yumikura-Futatsugi, S.; Yamanaka, K.; Tanaka, M.; Iwakura, Y.; Suzuki, N.; Takeda, K.; Akira, S.; Nakanishi, K.; Mizutani, H. : IL-18 contributes.

[68463] Further studies establishing the function and utilities of IL18 are found in John Hopkins OMIM database record ID

600953, and in sited publications numbered 8950-1320, 11688-1324, 1162, 943 and 11190 listed in the bibliography section hereinbelow, which are also hereby incorporated by reference.Interleukin 1 Receptor, Type I (IL1R1, Accession NM_000877) is another VGAM1965 host target gene. IL1R1 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by IL1R1, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of IL1R1 BINDING SITE, designated SEQ ID:6567, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68464] Another function of VGAM1965 is therefore inhibition of Interleukin 1 Receptor, Type I (IL1R1, Accession NM_000877), a gene which is a receptor for interleukin-1 alpha (il-1a), beta (il-1b), and interleukin-1 receptor antagonist protein (il-1ra). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with IL1R1. The function of IL1R1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference

to VGAM704.Interleukin 1 Receptor Accessory Protein-like 2 (IL1RAPL2, Accession NM_017416) is another VGAM1965 host target gene. IL1RAPL2 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by IL1RAPL2, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of IL1RAPL2 BINDING SITE, designated SEQ ID:18874, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68465] Another function of VGAM1965 is therefore inhibition of Interleukin 1 Receptor Accessory Protein-like 2 (IL1RAPL2, Accession NM_017416), a gene which may act in the development or function of the central nervous system. Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with IL1RAPL2. The function of IL1RAPL2 has been established by previous studies. The IL1 receptor family is composed of bona fide receptors (e.g., IL1R (OMIM Ref. No. 147810) and IL18R (OMIM Ref. No. 604494)), decoy receptors (e.g., IL1R2; 147811), signaling accessory receptors (e.g., IL1RAP (OMIM Ref. No. 602626)

and IL18RAP (OMIM Ref. No. 604509)), and structurally homologous orphan receptors. During searches of genomic databases with the IL1RAPL1 (OMIM Ref. No. 300206) cDNA sequence, Jin et al. (2000) identified a close homolog, which they designated IL1RAPL2, located on Xq22. They obtained a partial IL1RAPL2 cDNA by screening a human brain cDNA library. The cDNA encodes a deduced 658-amino acid protein that shares 65% identity with the IL1RAPL1 protein. Both proteins have novel C-terminal sequences not present in other members of the IL1 receptor family. The IL1RAPL2 gene is transcribed in a centromere-to-telomere direction. By searching genomic databases for sequences homologous to the Toll homology domain (THD), Sana et al. (2000) identified a cDNA encoding IL1RAPL2, which they termed IL1R9. Sequence analysis predicted that the 307-amino acid cytoplasmic tail of the 686-amino acid IL1RAPL2 protein contains an additional 120 to 130 residues beyond the THD, like IL1R8 (IL1RAPL1) but unlike other IL1Rs. Northern blot analysis revealed expression of a 5.5-kb transcript in fetal brain. Functional analysis determined that neither IL1RAPL1 nor IL1RAPL2 activate nuclear factor kappa-B (NFKB; OMIM Ref. No. 164011) except in the presence of

bona fide receptors but not orphan receptors. Evolutionary sequence analysis suggested that these orphan receptors probably form a functionally distinct subset of the IL1R superfamily. Jin et al. (2000) and Sana et al. (2000) suggested that, like IL1RAPL1, IL1RAPL2 may be the site of mutations causing nonspecific mental retardation.

[68466] Full details of the abovementioned studies are described in the following publications, the disclosure of which are hereby incorporated by reference:

[68467] Jin, H.; Gardner, R. J.; Viswesvaraiah, R.; Muntoni, F.; Roberts, R. G. : Two novel members of the interleukin-1 receptor gene family, one deleted in Xp22.1-Xp21.3 mental retardation. Europ. J. Hum. Genet. 8: 87-94, 2000. ; and

[68468] Sana, T. R.; Debets, R.; Timans, J. C.; Bazan, J. F.; Kastelein, R. A. : Computational identification, cloning, and characterization of IL1R9, a novel interleukin-1 receptor-like gene e.

[68469] Further studies establishing the function and utilities of IL1RAPL2 are found in John Hopkins OMIM database record ID 300277, and in sited publications numbered 899 and 10993 listed in the bibliography section hereinbelow, which are also hereby incorporated by refer-

ence.Interleukin 21 Receptor (IL21R, Accession NM_021798) is another VGAM1965 host target gene. IL21R BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by IL21R, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of IL21R BINDING SITE, designated SEQ ID:22355, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68470] Another function of VGAM1965 is therefore inhibition of Interleukin 21 Receptor (IL21R, Accession NM_021798), a gene which is involved in receptor mediated endocytosis and transduces the mitogenic signals of il-2. Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with IL21R. The function of IL21R and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM1940.Interleukin Enhancer Binding Factor 1 (ILF1, Accession NM_004514) is another VGAM1965 host target gene. ILF1 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA

encoded by ILF1, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of ILF1 BINDING SITE, designated SEQ ID:10844, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68471] Another function of VGAM1965 is therefore inhibition of Interleukin Enhancer Binding Factor 1 (ILF1, Accession NM_004514), a gene which binds to nfat-like motifs (purine-rich) in the hiv-1 long terminal repeat and in the il-2 promoter. Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ILF1. The function of ILF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM1446.Insulin Receptor Substrate 1 (IRS1, Accession NM_005544) is another VGAM1965 host target gene. IRS1 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by IRS1, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the com-

plementarity of the nucleotide sequences of IRS1 BINDING SITE, designated SEQ ID:12070, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68472] Another function of VGAM1965 is therefore inhibition of Insulin Receptor Substrate 1 (IRS1, Accession NM_005544), a gene which may mediate the control of various cellular processes by insulin. Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with IRS1. The function of IRS1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM281.Insulin Receptor Substrate 2 (IRS2, Accession XM_007095) is another VGAM1965 host target gene. IRS2 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by IRS2, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of IRS2 BINDING SITE, designated SEQ ID:30034, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68473] Another function of VGAM1965 is therefore inhibition of Insulin Receptor Substrate 2 (IRS2, Accession XM_007095), a gene which may mediate the control of various cellular processes by insulin. Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with IRS2. The function of IRS2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM1217.ISL1 Transcription Factor, LIM/homeodomain, (islet-1) (ISL1, Accession NM_002202) is another VGAM1965 host target gene. ISL1 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by ISL1, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of ISL1 BINDING SITE, designated SEQ ID:7958, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68474] Another function of VGAM1965 is therefore inhibition of ISL1 Transcription Factor, LIM/homeodomain, (islet-1) (ISL1, Accession NM_002202), a gene which binds to one

of the cis-acting domain of the insulin gene enhancer. Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ISL1. The function of ISL1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM464.Integrin, Alpha 5 (fibronectin receptor, alpha polypeptide) (ITGA5, Accession XM_028642) is another VGAM1965 host target gene. ITGA5 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by ITGA5, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of ITGA5 BINDING SITE, designated SEQ ID:30722, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68475] Another function of VGAM1965 is therefore inhibition of Integrin, Alpha 5 (fibronectin receptor, alpha polypeptide) (ITGA5, Accession XM_028642), a gene which is receptor for fibronectin and fibrinogen and recognizes the sequence r-g-d in its ligands. Accordingly, utilities of

VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ITGA5. The function of ITGA5 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM1220.Inositol 1,4,5-triphosphate Receptor, Type 1 (ITPR1, Accession NM_002222) is another VGAM1965 host target gene. ITPR1 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by ITPR1, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of ITPR1 BINDING SITE, designated SEQ ID:7987, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68476] Another function of VGAM1965 is therefore inhibition of Inositol 1,4,5-triphosphate Receptor, Type 1 (ITPR1, Accession NM_002222), a gene which couples cell membrane receptors to Ca2+ signal transduction pathways. Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ITPR1. The function of ITPR1 and its

association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM106.Jagged 1 (Alagille syndrome) (JAG1, Accession NM_000214) is another VGAM1965 host target gene. JAG1 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by JAG1, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of JAG1 BINDING SITE, designated SEQ ID:5711, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68477] Another function of VGAM1965 is therefore inhibition of Jagged 1 (Alagille syndrome) (JAG1, Accession NM_000214). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with JAG1. Janus Kinase 2 (a protein tyrosine kinase) (JAK2, Accession NM_004972) is another VGAM1965 host target gene. JAK2 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by JAK2, corresponding to a HOST TARGET binding site such as BINDING SITE I, BIND-

ING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of JAK2 BINDING SITE, designated SEQ ID:11417, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68478] Another function of VGAM1965 is therefore inhibition of Janus Kinase 2 (a protein tyrosine kinase) (JAK2, Accession NM_004972), a gene which tyrosine kinase of the non-receptor type, involved in interleukin 3 signal transduction. Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with JAK2. The function of JAK2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM445.JJAZ1 (Accession NM_015355) is another VGAM1965 host target gene. JJAZ1 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by JJAZ1, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of JJAZ1 BINDING SITE, designated SEQ ID:17652, to the nucleotide sequence of VGAM1965 RNA, herein

designated VGAM RNA, also designated SEQ ID:4676.

[68479] Another function of VGAM1965 is therefore inhibition of JJAZ1 (Accession NM_015355), a gene which is a zinc finger protein. Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with JJAZ1. The function of JJAZ1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM231.Potassium Voltage-gated Channel, Shaker-related Subfamily, Member 5 (KCNA5, Accession XM_006988) is another VGAM1965 host target gene. KCNA5 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by KCNA5, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of KCNA5 BINDING SITE, designated SEQ ID:30027, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68480] Another function of VGAM1965 is therefore inhibition of Potassium Voltage-gated Channel, Shaker-related Sub-

family, Member 5 (KCNA5, Accession XM_006988), a gene which mediates the voltage-dependent potassium ion permeability of excitable membranes. Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KCNA5. The function of KCNA5 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM413.Potassium Channel, Subfamily K, Member 6 (KCNK6, Accession NM_004823) is another VGAM1965 host target gene. KCNK6 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by KCNK6, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of KCNK6 BINDING SITE, designated SEQ ID:11240, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68481] Another function of VGAM1965 is therefore inhibition of Potassium Channel, Subfamily K, Member 6 (KCNK6, Accession NM_004823), a gene which is an inward rectifying potassium channel protein. Accordingly, utilities of

VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KCNK6. The function of KCNK6 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM1190.Potassium Voltage-gated Channel, Delayed-rectifier, Subfamily S, Member 2 (KCNS2, Accession XM_043106) is another VGAM1965 host target gene. KCNS2 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by KCNS2, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of KCNS2 BINDING SITE, designated SEQ ID:33895, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68482] Another function of VGAM1965 is therefore inhibition of Potassium Voltage-gated Channel, Delayed-rectifier, Subfamily S, Member 2 (KCNS2, Accession XM_043106), a gene which mediates the voltage-dependent potassium ion permeability of excitable membranes. Accordingly, utilities of VGAM1965 include diagnosis, prevention and

treatment of diseases and clinical conditions associated with KCNS2. The function of KCNS2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM419.Kinase Insert Domain Receptor (a type III receptor tyrosine kinase) (KDR, Accession NM_002253) is another VGAM1965 host target gene. KDR BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by KDR, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of KDR BINDING SITE, designated SEQ ID:8051, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68483] Another function of VGAM1965 is therefore inhibition of Kinase Insert Domain Receptor (a type III receptor tyrosine kinase) (KDR, Accession NM_002253). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KDR. KIAA0857 (Accession XM_039552) is another VGAM1965 host target gene. KIAA0857 BINDING SITE is HOST TARGET binding site found in the 3` untranslated

region of mRNA encoded by KIAA0857, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of KIAA0857 BINDING SITE, designated SEQ ID:33122, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68484] Another function of VGAM1965 is therefore inhibition of KIAA0857 (Accession XM_039552), a gene which is involved in cytoskeletal organization and cellular growth. Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0857. The function of KIAA0857 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM548.Kinesin Family Member 3B (KIF3B, Accession NM_004798) is another VGAM1965 host target gene. KIF3B BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by KIF3B, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide se-

quences of KIF3B BINDING SITE, designated SEQ ID:11219, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68485] Another function of VGAM1965 is therefore inhibition of Kinesin Family Member 3B (KIF3B, Accession NM_004798), a gene which is a microtubule-based anterograde translocator for membranous organelles. Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIF3B. The function of KIF3B and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM1017.Killer Cell Lectin-like Receptor Subfamily G, Member 1 (KLRG1, Accession NM_005810) is another VGAM1965 host target gene. KLRG1 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by KLRG1, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of KLRG1 BINDING SITE, designated SEQ ID:12393, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68486] Another function of VGAM1965 is therefore inhibition of Killer Cell Lectin-like Receptor Subfamily G, Member 1 (KLRG1, Accession NM_005810), a gene which plays a role in host defense;. Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KLRG1. The function of KLRG1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM648.Lysosomal-associated Membrane Protein 2 (LAMP2, Accession NM_013995) is another VGAM1965 host target gene. LAMP2 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LAMP2, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LAMP2 BINDING SITE, designated SEQ ID:15187, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68487] Another function of VGAM1965 is therefore inhibition of Lysosomal-associated Membrane Protein 2 (LAMP2, Accession NM_013995). Accordingly, utilities of VGAM1965

include diagnosis, prevention and treatment of diseases and clinical conditions associated with LAMP2. Leptin (obesity homolog, mouse) (LEP, Accession NM_000230) is another VGAM1965 host target gene. LEP BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LEP, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LEP BINDING SITE, designated SEQ ID:5741, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68488] Another function of VGAM1965 is therefore inhibition of Leptin (obesity homolog, mouse) (LEP, Accession NM_000230). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LEP. LIM Homeobox Protein 5 (LHX5, Accession NM_022363) is another VGAM1965 host target gene. LHX5 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by LHX5, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the

nucleotide sequences of LHX5 BINDING SITE, designated SEQ ID:22751, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68489] Another function of VGAM1965 is therefore inhibition of LIM Homeobox Protein 5 (LHX5, Accession NM_022363). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LHX5. Loss of Heterozygosity, 11, Chromosomal Region 2, Gene A (LOH11CR2A, Accession NM_014622) is another VGAM1965 host target gene. LOH11CR2A BINDING SITE1 and LOH11CR2A BINDING SITE2 are HOST TARGET binding sites found in untranslated regions of mRNA encoded by LOH11CR2A, corresponding to HOST TARGET binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOH11CR2A BINDING SITE1 and LOH11CR2A BINDING SITE2, designated SEQ ID:15987 and SEQ ID:15991 respectively, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68490] Another function of VGAM1965 is therefore inhibition of

Loss of Heterozygosity, 11, Chromosomal Region 2, Gene A (LOH11CR2A, Accession NM_014622). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOH11CR2A. Low Density Lipoprotein-related Protein 1 (alpha-2-macroglobulin receptor) (LRP1, Accession NM_002332) is another VGAM1965 host target gene. LRP1 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by LRP1, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LRP1 BINDING SITE, designated SEQ ID:8139, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68491] Another function of VGAM1965 is therefore inhibition of Low Density Lipoprotein-related Protein 1 (alpha-2-macroglobulin receptor) (LRP1, Accession NM_002332), a gene which is a recycling lipoprotein receptor with possible growth-modulating effects. Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LRP1. The function of LRP1 and its association

with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM885.Low Density Lipoprotein Receptor-related Protein 8, Apolipoprotein E Receptor (LRP8, Accession NM_033300) is another VGAM1965 host target gene. LRP8 BINDING SITE1 and LRP8 BINDING SITE2 are HOST TARGET binding sites found in untranslated regions of mRNA encoded by LRP8, corresponding to HOST TARGET binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LRP8 BINDING SITE1 and LRP8 BINDING SITE2, designated SEQ ID:27133 and SEQ ID:11009 respectively, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68492] Another function of VGAM1965 is therefore inhibition of Low Density Lipoprotein Receptor-related Protein 8, Apolipoprotein E Receptor (LRP8, Accession NM_033300), a gene which binds vldl and transports it into cells by endocytosis. Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LRP8. The function of LRP8 and its association with various diseases and clinical condi-

tions, has been established by previous studies, as described hereinabove with reference to VGAM191.Mitogen-activated Protein Kinase Kinase 1 (MAP2K1, Accession NM_002755) is another VGAM1965 host target gene. MAP2K1 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by MAP2K1, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of MAP2K1 BINDING SITE, designated SEQ ID:8633, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68493] Another function of VGAM1965 is therefore inhibition of Mitogen-activated Protein Kinase Kinase 1 (MAP2K1, Accession NM_002755), a gene which is a signaling intermediate, may take part in cell transformation. Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MAP2K1. The function of MAP2K1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM528.Mitogen-activated Protein Ki-

nase Kinase Kinase 7 Interacting Protein 2 (MAP3K7IP2, Accession NM_015093) is another VGAM1965 host target gene. MAP3K7IP2 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by MAP3K7IP2, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of MAP3K7IP2 BINDING SITE, designated SEQ ID:17488, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68494] Another function of VGAM1965 is therefore inhibition of Mitogen-activated Protein Kinase Kinase Kinase 7 Interacting Protein 2 (MAP3K7IP2, Accession NM_015093). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MAP3K7IP2. Mannan-binding Lectin Serine Protease 1 (C4/C2 activating component of Ra-reactive factor) (MASP1, Accession NM_139125) is another VGAM1965 host target gene. MASP1 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by MASP1, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE

II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of MASP1 BINDING SITE, designated SEQ ID:29160, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68495] Another function of VGAM1965 is therefore inhibition of Mannan-binding Lectin Serine Protease 1 (C4/C2 activating component of Ra-reactive factor) (MASP1, Accession NM_139125), a gene which a complement-dependent bactericidal factor . Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MASP1. The function of MASP1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM566.Meis1, Myeloid Ecotropic Viral Integration Site 1 Homolog 2 (mouse) (MEIS2, Accession NM_020149) is another VGAM1965 host target gene. MEIS2 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by MEIS2, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of MEIS2 BIND-

ING SITE, designated SEQ ID:21348, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68496] Another function of VGAM1965 is therefore inhibition of Meis1, Myeloid Ecotropic Viral Integration Site 1 Homolog 2 (mouse) (MEIS2, Accession NM_020149), a gene which may regulate gene expression and control cell differentiation. Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MEIS2. The function of MEIS2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM1244.Multiple Endocrine Neoplasia I (MEN1, Accession XM_167804) is another VGAM1965 host target gene. MEN1 BINDING SITE1 and MEN1 BINDING SITE2 are HOST TARGET binding sites found in untranslated regions of mRNA encoded by MEN1, corresponding to HOST TARGET binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of MEN1 BINDING SITE1 and MEN1 BINDING SITE2, designated SEQ ID:44846 and SEQ ID:44847 respectively, to the nucleotide sequence of VGAM1965 RNA,

herein designated VGAM RNA, also designated SEQ ID:4676.

[68497] Another function of VGAM1965 is therefore inhibition of Multiple Endocrine Neoplasia I (MEN1, Accession XM_167804). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MEN1. Mesenchyme Homeo Box 1 (MEOX1, Accession NM_004527) is another VGAM1965 host target gene. MEOX1 BINDING SITE1 and MEOX1 BINDING SITE2 are HOST TARGET binding sites found in untranslated regions of mRNA encoded by MEOX1, corresponding to HOST TARGET binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of MEOX1 BINDING SITE1 and MEOX1 BINDING SITE2, designated SEQ ID:10865 and SEQ ID:23309 respectively, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68498] Another function of VGAM1965 is therefore inhibition of Mesenchyme Homeo Box 1 (MEOX1, Accession NM_004527), a gene which plays a role in mesoderm induction and isomitogenesis, and sclerotomal differentia-

tion . Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MEOX1. The function of MEOX1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM1958.Maltase-glucoamylase (alpha-glucosidase) (MGAM, Accession XM_051351) is another VGAM1965 host target gene. MGAM BINDING SITE1 and MGAM BINDING SITE2 are HOST TARGET binding sites found in untranslated regions of mRNA encoded by MGAM, corresponding to HOST TARGET binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of MGAM BINDING SITE1 and MGAM BINDING SITE2, designated SEQ ID:35825 and SEQ ID:35828 respectively, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68499] Another function of VGAM1965 is therefore inhibition of Maltase-glucoamylase (alpha-glucosidase) (MGAM, Accession XM_051351), a gene which plays a role in the final steps of digestion of starch. Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment

of diseases and clinical conditions associated with MGAM. The function of MGAM and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM791.Matrix Metalloproteinase 11 (stromelysin 3) (MMP11, Accession NM_005940) is another VGAM1965 host target gene. MMP11 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by MMP11, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of MMP11 BINDING SITE, designated SEQ ID:12579, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68500] Another function of VGAM1965 is therefore inhibition of Matrix Metalloproteinase 11 (stromelysin 3) (MMP11, Accession NM_005940). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MMP11. MAX Binding Protein (MNT, Accession NM_020310) is another VGAM1965 host target gene. MNT BINDING SITE is HOST TARGET binding site found in the 3` untranslated region

of mRNA encoded by MNT, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of MNT BINDING SITE, designated SEQ ID:21568, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68501] Another function of VGAM1965 is therefore inhibition of MAX Binding Protein (MNT, Accession NM_020310). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MNT. Mucin 4, Tracheobronchial (MUC4, Accession NM_138298) is another VGAM1965 host target gene. MUC4 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by MUC4, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of MUC4 BINDING SITE, designated SEQ ID:28712, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68502] Another function of VGAM1965 is therefore inhibition of Mucin 4, Tracheobronchial (MUC4, Accession

NM_138298), a gene which may act as a ligand for ErbB2 mediated cell signalling. Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MUC4. The function of MUC4 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM1290.C-myc Binding Protein (MYCBP, Accession NM_012333) is another VGAM1965 host target gene. MYCBP BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by MYCBP, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of MYCBP BINDING SITE, designated SEQ ID:14725, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68503] Another function of VGAM1965 is therefore inhibition of C-myc Binding Protein (MYCBP, Accession NM_012333), a gene which binds c-Myc stimulating the activation of E-box-dependent transcription. Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment

of diseases and clinical conditions associated with MYCBP. The function of MYCBP and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM435.N-ethylmaleimide-sensitive Factor Attachment Protein, Beta (NAPB, Accession XM_046652) is another VGAM1965 host target gene. NAPB BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by NAPB, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of NAPB BINDING SITE, designated SEQ ID:34768, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68504] Another function of VGAM1965 is therefore inhibition of N-ethylmaleimide-sensitive Factor Attachment Protein, Beta (NAPB, Accession XM_046652). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with NAPB. Neurocalcin Delta (NCALD, Accession NM_032041) is another VGAM1965 host target gene. NCALD BINDING SITE is HOST TARGET binding site found in the 3` un-

translated region of mRNA encoded by NCALD, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of NCALD BINDING SITE, designated SEQ ID:25743, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68505] Another function of VGAM1965 is therefore inhibition of Neurocalcin Delta (NCALD, Accession NM_032041). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with NCALD. NADH Dehydrogenase (ubiquinone) 1 Alpha Subcomplex, 6, 14kDa (NDUFA6, Accession NM_002490) is another VGAM1965 host target gene. NDUFA6 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by NDUFA6, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of NDUFA6 BINDING SITE, designated SEQ ID:8313, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68506] Another function of VGAM1965 is therefore inhibition of NADH Dehydrogenase (ubiquinone) 1 Alpha Subcomplex, 6, 14kDa (NDUFA6, Accession NM_002490), a gene which transfers electrons from nadh to the respiratory chain. Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with NDUFA6. The function of NDUFA6 has been established by previous studies. See NDUFA2 (OMIM Ref. No. 602137). Dunbar et al. (1997) mapped the NDUFA6 gene to 21q22 by fluorescence in situ hybridization (FISH). However, by intron-based radiation hybrid mapping, Emahazion and Brookes (1998) assigned the NDUFA6 gene to 22q13.1. They stated that subsequent mapping studies with subfragments of the FISH-mapped recombinants of Dunbar et al. (1997) suggested chimerism and confirmed that the earlier FISH data were flawed. Ton et al. (1997) isolated human heart cDNAs encoding CI-B14 (OMIM Ref. No. NDUFA6) and 4 other complex I subunits.

[68507] Full details of the abovementioned studies are described in the following publications, the disclosure of which are hereby incorporated by reference:

[68508] Dunbar, D. R.; Shibasaki, Y.; Dobbie, L.; Andersson, B.; Brookes, A. J. : In situ hybridisation mapping of genomic

clones for five human respiratory chain complex I genes. Cytogenet. Cell Genet. 78: 21-24, 1997. ; and

[68509] Emahazion, T.; Brookes, A. J. : Mapping of the NDUFA2, NDUFA6, NDUFA7, NDUFB8, and NDUFS8 electron transport chain genes by intron based radiation hybrid mapping. Cytogenet. Cell Genet.

[68510] Further studies establishing the function and utilities of NDUFA6 are found in John Hopkins OMIM database record ID 602138, and in sited publications numbered 6283-6285 listed in the bibliography section hereinbelow, which are also hereby incorporated by reference.NEBL (Accession NM_006393) is another VGAM1965 host target gene. NEBL BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by NEBL, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of NEBL BINDING SITE, designated SEQ ID:13097, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68511] Another function of VGAM1965 is therefore inhibition of NEBL (Accession NM_006393). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment

of diseases and clinical conditions associated with NEBL. Nuclear Factor I/A (NFIA, Accession XM_046827) is another VGAM1965 host target gene. NFIA BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by NFIA, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of NFIA BINDING SITE, designated SEQ ID:34843, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68512] Another function of VGAM1965 is therefore inhibition of Nuclear Factor I/A (NFIA, Accession XM_046827). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with NFIA. Neuro-oncological Ventral Antigen 1 (NOVA1, Accession NM_006489) is another VGAM1965 host target gene. NOVA1 BINDING SITE1 and NOVA1 BINDING SITE2 are HOST TARGET binding sites found in untranslated regions of mRNA encoded by NOVA1, corresponding to HOST TARGET binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of

NOVA1 BINDING SITE1 and NOVA1 BINDING SITE2, designated SEQ ID:13219 and SEQ ID:8350 respectively, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68513] Another function of VGAM1965 is therefore inhibition of Neuro-oncological Ventral Antigen 1 (NOVA1, Accession NM_006489), a gene which may regulate rna splicing or metabolism in a specific subset of developing neurons. Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with NOVA1. The function of NOVA1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM521.Neuropeptide Y Receptor Y1 (NPY1R, Accession NM_000909) is another VGAM1965 host target gene. NPY1R BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by NPY1R, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of NPY1R BINDING SITE, designated SEQ ID:6608, to the nucleotide sequence of VGAM1965 RNA, herein

designated VGAM RNA, also designated SEQ ID:4676.

[68514] Another function of VGAM1965 is therefore inhibition of Neuropeptide Y Receptor Y1 (NPY1R, Accession NM_000909), a gene which stimulates intracellular calcium flux and signals through an inhibitory G-protein. Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with NPY1R. The function of NPY1R and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM1588.Neuronal Cell Adhesion Molecule (NRCAM, Accession NM_005010) is another VGAM1965 host target gene. NRCAM BINDING SITE1 and NRCAM BINDING SITE2 are HOST TARGET binding sites found in untranslated regions of mRNA encoded by NRCAM, corresponding to HOST TARGET binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of NRCAM BINDING SITE1 and NRCAM BINDING SITE2, designated SEQ ID:11453 and SEQ ID:11454 respectively, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68515] Another function of VGAM1965 is therefore inhibition of Neuronal Cell Adhesion Molecule (NRCAM, Accession NM_005010), a gene which functions as a cell surface protein and belongs to the immunoglobulin superfamily. Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with NRCAM. The function of NRCAM and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM268.Nuclear Respiratory Factor 1 (NRF1, Accession XM_011548) is another VGAM1965 host target gene. NRF1 BINDING SITE1 and NRF1 BINDING SITE2 are HOST TARGET binding sites found in untranslated regions of mRNA encoded by NRF1, corresponding to HOST TARGET binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of NRF1 BINDING SITE1 and NRF1 BINDING SITE2, designated SEQ ID:30190 and SEQ ID:8378 respectively, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68516] Another function of VGAM1965 is therefore inhibition of Nuclear Respiratory Factor 1 (NRF1, Accession

XM_011548), a gene which is a basic leucine zipper (bZIP) transcriptional activator and involved in the regulation of genes for EIF2A and respiratory subunits. Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with NRF1. The function of NRF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM1314.Oxidative-stress Responsive 1 (OSR1, Accession NM_005109) is another VGAM1965 host target gene. OSR1 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by OSR1, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of OSR1 BINDING SITE, designated SEQ ID:11592, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68517] Another function of VGAM1965 is therefore inhibition of Oxidative-stress Responsive 1 (OSR1, Accession NM_005109), a gene which mediats stress-activated signals. Accordingly, utilities of VGAM1965 include diagno-

sis, prevention and treatment of diseases and clinical conditions associated with OSR1. The function of OSR1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM538.Platelet-activating Factor Acetylhydrolase, Isoform Ib, Alpha Subunit 45kDa (PAFAH1B1, Accession NM_000430) is another VGAM1965 host target gene. PAFAH1B1 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by PAFAH1B1, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of PAFAH1B1 BINDING SITE, designated SEQ ID:6014, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68518] Another function of VGAM1965 is therefore inhibition of Platelet-activating Factor Acetylhydrolase, Isoform Ib, Alpha Subunit 45kDa (PAFAH1B1, Accession NM_000430). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PAFAH1B1. Paired Box Gene 5 (B-cell

lineage specific activator protein) (PAX5, Accession NM_016734) is another VGAM1965 host target gene. PAX5 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by PAX5, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of PAX5 BINDING SITE, designated SEQ ID:18791, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68519] Another function of VGAM1965 is therefore inhibition of Paired Box Gene 5 (B-cell lineage specific activator protein) (PAX5, Accession NM_016734), a gene which plays a role in B-cell differentiation, neural development and spermatogenesis. Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PAX5. The function of PAX5 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM1151.Protocadherin 11 X-linked (PCDH11X, Accession NM_032967) is another VGAM1965 host target gene. PCDH11X BINDING SITE is HOST TARGET binding site

found in the 3` untranslated region of mRNA encoded by PCDH11X, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of PCDH11X BINDING SITE, designated SEQ ID:26782, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68520] Another function of VGAM1965 is therefore inhibition of Protocadherin 11 X-linked (PCDH11X, Accession NM_032967), a gene which is thought to play a fundamental role in cell-cell recognition essential for the segmental development and function of the central nervous system. Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PCDH11X. The function of PCDH11X and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM433.Phosphatidylcholine Transfer Protein (PCTP, Accession NM_021213) is another VGAM1965 host target gene. PCTP BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by

PCTP, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of PCTP BINDING SITE, designated SEQ ID:22194, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68521] Another function of VGAM1965 is therefore inhibition of Phosphatidylcholine Transfer Protein (PCTP, Accession NM_021213), a gene which catalyzes the transfer of phosphatidylcholine between membranes (by similarity). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PCTP. The function of PCTP and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM1396.Phosphodiesterase 4C, CAMP-specific (phosphodiesterase E1 dunce homolog, Drosophila) (PDE4C, Accession NM_000923) is another VGAM1965 host target gene. PDE4C BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by PDE4C, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complemen-

tarity of the nucleotide sequences of PDE4C BINDING SITE, designated SEQ ID:6635, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68522] Another function of VGAM1965 is therefore inhibition of Phosphodiesterase 4C, CAMP-specific (phosphodiesterase E1 dunce homolog, Drosophila) (PDE4C, Accession NM_000923), a gene which is a cAMP-specific phosphodiesterase and may be a protein involved in learning and memory. Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PDE4C. The function of PDE4C has been established by previous studies. Milatovich et al. (1994) applied Southern analyses of somatic cell hybrid lines and of recombinant inbred mouse strains, as well as fluorescence chromosomal in situ hybridization (FISH), to map 4 'dunce-like' cAMP-specific nucleotide phosphodiesterase genes in human and mouse. DPDE1 (also symbolized PDE4C) was assigned to human chromosome 19 and mouse chromosome 8. DPDE2 (also symbolized PDE4A; 600126) was also assigned to human chromosome 19 but to mouse chromosome 9. DPDE3 (also symbolized PDE4D; 600129) was assigned to human 5q12

and mouse chromosome 13. DPDE4 (also symbolized PDE4B; 600127) was assigned to human 1p31 and mouse chromosome 4. By fluorescence in situ hybridization, Sullivan et al. (1999) localized the PDE4C gene to 19p13.1. They found that the PDE4C gene spans at least 38 kb, consists of at least 18 exons, and contains the marker D19S212 within an intron. Comparison of the published human PDE4C cDNA sequences with those of the genomic DNA identified 4 alternatively spliced exons and the possibility that the PDE4C locus contains at least 3 alternative promoters. The cosmids containing PDE4C also contained the genes for the growth regulatory transcription factor JUND (OMIM Ref. No. 165162), and the mini guanine nucleotide regulatory protein RAB3A (OMIM Ref. No. 179490). RAB3A was shown to consist of 5 exons spanning 7.9 kb, while the JUND gene was found to contain no introns. Analysis of cosmids containing PDE4C, JUND, and RAB3A showed that 27 kb separate JUND and PDE4C, while only 3.7 kb separate PDE4C and RAB3A. The 3 genes share the same orientation of transcription and are arranged in the 5-prime/3-prime order as follows: JUND--PDE4C--RAB3A--tel.

[68523] Full details of the abovementioned studies are described

in the following publications, the disclosure of which are hereby incorporated by reference:

[68524] Milatovich, A.; Bolger, G.; Michaeli, T.; Francke, U. : Chromosome localizations of genes for five cAMP-specific phosphodiesterases in man and mouse. Somat. Cell Molec. Genet. 20: 75-86, 1994. ; and

[68525] Sullivan, M.; Olsen, A. S.; Houslay, M. D. : Genomic organisation of the human cyclic AMP-specific phosphodiesterase PDE4C gene and its chromosomal localisation to 19p13.1, between RAB3A.

[68526] Further studies establishing the function and utilities of PDE4C are found in John Hopkins OMIM database record ID 600128, and in sited publications numbered 488 and 12445 listed in the bibliography section hereinbelow, which are also hereby incorporated by reference.Platelet-derived Growth Factor Receptor, Beta Polypeptide (PDGFRB, Accession XM_038350) is another VGAM1965 host target gene. PDGFRB BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by PDGFRB, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of PDGFRB

BINDING SITE, designated SEQ ID:32817, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68527] Another function of VGAM1965 is therefore inhibition of Platelet-derived Growth Factor Receptor, Beta Polypeptide (PDGFRB, Accession XM_038350), a gene which Platelet-derived growth factor receptor beta chain; tyrosine kinase receptor. Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PDGFRB. The function of PDGFRB and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM125.Phospholipase A2, Group IID (PLA2G2D, Accession NM_012400) is another VGAM1965 host target gene. PLA2G2D BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by PLA2G2D, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of PLA2G2D BINDING SITE, designated SEQ ID:14774, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ

ID:4676.

[68528] Another function of VGAM1965 is therefore inhibition of Phospholipase A2, Group IID (PLA2G2D, Accession NM_012400), a gene which is involved in phospholipid digestion, remodeling of cell membranes, and host defense, as well as pathophysiologic processes. Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PLA2G2D. The function of PLA2G2D and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM74.PPAR Binding Protein (PPARBP, Accession NM_004774) is another VGAM1965 host target gene. PPARBP BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by PPARBP, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of PPARBP BINDING SITE, designated SEQ ID:11164, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68529] Another function of VGAM1965 is therefore inhibition of

PPAR Binding Protein (PPARBP, Accession NM_004774), a gene which interacts with thyroid hormone receptors to regulate nuclear receptor-mediated transcription; binds dna and p53 protein. Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PPARBP. The function of PPARBP has been established by previous studies. By immunoscreening a human B-lymphoma cell cDNA expression library with the anti-p53 (see OMIM Ref. No. TP53; 191170) monoclonal antibody PAb1801, Drane et al. (1997) identified PPARBP, which they called RB18A for 'recognized by PAb1801 monoclonal antibody.' The predicted 1,566-amino acid RB18A protein contains several potential nuclear localization signals, 13 potential N-glycosylation sites, and a high number of potential phosphorylation sites. Despite sharing common antigenic determinants with p53, RB18A does not show significant nucleotide or amino acid sequence similarity with p53. Whereas the calculated molecular mass of RB18A is 166 kD, the apparent mass of recombinant RB18A was 205 kD by SDS-PAGE analysis. Drane et al. (1997) demonstrated that RB18A shares functional properties with p53, including DNA binding, p53 binding, and self-oligomerization.

Furthermore, RB18A was able to activate the sequence-specific binding of p53 to DNA, which was induced through an unstable interaction between both proteins. Northern blot analysis of human tissues detected an 8.5-kb RB18A transcript in all tissues examined except kidney, with highest expression in heart. Animal model experiments lend further support to the function of PPARBP. Ito et al. (2000) generated mouse mutants with targeted disruption of the Trap220 gene. The null mutants died during an early gestational stage with heart failure and exhibited impaired neuronal development with extensive apoptosis. Primary embryonic fibroblasts derived from null mutants showed impaired cell cycle regulation and a prominent decrease of thyroid hormone receptor (see OMIM Ref. No. 190160) function that was restored by ectopic Trap220; no defect in activation by Gal4-RARA, Gal4-RXRA, p53, or Gal4-VP16 (see OMIM Ref. No. 300019) was detected. Haploinsufficient mice showed growth retardation, pituitary hypothyroidism, and widely impaired transcription in certain organs. The results indicated that TRAP220 is essential for a wide range of physiologic processes and that it also has gene- and activator-selective functions.

[68530] It is appreciated that the abovementioned animal model

for PPARBP is acknowledged by those skilled in the art as a scientifically valid animal model, as can be further appreciated from the publications sited hereinbelow.

[68531] Full details of the abovementioned studies are described in the following publications, the disclosure of which are hereby incorporated by reference:

[68532] Drane, P.; Barel, M.; Balbo, M.; Frade, R. : Identification of RB18A, a 205 kDa new p53 regulatory protein which shares antigenic and functional properties with p53. Oncogene 15: 3013-3024, 1997. ; and

[68533] Ito, M.; Yuan, C.-X.; Okano, H. J.; Darnell, R. B.; Roeder, R. G. : Involvement of the TRAP220 component of the TRAP/SMCC coactivator complex in embryonic development and thyroid hormone.

[68534] Further studies establishing the function and utilities of PPARBP are found in John Hopkins OMIM database record ID 604311, and in sited publications numbered 7006, 635 and 6199-4761 listed in the bibliography section hereinbelow, which are also hereby incorporated by reference.Protein Phosphatase 2A, Regulatory Subunit B' (PR 53) (PPP2R4, Accession XM_026944) is another VGAM1965 host target gene. PPP2R4 BINDING SITE is HOST TARGET binding site found in the 3` untranslated

region of mRNA encoded by PPP2R4, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of PPP2R4 BINDING SITE, designated SEQ ID:30377, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68535] Another function of VGAM1965 is therefore inhibition of Protein Phosphatase 2A, Regulatory Subunit B' (PR 53) (PPP2R4, Accession XM_026944), a gene which is a regulatory subunit of protein phosphatase 2A. Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PPP2R4. The function of PPP2R4 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM435.Protein Phosphatase 2, Regulatory Subunit B (B56), Alpha Isoform (PPP2R5A, Accession NM_006243) is another VGAM1965 host target gene. PPP2R5A BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by PPP2R5A, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III.

Table 2 illustrates the complementarity of the nucleotide sequences of PPP2R5A BINDING SITE, designated SEQ ID:12912, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68536] Another function of VGAM1965 is therefore inhibition of Protein Phosphatase 2, Regulatory Subunit B (B56), Alpha Isoform (PPP2R5A, Accession NM_006243), a gene which is a regulatory subunit of protein phosphatase 2A. Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PPP2R5A. The function of PPP2R5A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM675.Protein Phosphatase 2, Regulatory Subunit B (B56), Epsilon Isoform (PPP2R5E, Accession NM_006246) is another VGAM1965 host target gene. PPP2R5E BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by PPP2R5E, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of PPP2R5E BINDING SITE,

designated SEQ ID:12923, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68537] Another function of VGAM1965 is therefore inhibition of Protein Phosphatase 2, Regulatory Subunit B (B56), Epsilon Isoform (PPP2R5E, Accession NM_006246), a gene which is a regulatory subunit of protein phosphatase 2A. Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PPP2R5E. The function of PPP2R5E and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM302.PR Domain Containing 2, with ZNF Domain (PRDM2, Accession NM_015866) is another VGAM1965 host target gene. PRDM2 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by PRDM2, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of PRDM2 BINDING SITE, designated SEQ ID:18004, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ

ID:4676.

[68538] Another function of VGAM1965 is therefore inhibition of PR Domain Containing 2, with ZNF Domain (PRDM2, Accession NM_015866), a gene which plays a role in transcriptional regulation during neuronal differentiation and pathogenesis of retinoblastoma. Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PRDM2. The function of PRDM2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM120.Protein Kinase, AMP-activated, Beta 1 Non-catalytic Subunit (PRKAB1, Accession NM_006253) is another VGAM1965 host target gene. PRKAB1 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by PRKAB1, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of PRKAB1 BINDING SITE, designated SEQ ID:12931, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68539] Another function of VGAM1965 is therefore inhibition of

Protein Kinase, AMP-activated, Beta 1 Non-catalytic Subunit (PRKAB1, Accession NM_006253), a gene which is responsible for the regulation of fatty acid synthesis by phosphorylation of acetyl-coa carboxylase. Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PRKAB1. The function of PRKAB1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM1384.Protein S (alpha) (PROS1, Accession XM_113400) is another VGAM1965 host target gene. PROS1 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by PROS1, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of PROS1 BINDING SITE, designated SEQ ID:42256, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68540] Another function of VGAM1965 is therefore inhibition of Protein S (alpha) (PROS1, Accession XM_113400). Accordingly, utilities of VGAM1965 include diagnosis, prevention

and treatment of diseases and clinical conditions associated with PROS1. Periaxin (PRX, Accession NM_020956) is another VGAM1965 host target gene. PRX BINDING SITE1 and PRX BINDING SITE2 are HOST TARGET binding sites found in untranslated regions of mRNA encoded by PRX, corresponding to HOST TARGET binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of PRX BINDING SITE1 and PRX BINDING SITE2, designated SEQ ID:21932 and SEQ ID:21938 respectively, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68541] Another function of VGAM1965 is therefore inhibition of Periaxin (PRX, Accession NM_020956), a gene which seems to be required for maintenance of peripheral nerve myelin sheath. may have a role in axon-glial interactions, possibly by interacting with the cytoplasmic domains of integral membrane proteins such as myelin-associated glycoprotein in the periaxonal regions of the schwann cell plasma membrane. may have a role in the early phases of myelin deposition. Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PRX. The function of

PRX and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM476.Pituitary Tumor-transforming 1 Interacting Protein (PTTG1IP, Accession NM_004339) is another VGAM1965 host target gene. PTTG1IP BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by PTTG1IP, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of PTTG1IP BINDING SITE, designated SEQ ID:10538, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68542] Another function of VGAM1965 is therefore inhibition of Pituitary Tumor-transforming 1 Interacting Protein (PTTG1IP, Accession NM_004339), a gene which facilitates the translocation of PTTG to the nucleus. Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PTTG1IP. The function of PTTG1IP and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove

with reference to VGAM131.Pumilio Homolog 2 (Drosophila) (PUM2, Accession NM_015317) is another VGAM1965 host target gene. PUM2 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by PUM2, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of PUM2 BINDING SITE, designated SEQ ID:17635, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68543] Another function of VGAM1965 is therefore inhibition of Pumilio Homolog 2 (Drosophila) (PUM2, Accession NM_015317). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PUM2. RAB5B, Member RAS Oncogene Family (RAB5B, Accession NM_002868) is another VGAM1965 host target gene. RAB5B BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by RAB5B, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of RAB5B BIND-

ING SITE, designated SEQ ID:8774, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68544] Another function of VGAM1965 is therefore inhibition of RAB5B, Member RAS Oncogene Family (RAB5B, Accession NM_002868), a gene which is presumably involved in vesicular trafficking at the plasma membrane. Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RAB5B. The function of RAB5B and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM1237.RAD54B (Accession NM_134434) is another VGAM1965 host target gene. RAD54B BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by RAD54B, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of RAD54B BINDING SITE, designated SEQ ID:28679, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68545] Another function of VGAM1965 is therefore inhibition of RAD54B (Accession NM_134434), a gene which is involved in dna repair and mitotic recombination. Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RAD54B. The function of RAD54B and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM595.RalA Binding Protein 1 (RALBP1, Accession NM_006788) is another VGAM1965 host target gene. RALBP1 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by RALBP1, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of RALBP1 BINDING SITE, designated SEQ ID:13667, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68546] Another function of VGAM1965 is therefore inhibition of RalA Binding Protein 1 (RALBP1, Accession NM_006788), a gene which plays a role in signal transduction and catalyzes the transport of glutathione conjugates and xeno-

biotics. Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RALBP1. The function of RALBP1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM345.RAN Binding Protein 2-like 1 (RANBP2L1, Accession NM_005054) is another VGAM1965 host target gene. RANBP2L1 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by RANBP2L1, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of RANBP2L1 BINDING SITE, designated SEQ ID:11483, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68547] Another function of VGAM1965 is therefore inhibition of RAN Binding Protein 2-like 1 (RANBP2L1, Accession NM_005054). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RANBP2L1. RGL (Accession NM_015149) is another VGAM1965 host target gene. RGL

BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by RGL, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of RGL BINDING SITE, designated SEQ ID:17509, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68548] Another function of VGAM1965 is therefore inhibition of RGL (Accession NM_015149), a gene which is involved in nucleotide exchange factor. Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RGL. The function of RGL and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM861.Arginyl Aminopeptidase (aminopeptidase B)-like 1 (RNPEPL1, Accession NM_018226) is another VGAM1965 host target gene. RNPEPL1 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by RNPEPL1, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the com-

plementarity of the nucleotide sequences of RNPEPL1 BINDING SITE, designated SEQ ID:20162, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68549] Another function of VGAM1965 is therefore inhibition of Arginyl Aminopeptidase (aminopeptidase B)-like 1 (RNPEPL1, Accession NM_018226). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RNPEPL1. Ribonucleotide Reductase M2 B (TP53 inducible) (RRM2B, Accession XM_042096) is another VGAM1965 host target gene. RRM2B BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by RRM2B, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of RRM2B BINDING SITE, designated SEQ ID:33688, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68550] Another function of VGAM1965 is therefore inhibition of Ribonucleotide Reductase M2 B (TP53 inducible) (RRM2B, Accession XM_042096). Accordingly, utilities of

VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RRM2B. Retinoid X Receptor, Alpha (RXRA, Accession NM_002957) is another VGAM1965 host target gene. RXRA BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by RXRA, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of RXRA BINDING SITE, designated SEQ ID:8872, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68551] Another function of VGAM1965 is therefore inhibition of Retinoid X Receptor, Alpha (RXRA, Accession NM_002957), a gene which activates genes required for vitamin A metabolism, binds 9-cis retinoic acid. Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RXRA. The function of RXRA and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM349.Spastic Ataxia of Charlevoix-Saguenay (sacsin) (SACS, Accession XM_170738) is another

VGAM1965 host target gene. SACS BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by SACS, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of SACS BINDING SITE, designated SEQ ID:45496, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68552] Another function of VGAM1965 is therefore inhibition of Spastic Ataxia of Charlevoix-Saguenay (sacsin) (SACS, Accession XM_170738). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SACS. Src Family Associated Phosphoprotein 2 (SCAP2, Accession NM_003930) is another VGAM1965 host target gene. SCAP2 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by SCAP2, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of SCAP2 BINDING SITE, designated SEQ ID:10027, to the nucleotide sequence of VGAM1965 RNA,

herein designated VGAM RNA, also designated SEQ ID:4676.

[68553] Another function of VGAM1965 is therefore inhibition of Src Family Associated Phosphoprotein 2 (SCAP2, Accession NM_003930), a gene which interacts with Src family protein tyrosine kinases and SLAP/FYB (SLA). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SCAP2. The function of SCAP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM134.Sodium Channel, Voltage-gated, Type I, Alpha Polypeptide (SCN1A, Accession XM_114281) is another VGAM1965 host target gene. SCN1A BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by SCN1A, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of SCN1A BINDING SITE, designated SEQ ID:42836, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68554] Another function of VGAM1965 is therefore inhibition of Sodium Channel, Voltage-gated, Type I, Alpha Polypeptide (SCN1A, Accession XM_114281). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SCN1A. Succinate Dehydrogenase Complex, Subunit D, Integral Membrane Protein (SDHD, Accession NM_003002) is another VGAM1965 host target gene. SDHD BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by SDHD, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of SDHD BINDING SITE, designated SEQ ID:8897, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68555] Another function of VGAM1965 is therefore inhibition of Succinate Dehydrogenase Complex, Subunit D, Integral Membrane Protein (SDHD, Accession NM_003002). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SDHD. Spondyloepiphyseal Dysplasia, Late (SEDL, Accession NM_014563) is another VGAM1965 host

target gene. SEDL BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by SEDL, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of SEDL BINDING SITE, designated SEQ ID:15917, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68556] Another function of VGAM1965 is therefore inhibition of Spondyloepiphyseal Dysplasia, Late (SEDL, Accession NM_014563), a gene which may play role in vesicular transport from endoplasmic reticulum to golgi. Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SEDL. The function of SEDL and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM74.Surfactant, Pulmonary-associated Protein A2 (SFTPA2, Accession NM_006926) is another VGAM1965 host target gene. SFTPA2 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by SFTPA2, corresponding to a

HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of SFTPA2 BINDING SITE, designated SEQ ID:13811, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68557] Another function of VGAM1965 is therefore inhibition of Surfactant, Pulmonary-associated Protein A2 (SFTPA2, Accession NM_006926), a gene which plays a role in innate host defense in the lung. Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SFTPA2. The function of SFTPA2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM148.Serine Hydroxymethyltransferase 2 (mitochondrial) (SHMT2, Accession NM_005412) is another VGAM1965 host target gene. SHMT2 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by SHMT2, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of SHMT2 BIND-

ING SITE, designated SEQ ID:11881, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68558] Another function of VGAM1965 is therefore inhibition of Serine Hydroxymethyltransferase 2 (mitochondrial) (SHMT2, Accession NM_005412), a gene which interconverts serine and glycine. Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SHMT2. The function of SHMT2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM152.Single-minded Homolog 2 (Drosophila) (SIM2, Accession NM_009586) is another VGAM1965 host target gene. SIM2 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by SIM2, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of SIM2 BINDING SITE, designated SEQ ID:14313, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68559] Another function of VGAM1965 is therefore inhibition of Single-minded Homolog 2 (Drosophila) (SIM2, Accession NM_009586), a gene which may be a master gene of cns development. Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SIM2. The function of SIM2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM369.Src-like-adaptor (SLA, Accession NM_006748) is another VGAM1965 host target gene. SLA BINDING SITE1 and SLA BINDING SITE2 are HOST TARGET binding sites found in untranslated regions of mRNA encoded by SLA, corresponding to HOST TARGET binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of SLA BINDING SITE1 and SLA BINDING SITE2, designated SEQ ID:13598 and SEQ ID:13597 respectively, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68560] Another function of VGAM1965 is therefore inhibition of Src-like-adaptor (SLA, Accession NM_006748), a gene which is a negative regulator of T-cell receptor signaling.

Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SLA. The function of SLA and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM383.Solute Carrier Family 13 (sodium/sulfate symporters), Member 4 (SLC13A4, Accession NM_012450) is another VGAM1965 host target gene. SLC13A4 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by SLC13A4, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of SLC13A4 BINDING SITE, designated SEQ ID:14820, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68561] Another function of VGAM1965 is therefore inhibition of Solute Carrier Family 13 (sodium/sulfate symporters), Member 4 (SLC13A4, Accession NM_012450). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SLC13A4. Solute Carrier Family 14 (urea transporter),

Member 1 (Kidd blood group) (SLC14A1, Accession NM_015865) is another VGAM1965 host target gene. SLC14A1 BINDING SITE1 through SLC14A1 BINDING SITE3 are HOST TARGET binding sites found in untranslated regions of mRNA encoded by SLC14A1, corresponding to HOST TARGET binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of SLC14A1 BINDING SITE1 through SLC14A1 BINDING SITE3, designated SEQ ID:17998, SEQ ID:17999 and SEQ ID:17997 respectively, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68562] Another function of VGAM1965 is therefore inhibition of Solute Carrier Family 14 (urea transporter), Member 1 (Kidd blood group) (SLC14A1, Accession NM_015865), a gene which is a urea transporters in spermatogenesis. Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SLC14A1. The function of SLC14A1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM586.Solute Carrier

Family 1 (neuronal/epithelial high affinity glutamate transporter, system Xag), Member 1 (SLC1A1, Accession NM_004170) is another VGAM1965 host target gene. SLC1A1 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by SLC1A1, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of SLC1A1 BINDING SITE, designated SEQ ID:10381, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68563] Another function of VGAM1965 is therefore inhibition of Solute Carrier Family 1 (neuronal/epithelial high affinity glutamate transporter, system Xag), Member 1 (SLC1A1, Accession NM_004170), a gene which is a glutamate transporter, essential for terminating the postsynaptic action of glutamate by rapidly removing it from the synaptic cleft. Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SLC1A1. The function of SLC1A1 and its association with various diseases and clinical conditions, has been established by previous studies, as de-

scribed hereinabove with reference to VGAM206.Solute Carrier Family 21 (organic anion transporter), Member 3 (SLC21A3, Accession NM_134431) is another VGAM1965 host target gene. SLC21A3 BINDING SITE1 and SLC21A3 BINDING SITE2 are HOST TARGET binding sites found in untranslated regions of mRNA encoded by SLC21A3, corresponding to HOST TARGET binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of SLC21A3 BINDING SITE1 and SLC21A3 BINDING SITE2, designated SEQ ID:28672 and SEQ ID:22075 respectively, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68564] Another function of VGAM1965 is therefore inhibition of Solute Carrier Family 21 (organic anion transporter), Member 3 (SLC21A3, Accession NM_134431), a gene which mediates the na(+)-independent transport of organic anions such as bsp and conjugated (taurocholate) and unconjugated (cholate) bile acids. Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SLC21A3. The function of SLC21A3 has been established by previous studies. The organic anion transporter

(OATP) of liver mediates the basolateral hepatocellular uptake of numerous cholephilic anions and steroidal compounds from sinusoidal blood. By screening a human liver cDNA library with a rat Oatp cDNA, Kullak-Ublick et al. (1995) cloned a cDNA encoding OATP. The deduced 670-amino acid OATP protein has 12 putative transmembrane domains and 8 potential N-linked glycosylation sites. The human and rat OATP proteins are 67% identical. In vitro translation produced unglycosylated and glycosylated human OATP proteins that migrated as 59-kD and 71-kD polypeptides, respectively, in SDS-polyacrylamide gels. Functional studies in Xenopus oocytes showed that OATP mediates sodium-independent transport of the xenobiotic bromosulfophthalein and of endogenous conjugated and unconjugated bile acids. Northern blot analysis detected an approximately 2.7-kb OATP transcript in human liver, brain, lung, kidney, and testis; additional transcripts were also observed. The authors stated that the extrahepatic expression of OATP suggests a general role for OATP in transepithelial organic anion transport

[68565] Full details of the abovementioned studies are described in the following publications, the disclosure of which are hereby incorporated by reference:

[68566] Kullak-Ublick, G. A.; Hagenbuch, B.; Stieger, B.; Schteingart, C. D.; Hofmann, A. F.; Wolkoff, A. W.; Meier, P. J. : Molecular and functional characterization of an organic anion transporting polypeptide cloned from human liver. :Gastroenterology 109: 1274-1282, 1995. ; and

[68567] By somatic cell hybrid analysis, Kullak-Ublick et al. (1995) mapped the SLC21A3 gene to chromosome 12. Kullak-Ublick et al. (1996) regionally localized the SLC21A3 gene to 12p12 using fluor.

[68568] Further studies establishing the function and utilities of SLC21A3 are found in John Hopkins OMIM database record ID 602883, and in sited publications numbered 5325-5326 listed in the bibliography section hereinbelow, which are also hereby incorporated by reference.Solute Carrier Family 4, Sodium Bicarbonate Cotransporter, Member 7 (SLC4A7, Accession NM_003615) is another VGAM1965 host target gene. SLC4A7 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by SLC4A7, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of SLC4A7 BINDING SITE, designated SEQ ID:9672, to the nucleotide

sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68569] Another function of VGAM1965 is therefore inhibition of Solute Carrier Family 4, Sodium Bicarbonate Cotransporter, Member 7 (SLC4A7, Accession NM_003615), a gene which mediates the coupled movement of sodium and bicarbonate ions across the plasma membrane. Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SLC4A7. The function of SLC4A7 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM66.Solute Carrier Family 8 (sodium-calcium exchanger), Member 2 (SLC8A2, Accession XM_038970) is another VGAM1965 host target gene. SLC8A2 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by SLC8A2, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of SLC8A2 BINDING SITE, designated SEQ ID:32969, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ

ID:4676.

[68570] Another function of VGAM1965 is therefore inhibition of Solute Carrier Family 8 (sodium-calcium exchanger), Member 2 (SLC8A2, Accession XM_038970). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SLC8A2. SWI/SNF Related, Matrix Associated, Actin Dependent Regulator of Chromatin, Subfamily A, Member 3 (SMARCA3, Accession NM_139048) is another VGAM1965 host target gene. SMARCA3 BINDING SITE1 and SMARCA3 BINDING SITE2 are HOST TARGET binding sites found in untranslated regions of mRNA encoded by SMARCA3, corresponding to HOST TARGET binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of SMARCA3 BINDING SITE1 and SMARCA3 BINDING SITE2, designated SEQ ID:29133 and SEQ ID:9038 respectively, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68571] Another function of VGAM1965 is therefore inhibition of SWI/SNF Related, Matrix Associated, Actin Dependent Regulator of Chromatin, Subfamily A, Member 3

(SMARCA3, Accession NM_139048), a gene which is involved in chromatin assembly and remodeling. Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SMARCA3. The function of SMARCA3 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM1330.Small Nuclear Ribonucleoprotein Polypeptide N (SNRPN, Accession NM_022807) is another VGAM1965 host target gene. SNRPN BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by SNRPN, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of SNRPN BINDING SITE, designated SEQ ID:23084, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68572] Another function of VGAM1965 is therefore inhibition of Small Nuclear Ribonucleoprotein Polypeptide N (SNRPN, Accession NM_022807), a gene which may be involved in tissue-specific alternative RNA processing events. Accord-

ingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SNRPN. The function of SNRPN and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM1924.Sorting Nexin 9 (SNX9, Accession NM_016224) is another VGAM1965 host target gene. SNX9 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by SNX9, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of SNX9 BINDING SITE, designated SEQ ID:18332, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68573] Another function of VGAM1965 is therefore inhibition of Sorting Nexin 9 (SNX9, Accession NM_016224). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SNX9. Sorbitol Dehydrogenase (SORD, Accession NM_003104) is another VGAM1965 host target gene. SORD BINDING SITE is HOST TARGET binding site found in

the 3` untranslated region of mRNA encoded by SORD, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of SORD BINDING SITE, designated SEQ ID:9070, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68574] Another function of VGAM1965 is therefore inhibition of Sorbitol Dehydrogenase (SORD, Accession NM_003104). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SORD. SRP46 (Accession NM_032102) is another VGAM1965 host target gene. SRP46 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by SRP46, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of SRP46 BINDING SITE, designated SEQ ID:25793, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68575] Another function of VGAM1965 is therefore inhibition of

SRP46 (Accession NM_032102). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SRP46. Suppressor of Fused Homolog (Drosophila) (SUFU, Accession NM_016169) is another VGAM1965 host target gene. SUFU BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by SUFU, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of SUFU BINDING SITE, designated SEQ ID:18260, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68576] Another function of VGAM1965 is therefore inhibition of Suppressor of Fused Homolog (Drosophila) (SUFU, Accession NM_016169). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SUFU. Synaptotagmin I (SYT1, Accession NM_005639) is another VGAM1965 host target gene. SYT1 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by SYT1, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III.

Table 2 illustrates the complementarity of the nucleotide sequences of SYT1 BINDING SITE, designated SEQ ID:12172, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68577] Another function of VGAM1965 is therefore inhibition of Synaptotagmin I (SYT1, Accession NM_005639), a gene which may have a regulatory role in the membrane interactions during trafficking of synaptic vesicles at the active zone of the synapse. Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SYT1. The function of SYT1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM739.Synaptotagmin V (SYT5, Accession NM_003180) is another VGAM1965 host target gene. SYT5 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by SYT5, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of SYT5 BINDING SITE, designated SEQ ID:9152, to the nucleotide

sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68578] Another function of VGAM1965 is therefore inhibition of Synaptotagmin V (SYT5, Accession NM_003180), a gene which is a member of a family of calcium sensors regulating neurotransmitter release. Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SYT5. The function of SYT5 has been established by previous studies. The synaptotagmins are a family of type III membrane proteins characterized by cytoplasmic repeats related to the protein kinase C regulatory (C2) domains which are thought to bind calcium. The synaptotagmins may act both as negative regulators of vesicle fusion, allowing fusion in the presence of calcium, and as calcium receptors or sensor molecules. Hudson and Birnbaum (1995) cloned a synaptotagmin cDNA from a rat adipose tissue cDNA library. The sequence predicts a 386-amino acid protein with 49% identity to synaptotagmins 1 (OMIM Ref. No. 185605) and 2 (OMIM Ref. No. 600104). The 1.7-kb synaptotagmin-5 mRNA is expressed in rat kidney, adipose tissue, lung and heart, and at higher levels in brain. An antibody to the SYT5 gene product detected an

approximately 50-kD protein. Kwon et al. (1995) mapped the SYT5 gene to mouse chromosome 7 and predicted that the human gene is located on 11p.

[68579] Full details of the abovementioned studies are described in the following publications, the disclosure of which are hereby incorporated by reference:

[68580] Hudson, A. W.; Birnbaum, M. J. : Identification of a non-neuronal isoform of synaptotagmin. Proc. Nat. Acad. Sci. 92: 5895-5899, 1995. ; and

[68581] Kwon, O.-J.; Adamson, M. C.; Chin, H.; Kozak, C. A. : Genetic mapping of five mouse genes encoding synaptotagmins. Mammalian Genome 6: 880-881, 1995.

[68582] Further studies establishing the function and utilities of SYT5 are found in John Hopkins OMIM database record ID 600782, and in sited publications numbered 9943 listed in the bibliography section hereinbelow, which are also hereby incorporated by reference.Transforming, Acidic Coiled-coil Containing Protein 1 (TACC1, Accession NM_006283) is another VGAM1965 host target gene. TACC1 BINDING SITE1 and TACC1 BINDING SITE2 are HOST TARGET binding sites found in untranslated regions of mRNA encoded by TACC1, corresponding to HOST TARGET binding sites such as BINDING SITE I, BINDING

SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of TACC1 BINDING SITE1 and TACC1 BINDING SITE2, designated SEQ ID:12961 and SEQ ID:12968 respectively, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68583] Another function of VGAM1965 is therefore inhibition of Transforming, Acidic Coiled-coil Containing Protein 1 (TACC1, Accession NM_006283). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TACC1. T-cell Acute Lymphocytic Leukemia 1 (TAL1, Accession NM_003189) is another VGAM1965 host target gene. TAL1 BINDING SITE1 and TAL1 BINDING SITE2 are HOST TARGET binding sites found in untranslated regions of mRNA encoded by TAL1, corresponding to HOST TARGET binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of TAL1 BINDING SITE1 and TAL1 BINDING SITE2, designated SEQ ID:9172 and SEQ ID:9186 respectively, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68584] Another function of VGAM1965 is therefore inhibition of T-cell Acute Lymphocytic Leukemia 1 (TAL1, Accession NM_003189), a gene which may help control cell growth and differentiation. Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TAL1. The function of TAL1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM172.Transmembrane Protein 1 (TMEM1, Accession NM_003274) is another VGAM1965 host target gene. TMEM1 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by TMEM1, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of TMEM1 BINDING SITE, designated SEQ ID:9288, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68585] Another function of VGAM1965 is therefore inhibition of Transmembrane Protein 1 (TMEM1, Accession NM_003274). Accordingly, utilities of VGAM1965 include

diagnosis, prevention and treatment of diseases and clinical conditions associated with TMEM1. Transmembrane Protease, Serine 2 (TMPRSS2, Accession NM_005656) is another VGAM1965 host target gene. TMPRSS2 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by TMPRSS2, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of TMPRSS2 BINDING SITE, designated SEQ ID:12195, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68586] Another function of VGAM1965 is therefore inhibition of Transmembrane Protease, Serine 2 (TMPRSS2, Accession NM_005656). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TMPRSS2. Tumor Necrosis Factor (TNF superfamily, member 2) (TNF, Accession XM_165823) is another VGAM1965 host target gene. TNF BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by TNF, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illus-

trates the complementarity of the nucleotide sequences of TNF BINDING SITE, designated SEQ ID:43772, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68587] Another function of VGAM1965 is therefore inhibition of Tumor Necrosis Factor (TNF superfamily, member 2) (TNF, Accession XM_165823), a gene which mediates proinflammatory responses and apoptosis. Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TNF. The function of TNF and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM175.TOX (Accession NM_014729) is another VGAM1965 host target gene. TOX BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by TOX, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of TOX BINDING SITE, designated SEQ ID:16329, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68588] Another function of VGAM1965 is therefore inhibition of TOX (Accession NM_014729). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TOX. Tumor Protein P53 (Li-Fraumeni syndrome) (TP53, Accession NM_000546) is another VGAM1965 host target gene. TP53 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by TP53, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of TP53 BINDING SITE, designated SEQ ID:6153, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68589] Another function of VGAM1965 is therefore inhibition of Tumor Protein P53 (Li-Fraumeni syndrome) (TP53, Accession NM_000546). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TP53. Tripartite Motif-containing 14 (TRIM14, Accession NM_014788) is another VGAM1965 host target gene. TRIM14 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by TRIM14, corresponding to a

HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of TRIM14 BINDING SITE, designated SEQ ID:16671, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68590] Another function of VGAM1965 is therefore inhibition of Tripartite Motif-containing 14 (TRIM14, Accession NM_014788), a gene which is composed of 3 zinc-binding domains and is involved in development and cell growth. Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TRIM14. The function of TRIM14 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM180.Transient Receptor Potential Cation Channel, Subfamily C, Member 6 (TRPC6, Accession NM_004621) is another VGAM1965 host target gene. TRPC6 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by TRPC6, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity

of the nucleotide sequences of TRPC6 BINDING SITE, designated SEQ ID:10980, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68591] Another function of VGAM1965 is therefore inhibition of Transient Receptor Potential Cation Channel, Subfamily C, Member 6 (TRPC6, Accession NM_004621), a gene which has calcium channel activity. Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TRPC6. The function of TRPC6 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM25.TSLP (Accession NM_033035) is another VGAM1965 host target gene. TSLP BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by TSLP, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of TSLP BINDING SITE, designated SEQ ID:26929, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68592] Another function of VGAM1965 is therefore inhibition of TSLP (Accession NM_033035), a gene which may contribute directly to the activation of Langerhans cells and inhibit apoptosis. Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TSLP. The function of TSLP and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM558.Translin-associated Factor X (TSNAX, Accession NM_005999) is another VGAM1965 host target gene. TSNAX BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by TSNAX, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of TSNAX BINDING SITE, designated SEQ ID:12616, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68593] Another function of VGAM1965 is therefore inhibition of Translin-associated Factor X (TSNAX, Accession NM_005999), a gene which Interacts with translin (TSN).

Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TSNAX. The function of TSNAX has been established by previous studies. Translin (TSN; 600575) is a DNA-binding protein that specifically binds to consensus sequences at breakpoint junctions of chromosomal translocations in many cases of lymphoid malignancies. Aoki et al. (1997) used a yeast 2-hybrid system to screen a human spleen cDNA library for potential interactions of TSN with other proteins. They isolated a TSNAX cDNA, termed TRAX (translin-associated factor X) by the authors, whose product specifically interacted with TSN in cotransformation and in vitro interaction assays. The cDNA encodes a putative 290-amino acid protein with a predicted molecular mass of 33 kD. The protein contains a heptad repeat of hydrophobic amino acids consistent with the hypothetical leucine zipper structure. The authors found 28% amino acid sequence identity between TSNAX and TSN, with 38% identity in the C-terminal regions. Northern blot analysis revealed a single TSNAX transcript of 2.7 kb, with a tissue distribution similar to that of the TSN transcript. Meng et al. (2000) determined that the genomic structure of TSNAX is similar to that of TSN, con-

sisting of 6 exons encompassing approximately 27 kb of genomic DNA. By fluorescence in situ hybridization, Meng et al. (2000) mapped the TSNAX gene to chromosome 1q41.

[68594] Full details of the abovementioned studies are described in the following publications, the disclosure of which are hereby incorporated by reference:

[68595] Aoki, K.; Ishida, R.; Kasai, M. : Isolation and characterization of a cDNA encoding a translin-like protein, TRAX. FEBS Lett. 401: 109-112, 1997. ; and

[68596] Meng, G.; Aoki, K.; Tokura, K.; Nakahara, K.; Inazawa, J.; Kasai, M. : Genomic structure and chromosomal localization of the gene encoding TRAX, a translin-associated factor X. J. Hum. G.

[68597] Further studies establishing the function and utilities of TSNAX are found in John Hopkins OMIM database record ID 602964, and in sited publications numbered 8476-8477 listed in the bibliography section hereinbelow, which are also hereby incorporated by reference.Ubiquitin-like 1 (sentrin) (UBL1, Accession NM_003352) is another VGAM1965 host target gene. UBL1 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by UBL1,

corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of UBL1 BINDING SITE, designated SEQ ID:9379, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68598] Another function of VGAM1965 is therefore inhibition of Ubiquitin-like 1 (sentrin) (UBL1, Accession NM_003352), a gene which generates proteins resistant to degradation through its modification. Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with UBL1. The function of UBL1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM206.UC28 (Accession NM_021635) is another VGAM1965 host target gene. UC28 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by UC28, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of UC28 BINDING SITE, designated SEQ ID:22281, to the nucleotide sequence of

VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68599] Another function of VGAM1965 is therefore inhibition of UC28 (Accession NM_021635). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with UC28. Vang-like 2 (van gogh, Drosophila) (VANGL2, Accession XM_049695) is another VGAM1965 host target gene. VANGL2 BINDING SITE1 and VANGL2 BINDING SITE2 are HOST TARGET binding sites found in untranslated regions of mRNA encoded by VANGL2, corresponding to HOST TARGET binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of VANGL2 BINDING SITE1 and VANGL2 BINDING SITE2, designated SEQ ID:35476 and SEQ ID:35487 respectively, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68600] Another function of VGAM1965 is therefore inhibition of Vang-like 2 (van gogh, Drosophila) (VANGL2, Accession XM_049695), a gene which may take part in defining the lateral boundary of floorplate differentiation. Accordingly, utilities of VGAM1965 include diagnosis, prevention and

treatment of diseases and clinical conditions associated with VANGL2. The function of VANGL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM111.WD Repeat Domain 3 (WDR3, Accession NM_006784) is another VGAM1965 host target gene. WDR3 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by WDR3, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of WDR3 BINDING SITE, designated SEQ ID:13654, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68601] Another function of VGAM1965 is therefore inhibition of WD Repeat Domain 3 (WDR3, Accession NM_006784), a gene which contains a WD repeat domain with unknown function. Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with WDR3. The function of WDR3 has been established by previous studies. A conserved core of 4 or more modular repeat units defines a group of functionally diverse regulatory proteins in eukaryotes

known as the WD repeat family. WD repeats are minimally conserved regions of approximately 40 amino acids typically bracketed by gly-his and trp-asp (GH-WD), which may facilitate formation of heterotrimeric or multiprotein complexes. Proteins belonging to the WD repeat family are involved in a variety of cellular processes, including cell cycle progression, signal transduction, apoptosis, and gene regulation. Claudio et al. (1998) identified a human CD34+ hematopoietic progenitor line (KG-1a) EST with significant sequence similarity to a portion of the yeast TUP1 gene, which encodes a WD repeat-containing transcriptional regulator. Using the EST, they isolated the complete coding sequence of the human WDR3 protein. Claudio et al. (1999) found that the predicted 943-amino acid WDR3 protein contains 10 WD repeat modules. The first 4 WD repeats are separated from the remaining 6 WD repeats by a nuclear localization signal (NLS); a second NLS is located near the C-terminal end of the protein. WDR3 also contains a potential tyrosine kinase phosphorylation site and a cAMP- and cGMP-dependent protein kinase phosphorylation site. WDR3 shares 37% amino acid sequence identity with the S. cerevisiae WD repeat-containing protein DIP2. Northern blot analysis detected

an approximately 4-kb WDR3 transcript in the majority of tissues examined, including brain, pancreas, skeletal muscle, and placenta. WDR3 expression was also found in all of the cell lines tested. By FISH, Claudio et al. (1999) mapped the WDR3 gene to 1p13-p12.

[68602] Full details of the abovementioned studies are described in the following publications, the disclosure of which are hereby incorporated by reference:

[68603] Claudio, J. O.; Liew, C.-C.; Dempsey, A. A.; Cukerman, E.; Stewart, A. K.; Na, E.; Atkins, H. L.; Iscove, N. N.; Hawley, R. G. : Identification of sequence-tagged transcripts differentially expressed within the human hematopoietic hierarchy. Genomics 50: 44-52, 1998. ; and

[68604] Claudio, J. O.; Liew, C.-C.; Ma, J.; Heng, H. H. Q.; Stewart, A. K.; Hawley, R. G. : Cloning and expression analysis of a novel WD repeat gene, WDR3, mapping to 1p12-p13. Genomics 59: 8.

[68605] Further studies establishing the function and utilities of WDR3 are found in John Hopkins OMIM database record ID 604737, and in sited publications numbered 6742-6743 listed in the bibliography section hereinbelow, which are also hereby incorporated by reference.Wolf-Hirschhorn Syndrome Candidate 1 (WHSC1, Accession NM_007331) is

another VGAM1965 host target gene. WHSC1 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by WHSC1, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of WHSC1 BINDING SITE, designated SEQ ID:14253, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68606] Another function of VGAM1965 is therefore inhibition of Wolf-Hirschhorn Syndrome Candidate 1 (WHSC1, Accession NM_007331), a gene which binds covalently to and repairs g/t mismatches. Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with WHSC1. The function of WHSC1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM200.Wingless-type MMTV Integration Site Family, Member 10B (WNT10B, Accession NM_003394) is another VGAM1965 host target gene. WNT10B BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by WNT10B, corresponding to a

HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of WNT10B BINDING SITE, designated SEQ ID:9431, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68607] Another function of VGAM1965 is therefore inhibition of Wingless-type MMTV Integration Site Family, Member 10B (WNT10B, Accession NM_003394), a gene which is a ligand for members of the frizzled family of seven transmembrane receptors and may be a signaling molecule. Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with WNT10B. The function of WNT10B and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM594.Wingless-type MMTV Integration Site Family, Member 5B (WNT5B, Accession NM_030775) is another VGAM1965 host target gene. WNT5B BINDING SITE1 and WNT5B BINDING SITE2 are HOST TARGET binding sites found in untranslated regions of mRNA encoded by WNT5B, corresponding to HOST TARGET binding sites

such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of WNT5B BINDING SITE1 and WNT5B BINDING SITE2, designated SEQ ID:25059 and SEQ ID:26361 respectively, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68608] Another function of VGAM1965 is therefore inhibition of Wingless-type MMTV Integration Site Family, Member 5B (WNT5B, Accession NM_030775), a gene which is the ligand for members of the frizzled family of seven transmembrane receptors and may be a signaling molecule . Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with WNT5B. The function of WNT5B and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM1928.X-ray Repair Complementing Defective Repair In Chinese Hamster Cells 3 (XRCC3, Accession NM_005432) is another VGAM1965 host target gene. XRCC3 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by XRCC3, corresponding to a HOST

TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of XRCC3 BINDING SITE, designated SEQ ID:11910, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68609] Another function of VGAM1965 is therefore inhibition of X-ray Repair Complementing Defective Repair In Chinese Hamster Cells 3 (XRCC3, Accession NM_005432), a gene which is required for meiotic recombination, synaptonemal complex formation and cell cycle progression. Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with XRCC3. The function of XRCC3 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM1290.XT3 (Accession NM_020208) is another VGAM1965 host target gene. XT3 BINDING SITE1 and XT3 BINDING SITE2 are HOST TARGET binding sites found in untranslated regions of mRNA encoded by XT3, corresponding to HOST TARGET binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nu-

cleotide sequences of XT3 BINDING SITE1 and XT3 BINDING SITE2, designated SEQ ID:21448 and SEQ ID:21449 respectively, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68610] Another function of VGAM1965 is therefore inhibition of XT3 (Accession NM_020208), a gene which is a Kidney-specific orphan transporter. Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with XT3. The function of XT3 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM21.Zinc Finger Protein 124 (HZF-16) (ZNF124, Accession NM_003431) is another VGAM1965 host target gene. ZNF124 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by ZNF124, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of ZNF124 BINDING SITE, designated SEQ ID:9483, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ

ID:4676.

[68611] Another function of VGAM1965 is therefore inhibition of Zinc Finger Protein 124 (HZF-16) (ZNF124, Accession NM_003431). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ZNF124. Zinc Finger Protein 137 (clone pHZ-30) (ZNF137, Accession NM_003438) is another VGAM1965 host target gene. ZNF137 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by ZNF137, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of ZNF137 BINDING SITE, designated SEQ ID:9493, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68612] Another function of VGAM1965 is therefore inhibition of Zinc Finger Protein 137 (clone pHZ-30) (ZNF137, Accession NM_003438). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ZNF137. Zinc Finger Protein 202 (ZNF202, Accession NM_003455) is another VGAM1965 host target gene. ZNF202 BINDING SITE is

HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by ZNF202, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of ZNF202 BINDING SITE, designated SEQ ID:9510, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68613] Another function of VGAM1965 is therefore inhibition of Zinc Finger Protein 202 (ZNF202, Accession NM_003455). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ZNF202. Zinc Finger Protein 74 (Cos52) (ZNF74, Accession NM_003426) is another VGAM1965 host target gene. ZNF74 BINDING SITE1 and ZNF74 BINDING SITE2 are HOST TARGET binding sites found in untranslated regions of mRNA encoded by ZNF74, corresponding to HOST TARGET binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of ZNF74 BINDING SITE1 and ZNF74 BINDING SITE2, designated SEQ ID:9474 and SEQ ID:9476 respectively, to the nucleotide sequence of VGAM1965 RNA,

herein designated VGAM RNA, also designated SEQ ID:4676.

[68614] Another function of VGAM1965 is therefore inhibition of Zinc Finger Protein 74 (Cos52) (ZNF74, Accession NM_003426). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ZNF74. A Kinase (PRKA) Anchor Protein 8 (AKAP8, Accession NM_005858) is another VGAM1965 host target gene. AKAP8 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by AKAP8, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of AKAP8 BINDING SITE, designated SEQ ID:12466, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68615] Another function of VGAM1965 is therefore inhibition of A Kinase (PRKA) Anchor Protein 8 (AKAP8, Accession NM_005858). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with AKAP8. Adaptor-related Protein Complex 4, Epsilon 1 Subunit (AP4E1, Accession

NM_007347) is another VGAM1965 host target gene. AP4E1 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by AP4E1, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of AP4E1 BINDING SITE, designated SEQ ID:14277, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68616] Another function of VGAM1965 is therefore inhibition of Adaptor-related Protein Complex 4, Epsilon 1 Subunit (AP4E1, Accession NM_007347). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with AP4E1. Apolipoprotein L, 4 (APOL4, Accession NM_030643) is another VGAM1965 host target gene. APOL4 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by APOL4, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of APOL4 BINDING SITE, designated SEQ ID:24978, to the nucleotide se-

quence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68617] Another function of VGAM1965 is therefore inhibition of Apolipoprotein L, 4 (APOL4, Accession NM_030643). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with APOL4. Apolipoprotein L, 6 (APOL6, Accession NM_030641) is another VGAM1965 host target gene. APOL6 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by APOL6, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of APOL6 BINDING SITE, designated SEQ ID:24972, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68618] Another function of VGAM1965 is therefore inhibition of Apolipoprotein L, 6 (APOL6, Accession NM_030641). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with APOL6. ARHGAP10 (Accession NM_020824) is another VGAM1965 host target gene.

ARHGAP10 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by ARHGAP10, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of ARHGAP10 BINDING SITE, designated SEQ ID:21886, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68619] Another function of VGAM1965 is therefore inhibition of ARHGAP10 (Accession NM_020824). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ARHGAP10. ATPase, H+ Transporting, Lysosomal V0 Subunit A Isoform 1 (ATP6V0A1, Accession NM_005177) is another VGAM1965 host target gene. ATP6V0A1 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by ATP6V0A1, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of ATP6V0A1 BINDING SITE, designated SEQ ID:11677, to the nucleotide sequence of VGAM1965 RNA, herein desig-

nated VGAM RNA, also designated SEQ ID:4676.

[68620] Another function of VGAM1965 is therefore inhibition of ATPase, H+ Transporting, Lysosomal V0 Subunit A Isoform 1 (ATP6V0A1, Accession NM_005177). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ATP6V0A1. UDP-GlcNAc:betaGal Beta-1,3-N-acetylglucosaminyltransferase 5 (B3GNT5, Accession NM_032047) is another VGAM1965 host target gene. B3GNT5 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by B3GNT5, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of B3GNT5 BINDING SITE, designated SEQ ID:25765, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68621] Another function of VGAM1965 is therefore inhibition of UDP-GlcNAc:betaGal Beta-1,3-N-acetylglucosaminyltransferase 5 (B3GNT5, Accession NM_032047). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and

clinical conditions associated with B3GNT5. BDG-29 (Accession XM_051343) is another VGAM1965 host target gene. BDG-29 BINDING SITE1 and BDG-29 BINDING SITE2 are HOST TARGET binding sites found in untranslated regions of mRNA encoded by BDG-29, corresponding to HOST TARGET binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of BDG-29 BINDING SITE1 and BDG-29 BINDING SITE2, designated SEQ ID:35817 and SEQ ID:35812 respectively, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68622] Another function of VGAM1965 is therefore inhibition of BDG-29 (Accession XM_051343). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with BDG-29. Burkitt Lymphoma Receptor 1, GTP Binding Protein (chemokine (C-X-C motif) Receptor 5) (BLR1, Accession NM_032966) is another VGAM1965 host target gene. BLR1 BINDING SITE1 and BLR1 BINDING SITE2 are HOST TARGET binding sites found in untranslated regions of mRNA encoded by BLR1, corresponding to HOST TARGET binding sites such as BINDING SITE I, BINDING SITE II or BINDING

SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of BLR1 BINDING SITE1 and BLR1 BINDING SITE2, designated SEQ ID:26779 and SEQ ID:7449 respectively, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68623] Another function of VGAM1965 is therefore inhibition of Burkitt Lymphoma Receptor 1, GTP Binding Protein (chemokine (C-X-C motif) Receptor 5) (BLR1, Accession NM_032966). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with BLR1. BTB (POZ) Domain Containing 1 (BTBD1, Accession NM_025238) is another VGAM1965 host target gene. BTBD1 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by BTBD1, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of BTBD1 BINDING SITE, designated SEQ ID:24920, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68624] Another function of VGAM1965 is therefore inhibition of

BTB (POZ) Domain Containing 1 (BTBD1, Accession NM_025238). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with BTBD1. Butyrophilin, Subfamily 1, Member A1 (BTN1A1, Accession NM_001732) is another VGAM1965 host target gene. BTN1A1 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by BTN1A1, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of BTN1A1 BINDING SITE, designated SEQ ID:7470, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68625] Another function of VGAM1965 is therefore inhibition of Butyrophilin, Subfamily 1, Member A1 (BTN1A1, Accession NM_001732). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with BTN1A1. Chromosome 14 Open Reading Frame 4 (C14orf4, Accession XM_041104) is another VGAM1965 host target gene. C14orf4 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by C14orf4, corre-

sponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of C14orf4 BINDING SITE, designated SEQ ID:33446, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68626] Another function of VGAM1965 is therefore inhibition of Chromosome 14 Open Reading Frame 4 (C14orf4, Accession XM_041104). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with C14orf4. Chromosome 16 Open Reading Frame 7 (C16orf7, Accession NM_004913) is another VGAM1965 host target gene. C16orf7 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by C16orf7, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of C16orf7 BINDING SITE, designated SEQ ID:11346, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68627] Another function of VGAM1965 is therefore inhibition of

Chromosome 16 Open Reading Frame 7 (C16orf7, Accession NM_004913). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with C16orf7. Chromosome 17 Open Reading Frame 26 (C17orf26, Accession NM_139177) is another VGAM1965 host target gene. C17orf26 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by C17orf26, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of C17orf26 BINDING SITE, designated SEQ ID:29188, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68628] Another function of VGAM1965 is therefore inhibition of Chromosome 17 Open Reading Frame 26 (C17orf26, Accession NM_139177). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with C17orf26. Chromosome 1 Open Reading Frame 16 (C1orf16, Accession NM_014837) is another VGAM1965 host target gene. C1orf16 BINDING SITE is HOST TARGET binding site found

in the 3` untranslated region of mRNA encoded by C1orf16, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of C1orf16 BINDING SITE, designated SEQ ID:16860, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68629] Another function of VGAM1965 is therefore inhibition of Chromosome 1 Open Reading Frame 16 (C1orf16, Accession NM_014837). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with C1orf16. Chromosome 1 Open Reading Frame 24 (C1orf24, Accession NM_052966) is another VGAM1965 host target gene. C1orf24 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by C1orf24, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of C1orf24 BINDING SITE, designated SEQ ID:27535, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ

ID:4676.

[68630] Another function of VGAM1965 is therefore inhibition of Chromosome 1 Open Reading Frame 24 (C1orf24, Accession NM_052966). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with C1orf24. Chromosome 1 Open Reading Frame 25 (C1orf25, Accession XM_051868) is another VGAM1965 host target gene. C1orf25 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by C1orf25, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of C1orf25 BINDING SITE, designated SEQ ID:35911, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68631] Another function of VGAM1965 is therefore inhibition of Chromosome 1 Open Reading Frame 25 (C1orf25, Accession XM_051868). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with C1orf25. Chromosome 1 Open Reading Frame 34 (C1orf34, Accession

XM_027172) is another VGAM1965 host target gene. C1orf34 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by C1orf34, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of C1orf34 BINDING SITE, designated SEQ ID:30440, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68632] Another function of VGAM1965 is therefore inhibition of Chromosome 1 Open Reading Frame 34 (C1orf34, Accession XM_027172). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with C1orf34. Chromosome 20 Open Reading Frame 12 (C20orf12, Accession NM_018152) is another VGAM1965 host target gene. C20orf12 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by C20orf12, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of C20orf12 BINDING SITE, designated SEQ

ID:19961, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68633] Another function of VGAM1965 is therefore inhibition of Chromosome 20 Open Reading Frame 12 (C20orf12, Accession NM_018152). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with C20orf12. Chromosome 20 Open Reading Frame 121 (C20orf121, Accession NM_024331) is another VGAM1965 host target gene. C20orf121 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by C20orf121, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of C20orf121 BINDING SITE, designated SEQ ID:23631, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68634] Another function of VGAM1965 is therefore inhibition of Chromosome 20 Open Reading Frame 121 (C20orf121, Accession NM_024331). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment

of diseases and clinical conditions associated with C20orf121. Chromosome 20 Open Reading Frame 124 (C20orf124, Accession NM_024777) is another VGAM1965 host target gene. C20orf124 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by C20orf124, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of C20orf124 BINDING SITE, designated SEQ ID:24145, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68635] Another function of VGAM1965 is therefore inhibition of Chromosome 20 Open Reading Frame 124 (C20orf124, Accession NM_024777). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with C20orf124. Chromosome 20 Open Reading Frame 126 (C20orf126, Accession NM_030815) is another VGAM1965 host target gene. C20orf126 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by C20orf126, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE

II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of C20orf126 BINDING SITE, designated SEQ ID:25136, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68636] Another function of VGAM1965 is therefore inhibition of Chromosome 20 Open Reading Frame 126 (C20orf126, Accession NM_030815). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with C20orf126. Chromosome 20 Open Reading Frame 162 (C20orf162, Accession NM_080603) is another VGAM1965 host target gene. C20orf162 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by C20orf162, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of C20orf162 BINDING SITE, designated SEQ ID:27920, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68637] Another function of VGAM1965 is therefore inhibition of Chromosome 20 Open Reading Frame 162 (C20orf162,

Accession NM_080603). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with C20orf162. Chromosome 20 Open Reading Frame 39 (C20orf39, Accession NM_024893) is another VGAM1965 host target gene. C20orf39 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by C20orf39, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of C20orf39 BINDING SITE, designated SEQ ID:24370, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68638] Another function of VGAM1965 is therefore inhibition of Chromosome 20 Open Reading Frame 39 (C20orf39, Accession NM_024893). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with C20orf39. Chromosome 20 Open Reading Frame 43 (C20orf43, Accession XM_009549) is another VGAM1965 host target gene. C20orf43 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by

C20orf43, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of C20orf43 BINDING SITE, designated SEQ ID:30114, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68639] Another function of VGAM1965 is therefore inhibition of Chromosome 20 Open Reading Frame 43 (C20orf43, Accession XM_009549). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with C20orf43. Chromosome 20 Open Reading Frame 60 (C20orf60, Accession NM_052970) is another VGAM1965 host target gene. C20orf60 BINDING SITE1 and C20orf60 BINDING SITE2 are HOST TARGET binding sites found in untranslated regions of mRNA encoded by C20orf60, corresponding to HOST TARGET binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of C20orf60 BINDING SITE1 and C20orf60 BINDING SITE2, designated SEQ ID:27541 and SEQ ID:27542 respectively, to the nucleotide sequence of VGAM1965 RNA, herein designated

VGAM RNA, also designated SEQ ID:4676.

[68640] Another function of VGAM1965 is therefore inhibition of Chromosome 20 Open Reading Frame 60 (C20orf60, Accession NM_052970). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with C20orf60. Chromosome 21 Open Reading Frame 100 (C21orf100, Accession NM_145033) is another VGAM1965 host target gene. C21orf100 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by C21orf100, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of C21orf100 BINDING SITE, designated SEQ ID:29649, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68641] Another function of VGAM1965 is therefore inhibition of Chromosome 21 Open Reading Frame 100 (C21orf100, Accession NM_145033). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with C21orf100. Chromosome 21 Open Reading Frame 41

(C21orf41, Accession NM_138332) is another VGAM1965 host target gene. C21orf41 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by C21orf41, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of C21orf41 BINDING SITE, designated SEQ ID:28731, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68642] Another function of VGAM1965 is therefore inhibition of Chromosome 21 Open Reading Frame 41 (C21orf41, Accession NM_138332). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with C21orf41. Chromosome 21 Open Reading Frame 7 (C21orf7, Accession NM_020152) is another VGAM1965 host target gene. C21orf7 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by C21orf7, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of C21orf7 BINDING SITE, designated SEQ

ID:21363, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68643] Another function of VGAM1965 is therefore inhibition of Chromosome 21 Open Reading Frame 7 (C21orf7, Accession NM_020152). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with C21orf7. Chromosome 5 Open Reading Frame 7 (C5orf7, Accession XM_033576) is another VGAM1965 host target gene. C5orf7 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by C5orf7, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of C5orf7 BINDING SITE, designated SEQ ID:31943, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68644] Another function of VGAM1965 is therefore inhibition of Chromosome 5 Open Reading Frame 7 (C5orf7, Accession XM_033576). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with C5orf7. Chromosome 6

Open Reading Frame 9 (C6orf9, Accession NM_022107) is another VGAM1965 host target gene. C6orf9 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by C6orf9, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of C6orf9 BINDING SITE, designated SEQ ID:22655, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68645] Another function of VGAM1965 is therefore inhibition of Chromosome 6 Open Reading Frame 9 (C6orf9, Accession NM_022107). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with C6orf9. Chromosome 8 Open Reading Frame 14 (C8orf14, Accession NM_054029) is another VGAM1965 host target gene. C8orf14 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by C8orf14, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of C8orf14 BINDING SITE, designated SEQ ID:27641, to the

nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68646] Another function of VGAM1965 is therefore inhibition of Chromosome 8 Open Reading Frame 14 (C8orf14, Accession NM_054029). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with C8orf14. Chromosome 8 Open Reading Frame 7 (C8orf7, Accession XM_088376) is another VGAM1965 host target gene. C8orf7 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by C8orf7, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of C8orf7 BINDING SITE, designated SEQ ID:39649, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68647] Another function of VGAM1965 is therefore inhibition of Chromosome 8 Open Reading Frame 7 (C8orf7, Accession XM_088376). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with C8orf7. Chromosome 9 Open Reading Frame 7 (C9orf7, Accession NM_017586) is

another VGAM1965 host target gene. C9orf7 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by C9orf7, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of C9orf7 BINDING SITE, designated SEQ ID:19037, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68648] Another function of VGAM1965 is therefore inhibition of Chromosome 9 Open Reading Frame 7 (C9orf7, Accession NM_017586). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with C9orf7. CAPN13 (Accession NM_144575) is another VGAM1965 host target gene. CAPN13 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by CAPN13, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of CAPN13 BINDING SITE, designated SEQ ID:29381, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ

ID:4676.

[68649] Another function of VGAM1965 is therefore inhibition of CAPN13 (Accession NM_144575). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CAPN13. Chromobox Homolog 6 (CBX6, Accession NM_014292) is another VGAM1965 host target gene. CBX6 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by CBX6, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of CBX6 BINDING SITE, designated SEQ ID:15578, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68650] Another function of VGAM1965 is therefore inhibition of Chromobox Homolog 6 (CBX6, Accession NM_014292). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CBX6. Chemokine (C-C motif) Receptor 6 (CCR6, Accession NM_004367) is another VGAM1965 host target gene. CCR6 BINDING SITE1 through CCR6 BINDING SITE4 are HOST TARGET binding

sites found in untranslated regions of mRNA encoded by CCR6, corresponding to HOST TARGET binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of CCR6 BINDING SITE1 through CCR6 BINDING SITE4, designated SEQ ID:10581, SEQ ID:10582, SEQ ID:25376 and SEQ ID:25377 respectively, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68651] Another function of VGAM1965 is therefore inhibition of Chemokine (C-C motif) Receptor 6 (CCR6, Accession NM_004367). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CCR6. CDV-1 (Accession NM_031473) is another VGAM1965 host target gene. CDV-1 BINDING SITE1 and CDV-1 BINDING SITE2 are HOST TARGET binding sites found in untranslated regions of mRNA encoded by CDV-1, corresponding to HOST TARGET binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of CDV-1 BINDING SITE1 and CDV-1 BINDING SITE2, designated SEQ ID:25542 and SEQ ID:40487 respectively, to the nu-

cleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68652] Another function of VGAM1965 is therefore inhibition of CDV-1 (Accession NM_031473). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CDV-1. CHRNA7 (cholinergic receptor, nicotinic, alpha polypeptide 7, exons 5-10) and FAM7A (family with sequence similarity 7A, exons A-E) Fusion (CHRFAM7A, Accession XM_170784) is another VGAM1965 host target gene. CHRFAM7A BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by CHRFAM7A, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of CHRFAM7A BINDING SITE, designated SEQ ID:45551, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68653] Another function of VGAM1965 is therefore inhibition of CHRNA7 (cholinergic receptor, nicotinic, alpha polypeptide 7, exons 5-10) and FAM7A (family with sequence similarity 7A, exons A-E) Fusion (CHRFAM7A, Accession

XM_170784). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CHRFAM7A. Carbohydrate (chondroitin 6) Sulfotransferase 3 (CHST3, Accession NM_004273) is another VGAM1965 host target gene. CHST3 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by CHST3, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of CHST3 BINDING SITE, designated SEQ ID:10483, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68654] Another function of VGAM1965 is therefore inhibition of Carbohydrate (chondroitin 6) Sulfotransferase 3 (CHST3, Accession NM_004273). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CHST3. Claudin 15 (CLDN15, Accession NM_138429) is another VGAM1965 host target gene. CLDN15 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by CLDN15, corresponding to a

HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of CLDN15 BINDING SITE, designated SEQ ID:28794, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68655] Another function of VGAM1965 is therefore inhibition of Claudin 15 (CLDN15, Accession NM_138429). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CLDN15. C-type (calcium dependent, carbohydrate-recognition domain) Lectin, Superfamily Member 9 (CLECSF9, Accession NM_014358) is another VGAM1965 host target gene. CLECSF9 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by CLECSF9, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of CLECSF9 BINDING SITE, designated SEQ ID:15689, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68656] Another function of VGAM1965 is therefore inhibition of

C-type (calcium dependent, carbohydrate-recognition domain) Lectin, Superfamily Member 9 (CLECSF9, Accession NM_014358). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CLECSF9. Chloride Intracellular Channel 5 (CLIC5, Accession NM_016929) is another VGAM1965 host target gene. CLIC5 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by CLIC5, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of CLIC5 BINDING SITE, designated SEQ ID:18848, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68657] Another function of VGAM1965 is therefore inhibition of Chloride Intracellular Channel 5 (CLIC5, Accession NM_016929). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CLIC5. Cyclin M4 (CNNM4, Accession NM_020184) is another VGAM1965 host target gene. CNNM4 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by

CNNM4, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of CNNM4 BINDING SITE, designated SEQ ID:21429, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68658] Another function of VGAM1965 is therefore inhibition of Cyclin M4 (CNNM4, Accession NM_020184). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CNNM4. CCR4-NOT Transcription Complex, Subunit 3 (CNOT3, Accession NM_014516) is another VGAM1965 host target gene. CNOT3 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by CNOT3, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of CNOT3 BINDING SITE, designated SEQ ID:15844, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68659] Another function of VGAM1965 is therefore inhibition of

CCR4-NOT Transcription Complex, Subunit 3 (CNOT3, Accession NM_014516). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CNOT3. CUB and Sushi Multiple Domains 1 (CSMD1, Accession XM_054838) is another VGAM1965 host target gene. CSMD1 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by CSMD1, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of CSMD1 BINDING SITE, designated SEQ ID:36195, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68660] Another function of VGAM1965 is therefore inhibition of CUB and Sushi Multiple Domains 1 (CSMD1, Accession XM_054838). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CSMD1. DAMS (Accession NM_022001) is another VGAM1965 host target gene. DAMS BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by DAMS,

corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of DAMS BINDING SITE, designated SEQ ID:22544, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68661] Another function of VGAM1965 is therefore inhibition of DAMS (Accession NM_022001). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DAMS. Doublecortin and CaM Kinase-like 1 (DCAMKL1, Accession NM_004734) is another VGAM1965 host target gene. DCAMKL1 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by DCAMKL1, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of DCAMKL1 BINDING SITE, designated SEQ ID:11118, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68662] Another function of VGAM1965 is therefore inhibition of Doublecortin and CaM Kinase-like 1 (DCAMKL1, Accession

NM_004734). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DCAMKL1. Degenerative Spermatocyte Homolog, Lipid Desaturase (Drosophila) (DEGS, Accession NM_003676) is another VGAM1965 host target gene. DEGS BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by DEGS, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of DEGS BINDING SITE, designated SEQ ID:9770, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68663] Another function of VGAM1965 is therefore inhibition of Degenerative Spermatocyte Homolog, Lipid Desaturase (Drosophila) (DEGS, Accession NM_003676). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DEGS. DIM1 (Accession NM_006701) is another VGAM1965 host target gene. DIM1 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by DIM1, corresponding to a HOST

TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of DIM1 BINDING SITE, designated SEQ ID:13527, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68664] Another function of VGAM1965 is therefore inhibition of DIM1 (Accession NM_006701). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DIM1. DJ122O8.2 (Accession NM_020466) is another VGAM1965 host target gene. DJ122O8.2 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by DJ122O8.2, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of DJ122O8.2 BINDING SITE, designated SEQ ID:21703, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68665] Another function of VGAM1965 is therefore inhibition of DJ122O8.2 (Accession NM_020466). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with DJ122O8.2. DKFZP434A043 (Accession NM_015396) is another VGAM1965 host target gene. DKFZP434A043 BINDING SITE1 and DKFZP434A043 BINDING SITE2 are HOST TARGET binding sites found in untranslated regions of mRNA encoded by DKFZP434A043, corresponding to HOST TARGET binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of DKFZP434A043 BINDING SITE1 and DKFZP434A043 BINDING SITE2, designated SEQ ID:17698 and SEQ ID:17705 respectively, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68666] Another function of VGAM1965 is therefore inhibition of DKFZP434A043 (Accession NM_015396). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZP434A043. DKFZP434B1727 (Accession NM_032143) is another VGAM1965 host target gene. DKFZP434B1727 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by DKFZP434B1727, corresponding to a HOST TARGET bind-

ing site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of DKFZP434B1727 BINDING SITE, designated SEQ ID:25831, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68667] Another function of VGAM1965 is therefore inhibition of DKFZP434B1727 (Accession NM_032143). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZP434B1727. DKFZP434D193 (Accession XM_114297) is another VGAM1965 host target gene. DKFZP434D193 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by DKFZP434D193, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of DKFZP434D193 BINDING SITE, designated SEQ ID:42853, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68668] Another function of VGAM1965 is therefore inhibition of DKFZP434D193 (Accession XM_114297). Accordingly,

utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZP434D193. DKFZp434E0519 (Accession NM_032247) is another VGAM1965 host target gene. DKFZp434E0519 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by DKFZp434E0519, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of DKFZp434E0519 BINDING SITE, designated SEQ ID:25984, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68669] Another function of VGAM1965 is therefore inhibition of DKFZp434E0519 (Accession NM_032247). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZp434E0519. DKFZP434F0318 (Accession NM_030817) is another VGAM1965 host target gene. DKFZP434F0318 BINDING SITE1 and DKFZP434F0318 BINDING SITE2 are HOST TARGET binding sites found in untranslated regions of mRNA encoded by DKFZP434F0318, corresponding to HOST TARGET binding sites such as

BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of DKFZP434F0318 BINDING SITE1 and DKFZP434F0318 BINDING SITE2, designated SEQ ID:25145 and SEQ ID:25138 respectively, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68670] Another function of VGAM1965 is therefore inhibition of DKFZP434F0318 (Accession NM_030817). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZP434F0318. DKFZp434G171 (Accession XM_086583) is another VGAM1965 host target gene. DKFZp434G171 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by DKFZp434G171, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of DKFZp434G171 BINDING SITE, designated SEQ ID:38778, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68671] Another function of VGAM1965 is therefore inhibition of

DKFZp434G171 (Accession XM_086583). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZp434G171. DKFZP434H204 (Accession XM_039153) is another VGAM1965 host target gene. DKFZP434H204 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by DKFZP434H204, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of DKFZP434H204 BINDING SITE, designated SEQ ID:33017, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68672] Another function of VGAM1965 is therefore inhibition of DKFZP434H204 (Accession XM_039153). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZP434H204. DKFZP434I1735 (Accession XM_113763) is another VGAM1965 host target gene. DKFZP434I1735 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by DKFZP434I1735, corresponding to a HOST TARGET bind-

ing site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of DKFZP434I1735 BINDING SITE, designated SEQ ID:42422, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68673] Another function of VGAM1965 is therefore inhibition of DKFZP434I1735 (Accession XM_113763). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZP434I1735. DKFZp434K1210 (Accession NM_017606) is another VGAM1965 host target gene. DKFZp434K1210 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by DKFZp434K1210, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of DKFZp434K1210 BINDING SITE, designated SEQ ID:19102, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68674] Another function of VGAM1965 is therefore inhibition of DKFZp434K1210 (Accession NM_017606). Accordingly,

utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZp434K1210. DKFZP434L187 (Accession XM_044070) is another VGAM1965 host target gene. DKFZP434L187 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by DKFZP434L187, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of DKFZP434L187 BINDING SITE, designated SEQ ID:34125, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68675] Another function of VGAM1965 is therefore inhibition of DKFZP434L187 (Accession XM_044070). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZP434L187. DKFZP434O047 (Accession NM_015594) is another VGAM1965 host target gene. DKFZP434O047 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by DKFZP434O047, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BIND-

ING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of DKFZP434O047 BINDING SITE, designated SEQ ID:17870, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68676] Another function of VGAM1965 is therefore inhibition of DKFZP434O047 (Accession NM_015594). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZP434O047. DKFZP434P0111 (Accession XM_041116) is another VGAM1965 host target gene. DKFZP434P0111 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by DKFZP434P0111, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of DKFZP434P0111 BINDING SITE, designated SEQ ID:33451, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68677] Another function of VGAM1965 is therefore inhibition of DKFZP434P0111 (Accession XM_041116). Accordingly, utilities of VGAM1965 include diagnosis, prevention and

treatment of diseases and clinical conditions associated with DKFZP434P0111. DKFZP547L112 (Accession XM_039353) is another VGAM1965 host target gene. DKFZP547L112 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by DKFZP547L112, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of DKFZP547L112 BINDING SITE, designated SEQ ID:33060, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68678] Another function of VGAM1965 is therefore inhibition of DKFZP547L112 (Accession XM_039353). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZP547L112. DKFZP564B1162 (Accession NM_031305) is another VGAM1965 host target gene. DKFZP564B1162 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by DKFZP564B1162, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the

nucleotide sequences of DKFZP564B1162 BINDING SITE, designated SEQ ID:25340, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68679] Another function of VGAM1965 is therefore inhibition of DKFZP564B1162 (Accession NM_031305). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZP564B1162. DKFZP564F013 (Accession XM_168479) is another VGAM1965 host target gene. DKFZP564F013 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by DKFZP564F013, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of DKFZP564F013 BINDING SITE, designated SEQ ID:45204, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68680] Another function of VGAM1965 is therefore inhibition of DKFZP564F013 (Accession XM_168479). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated

with DKFZP564F013. DKFZP564I052 (Accession XM_039660) is another VGAM1965 host target gene. DKFZP564I052 BINDING SITE1 and DKFZP564I052 BINDING SITE2 are HOST TARGET binding sites found in untranslated regions of mRNA encoded by DKFZP564I052, corresponding to HOST TARGET binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of DKFZP564I052 BINDING SITE1 and DKFZP564I052 BINDING SITE2, designated SEQ ID:33140 and SEQ ID:33141 respectively, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68681] Another function of VGAM1965 is therefore inhibition of DKFZP564I052 (Accession XM_039660). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZP564I052. DKFZP564M182 (Accession XM_085525) is another VGAM1965 host target gene. DKFZP564M182 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by DKFZP564M182, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BIND-

ING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of DKFZP564M182 BINDING SITE, designated SEQ ID:38221, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68682] Another function of VGAM1965 is therefore inhibition of DKFZP564M182 (Accession XM_085525). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZP564M182. DKFZP564O1863 (Accession XM_043922) is another VGAM1965 host target gene. DKFZP564O1863 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by DKFZP564O1863, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of DKFZP564O1863 BINDING SITE, designated SEQ ID:34043, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68683] Another function of VGAM1965 is therefore inhibition of DKFZP564O1863 (Accession XM_043922). Accordingly, utilities of VGAM1965 include diagnosis, prevention and

treatment of diseases and clinical conditions associated with DKFZP564O1863. DKFZP566F2124 (Accession NM_015630) is another VGAM1965 host target gene. DKFZP566F2124 BINDING SITE1 and DKFZP566F2124 BINDING SITE2 are HOST TARGET binding sites found in untranslated regions of mRNA encoded by DKFZP566F2124, corresponding to HOST TARGET binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of DKFZP566F2124 BINDING SITE1 and DKFZP566F2124 BINDING SITE2, designated SEQ ID:17888 and SEQ ID:17890 respectively, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68684] Another function of VGAM1965 is therefore inhibition of DKFZP566F2124 (Accession NM_015630). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZP566F2124. DKFZp586I021 (Accession NM_032271) is another VGAM1965 host target gene. DKFZp586I021 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by DKFZp586I021, corresponding to a HOST TARGET binding

site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of DKFZp586I021 BINDING SITE, designated SEQ ID:26030, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68685] Another function of VGAM1965 is therefore inhibition of DKFZp586I021 (Accession NM_032271). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZp586I021. DKFZP727M111 (Accession NM_015540) is another VGAM1965 host target gene. DKFZP727M111 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by DKFZP727M111, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of DKFZP727M111 BINDING SITE, designated SEQ ID:17801, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68686] Another function of VGAM1965 is therefore inhibition of DKFZP727M111 (Accession NM_015540). Accordingly,

utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZP727M111. DKFZp761F2014 (Accession NM_020215) is another VGAM1965 host target gene. DKFZp761F2014 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by DKFZp761F2014, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of DKFZp761F2014 BINDING SITE, designated SEQ ID:21464, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68687] Another function of VGAM1965 is therefore inhibition of DKFZp761F2014 (Accession NM_020215). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZp761F2014. DKFZP761F241 (Accession NM_031455) is another VGAM1965 host target gene. DKFZP761F241 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by DKFZP761F241, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING

SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of DKFZP761F241 BINDING SITE, designated SEQ ID:25479, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68688] Another function of VGAM1965 is therefore inhibition of DKFZP761F241 (Accession NM_031455). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZP761F241. DKFZp761G0313 (Accession XM_038026) is another VGAM1965 host target gene. DKFZp761G0313 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by DKFZp761G0313, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of DKFZp761G0313 BINDING SITE, designated SEQ ID:32743, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68689] Another function of VGAM1965 is therefore inhibition of DKFZp761G0313 (Accession XM_038026). Accordingly, utilities of VGAM1965 include diagnosis, prevention and

treatment of diseases and clinical conditions associated with DKFZp761G0313. DKFZP761G1913 (Accession NM_031474) is another VGAM1965 host target gene. DKFZP761G1913 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by DKFZP761G1913, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of DKFZP761G1913 BINDING SITE, designated SEQ ID:25547, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68690] Another function of VGAM1965 is therefore inhibition of DKFZP761G1913 (Accession NM_031474). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZP761G1913. DKFZp761G2113 (Accession XM_046017) is another VGAM1965 host target gene. DKFZp761G2113 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by DKFZp761G2113, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the

nucleotide sequences of DKFZp761G2113 BINDING SITE, designated SEQ ID:34645, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68691] Another function of VGAM1965 is therefore inhibition of DKFZp761G2113 (Accession XM_046017). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZp761G2113. DKFZp761O0113 (Accession NM_018409) is another VGAM1965 host target gene. DKFZp761O0113 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by DKFZp761O0113, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of DKFZp761O0113 BINDING SITE, designated SEQ ID:20448, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68692] Another function of VGAM1965 is therefore inhibition of DKFZp761O0113 (Accession NM_018409). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated

with DKFZp761O0113. DKFZp761P1010 (Accession NM_018423) is another VGAM1965 host target gene. DKFZp761P1010 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by DKFZp761P1010, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of DKFZp761P1010 BINDING SITE, designated SEQ ID:20480, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68693] Another function of VGAM1965 is therefore inhibition of DKFZp761P1010 (Accession NM_018423). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZp761P1010. DKFZp762L0311 (Accession NM_018719) is another VGAM1965 host target gene. DKFZp762L0311 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by DKFZp762L0311, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of DKFZp762L0311 BINDING SITE,

designated SEQ ID:20801, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68694] Another function of VGAM1965 is therefore inhibition of DKFZp762L0311 (Accession NM_018719). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZp762L0311. DRF1 (Accession NM_025104) is another VGAM1965 host target gene. DRF1 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by DRF1, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of DRF1 BINDING SITE, designated SEQ ID:24750, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68695] Another function of VGAM1965 is therefore inhibition of DRF1 (Accession NM_025104). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DRF1. Down Syndrome Critical Region Gene 1-like 1 (DSCR1L1, Accession NM_005822) is another VGAM1965 host target

gene. DSCR1L1 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by DSCR1L1, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of DSCR1L1 BINDING SITE, designated SEQ ID:12429, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68696] Another function of VGAM1965 is therefore inhibition of Down Syndrome Critical Region Gene 1-like 1 (DSCR1L1, Accession NM_005822). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DSCR1L1. Ephrin-A5 (EFNA5, Accession NM_001962) is another VGAM1965 host target gene. EFNA5 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by EFNA5, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of EFNA5 BINDING SITE, designated SEQ ID:7687, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA,

also designated SEQ ID:4676.

[68697] Another function of VGAM1965 is therefore inhibition of Ephrin-A5 (EFNA5, Accession NM_001962). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with EFNA5. Echinoderm Microtubule Associated Protein Like 4 (EML4, Accession NM_019063) is another VGAM1965 host target gene. EML4 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by EML4, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of EML4 BINDING SITE, designated SEQ ID:21146, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68698] Another function of VGAM1965 is therefore inhibition of Echinoderm Microtubule Associated Protein Like 4 (EML4, Accession NM_019063). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with EML4. Enabled Homolog (Drosophila) (ENAH, Accession NM_018212) is another VGAM1965 host target gene.

ENAH BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by ENAH, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of ENAH BINDING SITE, designated SEQ ID:20128, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68699] Another function of VGAM1965 is therefore inhibition of Enabled Homolog (Drosophila) (ENAH, Accession NM_018212). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ENAH. Ectonucleotide Pyrophosphatase/phosphodiesterase 4 (putative function) (ENPP4, Accession NM_014936) is another VGAM1965 host target gene. ENPP4 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by ENPP4, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of ENPP4 BINDING SITE, designated SEQ ID:17241, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also des-

ignated SEQ ID:4676.

[68700] Another function of VGAM1965 is therefore inhibition of Ectonucleotide Pyrophosphatase/phosphodiesterase 4 (putative function) (ENPP4, Accession NM_014936). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ENPP4. EPLIN (Accession NM_016357) is another VGAM1965 host target gene. EPLIN BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by EPLIN, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of EPLIN BINDING SITE, designated SEQ ID:18495, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68701] Another function of VGAM1965 is therefore inhibition of EPLIN (Accession NM_016357). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with EPLIN. Erythroblast Membrane-associated Protein (ERMAP, Accession NM_018538) is another VGAM1965 host target gene. ERMAP BINDING SITE is HOST TARGET binding site

found in the 3` untranslated region of mRNA encoded by ERMAP, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of ERMAP BINDING SITE, designated SEQ ID:20604, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68702] Another function of VGAM1965 is therefore inhibition of Erythroblast Membrane-associated Protein (ERMAP, Accession NM_018538). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ERMAP. ET (Accession NM_024311) is another VGAM1965 host target gene. ET BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by ET, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of ET BINDING SITE, designated SEQ ID:23605, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68703] Another function of VGAM1965 is therefore inhibition of

ET (Accession NM_024311). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ET. Fatty Acid Desaturase 2 (FADS2, Accession NM_004265) is another VGAM1965 host target gene. FADS2 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by FADS2, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of FADS2 BINDING SITE, designated SEQ ID:10468, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68704] Another function of VGAM1965 is therefore inhibition of Fatty Acid Desaturase 2 (FADS2, Accession NM_004265). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FADS2. FBX30 (Accession NM_033182) is another VGAM1965 host target gene. FBX30 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by FBX30, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2

illustrates the complementarity of the nucleotide sequences of FBX30 BINDING SITE, designated SEQ ID:27043, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68705] Another function of VGAM1965 is therefore inhibition of FBX30 (Accession NM_033182). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FBX30. F-box Only Protein 8 (FBXO8, Accession NM_012180) is another VGAM1965 host target gene. FBXO8 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by FBXO8, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of FBXO8 BINDING SITE, designated SEQ ID:14467, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68706] Another function of VGAM1965 is therefore inhibition of F-box Only Protein 8 (FBXO8, Accession NM_012180). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions

associated with FBXO8. FGD1 Family, Member 3 (FGD3, Accession XM_053487) is another VGAM1965 host target gene. FGD3 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by FGD3, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of FGD3 BINDING SITE, designated SEQ ID:36093, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68707] Another function of VGAM1965 is therefore inhibition of FGD1 Family, Member 3 (FGD3, Accession XM_053487). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FGD3. FLJ00001 (Accession XM_088525) is another VGAM1965 host target gene. FLJ00001 BINDING SITE1 and FLJ00001 BINDING SITE2 are HOST TARGET binding sites found in untranslated regions of mRNA encoded by FLJ00001, corresponding to HOST TARGET binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of FLJ00001 BINDING SITE1 and FLJ00001 BINDING SITE2, designated SEQ

ID:39781 and SEQ ID:39784 respectively, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68708] Another function of VGAM1965 is therefore inhibition of FLJ00001 (Accession XM_088525). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ00001. FLJ00007 (Accession XM_048928) is another VGAM1965 host target gene. FLJ00007 BINDING SITE1 and FLJ00007 BINDING SITE2 are HOST TARGET binding sites found in untranslated regions of mRNA encoded by FLJ00007, corresponding to HOST TARGET binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of FLJ00007 BINDING SITE1 and FLJ00007 BINDING SITE2, designated SEQ ID:35314 and SEQ ID:19799 respectively, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68709] Another function of VGAM1965 is therefore inhibition of FLJ00007 (Accession XM_048928). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

FLJ00007. FLJ10460 (Accession NM_018097) is another VGAM1965 host target gene. FLJ10460 BINDING SITE1 and FLJ10460 BINDING SITE2 are HOST TARGET binding sites found in untranslated regions of mRNA encoded by FLJ10460, corresponding to HOST TARGET binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of FLJ10460 BINDING SITE1 and FLJ10460 BINDING SITE2, designated SEQ ID:19868 and SEQ ID:19870 respectively, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68710] Another function of VGAM1965 is therefore inhibition of FLJ10460 (Accession NM_018097). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ10460. FLJ10520 (Accession NM_018124) is another VGAM1965 host target gene. FLJ10520 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by FLJ10520, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of FLJ10520

BINDING SITE, designated SEQ ID:19907, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68711] Another function of VGAM1965 is therefore inhibition of FLJ10520 (Accession NM_018124). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ10520. FLJ10535 (Accession NM_018129) is another VGAM1965 host target gene. FLJ10535 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by FLJ10535, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of FLJ10535 BINDING SITE, designated SEQ ID:19923, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68712] Another function of VGAM1965 is therefore inhibition of FLJ10535 (Accession NM_018129). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ10535. FLJ10539 (Accession NM_018130) is another VGAM1965 host target gene. FLJ10539 BINDING SITE is

HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by FLJ10539, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of FLJ10539 BINDING SITE, designated SEQ ID:19925, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68713] Another function of VGAM1965 is therefore inhibition of FLJ10539 (Accession NM_018130). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ10539. FLJ10547 (Accession NM_018134) is another VGAM1965 host target gene. FLJ10547 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by FLJ10547, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of FLJ10547 BINDING SITE, designated SEQ ID:19932, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68714] Another function of VGAM1965 is therefore inhibition of

FLJ10547 (Accession NM_018134). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ10547. FLJ10579 (Accession NM_018145) is another VGAM1965 host target gene. FLJ10579 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by FLJ10579, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of FLJ10579 BINDING SITE, designated SEQ ID:19947, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68715] Another function of VGAM1965 is therefore inhibition of FLJ10579 (Accession NM_018145). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ10579. FLJ10619 (Accession NM_018156) is another VGAM1965 host target gene. FLJ10619 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by FLJ10619, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the com-

plementarity of the nucleotide sequences of FLJ10619 BINDING SITE, designated SEQ ID:19968, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68716] Another function of VGAM1965 is therefore inhibition of FLJ10619 (Accession NM_018156). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ10619. FLJ10704 (Accession NM_018185) is another VGAM1965 host target gene. FLJ10704 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by FLJ10704, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of FLJ10704 BINDING SITE, designated SEQ ID:20036, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68717] Another function of VGAM1965 is therefore inhibition of FLJ10704 (Accession NM_018185). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ10704. FLJ10895 (Accession NM_019084) is another

VGAM1965 host target gene. FLJ10895 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by FLJ10895, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of FLJ10895 BINDING SITE, designated SEQ ID:21159, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68718] Another function of VGAM1965 is therefore inhibition of FLJ10895 (Accession NM_019084). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ10895. FLJ10904 (Accession NM_018268) is another VGAM1965 host target gene. FLJ10904 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by FLJ10904, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of FLJ10904 BINDING SITE, designated SEQ ID:20241, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68719] Another function of VGAM1965 is therefore inhibition of FLJ10904 (Accession NM_018268). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ10904. FLJ10922 (Accession NM_018273) is another VGAM1965 host target gene. FLJ10922 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by FLJ10922, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of FLJ10922 BINDING SITE, designated SEQ ID:20258, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68720] Another function of VGAM1965 is therefore inhibition of FLJ10922 (Accession NM_018273). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ10922. FLJ10936 (Accession NM_018279) is another VGAM1965 host target gene. FLJ10936 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by FLJ10936, corresponding to a HOST TARGET binding site such as BINDING SITE I, BIND-

ING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of FLJ10936 BINDING SITE, designated SEQ ID:20269, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68721] Another function of VGAM1965 is therefore inhibition of FLJ10936 (Accession NM_018279). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ10936. FLJ11210 (Accession XM_005298) is another VGAM1965 host target gene. FLJ11210 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by FLJ11210, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of FLJ11210 BINDING SITE, designated SEQ ID:29976, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68722] Another function of VGAM1965 is therefore inhibition of FLJ11210 (Accession XM_005298). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

FLJ11210. FLJ11539 (Accession NM_024748) is another VGAM1965 host target gene. FLJ11539 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by FLJ11539, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of FLJ11539 BINDING SITE, designated SEQ ID:24089, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68723] Another function of VGAM1965 is therefore inhibition of FLJ11539 (Accession NM_024748). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ11539. FLJ12057 (Accession NM_024768) is another VGAM1965 host target gene. FLJ12057 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by FLJ12057, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of FLJ12057 BINDING SITE, designated SEQ ID:24128, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM

RNA, also designated SEQ ID:4676.

[68724] Another function of VGAM1965 is therefore inhibition of FLJ12057 (Accession NM_024768). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ12057. FLJ12363 (Accession NM_032167) is another VGAM1965 host target gene. FLJ12363 BINDING SITE1 and FLJ12363 BINDING SITE2 are HOST TARGET binding sites found in untranslated regions of mRNA encoded by FLJ12363, corresponding to HOST TARGET binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of FLJ12363 BINDING SITE1 and FLJ12363 BINDING SITE2, designated SEQ ID:25869 and SEQ ID:25870 respectively, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68725] Another function of VGAM1965 is therefore inhibition of FLJ12363 (Accession NM_032167). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ12363. FLJ12425 (Accession XM_098290) is another VGAM1965 host target gene. FLJ12425 BINDING SITE1 and

FLJ12425 BINDING SITE2 are HOST TARGET binding sites found in untranslated regions of mRNA encoded by FLJ12425, corresponding to HOST TARGET binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of FLJ12425 BINDING SITE1 and FLJ12425 BINDING SITE2, designated SEQ ID:41563 and SEQ ID:24550 respectively, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68726] Another function of VGAM1965 is therefore inhibition of FLJ12425 (Accession XM_098290). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ12425. FLJ12587 (Accession NM_022480) is another VGAM1965 host target gene. FLJ12587 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by FLJ12587, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of FLJ12587 BINDING SITE, designated SEQ ID:22854, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM

RNA, also designated SEQ ID:4676.

[68727] Another function of VGAM1965 is therefore inhibition of FLJ12587 (Accession NM_022480). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ12587. FLJ12592 (Accession NM_032169) is another VGAM1965 host target gene. FLJ12592 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by FLJ12592, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of FLJ12592 BINDING SITE, designated SEQ ID:25876, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68728] Another function of VGAM1965 is therefore inhibition of FLJ12592 (Accession NM_032169). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ12592. FLJ12687 (Accession NM_024917) is another VGAM1965 host target gene. FLJ12687 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by FLJ12687, corresponding to a

HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of FLJ12687 BINDING SITE, designated SEQ ID:24448, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68729] Another function of VGAM1965 is therefore inhibition of FLJ12687 (Accession NM_024917). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ12687. FLJ12747 (Accession NM_032173) is another VGAM1965 host target gene. FLJ12747 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by FLJ12747, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of FLJ12747 BINDING SITE, designated SEQ ID:25882, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68730] Another function of VGAM1965 is therefore inhibition of FLJ12747 (Accession NM_032173). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment

of diseases and clinical conditions associated with FLJ12747. FLJ12770 (Accession NM_032174) is another VGAM1965 host target gene. FLJ12770 BINDING SITE1 and FLJ12770 BINDING SITE2 are HOST TARGET binding sites found in untranslated regions of mRNA encoded by FLJ12770, corresponding to HOST TARGET binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of FLJ12770 BINDING SITE1 and FLJ12770 BINDING SITE2, designated SEQ ID:25886 and SEQ ID:25887 respectively, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68731] Another function of VGAM1965 is therefore inhibition of FLJ12770 (Accession NM_032174). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ12770. FLJ12994 (Accession NM_022841) is another VGAM1965 host target gene. FLJ12994 BINDING SITE1 and FLJ12994 BINDING SITE2 are HOST TARGET binding sites found in untranslated regions of mRNA encoded by FLJ12994, corresponding to HOST TARGET binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III.

Table 2 illustrates the complementarity of the nucleotide sequences of FLJ12994 BINDING SITE1 and FLJ12994 BINDING SITE2, designated SEQ ID:23133 and SEQ ID:37975 respectively, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68732] Another function of VGAM1965 is therefore inhibition of FLJ12994 (Accession NM_022841). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ12994. FLJ13612 (Accession NM_025202) is another VGAM1965 host target gene. FLJ13612 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by FLJ13612, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of FLJ13612 BINDING SITE, designated SEQ ID:24865, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68733] Another function of VGAM1965 is therefore inhibition of FLJ13612 (Accession NM_025202). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment

of diseases and clinical conditions associated with FLJ13612. FLJ13614 (Accession NM_139076) is another VGAM1965 host target gene. FLJ13614 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by FLJ13614, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of FLJ13614 BINDING SITE, designated SEQ ID:29150, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68734] Another function of VGAM1965 is therefore inhibition of FLJ13614 (Accession NM_139076). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ13614. FLJ13646 (Accession NM_024584) is another VGAM1965 host target gene. FLJ13646 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by FLJ13646, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of FLJ13646 BINDING SITE, designated SEQ ID:23816, to the nucleotide

sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68735] Another function of VGAM1965 is therefore inhibition of FLJ13646 (Accession NM_024584). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ13646. FLJ13693 (Accession NM_024807) is another VGAM1965 host target gene. FLJ13693 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by FLJ13693, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of FLJ13693 BINDING SITE, designated SEQ ID:24189, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68736] Another function of VGAM1965 is therefore inhibition of FLJ13693 (Accession NM_024807). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ13693. FLJ13902 (Accession NM_024653) is another VGAM1965 host target gene. FLJ13902 BINDING SITE is HOST TARGET binding site found in the 3` untranslated

region of mRNA encoded by FLJ13902, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of FLJ13902 BINDING SITE, designated SEQ ID:23952, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68737] Another function of VGAM1965 is therefore inhibition of FLJ13902 (Accession NM_024653). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ13902. FLJ13952 (Accession NM_024798) is another VGAM1965 host target gene. FLJ13952 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by FLJ13952, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of FLJ13952 BINDING SITE, designated SEQ ID:24176, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68738] Another function of VGAM1965 is therefore inhibition of FLJ13952 (Accession NM_024798). Accordingly, utilities of

VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ13952. FLJ14054 (Accession NM_024563) is another VGAM1965 host target gene. FLJ14054 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by FLJ14054, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of FLJ14054 BINDING SITE, designated SEQ ID:23787, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68739] Another function of VGAM1965 is therefore inhibition of FLJ14054 (Accession NM_024563). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ14054. FLJ14084 (Accession NM_021637) is another VGAM1965 host target gene. FLJ14084 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by FLJ14084, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of FLJ14084

BINDING SITE, designated SEQ ID:22287, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68740] Another function of VGAM1965 is therefore inhibition of FLJ14084 (Accession NM_021637). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ14084. FLJ14356 (Accession NM_030824) is another VGAM1965 host target gene. FLJ14356 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by FLJ14356, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of FLJ14356 BINDING SITE, designated SEQ ID:25154, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68741] Another function of VGAM1965 is therefore inhibition of FLJ14356 (Accession NM_030824). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ14356. FLJ14431 (Accession NM_032783) is another VGAM1965 host target gene. FLJ14431 BINDING SITE is

HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by FLJ14431, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of FLJ14431 BINDING SITE, designated SEQ ID:26527, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68742] Another function of VGAM1965 is therefore inhibition of FLJ14431 (Accession NM_032783). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ14431. FLJ14525 (Accession NM_032800) is another VGAM1965 host target gene. FLJ14525 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by FLJ14525, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of FLJ14525 BINDING SITE, designated SEQ ID:26550, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68743] Another function of VGAM1965 is therefore inhibition of

FLJ14525 (Accession NM_032800). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ14525. FLJ14751 (Accession NM_032834) is another VGAM1965 host target gene. FLJ14751 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by FLJ14751, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of FLJ14751 BINDING SITE, designated SEQ ID:26611, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68744] Another function of VGAM1965 is therefore inhibition of FLJ14751 (Accession NM_032834). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ14751. FLJ14871 (Accession NM_032854) is another VGAM1965 host target gene. FLJ14871 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by FLJ14871, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the com-

plementarity of the nucleotide sequences of FLJ14871 BINDING SITE, designated SEQ ID:26653, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68745] Another function of VGAM1965 is therefore inhibition of FLJ14871 (Accession NM_032854). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ14871. FLJ14888 (Accession NM_032856) is another VGAM1965 host target gene. FLJ14888 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by FLJ14888, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of FLJ14888 BINDING SITE, designated SEQ ID:26656, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68746] Another function of VGAM1965 is therefore inhibition of FLJ14888 (Accession NM_032856). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ14888. FLJ20034 (Accession NM_017630) is another

VGAM1965 host target gene. FLJ20034 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by FLJ20034, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of FLJ20034 BINDING SITE, designated SEQ ID:19138, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68747] Another function of VGAM1965 is therefore inhibition of FLJ20034 (Accession NM_017630). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ20034. FLJ20139 (Accession NM_017685) is another VGAM1965 host target gene. FLJ20139 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by FLJ20139, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of FLJ20139 BINDING SITE, designated SEQ ID:19235, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68748] Another function of VGAM1965 is therefore inhibition of FLJ20139 (Accession NM_017685). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ20139. FLJ20150 (Accession NM_017688) is another VGAM1965 host target gene. FLJ20150 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by FLJ20150, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of FLJ20150 BINDING SITE, designated SEQ ID:19244, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68749] Another function of VGAM1965 is therefore inhibition of FLJ20150 (Accession NM_017688). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ20150. FLJ20232 (Accession NM_019008) is another VGAM1965 host target gene. FLJ20232 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by FLJ20232, corresponding to a HOST TARGET binding site such as BINDING SITE I, BIND-

ING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of FLJ20232 BINDING SITE, designated SEQ ID:21089, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68750] Another function of VGAM1965 is therefore inhibition of FLJ20232 (Accession NM_019008). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ20232. FLJ20308 (Accession XM_039852) is another VGAM1965 host target gene. FLJ20308 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by FLJ20308, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of FLJ20308 BINDING SITE, designated SEQ ID:33198, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68751] Another function of VGAM1965 is therefore inhibition of FLJ20308 (Accession XM_039852). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

FLJ20308. FLJ20343 (Accession NM_017775) is another VGAM1965 host target gene. FLJ20343 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by FLJ20343, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of FLJ20343 BINDING SITE, designated SEQ ID:19400, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68752] Another function of VGAM1965 is therefore inhibition of FLJ20343 (Accession NM_017775). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ20343. FLJ20413 (Accession NM_017808) is another VGAM1965 host target gene. FLJ20413 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by FLJ20413, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of FLJ20413 BINDING SITE, designated SEQ ID:19454, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM

RNA, also designated SEQ ID:4676.

[68753] Another function of VGAM1965 is therefore inhibition of FLJ20413 (Accession NM_017808). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ20413. FLJ20511 (Accession NM_017853) is another VGAM1965 host target gene. FLJ20511 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by FLJ20511, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of FLJ20511 BINDING SITE, designated SEQ ID:19530, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68754] Another function of VGAM1965 is therefore inhibition of FLJ20511 (Accession NM_017853). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ20511. FLJ20666 (Accession NM_017922) is another VGAM1965 host target gene. FLJ20666 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by FLJ20666, corresponding to a

HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of FLJ20666 BINDING SITE, designated SEQ ID:19584, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68755] Another function of VGAM1965 is therefore inhibition of FLJ20666 (Accession NM_017922). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ20666. FLJ20686 (Accession NM_017925) is another VGAM1965 host target gene. FLJ20686 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by FLJ20686, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of FLJ20686 BINDING SITE, designated SEQ ID:19596, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68756] Another function of VGAM1965 is therefore inhibition of FLJ20686 (Accession NM_017925). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment

of diseases and clinical conditions associated with FLJ20686. FLJ20689 (Accession NM_017926) is another VGAM1965 host target gene. FLJ20689 BINDING SITE1 and FLJ20689 BINDING SITE2 are HOST TARGET binding sites found in untranslated regions of mRNA encoded by FLJ20689, corresponding to HOST TARGET binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of FLJ20689 BINDING SITE1 and FLJ20689 BINDING SITE2, designated SEQ ID:19600 and SEQ ID:19704 respectively, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68757] Another function of VGAM1965 is therefore inhibition of FLJ20689 (Accession NM_017926). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ20689. FLJ22004 (Accession NM_025181) is another VGAM1965 host target gene. FLJ22004 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by FLJ22004, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the com-

plementarity of the nucleotide sequences of FLJ22004 BINDING SITE, designated SEQ ID:24817, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68758] Another function of VGAM1965 is therefore inhibition of FLJ22004 (Accession NM_025181). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ22004. FLJ22301 (Accession NM_024836) is another VGAM1965 host target gene. FLJ22301 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by FLJ22301, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of FLJ22301 BINDING SITE, designated SEQ ID:24242, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68759] Another function of VGAM1965 is therefore inhibition of FLJ22301 (Accession NM_024836). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ22301. FLJ22761 (Accession NM_025130) is another

VGAM1965 host target gene. FLJ22761 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by FLJ22761, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of FLJ22761 BINDING SITE, designated SEQ ID:24772, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68760] Another function of VGAM1965 is therefore inhibition of FLJ22761 (Accession NM_025130). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ22761. FLJ23040 (Accession NM_025174) is another VGAM1965 host target gene. FLJ23040 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by FLJ23040, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of FLJ23040 BINDING SITE, designated SEQ ID:24809, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68761] Another function of VGAM1965 is therefore inhibition of FLJ23040 (Accession NM_025174). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ23040. FLJ23119 (Accession NM_024652) is another VGAM1965 host target gene. FLJ23119 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by FLJ23119, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of FLJ23119 BINDING SITE, designated SEQ ID:23949, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68762] Another function of VGAM1965 is therefore inhibition of FLJ23119 (Accession NM_024652). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ23119. FLJ23311 (Accession NM_024680) is another VGAM1965 host target gene. FLJ23311 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by FLJ23311, corresponding to a HOST TARGET binding site such as BINDING SITE I, BIND-

ING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of FLJ23311 BINDING SITE, designated SEQ ID:23993, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68763] Another function of VGAM1965 is therefore inhibition of FLJ23311 (Accession NM_024680). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ23311. FLJ23342 (Accession NM_024631) is another VGAM1965 host target gene. FLJ23342 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by FLJ23342, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of FLJ23342 BINDING SITE, designated SEQ ID:23899, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68764] Another function of VGAM1965 is therefore inhibition of FLJ23342 (Accession NM_024631). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

FLJ23342. FLJ23462 (Accession NM_024843) is another VGAM1965 host target gene. FLJ23462 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by FLJ23462, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of FLJ23462 BINDING SITE, designated SEQ ID:24268, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68765] Another function of VGAM1965 is therefore inhibition of FLJ23462 (Accession NM_024843). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ23462. FLJ23499 (Accession NM_022761) is another VGAM1965 host target gene. FLJ23499 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by FLJ23499, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of FLJ23499 BINDING SITE, designated SEQ ID:23008, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM

RNA, also designated SEQ ID:4676.

[68766] Another function of VGAM1965 is therefore inhibition of FLJ23499 (Accession NM_022761). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ23499. FLJ23556 (Accession NM_024880) is another VGAM1965 host target gene. FLJ23556 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by FLJ23556, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of FLJ23556 BINDING SITE, designated SEQ ID:24321, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68767] Another function of VGAM1965 is therefore inhibition of FLJ23556 (Accession NM_024880). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ23556. FLJ23590 (Accession NM_024649) is another VGAM1965 host target gene. FLJ23590 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by FLJ23590, corresponding to a

HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of FLJ23590 BINDING SITE, designated SEQ ID:23942, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68768] Another function of VGAM1965 is therefore inhibition of FLJ23590 (Accession NM_024649). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ23590. FLJ25415 (Accession NM_144708) is another VGAM1965 host target gene. FLJ25415 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by FLJ25415, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of FLJ25415 BINDING SITE, designated SEQ ID:29534, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68769] Another function of VGAM1965 is therefore inhibition of FLJ25415 (Accession NM_144708). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment

of diseases and clinical conditions associated with FLJ25415. FLJ30294 (Accession NM_144632) is another VGAM1965 host target gene. FLJ30294 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by FLJ30294, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of FLJ30294 BINDING SITE, designated SEQ ID:29450, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68770] Another function of VGAM1965 is therefore inhibition of FLJ30294 (Accession NM_144632). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ30294. FLJ30567 (Accession NM_145022) is another VGAM1965 host target gene. FLJ30567 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by FLJ30567, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of FLJ30567 BINDING SITE, designated SEQ ID:29634, to the nucleotide

sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68771] Another function of VGAM1965 is therefore inhibition of FLJ30567 (Accession NM_145022). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ30567. FLJ31890 (Accession XM_166117) is another VGAM1965 host target gene. FLJ31890 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by FLJ31890, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of FLJ31890 BINDING SITE, designated SEQ ID:43893, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68772] Another function of VGAM1965 is therefore inhibition of FLJ31890 (Accession XM_166117). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ31890. FLJ32865 (Accession NM_144613) is another VGAM1965 host target gene. FLJ32865 BINDING SITE is HOST TARGET binding site found in the 3` untranslated

region of mRNA encoded by FLJ32865, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of FLJ32865 BINDING SITE, designated SEQ ID:29428, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68773] Another function of VGAM1965 is therefore inhibition of FLJ32865 (Accession NM_144613). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ32865. FLJ32894 (Accession NM_144667) is another VGAM1965 host target gene. FLJ32894 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by FLJ32894, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of FLJ32894 BINDING SITE, designated SEQ ID:29486, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68774] Another function of VGAM1965 is therefore inhibition of FLJ32894 (Accession NM_144667). Accordingly, utilities of

VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ32894. FLJ33069 (Accession NM_144649) is another VGAM1965 host target gene. FLJ33069 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by FLJ33069, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of FLJ33069 BINDING SITE, designated SEQ ID:29476, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68775] Another function of VGAM1965 is therefore inhibition of FLJ33069 (Accession NM_144649). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ33069. Forkhead Box H1 (FOXH1, Accession NM_003923) is another VGAM1965 host target gene. FOXH1 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by FOXH1, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide

sequences of FOXH1 BINDING SITE, designated SEQ ID:10012, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68776] Another function of VGAM1965 is therefore inhibition of Forkhead Box H1 (FOXH1, Accession NM_003923). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FOXH1. FRSB (Accession NM_005687) is another VGAM1965 host target gene. FRSB BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by FRSB, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of FRSB BINDING SITE, designated SEQ ID:12247, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68777] Another function of VGAM1965 is therefore inhibition of FRSB (Accession NM_005687). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FRSB. GRB2-associated Binding Protein 3 (GAB3, Accession

NM_080612) is another VGAM1965 host target gene. GAB3 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by GAB3, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of GAB3 BINDING SITE, designated SEQ ID:27929, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68778] Another function of VGAM1965 is therefore inhibition of GRB2-associated Binding Protein 3 (GAB3, Accession NM_080612). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GAB3. GAPCENA (Accession NM_012197) is another VGAM1965 host target gene. GAPCENA BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by GAPCENA, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of GAPCENA BINDING SITE, designated SEQ ID:14496, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ

ID:4676.

[68779] Another function of VGAM1965 is therefore inhibition of GAPCENA (Accession NM_012197). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GAPCENA. Ganglioside-induced Differentiation-associated Protein 1-like 1 (GDAP1L1, Accession NM_024034) is another VGAM1965 host target gene. GDAP1L1 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by GDAP1L1, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of GDAP1L1 BINDING SITE, designated SEQ ID:23466, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68780] Another function of VGAM1965 is therefore inhibition of Ganglioside-induced Differentiation-associated Protein 1-like 1 (GDAP1L1, Accession NM_024034). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GDAP1L1. GENX-3414 (Accession NM_003943) is another VGAM1965 host target gene. GENX-3414 BINDING

SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by GENX-3414, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of GENX-3414 BINDING SITE, designated SEQ ID:10060, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68781] Another function of VGAM1965 is therefore inhibition of GENX-3414 (Accession NM_003943). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GENX-3414. Golgi Associated, Gamma Adaptin Ear Containing, ARF Binding Protein 2 (GGA2, Accession NM_138640) is another VGAM1965 host target gene. GGA2 BINDING SITE1 and GGA2 BINDING SITE2 are HOST TARGET binding sites found in untranslated regions of mRNA encoded by GGA2, corresponding to HOST TARGET binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of GGA2 BINDING SITE1 and GGA2 BINDING SITE2, designated SEQ ID:28927 and SEQ ID:17405 respectively, to the nucleotide sequence of

VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68782] Another function of VGAM1965 is therefore inhibition of Golgi Associated, Gamma Adaptin Ear Containing, ARF Binding Protein 2 (GGA2, Accession NM_138640). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GGA2. Golgi Autoantigen, Golgin Subfamily A, 2-like, Y-linked (GOLGA2LY, Accession XM_034789) is another VGAM1965 host target gene. GOLGA2LY BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by GOLGA2LY, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of GOLGA2LY BINDING SITE, designated SEQ ID:32145, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68783] Another function of VGAM1965 is therefore inhibition of Golgi Autoantigen, Golgin Subfamily A, 2-like, Y-linked (GOLGA2LY, Accession XM_034789). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

GOLGA2LY. Glycoprotein V (platelet) (GP5, Accession NM_004488) is another VGAM1965 host target gene. GP5 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by GP5, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of GP5 BINDING SITE, designated SEQ ID:10820, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68784] Another function of VGAM1965 is therefore inhibition of Glycoprotein V (platelet) (GP5, Accession NM_004488). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GP5. G Protein Pathway Suppressor 2 (GPS2, Accession NM_004489) is another VGAM1965 host target gene. GPS2 BINDING SITE1 through GPS2 BINDING SITE3 are HOST TARGET binding sites found in untranslated regions of mRNA encoded by GPS2, corresponding to HOST TARGET binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of GPS2 BINDING SITE1 through GPS2 BINDING SITE3, designated

SEQ ID:10828, SEQ ID:42149 and SEQ ID:42150 respectively, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68785] Another function of VGAM1965 is therefore inhibition of G Protein Pathway Suppressor 2 (GPS2, Accession NM_004489). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GPS2. GTP Binding Protein 2 (GTPBP2, Accession NM_019096) is another VGAM1965 host target gene. GTPBP2 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by GTPBP2, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of GTPBP2 BINDING SITE, designated SEQ ID:21174, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68786] Another function of VGAM1965 is therefore inhibition of GTP Binding Protein 2 (GTPBP2, Accession NM_019096). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical condi-

tions associated with GTPBP2. G-2 and S-phase Expressed 1 (GTSE1, Accession NM_016426) is another VGAM1965 host target gene. GTSE1 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by GTSE1, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of GTSE1 BINDING SITE, designated SEQ ID:18547, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68787] Another function of VGAM1965 is therefore inhibition of G-2 and S-phase Expressed 1 (GTSE1, Accession NM_016426). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GTSE1. H326 (Accession NM_015726) is another VGAM1965 host target gene. H326 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by H326, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of H326 BINDING SITE, designated SEQ ID:17940,

to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68788] Another function of VGAM1965 is therefore inhibition of H326 (Accession NM_015726). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with H326. HCA127 (Accession NM_018684) is another VGAM1965 host target gene. HCA127 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by HCA127, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of HCA127 BINDING SITE, designated SEQ ID:20757, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68789] Another function of VGAM1965 is therefore inhibition of HCA127 (Accession NM_018684). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with HCA127. HIG2 (Accession NM_013332) is another VGAM1965 host target gene. HIG2 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region

of mRNA encoded by HIG2, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of HIG2 BINDING SITE, designated SEQ ID:14979, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68790] Another function of VGAM1965 is therefore inhibition of HIG2 (Accession NM_013332). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with HIG2. HSPC065 (Accession NM_014157) is another VGAM1965 host target gene. HSPC065 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by HSPC065, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of HSPC065 BINDING SITE, designated SEQ ID:15456, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68791] Another function of VGAM1965 is therefore inhibition of HSPC065 (Accession NM_014157). Accordingly, utilities of

VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with HSPC065. HT002 (Accession NM_014066) is another VGAM1965 host target gene. HT002 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by HT002, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of HT002 BINDING SITE, designated SEQ ID:15280, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68792] Another function of VGAM1965 is therefore inhibition of HT002 (Accession NM_014066). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with HT002. HT007 (Accession NM_018480) is another VGAM1965 host target gene. HT007 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by HT007, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of HT007 BINDING SITE, des-

ignated SEQ ID:20543, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68793] Another function of VGAM1965 is therefore inhibition of HT007 (Accession NM_018480). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with HT007. HUMNPIIY20 (Accession XM_096782) is another VGAM1965 host target gene. HUMNPIIY20 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by HUMNPIIY20, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of HUMNPIIY20 BINDING SITE, designated SEQ ID:40538, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68794] Another function of VGAM1965 is therefore inhibition of HUMNPIIY20 (Accession XM_096782). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with HUMNPIIY20. HYA22 (Accession NM_005808) is another VGAM1965 host target gene. HYA22 BINDING SITE is

HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by HYA22, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of HYA22 BINDING SITE, designated SEQ ID:12390, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68795] Another function of VGAM1965 is therefore inhibition of HYA22 (Accession NM_005808). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with HYA22. IDN3 (Accession NM_133433) is another VGAM1965 host target gene. IDN3 BINDING SITE1 and IDN3 BINDING SITE2 are HOST TARGET binding sites found in untranslated regions of mRNA encoded by IDN3, corresponding to HOST TARGET binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of IDN3 BINDING SITE1 and IDN3 BINDING SITE2, designated SEQ ID:28513 and SEQ ID:17685 respectively, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68796] Another function of VGAM1965 is therefore inhibition of IDN3 (Accession NM_133433). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with IDN3. Interleukin 1 Receptor Accessory Protein-like 1 (IL1RAPL1, Accession NM_014271) is another VGAM1965 host target gene. IL1RAPL1 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by IL1RAPL1, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of IL1RAPL1 BINDING SITE, designated SEQ ID:15555, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68797] Another function of VGAM1965 is therefore inhibition of Interleukin 1 Receptor Accessory Protein-like 1 (IL1RAPL1, Accession NM_014271). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with IL1RAPL1. IMAGE:4907098 (Accession XM_166247) is another VGAM1965 host target gene. IMAGE:4907098 BINDING SITE is HOST TARGET binding site found in the 3` un-

translated region of mRNA encoded by IMAGE:4907098, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of IMAGE:4907098 BINDING SITE, designated SEQ ID:44059, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68798] Another function of VGAM1965 is therefore inhibition of IMAGE:4907098 (Accession XM_166247). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with IMAGE:4907098. IMPACT (Accession NM_018439) is another VGAM1965 host target gene. IMPACT BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by IMPACT, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of IMPACT BINDING SITE, designated SEQ ID:20504, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68799] Another function of VGAM1965 is therefore inhibition of

IMPACT (Accession NM_018439). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with IMPACT. jdp2 (Accession NM_130469) is another VGAM1965 host target gene. jdp2 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by jdp2, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of jdp2 BINDING SITE, designated SEQ ID:28231, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68800] Another function of VGAM1965 is therefore inhibition of jdp2 (Accession NM_130469). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with jdp2. Potassium Voltage-gated Channel, Delayed-rectifier, Subfamily S, Member 1 (KCNS1, Accession NM_002251) is another VGAM1965 host target gene. KCNS1 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by KCNS1, corresponding to a HOST TARGET binding site such as BINDING SITE I, BIND-

ING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of KCNS1 BINDING SITE, designated SEQ ID:8043, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68801] Another function of VGAM1965 is therefore inhibition of Potassium Voltage-gated Channel, Delayed-rectifier, Subfamily S, Member 1 (KCNS1, Accession NM_002251). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KCNS1. KIAA0040 (Accession NM_014656) is another VGAM1965 host target gene. KIAA0040 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by KIAA0040, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of KIAA0040 BINDING SITE, designated SEQ ID:16097, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68802] Another function of VGAM1965 is therefore inhibition of KIAA0040 (Accession NM_014656). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with KIAA0040. KIAA0061 (Accession XM_043094) is another VGAM1965 host target gene. KIAA0061 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by KIAA0061, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of KIAA0061 BINDING SITE, designated SEQ ID:33893, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68803] Another function of VGAM1965 is therefore inhibition of KIAA0061 (Accession XM_043094). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0061. KIAA0090 (Accession XM_114045) is another VGAM1965 host target gene. KIAA0090 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by KIAA0090, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of KIAA0090 BINDING SITE, designated SEQ ID:42654, to the

nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68804] Another function of VGAM1965 is therefore inhibition of KIAA0090 (Accession XM_114045). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0090. KIAA0092 (Accession NM_014679) is another VGAM1965 host target gene. KIAA0092 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by KIAA0092, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of KIAA0092 BINDING SITE, designated SEQ ID:16156, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68805] Another function of VGAM1965 is therefore inhibition of KIAA0092 (Accession NM_014679). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0092. KIAA0102 (Accession NM_014752) is another VGAM1965 host target gene. KIAA0102 BINDING SITE is HOST TARGET binding site found in the 5` untranslated

region of mRNA encoded by KIAA0102, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of KIAA0102 BINDING SITE, designated SEQ ID:16476, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68806] Another function of VGAM1965 is therefore inhibition of KIAA0102 (Accession NM_014752). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0102. KIAA0133 (Accession NM_014777) is another VGAM1965 host target gene. KIAA0133 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by KIAA0133, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of KIAA0133 BINDING SITE, designated SEQ ID:16608, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68807] Another function of VGAM1965 is therefore inhibition of KIAA0133 (Accession NM_014777). Accordingly, utilities

of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0133. KIAA0161 (Accession NM_014746) is another VGAM1965 host target gene. KIAA0161 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by KIAA0161, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of KIAA0161 BINDING SITE, designated SEQ ID:16433, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68808] Another function of VGAM1965 is therefore inhibition of KIAA0161 (Accession NM_014746). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0161. KIAA0173 (Accession NM_014640) is another VGAM1965 host target gene. KIAA0173 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by KIAA0173, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of

KIAA0173 BINDING SITE, designated SEQ ID:16043, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68809] Another function of VGAM1965 is therefore inhibition of KIAA0173 (Accession NM_014640). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0173. KIAA0186 (Accession NM_021067) is another VGAM1965 host target gene. KIAA0186 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by KIAA0186, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of KIAA0186 BINDING SITE, designated SEQ ID:22039, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68810] Another function of VGAM1965 is therefore inhibition of KIAA0186 (Accession NM_021067). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0186. KIAA0227 (Accession XM_027236) is another VGAM1965 host target gene. KIAA0227 BINDING SITE is

HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by KIAA0227, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of KIAA0227 BINDING SITE, designated SEQ ID:30453, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68811] Another function of VGAM1965 is therefore inhibition of KIAA0227 (Accession XM_027236). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0227. KIAA0232 (Accession XM_052627) is another VGAM1965 host target gene. KIAA0232 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by KIAA0232, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of KIAA0232 BINDING SITE, designated SEQ ID:36039, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68812] Another function of VGAM1965 is therefore inhibition of

KIAA0232 (Accession XM_052627). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0232. KIAA0247 (Accession NM_014734) is another VGAM1965 host target gene. KIAA0247 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by KIAA0247, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of KIAA0247 BINDING SITE, designated SEQ ID:16378, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68813] Another function of VGAM1965 is therefore inhibition of KIAA0247 (Accession NM_014734). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0247. KIAA0258 (Accession NM_014785) is another VGAM1965 host target gene. KIAA0258 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by KIAA0258, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the

complementarity of the nucleotide sequences of KIAA0258 BINDING SITE, designated SEQ ID:16646, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68814] Another function of VGAM1965 is therefore inhibition of KIAA0258 (Accession NM_014785). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0258. KIAA0265 (Accession XM_045954) is another VGAM1965 host target gene. KIAA0265 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by KIAA0265, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of KIAA0265 BINDING SITE, designated SEQ ID:34631, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68815] Another function of VGAM1965 is therefore inhibition of KIAA0265 (Accession XM_045954). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0265. KIAA0326 (Accession XM_034819) is another

VGAM1965 host target gene. KIAA0326 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by KIAA0326, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of KIAA0326 BINDING SITE, designated SEQ ID:32161, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68816] Another function of VGAM1965 is therefore inhibition of KIAA0326 (Accession XM_034819). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0326. KIAA0336 (Accession NM_014635) is another VGAM1965 host target gene. KIAA0336 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by KIAA0336, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of KIAA0336 BINDING SITE, designated SEQ ID:16012, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68817] Another function of VGAM1965 is therefore inhibition of KIAA0336 (Accession NM_014635). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0336. KIAA0349 (Accession XM_166449) is another VGAM1965 host target gene. KIAA0349 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by KIAA0349, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of KIAA0349 BINDING SITE, designated SEQ ID:44342, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68818] Another function of VGAM1965 is therefore inhibition of KIAA0349 (Accession XM_166449). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0349. KIAA0352 (Accession NM_014830) is another VGAM1965 host target gene. KIAA0352 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by KIAA0352, corresponding to a HOST TARGET binding site such as BINDING SITE I,

BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of KIAA0352 BINDING SITE, designated SEQ ID:16825, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68819] Another function of VGAM1965 is therefore inhibition of KIAA0352 (Accession NM_014830). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0352. KIAA0354 (Accession NM_014872) is another VGAM1965 host target gene. KIAA0354 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by KIAA0354, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of KIAA0354 BINDING SITE, designated SEQ ID:16999, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68820] Another function of VGAM1965 is therefore inhibition of KIAA0354 (Accession NM_014872). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

KIAA0354. KIAA0365 (Accession XM_086055) is another VGAM1965 host target gene. KIAA0365 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by KIAA0365, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of KIAA0365 BINDING SITE, designated SEQ ID:38471, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68821] Another function of VGAM1965 is therefore inhibition of KIAA0365 (Accession XM_086055). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0365. KIAA0375 (Accession XM_048462) is another VGAM1965 host target gene. KIAA0375 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by KIAA0375, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of KIAA0375 BINDING SITE, designated SEQ ID:35177, to the nucleotide sequence of VGAM1965 RNA, herein desig-

nated VGAM RNA, also designated SEQ ID:4676.

[68822] Another function of VGAM1965 is therefore inhibition of KIAA0375 (Accession XM_048462). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0375. KIAA0410 (Accession NM_014778) is another VGAM1965 host target gene. KIAA0410 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by KIAA0410, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of KIAA0410 BINDING SITE, designated SEQ ID:16612, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68823] Another function of VGAM1965 is therefore inhibition of KIAA0410 (Accession NM_014778). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0410. KIAA0419 (Accession NM_014711) is another VGAM1965 host target gene. KIAA0419 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by KIAA0419, corresponding to

a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of KIAA0419 BINDING SITE, designated SEQ ID:16261, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68824] Another function of VGAM1965 is therefore inhibition of KIAA0419 (Accession NM_014711). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0419. KIAA0446 (Accession XM_044155) is another VGAM1965 host target gene. KIAA0446 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by KIAA0446, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of KIAA0446 BINDING SITE, designated SEQ ID:34153, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68825] Another function of VGAM1965 is therefore inhibition of KIAA0446 (Accession XM_044155). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with KIAA0446. KIAA0449 (Accession NM_017596) is another VGAM1965 host target gene. KIAA0449 BINDING SITE1 and KIAA0449 BINDING SITE2 are HOST TARGET binding sites found in untranslated regions of mRNA encoded by KIAA0449, corresponding to HOST TARGET binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of KIAA0449 BINDING SITE1 and KIAA0449 BINDING SITE2, designated SEQ ID:19056 and SEQ ID:19057 respectively, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68826] Another function of VGAM1965 is therefore inhibition of KIAA0449 (Accession NM_017596). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0449. KIAA0450 (Accession NM_014638) is another VGAM1965 host target gene. KIAA0450 BINDING SITE1 and KIAA0450 BINDING SITE2 are HOST TARGET binding sites found in untranslated regions of mRNA encoded by KIAA0450, corresponding to HOST TARGET binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III.

Table 2 illustrates the complementarity of the nucleotide sequences of KIAA0450 BINDING SITE1 and KIAA0450 BINDING SITE2, designated SEQ ID:16035 and SEQ ID:16989 respectively, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68827] Another function of VGAM1965 is therefore inhibition of KIAA0450 (Accession NM_014638). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0450. KIAA0527 (Accession XM_171054) is another VGAM1965 host target gene. KIAA0527 BINDING SITE1 and KIAA0527 BINDING SITE2 are HOST TARGET binding sites found in untranslated regions of mRNA encoded by KIAA0527, corresponding to HOST TARGET binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of KIAA0527 BINDING SITE1 and KIAA0527 BINDING SITE2, designated SEQ ID:45842 and SEQ ID:45845 respectively, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68828] Another function of VGAM1965 is therefore inhibition of

KIAA0527 (Accession XM_171054). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0527. KIAA0563 (Accession NM_014834) is another VGAM1965 host target gene. KIAA0563 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by KIAA0563, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of KIAA0563 BINDING SITE, designated SEQ ID:16843, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68829] Another function of VGAM1965 is therefore inhibition of KIAA0563 (Accession NM_014834). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0563. KIAA0565 (Accession XM_039912) is another VGAM1965 host target gene. KIAA0565 BINDING SITE1 and KIAA0565 BINDING SITE2 are HOST TARGET binding sites found in untranslated regions of mRNA encoded by KIAA0565, corresponding to HOST TARGET binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III.

Table 2 illustrates the complementarity of the nucleotide sequences of KIAA0565 BINDING SITE1 and KIAA0565 BINDING SITE2, designated SEQ ID:33219 and SEQ ID:33221 respectively, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68830] Another function of VGAM1965 is therefore inhibition of KIAA0565 (Accession XM_039912). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0565. KIAA0574 (Accession XM_045076) is another VGAM1965 host target gene. KIAA0574 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by KIAA0574, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of KIAA0574 BINDING SITE, designated SEQ ID:34350, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68831] Another function of VGAM1965 is therefore inhibition of KIAA0574 (Accession XM_045076). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with KIAA0574. KIAA0607 (Accession XM_051931) is another VGAM1965 host target gene. KIAA0607 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by KIAA0607, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of KIAA0607 BINDING SITE, designated SEQ ID:35927, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68832] Another function of VGAM1965 is therefore inhibition of KIAA0607 (Accession XM_051931). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0607. KIAA0685 (Accession NM_014678) is another VGAM1965 host target gene. KIAA0685 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by KIAA0685, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of KIAA0685 BINDING SITE, designated SEQ ID:16150, to the

nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68833] Another function of VGAM1965 is therefore inhibition of KIAA0685 (Accession NM_014678). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0685. KIAA0703 (Accession NM_014861) is another VGAM1965 host target gene. KIAA0703 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by KIAA0703, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of KIAA0703 BINDING SITE, designated SEQ ID:16928, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68834] Another function of VGAM1965 is therefore inhibition of KIAA0703 (Accession NM_014861). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0703. KIAA0712 (Accession NM_014715) is another VGAM1965 host target gene. KIAA0712 BINDING SITE is HOST TARGET binding site found in the 5` untranslated

region of mRNA encoded by KIAA0712, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of KIAA0712 BINDING SITE, designated SEQ ID:16268, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68835] Another function of VGAM1965 is therefore inhibition of KIAA0712 (Accession NM_014715). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0712. KIAA0792 (Accession NM_014698) is another VGAM1965 host target gene. KIAA0792 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by KIAA0792, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of KIAA0792 BINDING SITE, designated SEQ ID:16216, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68836] Another function of VGAM1965 is therefore inhibition of KIAA0792 (Accession NM_014698). Accordingly, utilities

of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0792. KIAA0794 (Accession XM_087353) is another VGAM1965 host target gene. KIAA0794 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by KIAA0794, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of KIAA0794 BINDING SITE, designated SEQ ID:39187, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68837] Another function of VGAM1965 is therefore inhibition of KIAA0794 (Accession XM_087353). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0794. KIAA0798 (Accession NM_014650) is another VGAM1965 host target gene. KIAA0798 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by KIAA0798, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of

KIAA0798 BINDING SITE, designated SEQ ID:16073, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68838] Another function of VGAM1965 is therefore inhibition of KIAA0798 (Accession NM_014650). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0798. KIAA0825 (Accession XM_027906) is another VGAM1965 host target gene. KIAA0825 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by KIAA0825, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of KIAA0825 BINDING SITE, designated SEQ ID:30593, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68839] Another function of VGAM1965 is therefore inhibition of KIAA0825 (Accession XM_027906). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0825. KIAA0847 (Accession XM_085298) is another VGAM1965 host target gene. KIAA0847 BINDING SITE is

HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by KIAA0847, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of KIAA0847 BINDING SITE, designated SEQ ID:38049, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68840] Another function of VGAM1965 is therefore inhibition of KIAA0847 (Accession XM_085298). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0847. KIAA0854 (Accession NM_014943) is another VGAM1965 host target gene. KIAA0854 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by KIAA0854, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of KIAA0854 BINDING SITE, designated SEQ ID:17253, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68841] Another function of VGAM1965 is therefore inhibition of

KIAA0854 (Accession NM_014943). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0854. KIAA0869 (Accession XM_047992) is another VGAM1965 host target gene. KIAA0869 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by KIAA0869, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of KIAA0869 BINDING SITE, designated SEQ ID:35094, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68842] Another function of VGAM1965 is therefore inhibition of KIAA0869 (Accession XM_047992). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0869. KIAA0870 (Accession XM_088315) is another VGAM1965 host target gene. KIAA0870 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by KIAA0870, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the

complementarity of the nucleotide sequences of KIAA0870 BINDING SITE, designated SEQ ID:39610, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68843] Another function of VGAM1965 is therefore inhibition of KIAA0870 (Accession XM_088315). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0870. KIAA0884 (Accession XM_046660) is another VGAM1965 host target gene. KIAA0884 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by KIAA0884, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of KIAA0884 BINDING SITE, designated SEQ ID:34778, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68844] Another function of VGAM1965 is therefore inhibition of KIAA0884 (Accession XM_046660). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0884. KIAA0889 (Accession NM_015377) is another

VGAM1965 host target gene. KIAA0889 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by KIAA0889, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of KIAA0889 BINDING SITE, designated SEQ ID:17681, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68845] Another function of VGAM1965 is therefore inhibition of KIAA0889 (Accession NM_015377). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0889. KIAA0930 (Accession XM_047214) is another VGAM1965 host target gene. KIAA0930 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by KIAA0930, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of KIAA0930 BINDING SITE, designated SEQ ID:34918, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68846] Another function of VGAM1965 is therefore inhibition of KIAA0930 (Accession XM_047214). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0930. KIAA0937 (Accession XM_166213) is another VGAM1965 host target gene. KIAA0937 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by KIAA0937, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of KIAA0937 BINDING SITE, designated SEQ ID:44020, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68847] Another function of VGAM1965 is therefore inhibition of KIAA0937 (Accession XM_166213). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0937. KIAA0939 (Accession XM_030524) is another VGAM1965 host target gene. KIAA0939 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by KIAA0939, corresponding to a HOST TARGET binding site such as BINDING SITE I,

BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of KIAA0939 BINDING SITE, designated SEQ ID:31069, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68848] Another function of VGAM1965 is therefore inhibition of KIAA0939 (Accession XM_030524). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0939. KIAA0953 (Accession XM_039733) is another VGAM1965 host target gene. KIAA0953 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by KIAA0953, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of KIAA0953 BINDING SITE, designated SEQ ID:33170, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68849] Another function of VGAM1965 is therefore inhibition of KIAA0953 (Accession XM_039733). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

KIAA0953. KIAA0971 (Accession NM_014929) is another VGAM1965 host target gene. KIAA0971 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by KIAA0971, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of KIAA0971 BINDING SITE, designated SEQ ID:17225, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68850] Another function of VGAM1965 is therefore inhibition of KIAA0971 (Accession NM_014929). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0971. KIAA1013 (Accession XM_114303) is another VGAM1965 host target gene. KIAA1013 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by KIAA1013, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of KIAA1013 BINDING SITE, designated SEQ ID:42861, to the nucleotide sequence of VGAM1965 RNA, herein desig-

nated VGAM RNA, also designated SEQ ID:4676.

[68851] Another function of VGAM1965 is therefore inhibition of KIAA1013 (Accession XM_114303). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1013. KIAA1023 (Accession NM_017604) is another VGAM1965 host target gene. KIAA1023 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by KIAA1023, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of KIAA1023 BINDING SITE, designated SEQ ID:19098, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68852] Another function of VGAM1965 is therefore inhibition of KIAA1023 (Accession NM_017604). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1023. KIAA1029 (Accession NM_007286) is another VGAM1965 host target gene. KIAA1029 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by KIAA1029, corresponding to

a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of KIAA1029 BINDING SITE, designated SEQ ID:14147, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68853] Another function of VGAM1965 is therefore inhibition of KIAA1029 (Accession NM_007286). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1029. KIAA1037 (Accession NM_015023) is another VGAM1965 host target gene. KIAA1037 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by KIAA1037, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of KIAA1037 BINDING SITE, designated SEQ ID:17385, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68854] Another function of VGAM1965 is therefore inhibition of KIAA1037 (Accession NM_015023). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with KIAA1037. KIAA1040 (Accession XM_051091) is another VGAM1965 host target gene. KIAA1040 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by KIAA1040, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of KIAA1040 BINDING SITE, designated SEQ ID:35742, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68855] Another function of VGAM1965 is therefore inhibition of KIAA1040 (Accession XM_051091). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1040. KIAA1054 (Accession XM_043493) is another VGAM1965 host target gene. KIAA1054 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by KIAA1054, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of KIAA1054 BINDING SITE, designated SEQ ID:33951, to the

nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68856] Another function of VGAM1965 is therefore inhibition of KIAA1054 (Accession XM_043493). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1054. KIAA1055 (Accession XM_038509) is another VGAM1965 host target gene. KIAA1055 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by KIAA1055, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of KIAA1055 BINDING SITE, designated SEQ ID:32853, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68857] Another function of VGAM1965 is therefore inhibition of KIAA1055 (Accession XM_038509). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1055. KIAA1110 (Accession XM_029973) is another VGAM1965 host target gene. KIAA1110 BINDING SITE is HOST TARGET binding site found in the 3` untranslated

region of mRNA encoded by KIAA1110, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of KIAA1110 BINDING SITE, designated SEQ ID:30986, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68858] Another function of VGAM1965 is therefore inhibition of KIAA1110 (Accession XM_029973). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1110. KIAA1161 (Accession XM_088501) is another VGAM1965 host target gene. KIAA1161 BINDING SITE1 and KIAA1161 BINDING SITE2 are HOST TARGET binding sites found in untranslated regions of mRNA encoded by KIAA1161, corresponding to HOST TARGET binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of KIAA1161 BINDING SITE1 and KIAA1161 BINDING SITE2, designated SEQ ID:39748 and SEQ ID:39755 respectively, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68859] Another function of VGAM1965 is therefore inhibition of KIAA1161 (Accession XM_088501). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1161. KIAA1189 (Accession XM_050508) is another VGAM1965 host target gene. KIAA1189 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by KIAA1189, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of KIAA1189 BINDING SITE, designated SEQ ID:35652, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68860] Another function of VGAM1965 is therefore inhibition of KIAA1189 (Accession XM_050508). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1189. KIAA1191 (Accession NM_020444) is another VGAM1965 host target gene. KIAA1191 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by KIAA1191, corresponding to a HOST TARGET binding site such as BINDING SITE I,

BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of KIAA1191 BINDING SITE, designated SEQ ID:21684, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68861] Another function of VGAM1965 is therefore inhibition of KIAA1191 (Accession NM_020444). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1191. KIAA1198 (Accession XM_032674) is another VGAM1965 host target gene. KIAA1198 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by KIAA1198, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of KIAA1198 BINDING SITE, designated SEQ ID:31712, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68862] Another function of VGAM1965 is therefore inhibition of KIAA1198 (Accession XM_032674). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

KIAA1198. KIAA1254 (Accession XM_046132) is another VGAM1965 host target gene. KIAA1254 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by KIAA1254, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of KIAA1254 BINDING SITE, designated SEQ ID:34698, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68863] Another function of VGAM1965 is therefore inhibition of KIAA1254 (Accession XM_046132). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1254. KIAA1265 (Accession XM_047707) is another VGAM1965 host target gene. KIAA1265 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by KIAA1265, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of KIAA1265 BINDING SITE, designated SEQ ID:35033, to the nucleotide sequence of VGAM1965 RNA, herein desig-

nated VGAM RNA, also designated SEQ ID:4676.

[68864] Another function of VGAM1965 is therefore inhibition of KIAA1265 (Accession XM_047707). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1265. KIAA1266 (Accession XM_038567) is another VGAM1965 host target gene. KIAA1266 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by KIAA1266, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of KIAA1266 BINDING SITE, designated SEQ ID:32868, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68865] Another function of VGAM1965 is therefore inhibition of KIAA1266 (Accession XM_038567). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1266. KIAA1280 (Accession XM_045766) is another VGAM1965 host target gene. KIAA1280 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by KIAA1280, corresponding to

a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of KIAA1280 BINDING SITE, designated SEQ ID:34555, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68866] Another function of VGAM1965 is therefore inhibition of KIAA1280 (Accession XM_045766). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1280. KIAA1322 (Accession XM_052626) is another VGAM1965 host target gene. KIAA1322 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by KIAA1322, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of KIAA1322 BINDING SITE, designated SEQ ID:36019, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68867] Another function of VGAM1965 is therefore inhibition of KIAA1322 (Accession XM_052626). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with KIAA1322. KIAA1332 (Accession XM_048774) is another VGAM1965 host target gene. KIAA1332 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by KIAA1332, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of KIAA1332 BINDING SITE, designated SEQ ID:35262, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68868] Another function of VGAM1965 is therefore inhibition of KIAA1332 (Accession XM_048774). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1332. KIAA1337 (Accession XM_052561) is another VGAM1965 host target gene. KIAA1337 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by KIAA1337, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of KIAA1337 BINDING SITE, designated SEQ ID:35985, to the

nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68869] Another function of VGAM1965 is therefore inhibition of KIAA1337 (Accession XM_052561). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1337. KIAA1363 (Accession XM_045056) is another VGAM1965 host target gene. KIAA1363 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by KIAA1363, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of KIAA1363 BINDING SITE, designated SEQ ID:34332, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68870] Another function of VGAM1965 is therefore inhibition of KIAA1363 (Accession XM_045056). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1363. KIAA1389 (Accession XM_045839) is another VGAM1965 host target gene. KIAA1389 BINDING SITE is HOST TARGET binding site found in the 3` untranslated

region of mRNA encoded by KIAA1389, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of KIAA1389 BINDING SITE, designated SEQ ID:34571, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68871] Another function of VGAM1965 is therefore inhibition of KIAA1389 (Accession XM_045839). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1389. KIAA1404 (Accession XM_030494) is another VGAM1965 host target gene. KIAA1404 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by KIAA1404, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of KIAA1404 BINDING SITE, designated SEQ ID:31050, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68872] Another function of VGAM1965 is therefore inhibition of KIAA1404 (Accession XM_030494). Accordingly, utilities

of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1404. KIAA1463 (Accession XM_051160) is another VGAM1965 host target gene. KIAA1463 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by KIAA1463, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of KIAA1463 BINDING SITE, designated SEQ ID:35774, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68873] Another function of VGAM1965 is therefore inhibition of KIAA1463 (Accession XM_051160). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1463. KIAA1484 (Accession XM_046088) is another VGAM1965 host target gene. KIAA1484 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by KIAA1484, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of

KIAA1484 BINDING SITE, designated SEQ ID:34679, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68874] Another function of VGAM1965 is therefore inhibition of KIAA1484 (Accession XM_046088). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1484. KIAA1559 (Accession XM_054472) is another VGAM1965 host target gene. KIAA1559 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by KIAA1559, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of KIAA1559 BINDING SITE, designated SEQ ID:36166, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68875] Another function of VGAM1965 is therefore inhibition of KIAA1559 (Accession XM_054472). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1559. KIAA1579 (Accession NM_018211) is another VGAM1965 host target gene. KIAA1579 BINDING SITE is

HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by KIAA1579, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of KIAA1579 BINDING SITE, designated SEQ ID:20120, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68876] Another function of VGAM1965 is therefore inhibition of KIAA1579 (Accession NM_018211). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1579. KIAA1622 (Accession NM_058237) is another VGAM1965 host target gene. KIAA1622 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by KIAA1622, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of KIAA1622 BINDING SITE, designated SEQ ID:27763, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68877] Another function of VGAM1965 is therefore inhibition of

KIAA1622 (Accession NM_058237). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1622. KIAA1649 (Accession NM_032311) is another VGAM1965 host target gene. KIAA1649 BINDING SITE1 and KIAA1649 BINDING SITE2 are HOST TARGET binding sites found in untranslated regions of mRNA encoded by KIAA1649, corresponding to HOST TARGET binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of KIAA1649 BINDING SITE1 and KIAA1649 BINDING SITE2, designated SEQ ID:26112 and SEQ ID:26113 respectively, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68878] Another function of VGAM1965 is therefore inhibition of KIAA1649 (Accession NM_032311). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1649. KIAA1676 (Accession XM_167612) is another VGAM1965 host target gene. KIAA1676 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by KIAA1676, corresponding to

a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of KIAA1676 BINDING SITE, designated SEQ ID:44729, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68879] Another function of VGAM1965 is therefore inhibition of KIAA1676 (Accession XM_167612). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1676. KIAA1679 (Accession XM_046570) is another VGAM1965 host target gene. KIAA1679 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by KIAA1679, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of KIAA1679 BINDING SITE, designated SEQ ID:34752, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68880] Another function of VGAM1965 is therefore inhibition of KIAA1679 (Accession XM_046570). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with KIAA1679. KIAA1706 (Accession XM_166595) is another VGAM1965 host target gene. KIAA1706 BINDING SITE1 and KIAA1706 BINDING SITE2 are HOST TARGET binding sites found in untranslated regions of mRNA encoded by KIAA1706, corresponding to HOST TARGET binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of KIAA1706 BINDING SITE1 and KIAA1706 BINDING SITE2, designated SEQ ID:44578 and SEQ ID:44579 respectively, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68881] Another function of VGAM1965 is therefore inhibition of KIAA1706 (Accession XM_166595). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1706. KIAA1727 (Accession XM_034262) is another VGAM1965 host target gene. KIAA1727 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by KIAA1727, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the

complementarity of the nucleotide sequences of KIAA1727 BINDING SITE, designated SEQ ID:32038, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68882] Another function of VGAM1965 is therefore inhibition of KIAA1727 (Accession XM_034262). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1727. KIAA1729 (Accession XM_114418) is another VGAM1965 host target gene. KIAA1729 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by KIAA1729, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of KIAA1729 BINDING SITE, designated SEQ ID:42949, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68883] Another function of VGAM1965 is therefore inhibition of KIAA1729 (Accession XM_114418). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1729. KIAA1754 (Accession XM_032587) is another

VGAM1965 host target gene. KIAA1754 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by KIAA1754, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of KIAA1754 BINDING SITE, designated SEQ ID:31681, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68884] Another function of VGAM1965 is therefore inhibition of KIAA1754 (Accession XM_032587). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1754. KIAA1765 (Accession XM_047355) is another VGAM1965 host target gene. KIAA1765 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by KIAA1765, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of KIAA1765 BINDING SITE, designated SEQ ID:34957, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68885] Another function of VGAM1965 is therefore inhibition of KIAA1765 (Accession XM_047355). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1765. KIAA1789 (Accession XM_040486) is another VGAM1965 host target gene. KIAA1789 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by KIAA1789, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of KIAA1789 BINDING SITE, designated SEQ ID:33312, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68886] Another function of VGAM1965 is therefore inhibition of KIAA1789 (Accession XM_040486). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1789. KIAA1804 (Accession XM_045864) is another VGAM1965 host target gene. KIAA1804 BINDING SITE1 and KIAA1804 BINDING SITE2 are HOST TARGET binding sites found in untranslated regions of mRNA encoded by KIAA1804, corresponding to HOST TARGET binding sites

such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of KIAA1804 BINDING SITE1 and KIAA1804 BINDING SITE2, designated SEQ ID:34588 and SEQ ID:34591 respectively, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68887] Another function of VGAM1965 is therefore inhibition of KIAA1804 (Accession XM_045864). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1804. KIAA1813 (Accession XM_046743) is another VGAM1965 host target gene. KIAA1813 BINDING SITE1 and KIAA1813 BINDING SITE2 are HOST TARGET binding sites found in untranslated regions of mRNA encoded by KIAA1813, corresponding to HOST TARGET binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of KIAA1813 BINDING SITE1 and KIAA1813 BINDING SITE2, designated SEQ ID:34809 and SEQ ID:31036 respectively, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68888] Another function of VGAM1965 is therefore inhibition of KIAA1813 (Accession XM_046743). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1813. KIAA1872 (Accession XM_031917) is another VGAM1965 host target gene. KIAA1872 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by KIAA1872, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of KIAA1872 BINDING SITE, designated SEQ ID:31522, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68889] Another function of VGAM1965 is therefore inhibition of KIAA1872 (Accession XM_031917). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1872. KIAA1887 (Accession XM_084801) is another VGAM1965 host target gene. KIAA1887 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by KIAA1887, corresponding to a HOST TARGET binding site such as BINDING SITE I,

BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of KIAA1887 BINDING SITE, designated SEQ ID:37715, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68890] Another function of VGAM1965 is therefore inhibition of KIAA1887 (Accession XM_084801). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1887. KIAA1908 (Accession XM_055834) is another VGAM1965 host target gene. KIAA1908 BINDING SITE1 and KIAA1908 BINDING SITE2 are HOST TARGET binding sites found in untranslated regions of mRNA encoded by KIAA1908, corresponding to HOST TARGET binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of KIAA1908 BINDING SITE1 and KIAA1908 BINDING SITE2, designated SEQ ID:36339 and SEQ ID:36326 respectively, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68891] Another function of VGAM1965 is therefore inhibition of KIAA1908 (Accession XM_055834). Accordingly, utilities

of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1908. KIAA1987 (Accession XM_113870) is another VGAM1965 host target gene. KIAA1987 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by KIAA1987, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of KIAA1987 BINDING SITE, designated SEQ ID:42502, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68892] Another function of VGAM1965 is therefore inhibition of KIAA1987 (Accession XM_113870). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1987. Kelch-like 6 (Drosophila) (KLHL6, Accession NM_130446) is another VGAM1965 host target gene. KLHL6 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by KLHL6, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide se-

quences of KLHL6 BINDING SITE, designated SEQ ID:28212, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68893] Another function of VGAM1965 is therefore inhibition of Kelch-like 6 (Drosophila) (KLHL6, Accession NM_130446). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KLHL6. Kelch-like 8 (Drosophila) (KLHL8, Accession XM_031735) is another VGAM1965 host target gene. KLHL8 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by KLHL8, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of KLHL8 BINDING SITE, designated SEQ ID:31478, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68894] Another function of VGAM1965 is therefore inhibition of Kelch-like 8 (Drosophila) (KLHL8, Accession XM_031735). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical condi-

tions associated with KLHL8. Keratin, Hair, Basic, 2 (KRTHB2, Accession NM_033033) is another VGAM1965 host target gene. KRTHB2 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by KRTHB2, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of KRTHB2 BINDING SITE, designated SEQ ID:26924, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68895] Another function of VGAM1965 is therefore inhibition of Keratin, Hair, Basic, 2 (KRTHB2, Accession NM_033033). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KRTHB2. Kv6.3 (Accession NM_133490) is another VGAM1965 host target gene. Kv6.3 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by Kv6.3, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of Kv6.3 BINDING SITE, designated SEQ ID:28567,

to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68896] Another function of VGAM1965 is therefore inhibition of Kv6.3 (Accession NM_133490). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with Kv6.3. LIM and SH3 Protein 1 (LASP1, Accession NM_006148) is another VGAM1965 host target gene. LASP1 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LASP1, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LASP1 BINDING SITE, designated SEQ ID:12804, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68897] Another function of VGAM1965 is therefore inhibition of LIM and SH3 Protein 1 (LASP1, Accession NM_006148). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LASP1. LATS, Large Tumor Suppressor, Homolog 1 (Drosophila) (LATS1, Accession XM_015547) is another VGAM1965 host target gene.

LATS1 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LATS1, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LATS1 BINDING SITE, designated SEQ ID:30236, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68898] Another function of VGAM1965 is therefore inhibition of LATS, Large Tumor Suppressor, Homolog 1 (Drosophila) (LATS1, Accession XM_015547). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LATS1. LIN-7-C (Accession NM_018362) is another VGAM1965 host target gene. LIN-7-C BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LIN-7-C, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LIN-7-C BINDING SITE, designated SEQ ID:20369, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also des-

ignated SEQ ID:4676.

[68899] Another function of VGAM1965 is therefore inhibition of LIN-7-C (Accession NM_018362). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LIN-7-C. Leucine-rich Repeat Protein, Neuronal 3 (LRRN3, Accession XM_045261) is another VGAM1965 host target gene. LRRN3 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by LRRN3, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LRRN3 BINDING SITE, designated SEQ ID:34403, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68900] Another function of VGAM1965 is therefore inhibition of Leucine-rich Repeat Protein, Neuronal 3 (LRRN3, Accession XM_045261). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LRRN3. MAD, Mothers Against Decapentaplegic Homolog (Drosophila) Interacting Protein, Receptor Activation Anchor (MADHIP, Accession

NM_007324) is another VGAM1965 host target gene. MADHIP BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by MADHIP, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of MADHIP BINDING SITE, designated SEQ ID:14244, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68901] Another function of VGAM1965 is therefore inhibition of MAD, Mothers Against Decapentaplegic Homolog (Drosophila) Interacting Protein, Receptor Activation Anchor (MADHIP, Accession NM_007324). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MADHIP. MAN1 (Accession NM_014319) is another VGAM1965 host target gene. MAN1 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by MAN1, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of MAN1 BINDING SITE,

designated SEQ ID:15619, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68902] Another function of VGAM1965 is therefore inhibition of MAN1 (Accession NM_014319). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MAN1. Mitogen-activated Protein Kinase Kinase Kinase 3 (MAP3K3, Accession NM_002401) is another VGAM1965 host target gene. MAP3K3 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by MAP3K3, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of MAP3K3 BINDING SITE, designated SEQ ID:8223, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68903] Another function of VGAM1965 is therefore inhibition of Mitogen-activated Protein Kinase Kinase Kinase 3 (MAP3K3, Accession NM_002401). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

MAP3K3. MAWBP (Accession NM_022129) is another VGAM1965 host target gene. MAWBP BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by MAWBP, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of MAWBP BINDING SITE, designated SEQ ID:22682, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68904] Another function of VGAM1965 is therefore inhibition of MAWBP (Accession NM_022129). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MAWBP. Methyl-CpG Binding Domain Protein 2 (MBD2, Accession NM_015832) is another VGAM1965 host target gene. MBD2 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by MBD2, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of MBD2 BINDING SITE, designated SEQ ID:17947, to the nucleotide sequence of VGAM1965 RNA, herein

designated VGAM RNA, also designated SEQ ID:4676.

[68905] Another function of VGAM1965 is therefore inhibition of Methyl-CpG Binding Domain Protein 2 (MBD2, Accession NM_015832). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MBD2. Mesoderm Development Candidate 2 (MESDC2, Accession XM_051854) is another VGAM1965 host target gene. MESDC2 BINDING SITE1 and MESDC2 BINDING SITE2 are HOST TARGET binding sites found in untranslated regions of mRNA encoded by MESDC2, corresponding to HOST TARGET binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of MESDC2 BINDING SITE1 and MESDC2 BINDING SITE2, designated SEQ ID:35896 and SEQ ID:35895 respectively, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68906] Another function of VGAM1965 is therefore inhibition of Mesoderm Development Candidate 2 (MESDC2, Accession XM_051854). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MESDC2. MGC10814

(Accession NM_032671) is another VGAM1965 host target gene. MGC10814 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by MGC10814, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of MGC10814 BINDING SITE, designated SEQ ID:26396, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68907] Another function of VGAM1965 is therefore inhibition of MGC10814 (Accession NM_032671). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC10814. MGC10960 (Accession NM_032653) is another VGAM1965 host target gene. MGC10960 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by MGC10960, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of MGC10960 BINDING SITE, designated SEQ ID:26383, to the nucleotide sequence of VGAM1965 RNA, herein desig-

nated VGAM RNA, also designated SEQ ID:4676.

[68908] Another function of VGAM1965 is therefore inhibition of MGC10960 (Accession NM_032653). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC10960. MGC11034 (Accession NM_031453) is another VGAM1965 host target gene. MGC11034 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by MGC11034, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of MGC11034 BINDING SITE, designated SEQ ID:25471, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68909] Another function of VGAM1965 is therefore inhibition of MGC11034 (Accession NM_031453). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC11034. MGC11115 (Accession NM_032310) is another VGAM1965 host target gene. MGC11115 BINDING SITE1 and MGC11115 BINDING SITE2 are HOST TARGET binding sites found in untranslated regions of mRNA en-

coded by MGC11115, corresponding to HOST TARGET binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of MGC11115 BINDING SITE1 and MGC11115 BINDING SITE2, designated SEQ ID:26097 and SEQ ID:26098 respectively, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68910] Another function of VGAM1965 is therefore inhibition of MGC11115 (Accession NM_032310). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC11115. MGC13114 (Accession NM_032366) is another VGAM1965 host target gene. MGC13114 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by MGC13114, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of MGC13114 BINDING SITE, designated SEQ ID:26155, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68911] Another function of VGAM1965 is therefore inhibition of

MGC13114 (Accession NM_032366). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC13114. MGC14407 (Accession NM_032908) is another VGAM1965 host target gene. MGC14407 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by MGC14407, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of MGC14407 BINDING SITE, designated SEQ ID:26730, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68912] Another function of VGAM1965 is therefore inhibition of MGC14407 (Accession NM_032908). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC14407. MGC15873 (Accession NM_032920) is another VGAM1965 host target gene. MGC15873 BINDING SITE1 and MGC15873 BINDING SITE2 are HOST TARGET binding sites found in untranslated regions of mRNA encoded by MGC15873, corresponding to HOST TARGET binding sites such as BINDING SITE I, BINDING SITE II or

BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of MGC15873 BINDING SITE1 and MGC15873 BINDING SITE2, designated SEQ ID:26744 and SEQ ID:26745 respectively, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68913] Another function of VGAM1965 is therefore inhibition of MGC15873 (Accession NM_032920). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC15873. MGC2603 (Accession NM_024037) is another VGAM1965 host target gene. MGC2603 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by MGC2603, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of MGC2603 BINDING SITE, designated SEQ ID:23471, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68914] Another function of VGAM1965 is therefore inhibition of MGC2603 (Accession NM_024037). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with MGC2603. MGC2668 (Accession XM_026968) is another VGAM1965 host target gene. MGC2668 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by MGC2668, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of MGC2668 BINDING SITE, designated SEQ ID:30380, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68915] Another function of VGAM1965 is therefore inhibition of MGC2668 (Accession XM_026968). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC2668. MGC2848 (Accession NM_032917) is another VGAM1965 host target gene. MGC2848 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by MGC2848, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of MGC2848 BINDING SITE, designated SEQ ID:26735, to the nucleotide

sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68916] Another function of VGAM1965 is therefore inhibition of MGC2848 (Accession NM_032917). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC2848. MGC5576 (Accession NM_024056) is another VGAM1965 host target gene. MGC5576 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by MGC5576, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of MGC5576 BINDING SITE, designated SEQ ID:23493, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68917] Another function of VGAM1965 is therefore inhibition of MGC5576 (Accession NM_024056). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC5576. MIDORI (Accession XM_057651) is another VGAM1965 host target gene. MIDORI BINDING SITE is HOST TARGET binding site found in the 3` untranslated

region of mRNA encoded by MIDORI, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of MIDORI BINDING SITE, designated SEQ ID:36526, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68918] Another function of VGAM1965 is therefore inhibition of MIDORI (Accession XM_057651). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MIDORI. MKP-7 (Accession XM_039106) is another VGAM1965 host target gene. MKP-7 BINDING SITE1 and MKP-7 BINDING SITE2 are HOST TARGET binding sites found in untranslated regions of mRNA encoded by MKP-7, corresponding to HOST TARGET binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of MKP-7 BINDING SITE1 and MKP-7 BINDING SITE2, designated SEQ ID:33010 and SEQ ID:33011 respectively, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68919] Another function of VGAM1965 is therefore inhibition of MKP-7 (Accession XM_039106). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MKP-7. MRPL56 (Accession NM_032857) is another VGAM1965 host target gene. MRPL56 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by MRPL56, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of MRPL56 BINDING SITE, designated SEQ ID:26660, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68920] Another function of VGAM1965 is therefore inhibition of MRPL56 (Accession NM_032857). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MRPL56. MTCH1 (Accession NM_014341) is another VGAM1965 host target gene. MTCH1 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by MTCH1, corresponding to a HOST TARGET binding site such as BINDING SITE I, BIND-

ING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of MTCH1 BINDING SITE, designated SEQ ID:15662, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68921] Another function of VGAM1965 is therefore inhibition of MTCH1 (Accession NM_014341). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MTCH1. MY014 (Accession NM_030918) is another VGAM1965 host target gene. MY014 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by MY014, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of MY014 BINDING SITE, designated SEQ ID:25192, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68922] Another function of VGAM1965 is therefore inhibition of MY014 (Accession NM_030918). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MY014.

My015 (Accession XM_039512) is another VGAM1965 host target gene. My015 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by My015, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of My015 BINDING SITE, designated SEQ ID:33109, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68923] Another function of VGAM1965 is therefore inhibition of My015 (Accession XM_039512). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with My015. N4BP2 (Accession NM_018177) is another VGAM1965 host target gene. N4BP2 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by N4BP2, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of N4BP2 BINDING SITE, designated SEQ ID:20005, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ

ID:4676.

[68924] Another function of VGAM1965 is therefore inhibition of N4BP2 (Accession NM_018177). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with N4BP2. N4BP3 (Accession XM_038920) is another VGAM1965 host target gene. N4BP3 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by N4BP3, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of N4BP3 BINDING SITE, designated SEQ ID:32940, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68925] Another function of VGAM1965 is therefore inhibition of N4BP3 (Accession XM_038920). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with N4BP3. NIBAN (Accession NM_022083) is another VGAM1965 host target gene. NIBAN BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by NIBAN, corresponding to a HOST TARGET binding site

such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of NIBAN BINDING SITE, designated SEQ ID:22631, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68926] Another function of VGAM1965 is therefore inhibition of NIBAN (Accession NM_022083). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with NIBAN. N-myristoyltransferase 1 (NMT1, Accession NM_021079) is another VGAM1965 host target gene. NMT1 BINDING SITE1 and NMT1 BINDING SITE2 are HOST TARGET binding sites found in untranslated regions of mRNA encoded by NMT1, corresponding to HOST TARGET binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of NMT1 BINDING SITE1 and NMT1 BINDING SITE2, designated SEQ ID:22050 and SEQ ID:22051 respectively, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68927] Another function of VGAM1965 is therefore inhibition of

N-myristoyltransferase 1 (NMT1, Accession NM_021079). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with NMT1. NX-17 (Accession NM_020665) is another VGAM1965 host target gene. NX-17 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by NX-17, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of NX-17 BINDING SITE, designated SEQ ID:21835, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68928] Another function of VGAM1965 is therefore inhibition of NX-17 (Accession NM_020665). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with NX-17. NXP-2 (Accession XM_048706) is another VGAM1965 host target gene. NXP-2 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by NXP-2, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III.

Table 2 illustrates the complementarity of the nucleotide sequences of NXP-2 BINDING SITE, designated SEQ ID:35230, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68929] Another function of VGAM1965 is therefore inhibition of NXP-2 (Accession XM_048706). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with NXP-2. Neurexophilin 3 (NXPH3, Accession XM_037847) is another VGAM1965 host target gene. NXPH3 BINDING SITE1 and NXPH3 BINDING SITE2 are HOST TARGET binding sites found in untranslated regions of mRNA encoded by NXPH3, corresponding to HOST TARGET binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of NXPH3 BINDING SITE1 and NXPH3 BINDING SITE2, designated SEQ ID:32721 and SEQ ID:32723 respectively, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68930] Another function of VGAM1965 is therefore inhibition of Neurexophilin 3 (NXPH3, Accession XM_037847). Accord-

ingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with NXPH3. Oxysterol Binding Protein-like 10 (OSBPL10, Accession NM_017784) is another VGAM1965 host target gene. OSBPL10 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by OSBPL10, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of OSBPL10 BINDING SITE, designated SEQ ID:19417, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68931] Another function of VGAM1965 is therefore inhibition of Oxysterol Binding Protein-like 10 (OSBPL10, Accession NM_017784). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with OSBPL10. P11 (Accession NM_006025) is another VGAM1965 host target gene. P11 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by P11, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illus-

trates the complementarity of the nucleotide sequences of P11 BINDING SITE, designated SEQ ID:12643, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68932] Another function of VGAM1965 is therefore inhibition of P11 (Accession NM_006025). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with P11. Purinergic Receptor P2X, Ligand-gated Ion Channel, 1 (P2RX1, Accession XM_040635) is another VGAM1965 host target gene. P2RX1 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by P2RX1, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of P2RX1 BINDING SITE, designated SEQ ID:33359, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68933] Another function of VGAM1965 is therefore inhibition of Purinergic Receptor P2X, Ligand-gated Ion Channel, 1 (P2RX1, Accession XM_040635). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment

of diseases and clinical conditions associated with P2RX1. P5-1 (Accession NM_006674) is another VGAM1965 host target gene. P5-1 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by P5-1, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of P5-1 BINDING SITE, designated SEQ ID:13500, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68934] Another function of VGAM1965 is therefore inhibition of P5-1 (Accession NM_006674). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with P5-1. Peptidyl Arginine Deiminase, Type III (PADI3, Accession NM_016233) is another VGAM1965 host target gene. PADI3 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by PADI3, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of PADI3 BINDING SITE, designated SEQ

ID:18347, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68935] Another function of VGAM1965 is therefore inhibition of Peptidyl Arginine Deiminase, Type III (PADI3, Accession NM_016233). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PADI3. PANK (Accession NM_138316) is another VGAM1965 host target gene. PANK BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by PANK, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of PANK BINDING SITE, designated SEQ ID:28715, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68936] Another function of VGAM1965 is therefore inhibition of PANK (Accession NM_138316). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PANK. Phosphodiesterase 2A, CGMP-stimulated (PDE2A, Accession NM_002599) is another VGAM1965 host target gene.

PDE2A BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by PDE2A, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of PDE2A BINDING SITE, designated SEQ ID:8462, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68937] Another function of VGAM1965 is therefore inhibition of Phosphodiesterase 2A, CGMP-stimulated (PDE2A, Accession NM_002599). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PDE2A. Platelet Derived Growth Factor C (PDGFC, Accession NM_016205) is another VGAM1965 host target gene. PDGFC BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by PDGFC, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of PDGFC BINDING SITE, designated SEQ ID:18303, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68938] Another function of VGAM1965 is therefore inhibition of Platelet Derived Growth Factor C (PDGFC, Accession NM_016205). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PDGFC. Pyruvate Dehydrogenase Kinase, Isoenzyme 2 (PDK2, Accession NM_002611) is another VGAM1965 host target gene. PDK2 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by PDK2, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of PDK2 BINDING SITE, designated SEQ ID:8474, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68939] Another function of VGAM1965 is therefore inhibition of Pyruvate Dehydrogenase Kinase, Isoenzyme 2 (PDK2, Accession NM_002611). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PDK2. PDZ Domain Containing 2 (PDZD2, Accession XM_087705) is another VGAM1965 host target gene. PDZD2 BINDING SITE1 and PDZD2 BINDING SITE2 are HOST TARGET binding sites

found in untranslated regions of mRNA encoded by PDZD2, corresponding to HOST TARGET binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of PDZD2 BINDING SITE1 and PDZD2 BINDING SITE2, designated SEQ ID:39398 and SEQ ID:39394 respectively, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68940] Another function of VGAM1965 is therefore inhibition of PDZ Domain Containing 2 (PDZD2, Accession XM_087705). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PDZD2. PGR1 (Accession NM_033296) is another VGAM1965 host target gene. PGR1 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by PGR1, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of PGR1 BINDING SITE, designated SEQ ID:27124, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68941] Another function of VGAM1965 is therefore inhibition of PGR1 (Accession NM_033296). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PGR1. Phytanoyl-CoA Hydroxylase Interacting Protein (PHYHIP, Accession NM_014759) is another VGAM1965 host target gene. PHYHIP BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by PHYHIP, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of PHYHIP BINDING SITE, designated SEQ ID:16514, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68942] Another function of VGAM1965 is therefore inhibition of Phytanoyl-CoA Hydroxylase Interacting Protein (PHYHIP, Accession NM_014759). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PHYHIP. Phosphatidylinositol-4-phosphate 5-kinase, Type II, Beta (PIP5K2B, Accession NM_003559) is another VGAM1965 host target gene. PIP5K2B BINDING SITE is HOST TARGET

binding site found in the 3` untranslated region of mRNA encoded by PIP5K2B, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of PIP5K2B BINDING SITE, designated SEQ ID:9616, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68943] Another function of VGAM1965 is therefore inhibition of Phosphatidylinositol-4-phosphate 5-kinase, Type II, Beta (PIP5K2B, Accession NM_003559). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PIP5K2B. POF1B (Accession NM_024921) is another VGAM1965 host target gene. POF1B BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by POF1B, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of POF1B BINDING SITE, designated SEQ ID:24455, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68944] Another function of VGAM1965 is therefore inhibition of POF1B (Accession NM_024921). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with POF1B. Polymerase (DNA directed), Mu (POLM, Accession XM_165867) is another VGAM1965 host target gene. POLM BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by POLM, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of POLM BINDING SITE, designated SEQ ID:43785, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68945] Another function of VGAM1965 is therefore inhibition of Polymerase (DNA directed), Mu (POLM, Accession XM_165867). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with POLM. PP1057 (Accession NM_031285) is another VGAM1965 host target gene. PP1057 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by PP1057, corresponding to a HOST TARGET binding site

such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of PP1057 BINDING SITE, designated SEQ ID:25312, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68946] Another function of VGAM1965 is therefore inhibition of PP1057 (Accession NM_031285). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PP1057. Protein Tyrosine Phosphatase, Receptor Type, F Polypeptide (PTPRF), Interacting Protein (liprin), Alpha 4 (PPFIA4, Accession XM_046751) is another VGAM1965 host target gene. PPFIA4 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by PPFIA4, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of PPFIA4 BINDING SITE, designated SEQ ID:34820, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68947] Another function of VGAM1965 is therefore inhibition of

Protein Tyrosine Phosphatase, Receptor Type, F Polypeptide (PTPRF), Interacting Protein (liprin), Alpha 4 (PPFIA4, Accession XM_046751). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PPFIA4. PPI5PIV (Accession NM_019892) is another VGAM1965 host target gene. PPI5PIV BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by PPI5PIV, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of PPI5PIV BINDING SITE, designated SEQ ID:21279, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68948] Another function of VGAM1965 is therefore inhibition of PPI5PIV (Accession NM_019892). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PPI5PIV. Protein Phosphatase 4, Regulatory Subunit 1-like (PPP4R1L, Accession XM_086650) is another VGAM1965 host target gene. PPP4R1L BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA

encoded by PPP4R1L, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of PPP4R1L BINDING SITE, designated SEQ ID:38818, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68949] Another function of VGAM1965 is therefore inhibition of Protein Phosphatase 4, Regulatory Subunit 1-like (PPP4R1L, Accession XM_086650). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PPP4R1L. PRO0233 (Accession NM_014121) is another VGAM1965 host target gene. PRO0233 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by PRO0233, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of PRO0233 BINDING SITE, designated SEQ ID:15375, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68950] Another function of VGAM1965 is therefore inhibition of

PRO0233 (Accession NM_014121). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PRO0233. PRO0245 (Accession NM_014122) is another VGAM1965 host target gene. PRO0245 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by PRO0245, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of PRO0245 BINDING SITE, designated SEQ ID:15378, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68951] Another function of VGAM1965 is therefore inhibition of PRO0245 (Accession NM_014122). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PRO0245. PRO0246 (Accession NM_014123) is another VGAM1965 host target gene. PRO0246 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by PRO0246, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the com-

plementarity of the nucleotide sequences of PRO0246 BINDING SITE, designated SEQ ID:15380, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68952] Another function of VGAM1965 is therefore inhibition of PRO0246 (Accession NM_014123). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PRO0246. PRO0456 (Accession NM_014127) is another VGAM1965 host target gene. PRO0456 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by PRO0456, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of PRO0456 BINDING SITE, designated SEQ ID:15395, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68953] Another function of VGAM1965 is therefore inhibition of PRO0456 (Accession NM_014127). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PRO0456. PRO0899 (Accession NM_018565) is another

VGAM1965 host target gene. PRO0899 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by PRO0899, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of PRO0899 BINDING SITE, designated SEQ ID:20649, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68954] Another function of VGAM1965 is therefore inhibition of PRO0899 (Accession NM_018565). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PRO0899. PRO1048 (Accession NM_018497) is another VGAM1965 host target gene. PRO1048 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by PRO1048, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of PRO1048 BINDING SITE, designated SEQ ID:20558, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68955] Another function of VGAM1965 is therefore inhibition of PRO1048 (Accession NM_018497). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PRO1048. PRO1866 (Accession NM_018510) is another VGAM1965 host target gene. PRO1866 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by PRO1866, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of PRO1866 BINDING SITE, designated SEQ ID:20581, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68956] Another function of VGAM1965 is therefore inhibition of PRO1866 (Accession NM_018510). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PRO1866. PRO2198 (Accession NM_018621) is another VGAM1965 host target gene. PRO2198 BINDING SITE1 and PRO2198 BINDING SITE2 are HOST TARGET binding sites found in untranslated regions of mRNA encoded by PRO2198, corresponding to HOST TARGET binding sites

such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of PRO2198 BINDING SITE1 and PRO2198 BINDING SITE2, designated SEQ ID:20696 and SEQ ID:20697 respectively, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68957] Another function of VGAM1965 is therefore inhibition of PRO2198 (Accession NM_018621). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PRO2198. PRO2859 (Accession NM_018543) is another VGAM1965 host target gene. PRO2859 BINDING SITE1 and PRO2859 BINDING SITE2 are HOST TARGET binding sites found in untranslated regions of mRNA encoded by PRO2859, corresponding to HOST TARGET binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of PRO2859 BINDING SITE1 and PRO2859 BINDING SITE2, designated SEQ ID:20614 and SEQ ID:20632 respectively, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68958] Another function of VGAM1965 is therefore inhibition of PRO2859 (Accession NM_018543). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PRO2859. Proline-serine-threonine Phosphatase Interacting Protein 2 (PSTPIP2, Accession NM_024430) is another VGAM1965 host target gene. PSTPIP2 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by PSTPIP2, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of PSTPIP2 BINDING SITE, designated SEQ ID:23682, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68959] Another function of VGAM1965 is therefore inhibition of Proline-serine-threonine Phosphatase Interacting Protein 2 (PSTPIP2, Accession NM_024430). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PSTPIP2. Quiescin Q6 (QSCN6, Accession NM_002826) is another VGAM1965 host target gene. QSCN6 BINDING SITE is HOST TARGET binding site found in the 3` un-

translated region of mRNA encoded by QSCN6, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of QSCN6 BINDING SITE, designated SEQ ID:8700, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68960] Another function of VGAM1965 is therefore inhibition of Quiescin Q6 (QSCN6, Accession NM_002826). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with QSCN6. RA-GEF-2 (Accession NM_016340) is another VGAM1965 host target gene. RA-GEF-2 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by RA-GEF-2, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of RA-GEF-2 BINDING SITE, designated SEQ ID:18468, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68961] Another function of VGAM1965 is therefore inhibition of RA-GEF-2 (Accession NM_016340). Accordingly, utilities

of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RA-GEF-2. RAB17, Member RAS Oncogene Family (RAB17, Accession NM_022449) is another VGAM1965 host target gene. RAB17 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by RAB17, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of RAB17 BINDING SITE, designated SEQ ID:22788, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68962] Another function of VGAM1965 is therefore inhibition of RAB17, Member RAS Oncogene Family (RAB17, Accession NM_022449). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RAB17. RAB33B, Member RAS Oncogene Family (RAB33B, Accession NM_031296) is another VGAM1965 host target gene. RAB33B BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by RAB33B, corresponding to a HOST TARGET binding site such as BINDING

SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of RAB33B BINDING SITE, designated SEQ ID:25333, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68963] Another function of VGAM1965 is therefore inhibition of RAB33B, Member RAS Oncogene Family (RAB33B, Accession NM_031296). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RAB33B. RAB35, Member RAS Oncogene Family (RAB35, Accession NM_006861) is another VGAM1965 host target gene. RAB35 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by RAB35, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of RAB35 BINDING SITE, designated SEQ ID:13734, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68964] Another function of VGAM1965 is therefore inhibition of RAB35, Member RAS Oncogene Family (RAB35, Accession NM_006861). Accordingly, utilities of VGAM1965 include

diagnosis, prevention and treatment of diseases and clinical conditions associated with RAB35. Rabip4R (Accession NM_017987) is another VGAM1965 host target gene. Rabip4R BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by Rabip4R, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of Rabip4R BINDING SITE, designated SEQ ID:19718, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68965] Another function of VGAM1965 is therefore inhibition of Rabip4R (Accession NM_017987). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with Rabip4R. RAN, Member RAS Oncogene Family (RAN, Accession NM_006325) is another VGAM1965 host target gene. RAN BINDING SITE1 and RAN BINDING SITE2 are HOST TARGET binding sites found in untranslated regions of mRNA encoded by RAN, corresponding to HOST TARGET binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity

of the nucleotide sequences of RAN BINDING SITE1 and RAN BINDING SITE2, designated SEQ ID:13019 and SEQ ID:13018 respectively, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68966] Another function of VGAM1965 is therefore inhibition of RAN, Member RAS Oncogene Family (RAN, Accession NM_006325). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RAN. RAN Binding Protein 6 (RANBP6, Accession XM_029423) is another VGAM1965 host target gene. RANBP6 BINDING SITE1 and RANBP6 BINDING SITE2 are HOST TARGET binding sites found in untranslated regions of mRNA encoded by RANBP6, corresponding to HOST TARGET binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of RANBP6 BINDING SITE1 and RANBP6 BINDING SITE2, designated SEQ ID:30886 and SEQ ID:16396 respectively, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68967] Another function of VGAM1965 is therefore inhibition of RAN Binding Protein 6 (RANBP6, Accession XM_029423).

Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RANBP6. Rpo1-2 (Accession NM_032212) is another VGAM1965 host target gene. Rpo1-2 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by Rpo1-2, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of Rpo1-2 BINDING SITE, designated SEQ ID:25937, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68968] Another function of VGAM1965 is therefore inhibition of Rpo1-2 (Accession NM_032212). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with Rpo1-2. RYK Receptor-like Tyrosine Kinase (RYK, Accession XM_093692) is another VGAM1965 host target gene. RYK BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by RYK, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 il-

lustrates the complementarity of the nucleotide sequences of RYK BINDING SITE, designated SEQ ID:40206, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68969] Another function of VGAM1965 is therefore inhibition of RYK Receptor-like Tyrosine Kinase (RYK, Accession XM_093692). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RYK. SBB103 (Accession NM_005785) is another VGAM1965 host target gene. SBB103 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by SBB103, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of SBB103 BINDING SITE, designated SEQ ID:12367, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68970] Another function of VGAM1965 is therefore inhibition of SBB103 (Accession NM_005785). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

SBB103. SC65 (Accession NM_006455) is another VGAM1965 host target gene. SC65 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by SC65, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of SC65 BINDING SITE, designated SEQ ID:13175, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68971] Another function of VGAM1965 is therefore inhibition of SC65 (Accession NM_006455). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SC65. SCAMP5 (Accession NM_138967) is another VGAM1965 host target gene. SCAMP5 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by SCAMP5, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of SCAMP5 BINDING SITE, designated SEQ ID:29078, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also des-

ignated SEQ ID:4676.

[68972] Another function of VGAM1965 is therefore inhibition of SCAMP5 (Accession NM_138967). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SCAMP5. SCYA5 (Accession NM_002985) is another VGAM1965 host target gene. SCYA5 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by SCYA5, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of SCYA5 BINDING SITE, designated SEQ ID:8883, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68973] Another function of VGAM1965 is therefore inhibition of SCYA5 (Accession NM_002985). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SCYA5. Serologically Defined Colon Cancer Antigen 3 (SDCCAG3, Accession NM_006643) is another VGAM1965 host target gene. SDCCAG3 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded

by SDCCAG3, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of SDCCAG3 BINDING SITE, designated SEQ ID:13437, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68974] Another function of VGAM1965 is therefore inhibition of Serologically Defined Colon Cancer Antigen 3 (SDCCAG3, Accession NM_006643). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SDCCAG3. SE57-1 (Accession NM_025214) is another VGAM1965 host target gene. SE57-1 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by SE57-1, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of SE57-1 BINDING SITE, designated SEQ ID:24893, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68975] Another function of VGAM1965 is therefore inhibition of

SE57-1 (Accession NM_025214). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SE57-1. SEC24 Related Gene Family, Member A (S. cerevisiae) (SEC24A, Accession XM_094581) is another VGAM1965 host target gene. SEC24A BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by SEC24A, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of SEC24A BINDING SITE, designated SEQ ID:40231, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68976] Another function of VGAM1965 is therefore inhibition of SEC24 Related Gene Family, Member A (S. cerevisiae) (SEC24A, Accession XM_094581). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SEC24A. Sema Domain, Immunoglobulin Domain (Ig), Short Basic Domain, Secreted, (semaphorin) 3E (SEMA3E, Accession NM_012431) is another VGAM1965 host target gene. SEMA3E BINDING SITE is HOST TARGET binding site

found in the 3` untranslated region of mRNA encoded by SEMA3E, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of SEMA3E BINDING SITE, designated SEQ ID:14810, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68977] Another function of VGAM1965 is therefore inhibition of Sema Domain, Immunoglobulin Domain (Ig), Short Basic Domain, Secreted, (semaphorin) 3E (SEMA3E, Accession NM_012431). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SEMA3E. Sema Domain, Immunoglobulin Domain (Ig), Transmembrane Domain (TM) and Short Cytoplasmic Domain, (semaphorin) 4B (SEMA4B, Accession XM_044533) is another VGAM1965 host target gene. SEMA4B BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by SEMA4B, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of SEMA4B BINDING SITE, designated SEQ

ID:34224, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68978] Another function of VGAM1965 is therefore inhibition of Sema Domain, Immunoglobulin Domain (Ig), Transmembrane Domain (TM) and Short Cytoplasmic Domain, (semaphorin) 4B (SEMA4B, Accession XM_044533). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SEMA4B. Sema Domain, Immunoglobulin Domain (Ig), Transmembrane Domain (TM) and Short Cytoplasmic Domain, (semaphorin) 4G (SEMA4G, Accession XM_170638) is another VGAM1965 host target gene. SEMA4G BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by SEMA4G, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of SEMA4G BINDING SITE, designated SEQ ID:45415, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68979] Another function of VGAM1965 is therefore inhibition of

Sema Domain, Immunoglobulin Domain (Ig), Transmembrane Domain (TM) and Short Cytoplasmic Domain, (semaphorin) 4G (SEMA4G, Accession XM_170638). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SEMA4G. Serine (or cysteine) Proteinase Inhibitor, Clade B (ovalbumin), Member 7 (SERPINB7, Accession NM_003784) is another VGAM1965 host target gene. SERPINB7 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by SERPINB7, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of SERPINB7 BINDING SITE, designated SEQ ID:9874, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68980] Another function of VGAM1965 is therefore inhibition of Serine (or cysteine) Proteinase Inhibitor, Clade B (ovalbumin), Member 7 (SERPINB7, Accession NM_003784). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SERPINB7. Sideroflexin 5

(SFXN5, Accession NM_144579) is another VGAM1965 host target gene. SFXN5 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by SFXN5, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of SFXN5 BINDING SITE, designated SEQ ID:29385, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68981] Another function of VGAM1965 is therefore inhibition of Sideroflexin 5 (SFXN5, Accession NM_144579). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SFXN5. Sialyltransferase 9 (CMP-NeuAc:lactosylceramide alpha-2,3-sialyltransferase; GM3 synthase) (SIAT9, Accession NM_003896) is another VGAM1965 host target gene. SIAT9 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by SIAT9, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of SIAT9 BINDING SITE,

designated SEQ ID:9978, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68982] Another function of VGAM1965 is therefore inhibition of Sialyltransferase 9 (CMP-NeuAc:lactosylceramide alpha-2,3-sialyltransferase; GM3 synthase) (SIAT9, Accession NM_003896). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SIAT9. SIMRP7 (Accession XM_166462) is another VGAM1965 host target gene. SIMRP7 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by SIMRP7, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of SIMRP7 BINDING SITE, designated SEQ ID:44374, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68983] Another function of VGAM1965 is therefore inhibition of SIMRP7 (Accession XM_166462). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SIMRP7.

Signal-regulatory Protein Beta 1 (SIRPB1, Accession NM_006065) is another VGAM1965 host target gene. SIRPB1 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by SIRPB1, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of SIRPB1 BINDING SITE, designated SEQ ID:12709, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68984] Another function of VGAM1965 is therefore inhibition of Signal-regulatory Protein Beta 1 (SIRPB1, Accession NM_006065). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SIRPB1. Solute Carrier Family 7, (cationic amino acid transporter, y+ system) Member 11 (SLC7A11, Accession NM_014331) is another VGAM1965 host target gene. SLC7A11 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by SLC7A11, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the com-

plementarity of the nucleotide sequences of SLC7A11 BINDING SITE, designated SEQ ID:15644, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68985] Another function of VGAM1965 is therefore inhibition of Solute Carrier Family 7, (cationic amino acid transporter, y+ system) Member 11 (SLC7A11, Accession NM_014331). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SLC7A11. SNF1 Sucrose Nonfermenting Like Kinase (yeast) (SLK, Accession NM_014720) is another VGAM1965 host target gene. SLK BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by SLK, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of SLK BINDING SITE, designated SEQ ID:16280, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68986] Another function of VGAM1965 is therefore inhibition of SNF1 Sucrose Nonfermenting Like Kinase (yeast) (SLK, Accession NM_014720). Accordingly, utilities of VGAM1965

include diagnosis, prevention and treatment of diseases and clinical conditions associated with SLK. Small Nuclear RNA Activating Complex, Polypeptide 1, 43kDa (SNAPC1, Accession NM_003082) is another VGAM1965 host target gene. SNAPC1 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by SNAPC1, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of SNAPC1 BINDING SITE, designated SEQ ID:9057, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68987] Another function of VGAM1965 is therefore inhibition of Small Nuclear RNA Activating Complex, Polypeptide 1, 43kDa (SNAPC1, Accession NM_003082). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SNAPC1. SP192 (Accession NM_021639) is another VGAM1965 host target gene. SP192 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by SP192, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE

II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of SP192 BINDING SITE, designated SEQ ID:22297, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68988] Another function of VGAM1965 is therefore inhibition of SP192 (Accession NM_021639). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SP192. SPEC1 (Accession NM_020239) is another VGAM1965 host target gene. SPEC1 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by SPEC1, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of SPEC1 BINDING SITE, designated SEQ ID:21515, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68989] Another function of VGAM1965 is therefore inhibition of SPEC1 (Accession NM_020239). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SPEC1.

Serine Protease Inhibitor-like, with Kunitz and WAP Domains 1 (eppin) (SPINLW1, Accession NM_020398) is another VGAM1965 host target gene. SPINLW1 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by SPINLW1, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of SPINLW1 BINDING SITE, designated SEQ ID:21667, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68990] Another function of VGAM1965 is therefore inhibition of Serine Protease Inhibitor-like, with Kunitz and WAP Domains 1 (eppin) (SPINLW1, Accession NM_020398). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SPINLW1. SSH2 (Accession XM_030846) is another VGAM1965 host target gene. SSH2 BINDING SITE1 and SSH2 BINDING SITE2 are HOST TARGET binding sites found in untranslated regions of mRNA encoded by SSH2, corresponding to HOST TARGET binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide se-

quences of SSH2 BINDING SITE1 and SSH2 BINDING SITE2, designated SEQ ID:31188 and SEQ ID:31186 respectively, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68991] Another function of VGAM1965 is therefore inhibition of SSH2 (Accession XM_030846). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SSH2. Stathmin-like 3 (STMN3, Accession NM_015894) is another VGAM1965 host target gene. STMN3 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by STMN3, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of STMN3 BINDING SITE, designated SEQ ID:18041, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68992] Another function of VGAM1965 is therefore inhibition of Stathmin-like 3 (STMN3, Accession NM_015894). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with STMN3. Stomatin (EPB72)-like 1 (STOML1, Ac-

cession NM_004809) is another VGAM1965 host target gene. STOML1 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by STOML1, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of STOML1 BINDING SITE, designated SEQ ID:11234, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68993] Another function of VGAM1965 is therefore inhibition of Stomatin (EPB72)-like 1 (STOML1, Accession NM_004809). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with STOML1. Suppressor of Ty 4 Homolog 1 (S. cerevisiae) (SUPT4H1, Accession NM_003168) is another VGAM1965 host target gene. SUPT4H1 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by SUPT4H1, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of SUPT4H1 BINDING SITE, designated SEQ ID:9146, to the

nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68994] Another function of VGAM1965 is therefore inhibition of Suppressor of Ty 4 Homolog 1 (S. cerevisiae) (SUPT4H1, Accession NM_003168). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SUPT4H1. SV2 (Accession NM_014849) is another VGAM1965 host target gene. SV2 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by SV2, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of SV2 BINDING SITE, designated SEQ ID:16886, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68995] Another function of VGAM1965 is therefore inhibition of SV2 (Accession NM_014849). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SV2. SYNCOILIN (Accession NM_030786) is another VGAM1965 host target gene. SYNCOILIN BINDING SITE is HOST TAR-

GET binding site found in the 3` untranslated region of mRNA encoded by SYNCOILIN, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of SYNCOILIN BINDING SITE, designated SEQ ID:25081, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68996] Another function of VGAM1965 is therefore inhibition of SYNCOILIN (Accession NM_030786). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SYNCOILIN. TAO1 (Accession NM_004783) is another VGAM1965 host target gene. TAO1 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by TAO1, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of TAO1 BINDING SITE, designated SEQ ID:11189, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68997] Another function of VGAM1965 is therefore inhibition of

TAO1 (Accession NM_004783). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TAO1. Transducin (beta)-like 1Y-linked (TBL1Y, Accession NM_033284) is another VGAM1965 host target gene. TBL1Y BINDING SITE1 and TBL1Y BINDING SITE2 are HOST TARGET binding sites found in untranslated regions of mRNA encoded by TBL1Y, corresponding to HOST TARGET binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of TBL1Y BINDING SITE1 and TBL1Y BINDING SITE2, designated SEQ ID:27100 and SEQ ID:28611 respectively, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68998] Another function of VGAM1965 is therefore inhibition of Transducin (beta)-like 1Y-linked (TBL1Y, Accession NM_033284). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TBL1Y. TERE1 (Accession NM_013319) is another VGAM1965 host target gene. TERE1 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by TERE1,

corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of TERE1 BINDING SITE, designated SEQ ID:14966, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[68999] Another function of VGAM1965 is therefore inhibition of TERE1 (Accession NM_013319). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TERE1. TIP47 (Accession NM_005817) is another VGAM1965 host target gene. TIP47 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by TIP47, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of TIP47 BINDING SITE, designated SEQ ID:12418, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69000] Another function of VGAM1965 is therefore inhibition of TIP47 (Accession NM_005817). Accordingly, utilities of

VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TIP47. Translocase of Outer Mitochondrial Membrane 34 (TOMM34, Accession NM_006809) is another VGAM1965 host target gene. TOMM34 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by TOMM34, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of TOMM34 BINDING SITE, designated SEQ ID:13681, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69001] Another function of VGAM1965 is therefore inhibition of Translocase of Outer Mitochondrial Membrane 34 (TOMM34, Accession NM_006809). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TOMM34. TOPK (Accession NM_018492) is another VGAM1965 host target gene. TOPK BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by TOPK, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE

II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of TOPK BINDING SITE, designated SEQ ID:20553, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69002] Another function of VGAM1965 is therefore inhibition of TOPK (Accession NM_018492). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TOPK. Tripartite Motif-containing 2 (TRIM2, Accession NM_015271) is another VGAM1965 host target gene. TRIM2 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by TRIM2, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of TRIM2 BINDING SITE, designated SEQ ID:17599, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69003] Another function of VGAM1965 is therefore inhibition of Tripartite Motif-containing 2 (TRIM2, Accession NM_015271). Accordingly, utilities of VGAM1965 include

diagnosis, prevention and treatment of diseases and clinical conditions associated with TRIM2. UBCE7IP5 (Accession NM_014948) is another VGAM1965 host target gene. UBCE7IP5 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by UBCE7IP5, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of UBCE7IP5 BINDING SITE, designated SEQ ID:17274, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69004] Another function of VGAM1965 is therefore inhibition of UBCE7IP5 (Accession NM_014948). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with UBCE7IP5. UQCR (Accession NM_006830) is another VGAM1965 host target gene. UQCR BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by UQCR, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of UQCR BINDING SITE,

designated SEQ ID:13712, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69005] Another function of VGAM1965 is therefore inhibition of UQCR (Accession NM_006830). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with UQCR. VIT1 (Accession NM_018693) is another VGAM1965 host target gene. VIT1 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by VIT1, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of VIT1 BINDING SITE, designated SEQ ID:20768, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69006] Another function of VGAM1965 is therefore inhibition of VIT1 (Accession NM_018693). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with VIT1. Vacuolar Protein Sorting 4B (yeast) (VPS4B, Accession NM_004869) is another VGAM1965 host target gene.

VPS4B BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by VPS4B, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of VPS4B BINDING SITE, designated SEQ ID:11295, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69007] Another function of VGAM1965 is therefore inhibition of Vacuolar Protein Sorting 4B (yeast) (VPS4B, Accession NM_004869). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with VPS4B. Williams-Beuren Syndrome Chromosome Region 17 (WBSCR17, Accession XM_088168) is another VGAM1965 host target gene. WBSCR17 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by WBSCR17, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of WBSCR17 BINDING SITE, designated SEQ ID:39547, to the nucleotide sequence of VGAM1965 RNA,

herein designated VGAM RNA, also designated SEQ ID:4676.

[69008] Another function of VGAM1965 is therefore inhibition of Williams-Beuren Syndrome Chromosome Region 17 (WBSCR17, Accession XM_088168). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with WBSCR17. WIT-1 (Accession NM_015855) is another VGAM1965 host target gene. WIT-1 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by WIT-1, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of WIT-1 BINDING SITE, designated SEQ ID:17993, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69009] Another function of VGAM1965 is therefore inhibition of WIT-1 (Accession NM_015855). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with WIT-1. WSB1 (Accession NM_134264) is another VGAM1965 host target gene. WSB1 BINDING SITE is HOST TARGET binding

site found in the 3` untranslated region of mRNA encoded by WSB1, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of WSB1 BINDING SITE, designated SEQ ID:28618, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69010] Another function of VGAM1965 is therefore inhibition of WSB1 (Accession NM_134264). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with WSB1. ZAK (Accession NM_016653) is another VGAM1965 host target gene. ZAK BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by ZAK, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of ZAK BINDING SITE, designated SEQ ID:18777, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69011] Another function of VGAM1965 is therefore inhibition of

ZAK (Accession NM_016653). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ZAK. Zinc Finger, DHHC Domain Containing 7 (ZDHHC7, Accession NM_017740) is another VGAM1965 host target gene. ZDHHC7 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by ZDHHC7, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of ZDHHC7 BINDING SITE, designated SEQ ID:19331, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69012] Another function of VGAM1965 is therefore inhibition of Zinc Finger, DHHC Domain Containing 7 (ZDHHC7, Accession NM_017740). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ZDHHC7. ZER6 (Accession XM_032742) is another VGAM1965 host target gene. ZER6 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by ZER6, corresponding to a HOST TARGET binding site such

as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of ZER6 BINDING SITE, designated SEQ ID:31746, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69013] Another function of VGAM1965 is therefore inhibition of ZER6 (Accession XM_032742). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ZER6. ZID (Accession NM_006626) is another VGAM1965 host target gene. ZID BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by ZID, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of ZID BINDING SITE, designated SEQ ID:13413, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69014] Another function of VGAM1965 is therefore inhibition of ZID (Accession NM_006626). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ZID. Zinc Finger Protein 237 (ZNF237, Accession NM_014242)

is another VGAM1965 host target gene. ZNF237 BINDING SITE1 and ZNF237 BINDING SITE2 are HOST TARGET binding sites found in untranslated regions of mRNA encoded by ZNF237, corresponding to HOST TARGET binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of ZNF237 BINDING SITE1 and ZNF237 BINDING SITE2, designated SEQ ID:15506 and SEQ ID:15507 respectively, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69015] Another function of VGAM1965 is therefore inhibition of Zinc Finger Protein 237 (ZNF237, Accession NM_014242). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ZNF237. Zinc Finger Protein 297B (ZNF297B, Accession NM_014007) is another VGAM1965 host target gene. ZNF297B BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by ZNF297B, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of ZNF297B BINDING SITE,

designated SEQ ID:15223, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69016] Another function of VGAM1965 is therefore inhibition of Zinc Finger Protein 297B (ZNF297B, Accession NM_014007). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ZNF297B. Zinc Finger Protein 31 (KOX 29) (ZNF31, Accession XM_036305) is another VGAM1965 host target gene. ZNF31 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by ZNF31, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of ZNF31 BINDING SITE, designated SEQ ID:32423, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69017] Another function of VGAM1965 is therefore inhibition of Zinc Finger Protein 31 (KOX 29) (ZNF31, Accession XM_036305). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ZNF31. Zinc Finger Protein

33a (KOX 31) (ZNF33A, Accession XM_166119) is another VGAM1965 host target gene. ZNF33A BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by ZNF33A, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of ZNF33A BINDING SITE, designated SEQ ID:43901, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69018] Another function of VGAM1965 is therefore inhibition of Zinc Finger Protein 33a (KOX 31) (ZNF33A, Accession XM_166119). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ZNF33A. LOC113523 (Accession XM_054378) is another VGAM1965 host target gene. LOC113523 BINDING SITE1 and LOC113523 BINDING SITE2 are HOST TARGET binding sites found in untranslated regions of mRNA encoded by LOC113523, corresponding to HOST TARGET binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC113523 BINDING SITE1 and LOC113523 BINDING

SITE2, designated SEQ ID:36154 and SEQ ID:36155 respectively, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69019] Another function of VGAM1965 is therefore inhibition of LOC113523 (Accession XM_054378). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC113523. LOC115297 (Accession XM_053313) is another VGAM1965 host target gene. LOC115297 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC115297, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC115297 BINDING SITE, designated SEQ ID:36071, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69020] Another function of VGAM1965 is therefore inhibition of LOC115297 (Accession XM_053313). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC115297. LOC116166 (Accession XM_007651) is an-

other VGAM1965 host target gene. LOC116166 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC116166, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC116166 BINDING SITE, designated SEQ ID:30061, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69021] Another function of VGAM1965 is therefore inhibition of LOC116166 (Accession XM_007651). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC116166. LOC120196 (Accession XM_061916) is another VGAM1965 host target gene. LOC120196 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC120196, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC120196 BINDING SITE, designated SEQ ID:37217, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69022] Another function of VGAM1965 is therefore inhibition of LOC120196 (Accession XM_061916). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC120196. LOC120526 (Accession XM_058475) is another VGAM1965 host target gene. LOC120526 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC120526, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC120526 BINDING SITE, designated SEQ ID:36624, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69023] Another function of VGAM1965 is therefore inhibition of LOC120526 (Accession XM_058475). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC120526. LOC121219 (Accession XM_058544) is another VGAM1965 host target gene. LOC121219 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by LOC121219, corresponding to a HOST TARGET binding site such as BIND-

ING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC121219 BINDING SITE, designated SEQ ID:36651, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69024] Another function of VGAM1965 is therefore inhibition of LOC121219 (Accession XM_058544). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC121219. LOC121601 (Accession XM_058577) is another VGAM1965 host target gene. LOC121601 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by LOC121601, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC121601 BINDING SITE, designated SEQ ID:36673, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69025] Another function of VGAM1965 is therefore inhibition of LOC121601 (Accession XM_058577). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

LOC121601. LOC122786 (Accession XM_058660) is another VGAM1965 host target gene. LOC122786 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC122786, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC122786 BINDING SITE, designated SEQ ID:36700, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69026] Another function of VGAM1965 is therefore inhibition of LOC122786 (Accession XM_058660). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC122786. LOC124145 (Accession XM_058775) is another VGAM1965 host target gene. LOC124145 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC124145, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC124145 BINDING SITE, designated SEQ ID:36734, to the nucleotide sequence of VGAM1965 RNA, herein desig-

nated VGAM RNA, also designated SEQ ID:4676.

[69027] Another function of VGAM1965 is therefore inhibition of LOC124145 (Accession XM_058775). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC124145. LOC124446 (Accession XM_058805) is another VGAM1965 host target gene. LOC124446 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by LOC124446, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC124446 BINDING SITE, designated SEQ ID:36752, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69028] Another function of VGAM1965 is therefore inhibition of LOC124446 (Accession XM_058805). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC124446. LOC124944 (Accession XM_058876) is another VGAM1965 host target gene. LOC124944 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by LOC124944, cor-

responding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC124944 BINDING SITE, designated SEQ ID:36778, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69029] Another function of VGAM1965 is therefore inhibition of LOC124944 (Accession XM_058876). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC124944. LOC126167 (Accession XM_058997) is another VGAM1965 host target gene. LOC126167 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by LOC126167, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC126167 BINDING SITE, designated SEQ ID:36814, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69030] Another function of VGAM1965 is therefore inhibition of LOC126167 (Accession XM_058997). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with LOC126167. LOC126917 (Accession XM_059091) is another VGAM1965 host target gene. LOC126917 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC126917, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC126917 BINDING SITE, designated SEQ ID:36876, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69031] Another function of VGAM1965 is therefore inhibition of LOC126917 (Accession XM_059091). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC126917. LOC126964 (Accession XM_059100) is another VGAM1965 host target gene. LOC126964 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC126964, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC126964 BINDING SITE, designated SEQ ID:36885, to

the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69032] Another function of VGAM1965 is therefore inhibition of LOC126964 (Accession XM_059100). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC126964. LOC127162 (Accession XM_059117) is another VGAM1965 host target gene. LOC127162 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC127162, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC127162 BINDING SITE, designated SEQ ID:36887, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69033] Another function of VGAM1965 is therefore inhibition of LOC127162 (Accession XM_059117). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC127162. LOC127281 (Accession XM_059128) is another VGAM1965 host target gene. LOC127281 BINDING SITE is HOST TARGET binding site found in the 3` un-

translated region of mRNA encoded by LOC127281, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC127281 BINDING SITE, designated SEQ ID:36889, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69034] Another function of VGAM1965 is therefore inhibition of LOC127281 (Accession XM_059128). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC127281. LOC127534 (Accession XM_060532) is another VGAM1965 host target gene. LOC127534 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC127534, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC127534 BINDING SITE, designated SEQ ID:37173, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69035] Another function of VGAM1965 is therefore inhibition of LOC127534 (Accession XM_060532). Accordingly, utilities

of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC127534. LOC127841 (Accession XM_059184) is another VGAM1965 host target gene. LOC127841 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by LOC127841, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC127841 BINDING SITE, designated SEQ ID:36910, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69036] Another function of VGAM1965 is therefore inhibition of LOC127841 (Accession XM_059184). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC127841. LOC128077 (Accession XM_059208) is another VGAM1965 host target gene. LOC128077 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC128077, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences

of LOC128077 BINDING SITE, designated SEQ ID:36919, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69037] Another function of VGAM1965 is therefore inhibition of LOC128077 (Accession XM_059208). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC128077. LOC129198 (Accession XM_072197) is another VGAM1965 host target gene. LOC129198 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by LOC129198, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC129198 BINDING SITE, designated SEQ ID:37465, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69038] Another function of VGAM1965 is therefore inhibition of LOC129198 (Accession XM_072197). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC129198. LOC133022 (Accession XM_068144) is another VGAM1965 host target gene. LOC133022 BINDING

SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC133022, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC133022 BINDING SITE, designated SEQ ID:37376, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69039] Another function of VGAM1965 is therefore inhibition of LOC133022 (Accession XM_068144). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC133022. LOC133088 (Accession XM_059624) is another VGAM1965 host target gene. LOC133088 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by LOC133088, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC133088 BINDING SITE, designated SEQ ID:37032, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69040] Another function of VGAM1965 is therefore inhibition of

LOC133088 (Accession XM_059624). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC133088. LOC133584 (Accession XM_059661) is another VGAM1965 host target gene. LOC133584 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC133584, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC133584 BINDING SITE, designated SEQ ID:37048, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69041] Another function of VGAM1965 is therefore inhibition of LOC133584 (Accession XM_059661). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC133584. LOC134121 (Accession XM_059692) is another VGAM1965 host target gene. LOC134121 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC134121, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 il-

lustrates the complementarity of the nucleotide sequences of LOC134121 BINDING SITE, designated SEQ ID:37065, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69042] Another function of VGAM1965 is therefore inhibition of LOC134121 (Accession XM_059692). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC134121. LOC134147 (Accession NM_138809) is another VGAM1965 host target gene. LOC134147 BINDING SITE1 and LOC134147 BINDING SITE2 are HOST TARGET binding sites found in untranslated regions of mRNA encoded by LOC134147, corresponding to HOST TARGET binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC134147 BINDING SITE1 and LOC134147 BINDING SITE2, designated SEQ ID:29033 and SEQ ID:29034 respectively, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69043] Another function of VGAM1965 is therefore inhibition of LOC134147 (Accession NM_138809). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with LOC134147. LOC135818 (Accession XM_059804) is another VGAM1965 host target gene. LOC135818 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC135818, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC135818 BINDING SITE, designated SEQ ID:37096, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69044] Another function of VGAM1965 is therefore inhibition of LOC135818 (Accession XM_059804). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC135818. LOC139221 (Accession XM_066558) is another VGAM1965 host target gene. LOC139221 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC139221, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC139221 BINDING SITE, designated SEQ ID:37333, to

the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69045] Another function of VGAM1965 is therefore inhibition of LOC139221 (Accession XM_066558). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC139221. LOC139248 (Accession XM_066582) is another VGAM1965 host target gene. LOC139248 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by LOC139248, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC139248 BINDING SITE, designated SEQ ID:37338, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69046] Another function of VGAM1965 is therefore inhibition of LOC139248 (Accession XM_066582). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC139248. LOC139770 (Accession XM_060053) is another VGAM1965 host target gene. LOC139770 BINDING SITE1 through LOC139770 BINDING SITE3 are HOST TAR-

GET binding sites found in untranslated regions of mRNA encoded by LOC139770, corresponding to HOST TARGET binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC139770 BINDING SITE1 through LOC139770 BINDING SITE3, designated SEQ ID:37146, SEQ ID:37148 and SEQ ID:37149 respectively, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69047] Another function of VGAM1965 is therefore inhibition of LOC139770 (Accession XM_060053). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC139770. LOC143188 (Accession XM_096387) is another VGAM1965 host target gene. LOC143188 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by LOC143188, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC143188 BINDING SITE, designated SEQ ID:40328, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69048] Another function of VGAM1965 is therefore inhibition of LOC143188 (Accession XM_096387). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC143188. LOC143465 (Accession XM_096430) is another VGAM1965 host target gene. LOC143465 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by LOC143465, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC143465 BINDING SITE, designated SEQ ID:40365, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69049] Another function of VGAM1965 is therefore inhibition of LOC143465 (Accession XM_096430). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC143465. LOC144245 (Accession XM_047770) is another VGAM1965 host target gene. LOC144245 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC144245, corresponding to a HOST TARGET binding site such as BIND-

ING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC144245 BINDING SITE, designated SEQ ID:35051, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69050] Another function of VGAM1965 is therefore inhibition of LOC144245 (Accession XM_047770). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC144245. LOC144266 (Accession XM_084795) is another VGAM1965 host target gene. LOC144266 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by LOC144266, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC144266 BINDING SITE, designated SEQ ID:37707, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69051] Another function of VGAM1965 is therefore inhibition of LOC144266 (Accession XM_084795). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

LOC144266. LOC144512 (Accession XM_096623) is another VGAM1965 host target gene. LOC144512 BINDING SITE1 and LOC144512 BINDING SITE2 are HOST TARGET binding sites found in untranslated regions of mRNA encoded by LOC144512, corresponding to HOST TARGET binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC144512 BINDING SITE1 and LOC144512 BINDING SITE2, designated SEQ ID:40430 and SEQ ID:40431 respectively, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69052] Another function of VGAM1965 is therefore inhibition of LOC144512 (Accession XM_096623). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC144512. LOC144920 (Accession XM_096688) is another VGAM1965 host target gene. LOC144920 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC144920, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences

of LOC144920 BINDING SITE, designated SEQ ID:40464, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69053] Another function of VGAM1965 is therefore inhibition of LOC144920 (Accession XM_096688). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC144920. LOC145082 (Accession XM_096719) is another VGAM1965 host target gene. LOC145082 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by LOC145082, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC145082 BINDING SITE, designated SEQ ID:40495, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69054] Another function of VGAM1965 is therefore inhibition of LOC145082 (Accession XM_096719). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC145082. LOC145231 (Accession XM_096740) is another VGAM1965 host target gene. LOC145231 BINDING

SITE1 and LOC145231 BINDING SITE2 are HOST TARGET binding sites found in untranslated regions of mRNA encoded by LOC145231, corresponding to HOST TARGET binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC145231 BINDING SITE1 and LOC145231 BINDING SITE2, designated SEQ ID:40522 and SEQ ID:40523 respectively, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69055] Another function of VGAM1965 is therefore inhibition of LOC145231 (Accession XM_096740). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC145231. LOC145497 (Accession XM_085150) is another VGAM1965 host target gene. LOC145497 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by LOC145497, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC145497 BINDING SITE, designated SEQ ID:37874, to the nucleotide sequence of VGAM1965 RNA, herein desig-

nated VGAM RNA, also designated SEQ ID:4676.

[69056] Another function of VGAM1965 is therefore inhibition of LOC145497 (Accession XM_085150). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC145497. LOC145547 (Accession XM_085167) is another VGAM1965 host target gene. LOC145547 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC145547, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC145547 BINDING SITE, designated SEQ ID:37891, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69057] Another function of VGAM1965 is therefore inhibition of LOC145547 (Accession XM_085167). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC145547. LOC145662 (Accession XM_085194) is another VGAM1965 host target gene. LOC145662 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC145662, cor-

responding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC145662 BINDING SITE, designated SEQ ID:37918, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69058] Another function of VGAM1965 is therefore inhibition of LOC145662 (Accession XM_085194). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC145662. LOC145761 (Accession XM_096855) is another VGAM1965 host target gene. LOC145761 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by LOC145761, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC145761 BINDING SITE, designated SEQ ID:40585, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69059] Another function of VGAM1965 is therefore inhibition of LOC145761 (Accession XM_096855). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with LOC145761. LOC145955 (Accession XM_096912) is another VGAM1965 host target gene. LOC145955 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by LOC145955, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC145955 BINDING SITE, designated SEQ ID:40646, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69060] Another function of VGAM1965 is therefore inhibition of LOC145955 (Accession XM_096912). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC145955. LOC145988 (Accession XM_085290) is another VGAM1965 host target gene. LOC145988 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by LOC145988, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC145988 BINDING SITE, designated SEQ ID:38043, to

the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69061] Another function of VGAM1965 is therefore inhibition of LOC145988 (Accession XM_085290). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC145988. LOC146108 (Accession XM_085322) is another VGAM1965 host target gene. LOC146108 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by LOC146108, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC146108 BINDING SITE, designated SEQ ID:38063, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69062] Another function of VGAM1965 is therefore inhibition of LOC146108 (Accession XM_085322). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC146108. LOC146315 (Accession XM_027576) is another VGAM1965 host target gene. LOC146315 BINDING SITE is HOST TARGET binding site found in the 5` un-

translated region of mRNA encoded by LOC146315, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC146315 BINDING SITE, designated SEQ ID:30535, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69063] Another function of VGAM1965 is therefore inhibition of LOC146315 (Accession XM_027576). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC146315. LOC146336 (Accession XM_085421) is another VGAM1965 host target gene. LOC146336 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC146336, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC146336 BINDING SITE, designated SEQ ID:38134, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69064] Another function of VGAM1965 is therefore inhibition of LOC146336 (Accession XM_085421). Accordingly, utilities

of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC146336. LOC146445 (Accession XM_096999) is another VGAM1965 host target gene. LOC146445 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC146445, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC146445 BINDING SITE, designated SEQ ID:40699, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69065] Another function of VGAM1965 is therefore inhibition of LOC146445 (Accession XM_096999). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC146445. LOC146745 (Accession XM_085577) is another VGAM1965 host target gene. LOC146745 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by LOC146745, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences

of LOC146745 BINDING SITE, designated SEQ ID:38232, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69066] Another function of VGAM1965 is therefore inhibition of LOC146745 (Accession XM_085577). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC146745. LOC146756 (Accession XM_097085) is another VGAM1965 host target gene. LOC146756 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC146756, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC146756 BINDING SITE, designated SEQ ID:40740, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69067] Another function of VGAM1965 is therefore inhibition of LOC146756 (Accession XM_097085). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC146756. LOC146802 (Accession XM_085595) is another VGAM1965 host target gene. LOC146802 BINDING

SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC146802, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC146802 BINDING SITE, designated SEQ ID:38248, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69068] Another function of VGAM1965 is therefore inhibition of LOC146802 (Accession XM_085595). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC146802. LOC146839 (Accession XM_097107) is another VGAM1965 host target gene. LOC146839 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by LOC146839, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC146839 BINDING SITE, designated SEQ ID:40755, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69069] Another function of VGAM1965 is therefore inhibition of

LOC146839 (Accession XM_097107). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC146839. LOC146880 (Accession XM_085627) is another VGAM1965 host target gene. LOC146880 BINDING SITE1 and LOC146880 BINDING SITE2 are HOST TARGET binding sites found in untranslated regions of mRNA encoded by LOC146880, corresponding to HOST TARGET binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC146880 BINDING SITE1 and LOC146880 BINDING SITE2, designated SEQ ID:38262 and SEQ ID:38263 respectively, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69070] Another function of VGAM1965 is therefore inhibition of LOC146880 (Accession XM_085627). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC146880. LOC147077 (Accession XM_085699) is another VGAM1965 host target gene. LOC147077 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC147077, cor-

responding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC147077 BINDING SITE, designated SEQ ID:38292, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69071] Another function of VGAM1965 is therefore inhibition of LOC147077 (Accession XM_085699). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC147077. LOC147160 (Accession XM_097202) is another VGAM1965 host target gene. LOC147160 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by LOC147160, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC147160 BINDING SITE, designated SEQ ID:40811, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69072] Another function of VGAM1965 is therefore inhibition of LOC147160 (Accession XM_097202). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with LOC147160. LOC147229 (Accession XM_085742) is another VGAM1965 host target gene. LOC147229 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by LOC147229, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC147229 BINDING SITE, designated SEQ ID:38323, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69073] Another function of VGAM1965 is therefore inhibition of LOC147229 (Accession XM_085742). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC147229. LOC148029 (Accession XM_086014) is another VGAM1965 host target gene. LOC148029 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by LOC148029, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC148029 BINDING SITE, designated SEQ ID:38446, to

the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69074] Another function of VGAM1965 is therefore inhibition of LOC148029 (Accession XM_086014). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC148029. LOC148223 (Accession XM_086101) is another VGAM1965 host target gene. LOC148223 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC148223, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC148223 BINDING SITE, designated SEQ ID:38493, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69075] Another function of VGAM1965 is therefore inhibition of LOC148223 (Accession XM_086101). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC148223. LOC148394 (Accession XM_097460) is another VGAM1965 host target gene. LOC148394 BINDING SITE is HOST TARGET binding site found in the 3` un-

translated region of mRNA encoded by LOC148394, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC148394 BINDING SITE, designated SEQ ID:40882, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69076] Another function of VGAM1965 is therefore inhibition of LOC148394 (Accession XM_097460). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC148394. LOC148479 (Accession XM_086204) is another VGAM1965 host target gene. LOC148479 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC148479, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC148479 BINDING SITE, designated SEQ ID:38543, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69077] Another function of VGAM1965 is therefore inhibition of LOC148479 (Accession XM_086204). Accordingly, utilities

of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC148479. LOC148823 (Accession NM_145278) is another VGAM1965 host target gene. LOC148823 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC148823, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC148823 BINDING SITE, designated SEQ ID:29796, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69078] Another function of VGAM1965 is therefore inhibition of LOC148823 (Accession NM_145278). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC148823. LOC148887 (Accession XM_097537) is another VGAM1965 host target gene. LOC148887 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by LOC148887, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences

of LOC148887 BINDING SITE, designated SEQ ID:40912, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69079] Another function of VGAM1965 is therefore inhibition of LOC148887 (Accession XM_097537). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC148887. LOC149010 (Accession XM_086397) is another VGAM1965 host target gene. LOC149010 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by LOC149010, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC149010 BINDING SITE, designated SEQ ID:38628, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69080] Another function of VGAM1965 is therefore inhibition of LOC149010 (Accession XM_086397). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC149010. LOC149013 (Accession XM_086398) is another VGAM1965 host target gene. LOC149013 BINDING

SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC149013, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC149013 BINDING SITE, designated SEQ ID:38634, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69081] Another function of VGAM1965 is therefore inhibition of LOC149013 (Accession XM_086398). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC149013. LOC149086 (Accession XM_097580) is another VGAM1965 host target gene. LOC149086 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC149086, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC149086 BINDING SITE, designated SEQ ID:40947, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69082] Another function of VGAM1965 is therefore inhibition of

LOC149086 (Accession XM_097580). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC149086. LOC149127 (Accession XM_097584) is another VGAM1965 host target gene. LOC149127 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC149127, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC149127 BINDING SITE, designated SEQ ID:40950, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69083] Another function of VGAM1965 is therefore inhibition of LOC149127 (Accession XM_097584). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC149127. LOC149153 (Accession XM_097599) is another VGAM1965 host target gene. LOC149153 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC149153, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 il-

lustrates the complementarity of the nucleotide sequences of LOC149153 BINDING SITE, designated SEQ ID:40966, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69084] Another function of VGAM1965 is therefore inhibition of LOC149153 (Accession XM_097599). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC149153. LOC149175 (Accession XM_086445) is another VGAM1965 host target gene. LOC149175 BINDING SITE1 and LOC149175 BINDING SITE2 are HOST TARGET binding sites found in untranslated regions of mRNA encoded by LOC149175, corresponding to HOST TARGET binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC149175 BINDING SITE1 and LOC149175 BINDING SITE2, designated SEQ ID:38664 and SEQ ID:38665 respectively, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69085] Another function of VGAM1965 is therefore inhibition of LOC149175 (Accession XM_086445). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with LOC149175. LOC149271 (Accession XM_086475) is another VGAM1965 host target gene. LOC149271 BINDING SITE1 and LOC149271 BINDING SITE2 are HOST TARGET binding sites found in untranslated regions of mRNA encoded by LOC149271, corresponding to HOST TARGET binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC149271 BINDING SITE1 and LOC149271 BINDING SITE2, designated SEQ ID:38684 and SEQ ID:38683 respectively, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69086] Another function of VGAM1965 is therefore inhibition of LOC149271 (Accession XM_086475). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC149271. LOC149319 (Accession XM_086495) is another VGAM1965 host target gene. LOC149319 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC149319, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 il-

lustrates the complementarity of the nucleotide sequences of LOC149319 BINDING SITE, designated SEQ ID:38713, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69087] Another function of VGAM1965 is therefore inhibition of LOC149319 (Accession XM_086495). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC149319. LOC149464 (Accession XM_097645) is another VGAM1965 host target gene. LOC149464 BINDING SITE1 and LOC149464 BINDING SITE2 are HOST TARGET binding sites found in untranslated regions of mRNA encoded by LOC149464, corresponding to HOST TARGET binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC149464 BINDING SITE1 and LOC149464 BINDING SITE2, designated SEQ ID:40995 and SEQ ID:40996 respectively, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69088] Another function of VGAM1965 is therefore inhibition of LOC149464 (Accession XM_097645). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with LOC149464. LOC149606 (Accession XM_086600) is another VGAM1965 host target gene. LOC149606 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC149606, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC149606 BINDING SITE, designated SEQ ID:38785, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69089] Another function of VGAM1965 is therefore inhibition of LOC149606 (Accession XM_086600). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC149606. LOC149684 (Accession XM_097710) is another VGAM1965 host target gene. LOC149684 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by LOC149684, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC149684 BINDING SITE, designated SEQ ID:41049, to

the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69090] Another function of VGAM1965 is therefore inhibition of LOC149684 (Accession XM_097710). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC149684. LOC149692 (Accession XM_097706) is another VGAM1965 host target gene. LOC149692 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC149692, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC149692 BINDING SITE, designated SEQ ID:41041, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69091] Another function of VGAM1965 is therefore inhibition of LOC149692 (Accession XM_097706). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC149692. LOC149711 (Accession XM_097720) is another VGAM1965 host target gene. LOC149711 BINDING SITE is HOST TARGET binding site found in the 5` un-

translated region of mRNA encoded by LOC149711, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC149711 BINDING SITE, designated SEQ ID:41076, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69092] Another function of VGAM1965 is therefore inhibition of LOC149711 (Accession XM_097720). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC149711. LOC149722 (Accession XM_097709) is another VGAM1965 host target gene. LOC149722 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by LOC149722, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC149722 BINDING SITE, designated SEQ ID:41045, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69093] Another function of VGAM1965 is therefore inhibition of LOC149722 (Accession XM_097709). Accordingly, utilities

of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC149722. LOC149773 (Accession XM_086628) is another VGAM1965 host target gene. LOC149773 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by LOC149773, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC149773 BINDING SITE, designated SEQ ID:38801, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69094] Another function of VGAM1965 is therefore inhibition of LOC149773 (Accession XM_086628). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC149773. LOC150150 (Accession XM_097820) is another VGAM1965 host target gene. LOC150150 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by LOC150150, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences

of LOC150150 BINDING SITE, designated SEQ ID:41137, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69095] Another function of VGAM1965 is therefore inhibition of LOC150150 (Accession XM_097820). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC150150. LOC150299 (Accession XM_097869) is another VGAM1965 host target gene. LOC150299 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC150299, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC150299 BINDING SITE, designated SEQ ID:41183, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69096] Another function of VGAM1965 is therefore inhibition of LOC150299 (Accession XM_097869). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC150299. LOC150365 (Accession XM_086847) is another VGAM1965 host target gene. LOC150365 BINDING

SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by LOC150365, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC150365 BINDING SITE, designated SEQ ID:38913, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69097] Another function of VGAM1965 is therefore inhibition of LOC150365 (Accession XM_086847). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC150365. LOC150423 (Accession XM_086912) is another VGAM1965 host target gene. LOC150423 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by LOC150423, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC150423 BINDING SITE, designated SEQ ID:38969, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69098] Another function of VGAM1965 is therefore inhibition of

LOC150423 (Accession XM_086912). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC150423. LOC150468 (Accession XM_086926) is another VGAM1965 host target gene. LOC150468 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC150468, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC150468 BINDING SITE, designated SEQ ID:38976, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69099] Another function of VGAM1965 is therefore inhibition of LOC150468 (Accession XM_086926). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC150468. LOC150848 (Accession XM_097959) is another VGAM1965 host target gene. LOC150848 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by LOC150848, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 il-

lustrates the complementarity of the nucleotide sequences of LOC150848 BINDING SITE, designated SEQ ID:41259, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69100] Another function of VGAM1965 is therefore inhibition of LOC150848 (Accession XM_097959). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC150848. LOC150933 (Accession XM_097971) is another VGAM1965 host target gene. LOC150933 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC150933, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC150933 BINDING SITE, designated SEQ ID:41272, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69101] Another function of VGAM1965 is therefore inhibition of LOC150933 (Accession XM_097971). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC150933. LOC150998 (Accession XM_097990) is an-

other VGAM1965 host target gene. LOC150998 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC150998, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC150998 BINDING SITE, designated SEQ ID:41288, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69102] Another function of VGAM1965 is therefore inhibition of LOC150998 (Accession XM_097990). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC150998. LOC151124 (Accession XM_098006) is another VGAM1965 host target gene. LOC151124 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by LOC151124, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC151124 BINDING SITE, designated SEQ ID:41303, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69103] Another function of VGAM1965 is therefore inhibition of LOC151124 (Accession XM_098006). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC151124. LOC151126 (Accession XM_087103) is another VGAM1965 host target gene. LOC151126 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC151126, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC151126 BINDING SITE, designated SEQ ID:39059, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69104] Another function of VGAM1965 is therefore inhibition of LOC151126 (Accession XM_087103). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC151126. LOC151146 (Accession XM_087106) is another VGAM1965 host target gene. LOC151146 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by LOC151146, corresponding to a HOST TARGET binding site such as BIND-

ING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC151146 BINDING SITE, designated SEQ ID:39062, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69105] Another function of VGAM1965 is therefore inhibition of LOC151146 (Accession XM_087106). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC151146. LOC151201 (Accession XM_098021) is another VGAM1965 host target gene. LOC151201 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC151201, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC151201 BINDING SITE, designated SEQ ID:41322, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69106] Another function of VGAM1965 is therefore inhibition of LOC151201 (Accession XM_098021). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

LOC151201. LOC151405 (Accession XM_098058) is another VGAM1965 host target gene. LOC151405 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by LOC151405, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC151405 BINDING SITE, designated SEQ ID:41340, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69107] Another function of VGAM1965 is therefore inhibition of LOC151405 (Accession XM_098058). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC151405. LOC151446 (Accession XM_098061) is another VGAM1965 host target gene. LOC151446 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by LOC151446, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC151446 BINDING SITE, designated SEQ ID:41352, to the nucleotide sequence of VGAM1965 RNA, herein desig-

nated VGAM RNA, also designated SEQ ID:4676.

[69108] Another function of VGAM1965 is therefore inhibition of LOC151446 (Accession XM_098061). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC151446. LOC151568 (Accession NM_138483) is another VGAM1965 host target gene. LOC151568 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by LOC151568, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC151568 BINDING SITE, designated SEQ ID:28839, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69109] Another function of VGAM1965 is therefore inhibition of LOC151568 (Accession NM_138483). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC151568. LOC151602 (Accession XM_087247) is another VGAM1965 host target gene. LOC151602 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC151602, cor-

responding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC151602 BINDING SITE, designated SEQ ID:39140, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69110] Another function of VGAM1965 is therefore inhibition of LOC151602 (Accession XM_087247). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC151602. LOC151643 (Accession XM_087259) is another VGAM1965 host target gene. LOC151643 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC151643, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC151643 BINDING SITE, designated SEQ ID:39152, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69111] Another function of VGAM1965 is therefore inhibition of LOC151643 (Accession XM_087259). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with LOC151643. LOC151904 (Accession XM_087334) is another VGAM1965 host target gene. LOC151904 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by LOC151904, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC151904 BINDING SITE, designated SEQ ID:39174, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69112] Another function of VGAM1965 is therefore inhibition of LOC151904 (Accession XM_087334). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC151904. LOC151959 (Accession XM_098144) is another VGAM1965 host target gene. LOC151959 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC151959, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC151959 BINDING SITE, designated SEQ ID:41410, to

the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69113] Another function of VGAM1965 is therefore inhibition of LOC151959 (Accession XM_098144). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC151959. LOC152018 (Accession XM_098156) is another VGAM1965 host target gene. LOC152018 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC152018, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC152018 BINDING SITE, designated SEQ ID:41423, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69114] Another function of VGAM1965 is therefore inhibition of LOC152018 (Accession XM_098156). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC152018. LOC152137 (Accession XM_087392) is another VGAM1965 host target gene. LOC152137 BINDING SITE is HOST TARGET binding site found in the 3` un-

translated region of mRNA encoded by LOC152137, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC152137 BINDING SITE, designated SEQ ID:39223, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69115] Another function of VGAM1965 is therefore inhibition of LOC152137 (Accession XM_087392). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC152137. LOC152315 (Accession XM_087440) is another VGAM1965 host target gene. LOC152315 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by LOC152315, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC152315 BINDING SITE, designated SEQ ID:39255, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69116] Another function of VGAM1965 is therefore inhibition of LOC152315 (Accession XM_087440). Accordingly, utilities

of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC152315. LOC152345 (Accession XM_087442) is another VGAM1965 host target gene. LOC152345 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC152345, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC152345 BINDING SITE, designated SEQ ID:39268, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69117] Another function of VGAM1965 is therefore inhibition of LOC152345 (Accession XM_087442). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC152345. LOC152627 (Accession XM_087495) is another VGAM1965 host target gene. LOC152627 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by LOC152627, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences

of LOC152627 BINDING SITE, designated SEQ ID:39296, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69118] Another function of VGAM1965 is therefore inhibition of LOC152627 (Accession XM_087495). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC152627. LOC152804 (Accession XM_098266) is another VGAM1965 host target gene. LOC152804 BINDING SITE1 and LOC152804 BINDING SITE2 are HOST TARGET binding sites found in untranslated regions of mRNA encoded by LOC152804, corresponding to HOST TARGET binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC152804 BINDING SITE1 and LOC152804 BINDING SITE2, designated SEQ ID:41557 and SEQ ID:41558 respectively, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69119] Another function of VGAM1965 is therefore inhibition of LOC152804 (Accession XM_098266). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

LOC152804. LOC152860 (Accession XM_087539) is another VGAM1965 host target gene. LOC152860 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC152860, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC152860 BINDING SITE, designated SEQ ID:39326, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69120] Another function of VGAM1965 is therefore inhibition of LOC152860 (Accession XM_087539). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC152860. LOC153516 (Accession NM_138491) is another VGAM1965 host target gene. LOC153516 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by LOC153516, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC153516 BINDING SITE, designated SEQ ID:28843, to the nucleotide sequence of VGAM1965 RNA, herein desig-

nated VGAM RNA, also designated SEQ ID:4676.

[69121] Another function of VGAM1965 is therefore inhibition of LOC153516 (Accession NM_138491). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC153516. LOC153688 (Accession XM_098416) is another VGAM1965 host target gene. LOC153688 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC153688, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC153688 BINDING SITE, designated SEQ ID:41662, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69122] Another function of VGAM1965 is therefore inhibition of LOC153688 (Accession XM_098416). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC153688. LOC153810 (Accession XM_087778) is another VGAM1965 host target gene. LOC153810 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC153810, cor-

responding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC153810 BINDING SITE, designated SEQ ID:39413, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69123] Another function of VGAM1965 is therefore inhibition of LOC153810 (Accession XM_087778). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC153810. LOC153811 (Accession XM_087779) is another VGAM1965 host target gene. LOC153811 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC153811, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC153811 BINDING SITE, designated SEQ ID:39419, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69124] Another function of VGAM1965 is therefore inhibition of LOC153811 (Accession XM_087779). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with LOC153811. LOC153910 (Accession XM_087801) is another VGAM1965 host target gene. LOC153910 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by LOC153910, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC153910 BINDING SITE, designated SEQ ID:39440, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69125] Another function of VGAM1965 is therefore inhibition of LOC153910 (Accession XM_087801). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC153910. LOC154222 (Accession XM_098497) is another VGAM1965 host target gene. LOC154222 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC154222, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC154222 BINDING SITE, designated SEQ ID:41694, to

the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69126] Another function of VGAM1965 is therefore inhibition of LOC154222 (Accession XM_098497). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC154222. LOC154739 (Accession XM_098602) is another VGAM1965 host target gene. LOC154739 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by LOC154739, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC154739 BINDING SITE, designated SEQ ID:41710, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69127] Another function of VGAM1965 is therefore inhibition of LOC154739 (Accession XM_098602). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC154739. LOC155060 (Accession XM_098650) is another VGAM1965 host target gene. LOC155060 BINDING SITE is HOST TARGET binding site found in the 3` un-

translated region of mRNA encoded by LOC155060, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC155060 BINDING SITE, designated SEQ ID:41751, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69128] Another function of VGAM1965 is therefore inhibition of LOC155060 (Accession XM_098650). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC155060. LOC155179 (Accession XM_088169) is another VGAM1965 host target gene. LOC155179 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC155179, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC155179 BINDING SITE, designated SEQ ID:39561, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69129] Another function of VGAM1965 is therefore inhibition of LOC155179 (Accession XM_088169). Accordingly, utilities

of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC155179. LOC157381 (Accession XM_098754) is another VGAM1965 host target gene. LOC157381 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC157381, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC157381 BINDING SITE, designated SEQ ID:41791, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69130] Another function of VGAM1965 is therefore inhibition of LOC157381 (Accession XM_098754). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC157381. LOC157506 (Accession XM_088311) is another VGAM1965 host target gene. LOC157506 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC157506, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences

of LOC157506 BINDING SITE, designated SEQ ID:39602, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69131] Another function of VGAM1965 is therefore inhibition of LOC157506 (Accession XM_088311). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC157506. LOC157621 (Accession XM_098800) is another VGAM1965 host target gene. LOC157621 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC157621, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC157621 BINDING SITE, designated SEQ ID:41825, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69132] Another function of VGAM1965 is therefore inhibition of LOC157621 (Accession XM_098800). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC157621. LOC157624 (Accession XM_098801) is another VGAM1965 host target gene. LOC157624 BINDING

SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by LOC157624, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC157624 BINDING SITE, designated SEQ ID:41827, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69133] Another function of VGAM1965 is therefore inhibition of LOC157624 (Accession XM_098801). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC157624. LOC158055 (Accession XM_088453) is another VGAM1965 host target gene. LOC158055 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC158055, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC158055 BINDING SITE, designated SEQ ID:39707, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69134] Another function of VGAM1965 is therefore inhibition of

LOC158055 (Accession XM_088453). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC158055. LOC158056 (Accession XM_088463) is another VGAM1965 host target gene. LOC158056 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by LOC158056, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC158056 BINDING SITE, designated SEQ ID:39715, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69135] Another function of VGAM1965 is therefore inhibition of LOC158056 (Accession XM_088463). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC158056. LOC158301 (Accession XM_088543) is another VGAM1965 host target gene. LOC158301 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC158301, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 il-

lustrates the complementarity of the nucleotide sequences of LOC158301 BINDING SITE, designated SEQ ID:39812, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69136] Another function of VGAM1965 is therefore inhibition of LOC158301 (Accession XM_088543). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC158301. LOC158308 (Accession XM_098917) is another VGAM1965 host target gene. LOC158308 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by LOC158308, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC158308 BINDING SITE, designated SEQ ID:41942, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69137] Another function of VGAM1965 is therefore inhibition of LOC158308 (Accession XM_098917). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC158308. LOC158332 (Accession XM_088554) is an-

other VGAM1965 host target gene. LOC158332 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC158332, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC158332 BINDING SITE, designated SEQ ID:39826, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69138] Another function of VGAM1965 is therefore inhibition of LOC158332 (Accession XM_088554). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC158332. LOC158382 (Accession XM_098931) is another VGAM1965 host target gene. LOC158382 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by LOC158382, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC158382 BINDING SITE, designated SEQ ID:41969, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69139] Another function of VGAM1965 is therefore inhibition of LOC158382 (Accession XM_098931). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC158382. LOC158427 (Accession NM_139246) is another VGAM1965 host target gene. LOC158427 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by LOC158427, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC158427 BINDING SITE, designated SEQ ID:29248, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69140] Another function of VGAM1965 is therefore inhibition of LOC158427 (Accession NM_139246). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC158427. LOC158490 (Accession XM_088585) is another VGAM1965 host target gene. LOC158490 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC158490, corresponding to a HOST TARGET binding site such as BIND-

ING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC158490 BINDING SITE, designated SEQ ID:39849, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69141] Another function of VGAM1965 is therefore inhibition of LOC158490 (Accession XM_088585). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC158490. LOC158527 (Accession XM_088594) is another VGAM1965 host target gene. LOC158527 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by LOC158527, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC158527 BINDING SITE, designated SEQ ID:39864, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69142] Another function of VGAM1965 is therefore inhibition of LOC158527 (Accession XM_088594). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

LOC158527. LOC158987 (Accession XM_099015) is another VGAM1965 host target gene. LOC158987 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC158987, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC158987 BINDING SITE, designated SEQ ID:42051, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69143] Another function of VGAM1965 is therefore inhibition of LOC158987 (Accession XM_099015). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC158987. LOC161527 (Accession XM_090960) is another VGAM1965 host target gene. LOC161527 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by LOC161527, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC161527 BINDING SITE, designated SEQ ID:40020, to the nucleotide sequence of VGAM1965 RNA, herein desig-

nated VGAM RNA, also designated SEQ ID:4676.

[69144] Another function of VGAM1965 is therefore inhibition of LOC161527 (Accession XM_090960). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC161527. LOC161829 (Accession XM_091161) is another VGAM1965 host target gene. LOC161829 BINDING SITE1 and LOC161829 BINDING SITE2 are HOST TARGET binding sites found in untranslated regions of mRNA encoded by LOC161829, corresponding to HOST TARGET binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC161829 BINDING SITE1 and LOC161829 BINDING SITE2, designated SEQ ID:40036 and SEQ ID:40041 respectively, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69145] Another function of VGAM1965 is therefore inhibition of LOC161829 (Accession XM_091161). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC161829. LOC162333 (Accession XM_102591) is another VGAM1965 host target gene. LOC162333 BINDING

SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by LOC162333, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC162333 BINDING SITE, designated SEQ ID:42139, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69146] Another function of VGAM1965 is therefore inhibition of LOC162333 (Accession XM_102591). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC162333. LOC170106 (Accession XM_093106) is another VGAM1965 host target gene. LOC170106 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by LOC170106, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC170106 BINDING SITE, designated SEQ ID:40175, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69147] Another function of VGAM1965 is therefore inhibition of

LOC170106 (Accession XM_093106). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC170106. LOC170409 (Accession XM_096330) is another VGAM1965 host target gene. LOC170409 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC170409, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC170409 BINDING SITE, designated SEQ ID:40316, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69148] Another function of VGAM1965 is therefore inhibition of LOC170409 (Accession XM_096330). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC170409. LOC196477 (Accession XM_113728) is another VGAM1965 host target gene. LOC196477 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC196477, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 il-

lustrates the complementarity of the nucleotide sequences of LOC196477 BINDING SITE, designated SEQ ID:42377, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69149] Another function of VGAM1965 is therefore inhibition of LOC196477 (Accession XM_113728). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC196477. LOC196484 (Accession XM_031807) is another VGAM1965 host target gene. LOC196484 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by LOC196484, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC196484 BINDING SITE, designated SEQ ID:31486, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69150] Another function of VGAM1965 is therefore inhibition of LOC196484 (Accession XM_031807). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC196484. LOC196955 (Accession XM_085210) is an-

other VGAM1965 host target gene. LOC196955 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by LOC196955, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC196955 BINDING SITE, designated SEQ ID:37939, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69151] Another function of VGAM1965 is therefore inhibition of LOC196955 (Accession XM_085210). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC196955. LOC197196 (Accession XM_117003) is another VGAM1965 host target gene. LOC197196 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by LOC197196, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC197196 BINDING SITE, designated SEQ ID:43203, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69152] Another function of VGAM1965 is therefore inhibition of LOC197196 (Accession XM_117003). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC197196. LOC197201 (Accession XM_113839) is another VGAM1965 host target gene. LOC197201 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC197201, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC197201 BINDING SITE, designated SEQ ID:42466, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69153] Another function of VGAM1965 is therefore inhibition of LOC197201 (Accession XM_113839). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC197201. LOC197342 (Accession XM_113869) is another VGAM1965 host target gene. LOC197342 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC197342, corresponding to a HOST TARGET binding site such as BIND-

ING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC197342 BINDING SITE, designated SEQ ID:42490, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69154] Another function of VGAM1965 is therefore inhibition of LOC197342 (Accession XM_113869). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC197342. LOC199858 (Accession XM_114040) is another VGAM1965 host target gene. LOC199858 BINDING SITE1 and LOC199858 BINDING SITE2 are HOST TARGET binding sites found in untranslated regions of mRNA encoded by LOC199858, corresponding to HOST TARGET binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC199858 BINDING SITE1 and LOC199858 BINDING SITE2, designated SEQ ID:42644 and SEQ ID:42645 respectively, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69155] Another function of VGAM1965 is therefore inhibition of LOC199858 (Accession XM_114040). Accordingly, utilities

of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC199858. LOC200488 (Accession XM_117240) is another VGAM1965 host target gene. LOC200488 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by LOC200488, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC200488 BINDING SITE, designated SEQ ID:43314, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69156] Another function of VGAM1965 is therefore inhibition of LOC200488 (Accession XM_117240). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC200488. LOC200830 (Accession XM_117287) is another VGAM1965 host target gene. LOC200830 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by LOC200830, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences

of LOC200830 BINDING SITE, designated SEQ ID:43349, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69157] Another function of VGAM1965 is therefore inhibition of LOC200830 (Accession XM_117287). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC200830. LOC200953 (Accession XM_117302) is another VGAM1965 host target gene. LOC200953 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by LOC200953, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC200953 BINDING SITE, designated SEQ ID:43368, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69158] Another function of VGAM1965 is therefore inhibition of LOC200953 (Accession XM_117302). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC200953. LOC201173 (Accession XM_113312) is another VGAM1965 host target gene. LOC201173 BINDING

SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by LOC201173, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC201173 BINDING SITE, designated SEQ ID:42217, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69159] Another function of VGAM1965 is therefore inhibition of LOC201173 (Accession XM_113312). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC201173. LOC201203 (Accession XM_113920) is another VGAM1965 host target gene. LOC201203 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC201203, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC201203 BINDING SITE, designated SEQ ID:42537, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69160] Another function of VGAM1965 is therefore inhibition of

LOC201203 (Accession XM_113920). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC201203. LOC201220 (Accession XM_113321) is another VGAM1965 host target gene. LOC201220 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by LOC201220, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC201220 BINDING SITE, designated SEQ ID:42226, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69161] Another function of VGAM1965 is therefore inhibition of LOC201220 (Accession XM_113321). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC201220. LOC201243 (Accession XM_113935) is another VGAM1965 host target gene. LOC201243 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by LOC201243, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 il-

lustrates the complementarity of the nucleotide sequences of LOC201243 BINDING SITE, designated SEQ ID:42554, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69162] Another function of VGAM1965 is therefore inhibition of LOC201243 (Accession XM_113935). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC201243. LOC201626 (Accession XM_114349) is another VGAM1965 host target gene. LOC201626 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC201626, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC201626 BINDING SITE, designated SEQ ID:42888, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69163] Another function of VGAM1965 is therefore inhibition of LOC201626 (Accession XM_114349). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC201626. LOC201895 (Accession XM_114396) is an-

other VGAM1965 host target gene. LOC201895 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC201895, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC201895 BINDING SITE, designated SEQ ID:42928, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69164] Another function of VGAM1965 is therefore inhibition of LOC201895 (Accession XM_114396). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC201895. LOC202134 (Accession XM_117365) is another VGAM1965 host target gene. LOC202134 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by LOC202134, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC202134 BINDING SITE, designated SEQ ID:43415, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69165] Another function of VGAM1965 is therefore inhibition of LOC202134 (Accession XM_117365). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC202134. LOC203235 (Accession XM_117514) is another VGAM1965 host target gene. LOC203235 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by LOC203235, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC203235 BINDING SITE, designated SEQ ID:43479, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69166] Another function of VGAM1965 is therefore inhibition of LOC203235 (Accession XM_117514). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC203235. LOC203248 (Accession XM_114659) is another VGAM1965 host target gene. LOC203248 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC203248, corresponding to a HOST TARGET binding site such as BIND-

ING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC203248 BINDING SITE, designated SEQ ID:43019, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69167] Another function of VGAM1965 is therefore inhibition of LOC203248 (Accession XM_114659). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC203248. LOC203339 (Accession XM_117534) is another VGAM1965 host target gene. LOC203339 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC203339, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC203339 BINDING SITE, designated SEQ ID:43526, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69168] Another function of VGAM1965 is therefore inhibition of LOC203339 (Accession XM_117534). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

LOC203339. LOC203378 (Accession XM_117541) is another VGAM1965 host target gene. LOC203378 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC203378, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC203378 BINDING SITE, designated SEQ ID:43559, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69169] Another function of VGAM1965 is therefore inhibition of LOC203378 (Accession XM_117541). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC203378. LOC203504 (Accession XM_117550) is another VGAM1965 host target gene. LOC203504 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC203504, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC203504 BINDING SITE, designated SEQ ID:43567, to the nucleotide sequence of VGAM1965 RNA, herein desig-

nated VGAM RNA, also designated SEQ ID:4676.

[69170] Another function of VGAM1965 is therefore inhibition of LOC203504 (Accession XM_117550). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC203504. LOC205251 (Accession XM_119554) is another VGAM1965 host target gene. LOC205251 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by LOC205251, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC205251 BINDING SITE, designated SEQ ID:43591, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69171] Another function of VGAM1965 is therefore inhibition of LOC205251 (Accession XM_119554). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC205251. LOC219540 (Accession XM_168047) is another VGAM1965 host target gene. LOC219540 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by LOC219540, cor-

responding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC219540 BINDING SITE, designated SEQ ID:44959, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69172] Another function of VGAM1965 is therefore inhibition of LOC219540 (Accession XM_168047). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC219540. LOC219627 (Accession XM_166402) is another VGAM1965 host target gene. LOC219627 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by LOC219627, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC219627 BINDING SITE, designated SEQ ID:44275, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69173] Another function of VGAM1965 is therefore inhibition of LOC219627 (Accession XM_166402). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with LOC219627. LOC219690 (Accession XM_167572) is another VGAM1965 host target gene. LOC219690 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC219690, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC219690 BINDING SITE, designated SEQ ID:44707, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69174] Another function of VGAM1965 is therefore inhibition of LOC219690 (Accession XM_167572). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC219690. LOC219735 (Accession XM_167601) is another VGAM1965 host target gene. LOC219735 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC219735, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC219735 BINDING SITE, designated SEQ ID:44722, to

the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69175] Another function of VGAM1965 is therefore inhibition of LOC219735 (Accession XM_167601). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC219735. LOC219920 (Accession XM_167787) is another VGAM1965 host target gene. LOC219920 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by LOC219920, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC219920 BINDING SITE, designated SEQ ID:44813, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69176] Another function of VGAM1965 is therefore inhibition of LOC219920 (Accession XM_167787). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC219920. LOC219942 (Accession XM_167790) is another VGAM1965 host target gene. LOC219942 BINDING SITE is HOST TARGET binding site found in the 3` un-

translated region of mRNA encoded by LOC219942, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC219942 BINDING SITE, designated SEQ ID:44823, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69177] Another function of VGAM1965 is therefore inhibition of LOC219942 (Accession XM_167790). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC219942. LOC220073 (Accession XM_167847) is another VGAM1965 host target gene. LOC220073 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by LOC220073, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC220073 BINDING SITE, designated SEQ ID:44875, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69178] Another function of VGAM1965 is therefore inhibition of LOC220073 (Accession XM_167847). Accordingly, utilities

of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC220073. LOC220143 (Accession XM_168046) is another VGAM1965 host target gene. LOC220143 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC220143, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC220143 BINDING SITE, designated SEQ ID:44955, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69179] Another function of VGAM1965 is therefore inhibition of LOC220143 (Accession XM_168046). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC220143. LOC220692 (Accession XM_165991) is another VGAM1965 host target gene. LOC220692 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC220692, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences

of LOC220692 BINDING SITE, designated SEQ ID:43832, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69180] Another function of VGAM1965 is therefore inhibition of LOC220692 (Accession XM_165991). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC220692. LOC221002 (Accession XM_166156) is another VGAM1965 host target gene. LOC221002 BINDING SITE1 and LOC221002 BINDING SITE2 are HOST TARGET binding sites found in untranslated regions of mRNA encoded by LOC221002, corresponding to HOST TARGET binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC221002 BINDING SITE1 and LOC221002 BINDING SITE2, designated SEQ ID:43974 and SEQ ID:43978 respectively, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69181] Another function of VGAM1965 is therefore inhibition of LOC221002 (Accession XM_166156). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

LOC221002. LOC221178 (Accession XM_167936) is another VGAM1965 host target gene. LOC221178 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC221178, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC221178 BINDING SITE, designated SEQ ID:44930, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69182] Another function of VGAM1965 is therefore inhibition of LOC221178 (Accession XM_167936). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC221178. LOC221288 (Accession XM_168058) is another VGAM1965 host target gene. LOC221288 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC221288, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC221288 BINDING SITE, designated SEQ ID:44971, to the nucleotide sequence of VGAM1965 RNA, herein desig-

nated VGAM RNA, also designated SEQ ID:4676.

[69183] Another function of VGAM1965 is therefore inhibition of LOC221288 (Accession XM_168058). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC221288. LOC221421 (Accession XM_166428) is another VGAM1965 host target gene. LOC221421 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC221421, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC221421 BINDING SITE, designated SEQ ID:44324, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69184] Another function of VGAM1965 is therefore inhibition of LOC221421 (Accession XM_166428). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC221421. LOC221466 (Accession XM_168087) is another VGAM1965 host target gene. LOC221466 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by LOC221466, cor-

responding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC221466 BINDING SITE, designated SEQ ID:44995, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69185] Another function of VGAM1965 is therefore inhibition of LOC221466 (Accession XM_168087). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC221466. LOC221495 (Accession XM_168136) is another VGAM1965 host target gene. LOC221495 BINDING SITE1 through LOC221495 BINDING SITE3 are HOST TARGET binding sites found in untranslated regions of mRNA encoded by LOC221495, corresponding to HOST TARGET binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC221495 BINDING SITE1 through LOC221495 BINDING SITE3, designated SEQ ID:45059, SEQ ID:45060 and SEQ ID:45061 respectively, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69186] Another function of VGAM1965 is therefore inhibition of

LOC221495 (Accession XM_168136). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC221495. LOC221641 (Accession XM_168090) is another VGAM1965 host target gene. LOC221641 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by LOC221641, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC221641 BINDING SITE, designated SEQ ID:45010, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69187] Another function of VGAM1965 is therefore inhibition of LOC221641 (Accession XM_168090). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC221641. LOC221662 (Accession XM_166466) is another VGAM1965 host target gene. LOC221662 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC221662, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 il-

lustrates the complementarity of the nucleotide sequences of LOC221662 BINDING SITE, designated SEQ ID:44389, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69188] Another function of VGAM1965 is therefore inhibition of LOC221662 (Accession XM_166466). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC221662. LOC221712 (Accession XM_168059) is another VGAM1965 host target gene. LOC221712 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by LOC221712, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC221712 BINDING SITE, designated SEQ ID:44974, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69189] Another function of VGAM1965 is therefore inhibition of LOC221712 (Accession XM_168059). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC221712. LOC221760 (Accession XM_168105) is an-

other VGAM1965 host target gene. LOC221760 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by LOC221760, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC221760 BINDING SITE, designated SEQ ID:45033, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69190] Another function of VGAM1965 is therefore inhibition of LOC221760 (Accession XM_168105). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC221760. LOC221773 (Accession XM_165802) is another VGAM1965 host target gene. LOC221773 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC221773, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC221773 BINDING SITE, designated SEQ ID:43765, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69191] Another function of VGAM1965 is therefore inhibition of LOC221773 (Accession XM_165802). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC221773. LOC221955 (Accession NM_139179) is another VGAM1965 host target gene. LOC221955 BINDING SITE1 and LOC221955 BINDING SITE2 are HOST TARGET binding sites found in untranslated regions of mRNA encoded by LOC221955, corresponding to HOST TARGET binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC221955 BINDING SITE1 and LOC221955 BINDING SITE2, designated SEQ ID:29193 and SEQ ID:29194 respectively, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69192] Another function of VGAM1965 is therefore inhibition of LOC221955 (Accession NM_139179). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC221955. LOC222128 (Accession XM_166560) is another VGAM1965 host target gene. LOC222128 BINDING SITE is HOST TARGET binding site found in the 5` un-

translated region of mRNA encoded by LOC222128, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC222128 BINDING SITE, designated SEQ ID:44540, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69193] Another function of VGAM1965 is therefore inhibition of LOC222128 (Accession XM_166560). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC222128. LOC222256 (Accession XM_168571) is another VGAM1965 host target gene. LOC222256 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC222256, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC222256 BINDING SITE, designated SEQ ID:45250, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69194] Another function of VGAM1965 is therefore inhibition of LOC222256 (Accession XM_168571). Accordingly, utilities

of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC222256. LOC222671 (Accession XM_167094) is another VGAM1965 host target gene. LOC222671 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by LOC222671, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC222671 BINDING SITE, designated SEQ ID:44604, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69195] Another function of VGAM1965 is therefore inhibition of LOC222671 (Accession XM_167094). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC222671. LOC253216 (Accession XM_170765) is another VGAM1965 host target gene. LOC253216 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by LOC253216, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences

of LOC253216 BINDING SITE, designated SEQ ID:45522, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69196] Another function of VGAM1965 is therefore inhibition of LOC253216 (Accession XM_170765). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC253216. LOC253264 (Accession XM_170639) is another VGAM1965 host target gene. LOC253264 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by LOC253264, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC253264 BINDING SITE, designated SEQ ID:45418, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69197] Another function of VGAM1965 is therefore inhibition of LOC253264 (Accession XM_170639). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC253264. LOC253612 (Accession XM_172985) is another VGAM1965 host target gene. LOC253612 BINDING

SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC253612, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC253612 BINDING SITE, designated SEQ ID:46257, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69198] Another function of VGAM1965 is therefore inhibition of LOC253612 (Accession XM_172985). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC253612. LOC253758 (Accession XM_173067) is another VGAM1965 host target gene. LOC253758 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by LOC253758, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC253758 BINDING SITE, designated SEQ ID:46320, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69199] Another function of VGAM1965 is therefore inhibition of

LOC253758 (Accession XM_173067). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC253758. LOC253912 (Accession XM_173222) is another VGAM1965 host target gene. LOC253912 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC253912, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC253912 BINDING SITE, designated SEQ ID:46485, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69200] Another function of VGAM1965 is therefore inhibition of LOC253912 (Accession XM_173222). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC253912. LOC253926 (Accession XM_170741) is another VGAM1965 host target gene. LOC253926 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by LOC253926, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 il-

lustrates the complementarity of the nucleotide sequences of LOC253926 BINDING SITE, designated SEQ ID:45500, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69201] Another function of VGAM1965 is therefore inhibition of LOC253926 (Accession XM_170741). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC253926. LOC254015 (Accession XM_172977) is another VGAM1965 host target gene. LOC254015 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC254015, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC254015 BINDING SITE, designated SEQ ID:46247, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69202] Another function of VGAM1965 is therefore inhibition of LOC254015 (Accession XM_172977). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC254015. LOC254143 (Accession XM_172880) is an-

other VGAM1965 host target gene. LOC254143 BINDING SITE1 and LOC254143 BINDING SITE2 are HOST TARGET binding sites found in untranslated regions of mRNA encoded by LOC254143, corresponding to HOST TARGET binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC254143 BINDING SITE1 and LOC254143 BINDING SITE2, designated SEQ ID:46159 and SEQ ID:46160 respectively, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69203] Another function of VGAM1965 is therefore inhibition of LOC254143 (Accession XM_172880). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC254143. LOC254266 (Accession XM_173221) is another VGAM1965 host target gene. LOC254266 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by LOC254266, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC254266 BINDING SITE, designated SEQ ID:46482, to

the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69204] Another function of VGAM1965 is therefore inhibition of LOC254266 (Accession XM_173221). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC254266. LOC254351 (Accession XM_170774) is another VGAM1965 host target gene. LOC254351 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC254351, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC254351 BINDING SITE, designated SEQ ID:45543, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69205] Another function of VGAM1965 is therefore inhibition of LOC254351 (Accession XM_170774). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC254351. LOC254413 (Accession XM_173141) is another VGAM1965 host target gene. LOC254413 BINDING SITE is HOST TARGET binding site found in the 5` un-

translated region of mRNA encoded by LOC254413, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC254413 BINDING SITE, designated SEQ ID:46405, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69206] Another function of VGAM1965 is therefore inhibition of LOC254413 (Accession XM_173141). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC254413. LOC254719 (Accession XM_171166) is another VGAM1965 host target gene. LOC254719 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by LOC254719, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC254719 BINDING SITE, designated SEQ ID:45952, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69207] Another function of VGAM1965 is therefore inhibition of LOC254719 (Accession XM_171166). Accordingly, utilities

of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC254719. LOC254896 (Accession XM_171201) is another VGAM1965 host target gene. LOC254896 BINDING SITE1 and LOC254896 BINDING SITE2 are HOST TARGET binding sites found in untranslated regions of mRNA encoded by LOC254896, corresponding to HOST TARGET binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC254896 BINDING SITE1 and LOC254896 BINDING SITE2, designated SEQ ID:45988 and SEQ ID:45990 respectively, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69208] Another function of VGAM1965 is therefore inhibition of LOC254896 (Accession XM_171201). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC254896. LOC255104 (Accession XM_170911) is another VGAM1965 host target gene. LOC255104 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC255104, corresponding to a HOST TARGET binding site such as BIND-

ING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC255104 BINDING SITE, designated SEQ ID:45685, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69209] Another function of VGAM1965 is therefore inhibition of LOC255104 (Accession XM_170911). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC255104. LOC255177 (Accession XM_172941) is another VGAM1965 host target gene. LOC255177 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC255177, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC255177 BINDING SITE, designated SEQ ID:46202, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69210] Another function of VGAM1965 is therefore inhibition of LOC255177 (Accession XM_172941). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

LOC255177. LOC255252 (Accession XM_170779) is another VGAM1965 host target gene. LOC255252 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC255252, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC255252 BINDING SITE, designated SEQ ID:45548, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69211] Another function of VGAM1965 is therefore inhibition of LOC255252 (Accession XM_170779). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC255252. LOC255320 (Accession XM_170777) is another VGAM1965 host target gene. LOC255320 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by LOC255320, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC255320 BINDING SITE, designated SEQ ID:45544, to the nucleotide sequence of VGAM1965 RNA, herein desig-

nated VGAM RNA, also designated SEQ ID:4676.

[69212] Another function of VGAM1965 is therefore inhibition of LOC255320 (Accession XM_170777). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC255320. LOC255327 (Accession XM_171236) is another VGAM1965 host target gene. LOC255327 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by LOC255327, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC255327 BINDING SITE, designated SEQ ID:46023, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69213] Another function of VGAM1965 is therefore inhibition of LOC255327 (Accession XM_171236). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC255327. LOC255338 (Accession XM_171105) is another VGAM1965 host target gene. LOC255338 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by LOC255338, cor-

responding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC255338 BINDING SITE, designated SEQ ID:45913, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69214] Another function of VGAM1965 is therefore inhibition of LOC255338 (Accession XM_171105). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC255338. LOC255426 (Accession XM_173155) is another VGAM1965 host target gene. LOC255426 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC255426, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC255426 BINDING SITE, designated SEQ ID:46410, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69215] Another function of VGAM1965 is therefore inhibition of LOC255426 (Accession XM_173155). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with LOC255426. LOC255533 (Accession XM_173073) is another VGAM1965 host target gene. LOC255533 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by LOC255533, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC255533 BINDING SITE, designated SEQ ID:46332, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69216] Another function of VGAM1965 is therefore inhibition of LOC255533 (Accession XM_173073). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC255533. LOC255975 (Accession XM_171083) is another VGAM1965 host target gene. LOC255975 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by LOC255975, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC255975 BINDING SITE, designated SEQ ID:45892, to

the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69217] Another function of VGAM1965 is therefore inhibition of LOC255975 (Accession XM_171083). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC255975. LOC256096 (Accession XM_173164) is another VGAM1965 host target gene. LOC256096 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by LOC256096, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC256096 BINDING SITE, designated SEQ ID:46420, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69218] Another function of VGAM1965 is therefore inhibition of LOC256096 (Accession XM_173164). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC256096. LOC256207 (Accession XM_170837) is another VGAM1965 host target gene. LOC256207 BINDING SITE is HOST TARGET binding site found in the 3` un-

translated region of mRNA encoded by LOC256207, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC256207 BINDING SITE, designated SEQ ID:45622, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69219] Another function of VGAM1965 is therefore inhibition of LOC256207 (Accession XM_170837). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC256207. LOC256337 (Accession XM_170643) is another VGAM1965 host target gene. LOC256337 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC256337, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC256337 BINDING SITE, designated SEQ ID:45420, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69220] Another function of VGAM1965 is therefore inhibition of LOC256337 (Accession XM_170643). Accordingly, utilities

of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC256337. LOC256867 (Accession XM_170694) is another VGAM1965 host target gene. LOC256867 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by LOC256867, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC256867 BINDING SITE, designated SEQ ID:45477, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69221] Another function of VGAM1965 is therefore inhibition of LOC256867 (Accession XM_170694). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC256867. LOC256905 (Accession XM_173031) is another VGAM1965 host target gene. LOC256905 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC256905, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences

of LOC256905 BINDING SITE, designated SEQ ID:46298, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69222] Another function of VGAM1965 is therefore inhibition of LOC256905 (Accession XM_173031). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC256905. LOC257302 (Accession XM_171750) is another VGAM1965 host target gene. LOC257302 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by LOC257302, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC257302 BINDING SITE, designated SEQ ID:46064, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69223] Another function of VGAM1965 is therefore inhibition of LOC257302 (Accession XM_171750). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC257302. LOC257358 (Accession XM_173138) is another VGAM1965 host target gene. LOC257358 BINDING

SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC257358, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC257358 BINDING SITE, designated SEQ ID:46389, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69224] Another function of VGAM1965 is therefore inhibition of LOC257358 (Accession XM_173138). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC257358. LOC257431 (Accession XM_088764) is another VGAM1965 host target gene. LOC257431 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by LOC257431, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC257431 BINDING SITE, designated SEQ ID:39947, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69225] Another function of VGAM1965 is therefore inhibition of

LOC257431 (Accession XM_088764). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC257431. LOC257464 (Accession XM_116972) is another VGAM1965 host target gene. LOC257464 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by LOC257464, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC257464 BINDING SITE, designated SEQ ID:43167, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69226] Another function of VGAM1965 is therefore inhibition of LOC257464 (Accession XM_116972). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC257464. LOC257476 (Accession XM_028610) is another VGAM1965 host target gene. LOC257476 BINDING SITE1 and LOC257476 BINDING SITE2 are HOST TARGET binding sites found in untranslated regions of mRNA encoded by LOC257476, corresponding to HOST TARGET binding sites such as BINDING SITE I, BINDING SITE II or

BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC257476 BINDING SITE1 and LOC257476 BINDING SITE2, designated SEQ ID:30716 and SEQ ID:30717 respectively, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69227] Another function of VGAM1965 is therefore inhibition of LOC257476 (Accession XM_028610). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC257476. LOC257596 (Accession XM_175296) is another VGAM1965 host target gene. LOC257596 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC257596, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC257596 BINDING SITE, designated SEQ ID:46755, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69228] Another function of VGAM1965 is therefore inhibition of LOC257596 (Accession XM_175296). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with LOC257596. LOC257601 (Accession XM_175231) is another VGAM1965 host target gene. LOC257601 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC257601, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC257601 BINDING SITE, designated SEQ ID:46697, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69229] Another function of VGAM1965 is therefore inhibition of LOC257601 (Accession XM_175231). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC257601. LOC257615 (Accession XM_175293) is another VGAM1965 host target gene. LOC257615 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by LOC257615, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC257615 BINDING SITE, designated SEQ ID:46744, to

the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69230] Another function of VGAM1965 is therefore inhibition of LOC257615 (Accession XM_175293). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC257615. LOC51134 (Accession NM_016122) is another VGAM1965 host target gene. LOC51134 BINDING SITE1 and LOC51134 BINDING SITE2 are HOST TARGET binding sites found in untranslated regions of mRNA encoded by LOC51134, corresponding to HOST TARGET binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC51134 BINDING SITE1 and LOC51134 BINDING SITE2, designated SEQ ID:18212 and SEQ ID:18211 respectively, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69231] Another function of VGAM1965 is therefore inhibition of LOC51134 (Accession NM_016122). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC51134. LOC51301 (Accession NM_016591) is another

VGAM1965 host target gene. LOC51301 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC51301, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC51301 BINDING SITE, designated SEQ ID:18672, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69232] Another function of VGAM1965 is therefore inhibition of LOC51301 (Accession NM_016591). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC51301. LOC51308 (Accession NM_016606) is another VGAM1965 host target gene. LOC51308 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC51308, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC51308 BINDING SITE, designated SEQ ID:18709, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69233] Another function of VGAM1965 is therefore inhibition of LOC51308 (Accession NM_016606). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC51308. LOC51580 (Accession NM_015874) is another VGAM1965 host target gene. LOC51580 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by LOC51580, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC51580 BINDING SITE, designated SEQ ID:18016, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69234] Another function of VGAM1965 is therefore inhibition of LOC51580 (Accession NM_015874). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC51580. LOC51696 (Accession NM_016217) is another VGAM1965 host target gene. LOC51696 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC51696, corresponding to a HOST TARGET binding site such as BINDING SITE I,

BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC51696 BINDING SITE, designated SEQ ID:18316, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69235] Another function of VGAM1965 is therefore inhibition of LOC51696 (Accession NM_016217). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC51696. LOC56920 (Accession NM_020163) is another VGAM1965 host target gene. LOC56920 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC56920, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC56920 BINDING SITE, designated SEQ ID:21383, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69236] Another function of VGAM1965 is therefore inhibition of LOC56920 (Accession NM_020163). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

LOC56920. LOC57805 (Accession NM_021174) is another VGAM1965 host target gene. LOC57805 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC57805, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC57805 BINDING SITE, designated SEQ ID:22150, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69237] Another function of VGAM1965 is therefore inhibition of LOC57805 (Accession NM_021174). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC57805. LOC58525 (Accession XM_086045) is another VGAM1965 host target gene. LOC58525 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC58525, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC58525 BINDING SITE, designated SEQ ID:38460, to the nucleotide sequence of VGAM1965 RNA, herein desig-

nated VGAM RNA, also designated SEQ ID:4676.

[69238] Another function of VGAM1965 is therefore inhibition of LOC58525 (Accession XM_086045). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC58525. LOC90019 (Accession NM_138567) is another VGAM1965 host target gene. LOC90019 BINDING SITE1 through LOC90019 BINDING SITE3 are HOST TARGET binding sites found in untranslated regions of mRNA encoded by LOC90019, corresponding to HOST TARGET binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC90019 BINDING SITE1 through LOC90019 BINDING SITE3, designated SEQ ID:28874, SEQ ID:28875 and SEQ ID:28876 respectively, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69239] Another function of VGAM1965 is therefore inhibition of LOC90019 (Accession NM_138567). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC90019. LOC90092 (Accession XM_028862) is another VGAM1965 host target gene. LOC90092 BINDING SITE1

and LOC90092 BINDING SITE2 are HOST TARGET binding sites found in untranslated regions of mRNA encoded by LOC90092, corresponding to HOST TARGET binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC90092 BINDING SITE1 and LOC90092 BINDING SITE2, designated SEQ ID:30782 and SEQ ID:30793 respectively, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69240] Another function of VGAM1965 is therefore inhibition of LOC90092 (Accession XM_028862). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC90092. LOC90246 (Accession XM_030283) is another VGAM1965 host target gene. LOC90246 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC90246, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC90246 BINDING SITE, designated SEQ ID:31003, to the nucleotide sequence of VGAM1965 RNA, herein desig-

nated VGAM RNA, also designated SEQ ID:4676.

[69241] Another function of VGAM1965 is therefore inhibition of LOC90246 (Accession XM_030283). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC90246. LOC90379 (Accession XM_031308) is another VGAM1965 host target gene. LOC90379 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by LOC90379, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC90379 BINDING SITE, designated SEQ ID:31338, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69242] Another function of VGAM1965 is therefore inhibition of LOC90379 (Accession XM_031308). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC90379. LOC90459 (Accession XM_031826) is another VGAM1965 host target gene. LOC90459 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC90459, corresponding to

a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC90459 BINDING SITE, designated SEQ ID:31493, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69243] Another function of VGAM1965 is therefore inhibition of LOC90459 (Accession XM_031826). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC90459. LOC90509 (Accession XM_032209) is another VGAM1965 host target gene. LOC90509 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by LOC90509, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC90509 BINDING SITE, designated SEQ ID:31610, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69244] Another function of VGAM1965 is therefore inhibition of LOC90509 (Accession XM_032209). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with LOC90509. LOC90529 (Accession XM_032350) is another VGAM1965 host target gene. LOC90529 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC90529, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC90529 BINDING SITE, designated SEQ ID:31639, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69245] Another function of VGAM1965 is therefore inhibition of LOC90529 (Accession XM_032350). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC90529. LOC90538 (Accession XM_032401) is another VGAM1965 host target gene. LOC90538 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC90538, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC90538 BINDING SITE, designated SEQ ID:31660, to the

nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69246] Another function of VGAM1965 is therefore inhibition of LOC90538 (Accession XM_032401). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC90538. LOC90670 (Accession XM_033352) is another VGAM1965 host target gene. LOC90670 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC90670, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC90670 BINDING SITE, designated SEQ ID:31884, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69247] Another function of VGAM1965 is therefore inhibition of LOC90670 (Accession XM_033352). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC90670. LOC90750 (Accession XM_033868) is another VGAM1965 host target gene. LOC90750 BINDING SITE is HOST TARGET binding site found in the 3` untranslated

region of mRNA encoded by LOC90750, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC90750 BINDING SITE, designated SEQ ID:31970, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69248] Another function of VGAM1965 is therefore inhibition of LOC90750 (Accession XM_033868). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC90750. LOC90918 (Accession XM_034863) is another VGAM1965 host target gene. LOC90918 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by LOC90918, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC90918 BINDING SITE, designated SEQ ID:32177, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69249] Another function of VGAM1965 is therefore inhibition of LOC90918 (Accession XM_034863). Accordingly, utilities

of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC90918. LOC91040 (Accession XM_035641) is another VGAM1965 host target gene. LOC91040 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC91040, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC91040 BINDING SITE, designated SEQ ID:32324, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69250] Another function of VGAM1965 is therefore inhibition of LOC91040 (Accession XM_035641). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC91040. LOC91069 (Accession XM_035824) is another VGAM1965 host target gene. LOC91069 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC91069, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of

LOC91069 BINDING SITE, designated SEQ ID:32347, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69251] Another function of VGAM1965 is therefore inhibition of LOC91069 (Accession XM_035824). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC91069. LOC91149 (Accession XM_036480) is another VGAM1965 host target gene. LOC91149 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC91149, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC91149 BINDING SITE, designated SEQ ID:32459, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69252] Another function of VGAM1965 is therefore inhibition of LOC91149 (Accession XM_036480). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC91149. LOC91408 (Accession XM_038290) is another VGAM1965 host target gene. LOC91408 BINDING SITE is

HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC91408, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC91408 BINDING SITE, designated SEQ ID:32793, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69253] Another function of VGAM1965 is therefore inhibition of LOC91408 (Accession XM_038290). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC91408. LOC91445 (Accession XM_018516) is another VGAM1965 host target gene. LOC91445 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC91445, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC91445 BINDING SITE, designated SEQ ID:30373, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69254] Another function of VGAM1965 is therefore inhibition of

LOC91445 (Accession XM_018516). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC91445. LOC91464 (Accession XM_038589) is another VGAM1965 host target gene. LOC91464 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by LOC91464, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC91464 BINDING SITE, designated SEQ ID:32875, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69255] Another function of VGAM1965 is therefore inhibition of LOC91464 (Accession XM_038589). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC91464. LOC91948 (Accession XM_041723) is another VGAM1965 host target gene. LOC91948 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC91948, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the

complementarity of the nucleotide sequences of LOC91948 BINDING SITE, designated SEQ ID:33576, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69256] Another function of VGAM1965 is therefore inhibition of LOC91948 (Accession XM_041723). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC91948. LOC92078 (Accession XM_042684) is another VGAM1965 host target gene. LOC92078 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC92078, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC92078 BINDING SITE, designated SEQ ID:33748, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69257] Another function of VGAM1965 is therefore inhibition of LOC92078 (Accession XM_042684). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC92078. LOC92140 (Accession XM_043070) is another

VGAM1965 host target gene. LOC92140 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC92140, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC92140 BINDING SITE, designated SEQ ID:33888, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69258] Another function of VGAM1965 is therefore inhibition of LOC92140 (Accession XM_043070). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC92140. LOC92181 (Accession XM_043394) is another VGAM1965 host target gene. LOC92181 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC92181, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC92181 BINDING SITE, designated SEQ ID:33945, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69259] Another function of VGAM1965 is therefore inhibition of LOC92181 (Accession XM_043394). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC92181. LOC92249 (Accession XM_043814) is another VGAM1965 host target gene. LOC92249 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by LOC92249, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC92249 BINDING SITE, designated SEQ ID:34026, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69260] Another function of VGAM1965 is therefore inhibition of LOC92249 (Accession XM_043814). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC92249. LOC92267 (Accession XM_043979) is another VGAM1965 host target gene. LOC92267 BINDING SITE1 and LOC92267 BINDING SITE2 are HOST TARGET binding sites found in untranslated regions of mRNA encoded by LOC92267, corresponding to HOST TARGET binding sites

such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC92267 BINDING SITE1 and LOC92267 BINDING SITE2, designated SEQ ID:34056 and SEQ ID:34059 respectively, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69261] Another function of VGAM1965 is therefore inhibition of LOC92267 (Accession XM_043979). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC92267. LOC92379 (Accession XM_044712) is another VGAM1965 host target gene. LOC92379 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC92379, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC92379 BINDING SITE, designated SEQ ID:34267, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69262] Another function of VGAM1965 is therefore inhibition of LOC92379 (Accession XM_044712). Accordingly, utilities

of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC92379. LOC92661 (Accession XM_046465) is another VGAM1965 host target gene. LOC92661 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC92661, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC92661 BINDING SITE, designated SEQ ID:34723, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69263] Another function of VGAM1965 is therefore inhibition of LOC92661 (Accession XM_046465). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC92661. LOC92771 (Accession NM_033424) is another VGAM1965 host target gene. LOC92771 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC92771, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of

LOC92771 BINDING SITE, designated SEQ ID:27248, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69264] Another function of VGAM1965 is therefore inhibition of LOC92771 (Accession NM_033424). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC92771. LOC93052 (Accession XM_048905) is another VGAM1965 host target gene. LOC93052 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by LOC93052, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC93052 BINDING SITE, designated SEQ ID:35301, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69265] Another function of VGAM1965 is therefore inhibition of LOC93052 (Accession XM_048905). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC93052. LOC93070 (Accession XM_049046) is another VGAM1965 host target gene. LOC93070 BINDING SITE is

HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by LOC93070, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC93070 BINDING SITE, designated SEQ ID:35324, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69266] Another function of VGAM1965 is therefore inhibition of LOC93070 (Accession XM_049046). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC93070. LOC93622 (Accession NM_138699) is another VGAM1965 host target gene. LOC93622 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC93622, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC93622 BINDING SITE, designated SEQ ID:28949, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69267] Another function of VGAM1965 is therefore inhibition of

LOC93622 (Accession NM_138699). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC93622. LOC93624 (Accession XM_052624) is another VGAM1965 host target gene. LOC93624 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by LOC93624, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC93624 BINDING SITE, designated SEQ ID:36015, to the nucleotide sequence of VGAM1965 RNA, herein designated VGAM RNA, also designated SEQ ID:4676.

[69268] Another function of VGAM1965 is therefore inhibition of LOC93624 (Accession XM_052624). Accordingly, utilities of VGAM1965 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC93624. Fig. 1 further provides a conceptual description of a novel bioinformatically detected viral gene of the present invention, referred to here as Viral Genomic Address Messenger 1966 (VGAM1966) viral gene, which modulates expression of respective host target genes thereof, the function and utility of which host target genes

is known in the art.

[69269] VGAM1966 is a novel bioinformatically detected regulatory, non protein coding, viral micro RNA (miRNA) gene. The method by which VGAM1966 was detected is described hereinabove with reference to Figs. 1-8.

[69270] VGAM1966 gene, herein designated VGAM GENE, is a viral gene contained in the genome of Rana Tigrina Ranavirus. VGAM1966 host target gene, herein designated VGAM HOST TARGET GENE, is a human gene contained in the human genome.

[69271] VGAM1966 gene encodes a VGAM1966 precursor RNA, herein designated VGAM PRECURSOR RNA. Similar to other miRNA genes, and unlike most ordinary genes, VGAM1966 precursor RNA does not encode a protein. A nucleotide sequence identical or highly similar to the nucleotide sequence of VGAM1966 precursor RNA is designated SEQ ID:1952, and is provided hereinbelow with reference to the sequence listing part. Nucleotide sequence SEQ ID:1952 is located at position 88719 relative to the genome of Rana Tigrina Ranavirus.

[69272] VGAM1966 precursor RNA folds onto itself, forming VGAM1966 folded precursor RNA, herein designated VGAM FOLDED PRECURSOR RNA, which has a two-

dimensional `hairpin structure`. As is well known in the art, this `hairpin structure`, is typical of RNA encoded by miRNA genes, and is due to the fact that the nucleotide sequence of the first half of the RNA encoded by a miRNA gene is an accurate or partial inversed-reversed sequence of the nucleotide sequence of the second half thereof.

[69273] An enzyme complex designated DICER COMPLEX, `dices` the VGAM1966 folded precursor RNA into VGAM1966 RNA, herein designated VGAM RNA, a single stranded ~22 nt long RNA segment. As is known in the art, `dicing` of a hairpin structured RNA precursor product into a short ~22nt RNA segment is catalyzed by an enzyme complex comprising an enzyme called Dicer together with other necessary proteins. A probable (over 71%) nucleotide sequence of VGAM1966 RNA is designated SEQ ID:4677, and is provided hereinbelow with reference to the sequence listing part.

[69274] VGAM1966 host target gene, herein designated VGAM HOST TARGET GENE, encodes a corresponding messenger RNA, VGAM1966 host target RNA, herein designated VGAM HOST TARGET RNA. VGAM1966 host target RNA comprises three regions, as is typical of mRNA of a protein coding gene: a 5` untranslated region, a protein cod-

ing region and a 3` untranslated region, designated 5`UTR, PROTEIN CODING and 3`UTR respectively.

[69275] VGAM1966 RNA, herein designated VGAM RNA, binds complementarily to one or more host target binding sites located in untranslated regions of VGAM1966 host target RNA, herein designated VGAM HOST TARGET RNA. This complementary binding is due to the fact that the nucleotide sequence of VGAM1966 RNA is an accurate or a partial inversed-reversed sequence of the nucleotide sequence of each of the host target binding sites. As an illustration, Fig. 1 shows three such host target binding sites, designated BINDING SITE I, BINDING SITE II and BINDING SITE III respectively. It is appreciated that the number of host target binding sites shown in Fig. 1 is meant as an illustration only, and is not meant to be limiting - VGAM1966 RNA, herein designated VGAM RNA, may have a different number of host target binding sites in untranslated regions of a VGAM1966 host target RNA, herein designated VGAM HOST TARGET RNA. It is further appreciated that while Fig. 1 depicts host target binding sites in the 3`UTR region, this is meant as an example only - these host target binding sites may be located in the 3`UTR region, the 5`UTR region, or in both 3`UTR

and 5`UTR regions.

[69276] The complementary binding of VGAM1966 RNA, herein designated VGAM RNA, to host target binding sites on VGAM1966 host target RNA, herein designated VGAM HOST TARGET RNA, such as BINDING SITE I, BINDING SITE II and BINDING SITE III, inhibits translation of VGAM1966 host target RNA into VGAM1966 host target protein, herein designated VGAM HOST TARGET PROTEIN. VGAM host target protein is therefore outlined by a broken line.

[69277] It is appreciated that VGAM1966 host target gene, herein designated VGAM HOST TARGET GENE, in fact represents a plurality of VGAM1966 host target genes. The mRNA of each one of this plurality of VGAM1966 host target genes comprises one or more host target binding sites, each having a nucleotide sequence which is at least partly complementary to VGAM1966 RNA, herein designated VGAM RNA, and which when bound by VGAM1966 RNA causes inhibition of translation of respective one or more VGAM1966 host target proteins.

[69278] It is further appreciated by one skilled in the art that the mode of translational inhibition illustrated by Fig. 1 with specific reference to translational inhibition exerted by VGAM1966 gene, herein designated VGAM GENE, on one

or more VGAM1966 host target gene, herein designated VGAM HOST TARGET GENE, is in fact common to other known non-viral miRNA genes. As mentioned hereinabove with reference to the background section, although a specific complementary binding site has been demonstrated only for some of the known miRNA genes (primarily Lin-4 and Let-7), all other recently discovered miRNA genes are also believed by those skilled in the art to modulate expression of other genes by complementary binding, although specific complementary binding sites of these other miRNA genes have not yet been found (Ruvkun G., `Perspective: Glimpses of a tiny RNA world`, Science 294,779 (2001)).

[69279] It is yet further appreciated that a function of VGAM1966 is inhibition of expression of host target genes, as part of a novel viral mechanism of attacking a host. Accordingly, utilities of VGAM1966 include diagnosis, prevention and treatment of viral infection by Rana Tigrina Ranavirus. Specific functions, and accordingly utilities, of VGAM1966 correlate with, and may be deduced from, the identity of the host target genes which VGAM1966 binds and inhibits, and the function of these host target genes, as elaborated hereinbelow.

[69280] Nucleotide sequences of the VGAM1966 precursor RNA, herein designated VGAM PRECURSOR RNA, and of the `diced` VGAM1966 RNA, herein designated VGAM RNA, and a schematic representation of the secondary folding of VGAM1966 folded precursor RNA, herein designated VGAM FOLDED PRECURSOR RNA, of VGAM1966 are further described hereinbelow with reference to Table 1.

[69281] Nucleotide sequences of host target binding sites, such as BINDING SITE-I, BINDING SITE-II and BINDING SITE-III of Fig. 1, found on VGAM1966 host target RNA, and schematic representation of the complementarity of each of these host target binding sites to VGAM1966 RNA, herein designated VGAM RNA, are described hereinbelow with reference to Table 2.

[69282] As mentioned hereinabove with reference to Fig. 1, a function of VGAM1966 gene, herein designated VGAM is inhibition of expression of VGAM1966 target genes. It is appreciated that specific functions, and accordingly utilities, of VGAM1966 correlate with, and may be deduced from, the identity of the target genes which VGAM1966 binds and inhibits, and the function of these target genes, as elaborated hereinbelow.

[69283] Surfeit 6 (SURF6, Accession NM_006753) is a VGAM1966

host target gene. SURF6 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by SURF6, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of SURF6 BINDING SITE, designated SEQ ID:13608, to the nucleotide sequence of VGAM1966 RNA, herein designated VGAM RNA, also designated SEQ ID:4677.

[69284] A function of VGAM1966 is therefore inhibition of Surfeit 6 (SURF6, Accession NM_006753). Accordingly, utilities of VGAM1966 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SURF6. Fig. 1 further provides a conceptual description of a novel bioinformatically detected viral gene of the present invention, referred to here as Viral Genomic Address Messenger 1967 (VGAM1967) viral gene, which modulates expression of respective host target genes thereof, the function and utility of which host target genes is known in the art.

[69285] VGAM1967 is a novel bioinformatically detected regulatory, non protein coding, viral micro RNA (miRNA) gene. The method by which VGAM1967 was detected is described hereinabove with reference to Figs. 1-8.

[69286] VGAM1967 gene, herein designated VGAM GENE, is a viral gene contained in the genome of Rana Tigrina Ranavirus. VGAM1967 host target gene, herein designated VGAM HOST TARGET GENE, is a human gene contained in the human genome.

[69287] VGAM1967 gene encodes a VGAM1967 precursor RNA, herein designated VGAM PRECURSOR RNA. Similar to other miRNA genes, and unlike most ordinary genes, VGAM1967 precursor RNA does not encode a protein. A nucleotide sequence identical or highly similar to the nucleotide sequence of VGAM1967 precursor RNA is designated SEQ ID:1953, and is provided hereinbelow with reference to the sequence listing part. Nucleotide sequence SEQ ID:1953 is located at position 96311 relative to the genome of Rana Tigrina Ranavirus.

[69288] VGAM1967 precursor RNA folds onto itself, forming VGAM1967 folded precursor RNA, herein designated VGAM FOLDED PRECURSOR RNA, which has a two-dimensional `hairpin structure`. As is well known in the art, this `hairpin structure`, is typical of RNA encoded by miRNA genes, and is due to the fact that the nucleotide sequence of the first half of the RNA encoded by a miRNA gene is an accurate or partial inversed-reversed sequence

of the nucleotide sequence of the second half thereof.

[69289] An enzyme complex designated DICER COMPLEX, `dices` the VGAM1967 folded precursor RNA into VGAM1967 RNA, herein designated VGAM RNA, a single stranded ~22 nt long RNA segment. As is known in the art, `dicing` of a hairpin structured RNA precursor product into a short ~22nt RNA segment is catalyzed by an enzyme complex comprising an enzyme called Dicer together with other necessary proteins. A probable (over 60%) nucleotide sequence of VGAM1967 RNA is designated SEQ ID:4678, and is provided hereinbelow with reference to the sequence listing part.

[69290] VGAM1967 host target gene, herein designated VGAM HOST TARGET GENE, encodes a corresponding messenger RNA, VGAM1967 host target RNA, herein designated VGAM HOST TARGET RNA. VGAM1967 host target RNA comprises three regions, as is typical of mRNA of a protein coding gene: a 5` untranslated region, a protein coding region and a 3` untranslated region, designated 5`UTR, PROTEIN CODING and 3`UTR respectively.

[69291] VGAM1967 RNA, herein designated VGAM RNA, binds complementarily to one or more host target binding sites located in untranslated regions of VGAM1967 host target

RNA, herein designated VGAM HOST TARGET RNA. This complementary binding is due to the fact that the nucleotide sequence of VGAM1967 RNA is an accurate or a partial inversed-reversed sequence of the nucleotide sequence of each of the host target binding sites. As an illustration, Fig. 1 shows three such host target binding sites, designated BINDING SITE I, BINDING SITE II and BINDING SITE III respectively. It is appreciated that the number of host target binding sites shown in Fig. 1 is meant as an illustration only, and is not meant to be limiting - VGAM1967 RNA, herein designated VGAM RNA, may have a different number of host target binding sites in untranslated regions of a VGAM1967 host target RNA, herein designated VGAM HOST TARGET RNA. It is further appreciated that while Fig. 1 depicts host target binding sites in the 3`UTR region, this is meant as an example only - these host target binding sites may be located in the 3`UTR region, the 5`UTR region, or in both 3`UTR and 5`UTR regions.

[69292] The complementary binding of VGAM1967 RNA, herein designated VGAM RNA, to host target binding sites on VGAM1967 host target RNA, herein designated VGAM HOST TARGET RNA, such as BINDING SITE I, BINDING SITE

II and BINDING SITE III, inhibits translation of VGAM1967 host target RNA into VGAM1967 host target protein, herein designated VGAM HOST TARGET PROTEIN. VGAM host target protein is therefore outlined by a broken line.

[69293] It is appreciated that VGAM1967 host target gene, herein designated VGAM HOST TARGET GENE, in fact represents a plurality of VGAM1967 host target genes. The mRNA of each one of this plurality of VGAM1967 host target genes comprises one or more host target binding sites, each having a nucleotide sequence which is at least partly complementary to VGAM1967 RNA, herein designated VGAM RNA, and which when bound by VGAM1967 RNA causes inhibition of translation of respective one or more VGAM1967 host target proteins.

[69294] It is further appreciated by one skilled in the art that the mode of translational inhibition illustrated by Fig. 1 with specific reference to translational inhibition exerted by VGAM1967 gene, herein designated VGAM GENE, on one or more VGAM1967 host target gene, herein designated VGAM HOST TARGET GENE, is in fact common to other known non-viral miRNA genes. As mentioned hereinabove with reference to the background section, although a specific complementary binding site has been demonstrated

only for some of the known miRNA genes (primarily Lin-4 and Let-7), all other recently discovered miRNA genes are also believed by those skilled in the art to modulate expression of other genes by complementary binding, although specific complementary binding sites of these other miRNA genes have not yet been found (Ruvkun G., `Perspective: Glimpses of a tiny RNA world`, Science 294,779 (2001)).

[69295] It is yet further appreciated that a function of VGAM1967 is inhibition of expression of host target genes, as part of a novel viral mechanism of attacking a host. Accordingly, utilities of VGAM1967 include diagnosis, prevention and treatment of viral infection by Rana Tigrina Ranavirus. Specific functions, and accordingly utilities, of VGAM1967 correlate with, and may be deduced from, the identity of the host target genes which VGAM1967 binds and inhibits, and the function of these host target genes, as elaborated hereinbelow.

[69296] Nucleotide sequences of the VGAM1967 precursor RNA, herein designated VGAM PRECURSOR RNA, and of the `diced` VGAM1967 RNA, herein designated VGAM RNA, and a schematic representation of the secondary folding of VGAM1967 folded precursor RNA, herein designated

VGAM FOLDED PRECURSOR RNA, of VGAM1967 are further described hereinbelow with reference to Table 1.

[69297] Nucleotide sequences of host target binding sites, such as BINDING SITE-I, BINDING SITE-II and BINDING SITE-III of Fig. 1, found on VGAM1967 host target RNA, and schematic representation of the complementarity of each of these host target binding sites to VGAM1967 RNA, herein designated VGAM RNA, are described hereinbelow with reference to Table 2.

[69298] As mentioned hereinabove with reference to Fig. 1, a function of VGAM1967 gene, herein designated VGAM is inhibition of expression of VGAM1967 target genes. It is appreciated that specific functions, and accordingly utilities, of VGAM1967 correlate with, and may be deduced from, the identity of the target genes which VGAM1967 binds and inhibits, and the function of these target genes, as elaborated hereinbelow.

[69299] Dual Oxidase 1 (DUOX1, Accession NM_017434) is a VGAM1967 host target gene. DUOX1 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by DUOX1, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the com-

plementarity of the nucleotide sequences of DUOX1 BINDING SITE, designated SEQ ID:18888, to the nucleotide sequence of VGAM1967 RNA, herein designated VGAM RNA, also designated SEQ ID:4678.

[69300] A function of VGAM1967 is therefore inhibition of Dual Oxidase 1 (DUOX1, Accession NM_017434), a gene which is a component of the thyroid hydrogen peroxide generating system. Accordingly, utilities of VGAM1967 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DUOX1. The function of DUOX1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM1188.Growth Differentiation Factor 2 (GDF2, Accession NM_016204) is another VGAM1967 host target gene. GDF2 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by GDF2, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of GDF2 BINDING SITE, designated SEQ ID:18299, to the nucleotide sequence of VGAM1967 RNA, herein designated VGAM RNA, also designated SEQ ID:4678.

[69301] Another function of VGAM1967 is therefore inhibition of Growth Differentiation Factor 2 (GDF2, Accession NM_016204), a gene which could be involved in bone formation. Accordingly, utilities of VGAM1967 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GDF2. The function of GDF2 has been established by previous studies. Bone morphogenetic proteins (BMPs, e.g., BMP2; 112261) are members of the highly conserved transforming growth factor-beta (TGFB; OMIM Ref. No. 190180) superfamily. BMP signaling is important during development and growth, and BMPs and their type I (e.g., BMPR1A; 601299) and type II (e.g., BMPR2; 600799) receptors are expressed in numerous cell types. BMP ligands bring type I and type II receptors together, allowing the ser/thr kinase activity of the type II receptor to phosphorylate and activate the type I ser/thr kinase. The activated receptor then initiates intracellular signaling. By ribonuclease protection analysis, Miller et al. (2000) found that Bmp9, also called Gdf2, is expressed in adult rat predominantly in the Kupffer cells (KC), endothelial cells (EC), and stellate cells, but not the parenchymal cells, of liver, with little expression in other tissues. Western blot analysis showed that a 13-kD Bmp9 protein is

expressed in KC and liver EC. KC and liver EC bound Bmp9 but not other BMPs, suggesting that BMP9 acts in an autocrine and/or paracrine manner. Liver EC and KC also internalized labeled Bmp9 under physiologic conditions.

[69302] Full details of the abovementioned studies are described in the following publications, the disclosure of which are hereby incorporated by reference:

[69303] Lopez-Coviella, I.; Berse, B.; Krauss, R.; Thies, R. S.; Blusztajn, J. K. : Induction and maintenance of the neuronal cholinergic phenotype in the central nervous system by BMP-9. Science 289: 313-316, 2000. ; and

[69304] Miller, A. F.; Harvey, S. A. K.; Thies, R. S.; Olson, M. S. : Bone morphogenetic protein-9: an autocrine/paracrine cytokine in the liver. J. Biol. Chem. 275: 17937-17945, 2000.

[69305] Further studies establishing the function and utilities of GDF2 are found in John Hopkins OMIM database record ID 605120, and in sited publications numbered 696 and 7080-7081 listed in the bibliography section hereinbelow, which are also hereby incorporated by reference.Jun B Proto-oncogene (JUNB, Accession NM_002229) is another VGAM1967 host target gene. JUNB BINDING SITE is HOST TARGET binding site found in the 5` untranslated region

of mRNA encoded by JUNB, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of JUNB BINDING SITE, designated SEQ ID:8011, to the nucleotide sequence of VGAM1967 RNA, herein designated VGAM RNA, also designated SEQ ID:4678.

[69306] Another function of VGAM1967 is therefore inhibition of Jun B Proto-oncogene (JUNB, Accession NM_002229), a gene which may be a key transcriptional regulator of myelopoiesis. Accordingly, utilities of VGAM1967 include diagnosis, prevention and treatment of diseases and clinical conditions associated with JUNB. The function of JUNB has been established by previous studies. Jacobs-Helber et al. (2002) studied the role of JUNB in erythroid differentiation in an erythropoietin (EPO; 133170)-dependent cell line and in primary mouse and human erythroid cells. They identified an initial EPO-dependent induction of JUNB expression that was insufficient to induce differentiation. A second EPO-independent peak of JUNB expression was associated with erythroid cell differentiation as measured by increased expression of erythroid-specific proteins. Mathas et al. (2002) found AP1 constitutively activated,

with robust JUN (OMIM Ref. No. 165160) and JUNB overexpression, in all cell lines derived from patients with classical Hodgkin lymphoma (OMIM Ref. No. 236000) and anaplastic large cell lymphoma (ALCL), but not in other lymphoma types. AP1 supported proliferation of Hodgkin cells, but suppressed apoptosis of ALCL cells. Mathas et al. (2002) noted that, whereas JUN is upregulated by an autoregulatory process, JUNB is under the control of nuclear factor kappa-B (NFKB; 164011). They found that AP1 and NFKB cooperate and stimulate expression of the cell cycle regulator cyclin D2 (OMIM Ref. No. 123833), the protooncogene MET (OMIM Ref. No. 164860), and the lymphocyte homing receptor CCR7 (OMIM Ref. No. 600242), which are all strongly expressed in primary Hodgkin/Reed-Sternberg (HRS) cells Jacobs-Helber et al. (2002) studied the role of JUNB in erythroid differentiation in an erythropoietin (EPO; 133170)-dependent cell line and in primary mouse and human erythroid cells. They identified an initial EPO-dependent induction of JUNB expression that was insufficient to induce differentiation. A second EPO-independent peak of JUNB expression was associated with erythroid cell differentiation as measured by increased expression of erythroid-specific proteins.

Mathas et al. (2002) found AP1 constitutively activated, with robust JUN (OMIM Ref. No. 165160) and JUNB overexpression, in all cell lines derived from patients with classical Hodgkin lymphoma (OMIM Ref. No. 236000) and anaplastic large cell lymphoma (ALCL), but not in other lymphoma types. AP1 supported proliferation of Hodgkin cells, but suppressed apoptosis of ALCL cells. Mathas et al. (2002) noted that, whereas JUN is upregulated by an autoregulatory process, JUNB is under the control of nuclear factor kappa-B (NFKB; 164011). They found that AP1 and NFKB cooperate and stimulate expression of the cell cycle regulator cyclin D2 (OMIM Ref. No. 123833), the protooncogene MET (OMIM Ref. No. 164860), and the lymphocyte homing receptor CCR7 (OMIM Ref. No. 600242), which are all strongly expressed in primary Hodgkin/Reed-Sternberg (HRS) cells Animal model experiments lend further support to the function of JUNB. The JUN and JUNB components of the AP1 transcription factor are known to have antagonistic functions. Passegue et al. (2002) showed, by a knockin strategy and a transgenic complementation approach, that JunB can substitute for absence of Jun during mouse development. JunB can rescue both liver and cardiac defects in Jun-null mice in a

manner dependent on gene dosage. JunB restores the expression of genes regulated by Jun/Fos (OMIM Ref. No. 164810), but not those regulated by Jun/ATF (ATF1; 123803), thereby rescuing Jun-dependent defects in vivo as well as in primary fibroblasts and fetal hepatoblasts in vitro. Thus, the transcriptionally less active JunB has the potential to substitute for Jun, indicating that the spatial and temporal regulation of expression of the transcription factor AP1 may be more important than the coding sequence of its components.

[69307] It is appreciated that the abovementioned animal model for JUNB is acknowledged by those skilled in the art as a scientifically valid animal model, as can be further appreciated from the publications sited hereinbelow.

[69308] Full details of the abovementioned studies are described in the following publications, the disclosure of which are hereby incorporated by reference:

[69309] Passegue, E.; Jochum, W.; Behrens, A.; Ricci, R.; Wagner, E. F. : JunB can substitute for Jun in mouse development and cell proliferation. Nature Genet. 30: 158-166, 2002. ; and

[69310] Jacobs-Helber, S. M.; Abutin, R. M.; Tian, C.; Bondurant, M.; Wickrema, A.; Sawyer, S. T. : Role of JunB in erythroid differentiation. J. Biol. Chem. 277: 4859-4866, 2002.

[69311] Further studies establishing the function and utilities of JUNB are found in John Hopkins OMIM database record ID 165161, and in sited publications numbered 5122-512 and 4710 listed in the bibliography section hereinbelow, which are also hereby incorporated by refer-ence.Palmitoyl-protein Thioesterase 2 (PPT2, Accession NM_138934) is another VGAM1967 host target gene. PPT2 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by PPT2, corre-sponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illus-trates the complementarity of the nucleotide sequences of PPT2 BINDING SITE, designated SEQ ID:29062, to the nu-cleotide sequence of VGAM1967 RNA, herein designated

VGAM RNA, also designated SEQ ID:4678.

[69312] Another function of VGAM1967 is therefore inhibition of Palmitoyl-protein Thioesterase 2 (PPT2, Accession NM_138934), a gene which is a palmitoyl-protein thioesterase 2 which possesses a different substrate specificity than PPT1. Accordingly, utilities of VGAM1967 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PPT2. The function of PPT2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM120.Ribonucleotide Reductase M2 Polypeptide (RRM2, Accession NM_001034) is another VGAM1967 host target gene. RRM2 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by RRM2, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of RRM2 BINDING SITE, designated SEQ ID:6698, to the nucleotide sequence of VGAM1967 RNA, herein designated VGAM RNA, also designated SEQ ID:4678.

[69313] Another function of VGAM1967 is therefore inhibition of

Ribonucleotide Reductase M2 Polypeptide (RRM2, Accession NM_001034). Accordingly, utilities of VGAM1967 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RRM2. DKFZP434I2117 (Accession NM_031478) is another VGAM1967 host target gene. DKFZP434I2117 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by DKFZP434I2117, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of DKFZP434I2117 BINDING SITE, designated SEQ ID:25556, to the nucleotide sequence of VGAM1967 RNA, herein designated VGAM RNA, also designated SEQ ID:4678.

[69314] Another function of VGAM1967 is therefore inhibition of DKFZP434I2117 (Accession NM_031478). Accordingly, utilities of VGAM1967 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZP434I2117. DKFZp564A176 (Accession NM_032242) is another VGAM1967 host target gene. DKFZp564A176 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by DKFZp564A176, corresponding to a HOST TARGET bind-

ing site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of DKFZp564A176 BINDING SITE, designated SEQ ID:25979, to the nucleotide sequence of VGAM1967 RNA, herein designated VGAM RNA, also designated SEQ ID:4678.

[69315] Another function of VGAM1967 is therefore inhibition of DKFZp564A176 (Accession NM_032242). Accordingly, utilities of VGAM1967 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZp564A176. GNB4 (Accession NM_021629) is another VGAM1967 host target gene. GNB4 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by GNB4, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of GNB4 BINDING SITE, designated SEQ ID:22270, to the nucleotide sequence of VGAM1967 RNA, herein designated VGAM RNA, also designated SEQ ID:4678.

[69316] Another function of VGAM1967 is therefore inhibition of GNB4 (Accession NM_021629). Accordingly, utilities of VGAM1967 include diagnosis, prevention and treatment

of diseases and clinical conditions associated with GNB4. KIAA0323 (Accession XM_032634) is another VGAM1967 host target gene. KIAA0323 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by KIAA0323, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of KIAA0323 BINDING SITE, designated SEQ ID:31692, to the nucleotide sequence of VGAM1967 RNA, herein designated VGAM RNA, also designated SEQ ID:4678.

[69317] Another function of VGAM1967 is therefore inhibition of KIAA0323 (Accession XM_032634). Accordingly, utilities of VGAM1967 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0323. SARM (Accession NM_015077) is another VGAM1967 host target gene. SARM BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by SARM, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of SARM BINDING SITE, designated SEQ ID:17456, to the nucleotide sequence of

VGAM1967 RNA, herein designated VGAM RNA, also designated SEQ ID:4678.

[69318] Another function of VGAM1967 is therefore inhibition of SARM (Accession NM_015077). Accordingly, utilities of VGAM1967 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SARM. LOC149345 (Accession XM_086502) is another VGAM1967 host target gene. LOC149345 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by LOC149345, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC149345 BINDING SITE, designated SEQ ID:38715, to the nucleotide sequence of VGAM1967 RNA, herein designated VGAM RNA, also designated SEQ ID:4678.

[69319] Another function of VGAM1967 is therefore inhibition of LOC149345 (Accession XM_086502). Accordingly, utilities of VGAM1967 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC149345. LOC152275 (Accession XM_098186) is another VGAM1967 host target gene. LOC152275 BINDING SITE is HOST TARGET binding site found in the 3` un-

translated region of mRNA encoded by LOC152275, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC152275 BINDING SITE, designated SEQ ID:41457, to the nucleotide sequence of VGAM1967 RNA, herein designated VGAM RNA, also designated SEQ ID:4678.

[69320] Another function of VGAM1967 is therefore inhibition of LOC152275 (Accession XM_098186). Accordingly, utilities of VGAM1967 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC152275. LOC152286 (Accession XM_098188) is another VGAM1967 host target gene. LOC152286 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC152286, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC152286 BINDING SITE, designated SEQ ID:41463, to the nucleotide sequence of VGAM1967 RNA, herein designated VGAM RNA, also designated SEQ ID:4678.

[69321] Another function of VGAM1967 is therefore inhibition of LOC152286 (Accession XM_098188). Accordingly, utilities

of VGAM1967 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC152286. LOC160646 (Accession XM_090413) is another VGAM1967 host target gene. LOC160646 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by LOC160646, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC160646 BINDING SITE, designated SEQ ID:40004, to the nucleotide sequence of VGAM1967 RNA, herein designated VGAM RNA, also designated SEQ ID:4678.

[69322] Another function of VGAM1967 is therefore inhibition of LOC160646 (Accession XM_090413). Accordingly, utilities of VGAM1967 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC160646. LOC84548 (Accession XM_048904) is another VGAM1967 host target gene. LOC84548 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC84548, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of

LOC84548 BINDING SITE, designated SEQ ID:35297, to the nucleotide sequence of VGAM1967 RNA, herein designated VGAM RNA, also designated SEQ ID:4678.

[69323] Another function of VGAM1967 is therefore inhibition of LOC84548 (Accession XM_048904). Accordingly, utilities of VGAM1967 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC84548. Fig. 1 further provides a conceptual description of a novel bioinformatically detected viral gene of the present invention, referred to here as Viral Genomic Address Messenger 1968 (VGAM1968) viral gene, which modulates expression of respective host target genes thereof, the function and utility of which host target genes is known in the art.

[69324] VGAM1968 is a novel bioinformatically detected regulatory, non protein coding, viral micro RNA (miRNA) gene. The method by which VGAM1968 was detected is described hereinabove with reference to Figs. 1-8.

[69325] VGAM1968 gene, herein designated VGAM GENE, is a viral gene contained in the genome of Rana Tigrina Ranavirus. VGAM1968 host target gene, herein designated VGAM HOST TARGET GENE, is a human gene contained in the human genome.

[69326] VGAM1968 gene encodes a VGAM1968 precursor RNA, herein designated VGAM PRECURSOR RNA. Similar to other miRNA genes, and unlike most ordinary genes, VGAM1968 precursor RNA does not encode a protein. A nucleotide sequence identical or highly similar to the nucleotide sequence of VGAM1968 precursor RNA is designated SEQ ID:1954, and is provided hereinbelow with reference to the sequence listing part. Nucleotide sequence SEQ ID:1954 is located at position 97726 relative to the genome of Rana Tigrina Ranavirus.

[69327] VGAM1968 precursor RNA folds onto itself, forming VGAM1968 folded precursor RNA, herein designated VGAM FOLDED PRECURSOR RNA, which has a two-dimensional `hairpin structure`. As is well known in the art, this `hairpin structure`, is typical of RNA encoded by miRNA genes, and is due to the fact that the nucleotide sequence of the first half of the RNA encoded by a miRNA gene is an accurate or partial inversed-reversed sequence of the nucleotide sequence of the second half thereof.

[69328] An enzyme complex designated DICER COMPLEX, `dices` the VGAM1968 folded precursor RNA into VGAM1968 RNA, herein designated VGAM RNA, a single stranded ~22 nt long RNA segment. As is known in the art, `dicing` of a

hairpin structured RNA precursor product into a short ~22nt RNA segment is catalyzed by an enzyme complex comprising an enzyme called Dicer together with other necessary proteins. A probable (over 40%) nucleotide sequence of VGAM1968 RNA is designated SEQ ID:4679, and is provided hereinbelow with reference to the sequence listing part.

[69329] VGAM1968 host target gene, herein designated VGAM HOST TARGET GENE, encodes a corresponding messenger RNA, VGAM1968 host target RNA, herein designated VGAM HOST TARGET RNA. VGAM1968 host target RNA comprises three regions, as is typical of mRNA of a protein coding gene: a 5` untranslated region, a protein coding region and a 3` untranslated region, designated 5`UTR, PROTEIN CODING and 3`UTR respectively.

[69330] VGAM1968 RNA, herein designated VGAM RNA, binds complementarily to one or more host target binding sites located in untranslated regions of VGAM1968 host target RNA, herein designated VGAM HOST TARGET RNA. This complementary binding is due to the fact that the nucleotide sequence of VGAM1968 RNA is an accurate or a partial inversed-reversed sequence of the nucleotide sequence of each of the host target binding sites. As an il-

lustration, Fig. 1 shows three such host target binding sites, designated BINDING SITE I, BINDING SITE II and BINDING SITE III respectively. It is appreciated that the number of host target binding sites shown in Fig. 1 is meant as an illustration only, and is not meant to be limiting - VGAM1968 RNA, herein designated VGAM RNA, may have a different number of host target binding sites in untranslated regions of a VGAM1968 host target RNA, herein designated VGAM HOST TARGET RNA. It is further appreciated that while Fig. 1 depicts host target binding sites in the 3`UTR region, this is meant as an example only - these host target binding sites may be located in the 3`UTR region, the 5`UTR region, or in both 3`UTR and 5`UTR regions.

[69331] The complementary binding of VGAM1968 RNA, herein designated VGAM RNA, to host target binding sites on VGAM1968 host target RNA, herein designated VGAM HOST TARGET RNA, such as BINDING SITE I, BINDING SITE II and BINDING SITE III, inhibits translation of VGAM1968 host target RNA into VGAM1968 host target protein, herein designated VGAM HOST TARGET PROTEIN. VGAM host target protein is therefore outlined by a broken line.

[69332] It is appreciated that VGAM1968 host target gene, herein

designated VGAM HOST TARGET GENE, in fact represents a plurality of VGAM1968 host target genes. The mRNA of each one of this plurality of VGAM1968 host target genes comprises one or more host target binding sites, each having a nucleotide sequence which is at least partly complementary to VGAM1968 RNA, herein designated VGAM RNA, and which when bound by VGAM1968 RNA causes inhibition of translation of respective one or more VGAM1968 host target proteins.

[69333] It is further appreciated by one skilled in the art that the mode of translational inhibition illustrated by Fig. 1 with specific reference to translational inhibition exerted by VGAM1968 gene, herein designated VGAM GENE, on one or more VGAM1968 host target gene, herein designated VGAM HOST TARGET GENE, is in fact common to other known non-viral miRNA genes. As mentioned hereinabove with reference to the background section, although a specific complementary binding site has been demonstrated only for some of the known miRNA genes (primarily Lin-4 and Let-7), all other recently discovered miRNA genes are also believed by those skilled in the art to modulate expression of other genes by complementary binding, although specific complementary binding sites of these

other miRNA genes have not yet been found (Ruvkun G., `Perspective: Glimpses of a tiny RNA world`, Science 294,779 (2001)).

[69334] It is yet further appreciated that a function of VGAM1968 is inhibition of expression of host target genes, as part of a novel viral mechanism of attacking a host. Accordingly, utilities of VGAM1968 include diagnosis, prevention and treatment of viral infection by Rana Tigrina Ranavirus. Specific functions, and accordingly utilities, of VGAM1968 correlate with, and may be deduced from, the identity of the host target genes which VGAM1968 binds and inhibits, and the function of these host target genes, as elaborated hereinbelow.

[69335] Nucleotide sequences of the VGAM1968 precursor RNA, herein designated VGAM PRECURSOR RNA, and of the `diced` VGAM1968 RNA, herein designated VGAM RNA, and a schematic representation of the secondary folding of VGAM1968 folded precursor RNA, herein designated VGAM FOLDED PRECURSOR RNA, of VGAM1968 are further described hereinbelow with reference to Table 1.

[69336] Nucleotide sequences of host target binding sites, such as BINDING SITE-I, BINDING SITE-II and BINDING SITE-III of Fig. 1, found on VGAM1968 host target RNA, and

schematic representation of the complementarity of each of these host target binding sites to VGAM1968 RNA, herein designated VGAM RNA, are described hereinbelow with reference to Table 2.

[69337] As mentioned hereinabove with reference to Fig. 1, a function of VGAM1968 gene, herein designated VGAM is inhibition of expression of VGAM1968 target genes. It is appreciated that specific functions, and accordingly utilities, of VGAM1968 correlate with, and may be deduced from, the identity of the target genes which VGAM1968 binds and inhibits, and the function of these target genes, as elaborated hereinbelow.

[69338] Adaptor-related Protein Complex 1, Gamma 1 Subunit (AP1G1, Accession NM_001128) is a VGAM1968 host target gene. AP1G1 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by AP1G1, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of AP1G1 BINDING SITE, designated SEQ ID:6801, to the nucleotide sequence of VGAM1968 RNA, herein designated VGAM RNA, also designated SEQ ID:4679.

[69339] A function of VGAM1968 is therefore inhibition of Adaptor-related Protein Complex 1, Gamma 1 Subunit (AP1G1, Accession NM_001128), a gene which promotes the formation of clathrin-coated pits and vesicles. Accordingly, utilities of VGAM1968 include diagnosis, prevention and treatment of diseases and clinical conditions associated with AP1G1. The function of AP1G1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM316.ASIC4 (Accession NM_018674) is another VGAM1968 host target gene. ASIC4 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by ASIC4, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of ASIC4 BINDING SITE, designated SEQ ID:20748, to the nucleotide sequence of VGAM1968 RNA, herein designated VGAM RNA, also designated SEQ ID:4679.

[69340] Another function of VGAM1968 is therefore inhibition of ASIC4 (Accession NM_018674), a gene which is a proton-gated, amiloride-sensitive sodium channel. Accordingly, utilities of VGAM1968 include diagnosis, prevention and

treatment of diseases and clinical conditions associated with ASIC4. The function of ASIC4 has been established by previous studies. Grunder et al. (2000) isolated a cDNA corresponding to the human ASIC4 gene from a pituitary gland-specific cDNA library. Human ASIC4 protein shares 97% identity with its rat homolog. Dot-blot analysis and abundance of ASIC4 cDNAs in the pituitary cDNA library indicated strong expression in pituitary gland. By RT-PCR, Grunder et al. (2000) demonstrated expression in vestibular system and very faint expression in organ of Corti. ASIC4 could not be activated by a drop in extracellular pH in Xenopus oocytes, suggesting association with other subunits or activation by a ligand other than protons As the ASIC4 gene mapped in close proximity to the locus for paroxysmal dystonic choreoathetosis (PDC; 118800) on chromosome 2q, Grunder et al. (2001) sequenced the entire coding region and adjacent intronic sequences in an affected member of a large PDC family in which the disorder had been shown to be linked to the PDC locus on chromosome 2. Although 3 amino acid substitution polymorphisms were identified, none was disease-specific.

[69341] Full details of the abovementioned studies are described in the following publications, the disclosure of which are

hereby incorporated by reference:

[69342] Grunder, S.; Geisler, H.-S.; Rainer, S.; Fink, J. K. : Acid-sensing ion channel (ASIC) 4 gene: physical mapping, genomic organisation, and evaluation as a candidate for paroxysmal dystonia. Europ. J. Hum. Genet. 9: 672-676, 2001. ; and

[69343] Grunder, S.; Geissler, H.-S.; Bassler, E.-L.; Ruppersberg, J. P. : A new member of acid-sensing ion channels from pituitary gland. Neuroreport 11: 1607-1611, 2000.

[69344] Further studies establishing the function and utilities of ASIC4 are found in John Hopkins OMIM database record ID 606715, and in sited publications numbered 11920 listed in the bibliography section hereinbelow, which are also hereby incorporated by reference.ATPase, Cu++ Transporting, Beta Polypeptide (Wilson disease) (ATP7B, Accession NM_000053) is another VGAM1968 host target gene. ATP7B BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by ATP7B, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of ATP7B BINDING SITE, designated SEQ ID:5505, to the nucleotide sequence of VGAM1968 RNA, herein

designated VGAM RNA, also designated SEQ ID:4679.

[69345] Another function of VGAM1968 is therefore inhibition of ATPase, Cu++ Transporting, Beta Polypeptide (Wilson disease) (ATP7B, Accession NM_000053). Accordingly, utilities of VGAM1968 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ATP7B. B-cell CLL/lymphoma 6 (zinc finger protein 51) (BCL6, Accession NM_001706) is another VGAM1968 host target gene. BCL6 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by BCL6, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of BCL6 BINDING SITE, designated SEQ ID:7432, to the nucleotide sequence of VGAM1968 RNA, herein designated VGAM RNA, also designated SEQ ID:4679.

[69346] Another function of VGAM1968 is therefore inhibition of B-cell CLL/lymphoma 6 (zinc finger protein 51) (BCL6, Accession NM_001706), a gene which is involved in the generation and maintenance of both T and B cells during immune responses. Accordingly, utilities of VGAM1968 include diagnosis, prevention and treatment of diseases and

clinical conditions associated with BCL6. The function of BCL6 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM481.BLAME (Accession NM_020125) is another VGAM1968 host target gene. BLAME BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by BLAME, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of BLAME BINDING SITE, designated SEQ ID:21310, to the nucleotide sequence of VGAM1968 RNA, herein designated VGAM RNA, also designated SEQ ID:4679.

[69347] Another function of VGAM1968 is therefore inhibition of BLAME (Accession NM_020125). Accordingly, utilities of VGAM1968 include diagnosis, prevention and treatment of diseases and clinical conditions associated with BLAME. Breast Cancer 1, Early Onset (BRCA1, Accession NM_007301) is another VGAM1968 host target gene. BRCA1 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by BRCA1, corresponding to a HOST TARGET binding site

such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of BRCA1 BINDING SITE, designated SEQ ID:14203, to the nucleotide sequence of VGAM1968 RNA, herein designated VGAM RNA, also designated SEQ ID:4679.

[69348] Another function of VGAM1968 is therefore inhibition of Breast Cancer 1, Early Onset (BRCA1, Accession NM_007301). Accordingly, utilities of VGAM1968 include diagnosis, prevention and treatment of diseases and clinical conditions associated with BRCA1. Bassoon (presynaptic cytomatrix protein) (BSN, Accession NM_003458) is another VGAM1968 host target gene. BSN BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by BSN, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of BSN BINDING SITE, designated SEQ ID:9518, to the nucleotide sequence of VGAM1968 RNA, herein designated VGAM RNA, also designated SEQ ID:4679.

[69349] Another function of VGAM1968 is therefore inhibition of Bassoon (presynaptic cytomatrix protein) (BSN, Accession

NM_003458), a gene which may be involved in cytomatrix organization at the site of neurotransmitter release. Accordingly, utilities of VGAM1968 include diagnosis, prevention and treatment of diseases and clinical conditions associated with BSN. The function of BSN and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM638.BUB3 Budding Uninhibited By Benzimidazoles 3 Homolog (yeast) (BUB3, Accession NM_004725) is another VGAM1968 host target gene. BUB3 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by BUB3, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of BUB3 BINDING SITE, designated SEQ ID:11095, to the nucleotide sequence of VGAM1968 RNA, herein designated VGAM RNA, also designated SEQ ID:4679.

[69350] Another function of VGAM1968 is therefore inhibition of BUB3 Budding Uninhibited By Benzimidazoles 3 Homolog (yeast) (BUB3, Accession NM_004725), a gene which has a role in the mitotic spindle checkpoint. Accordingly, utilities of VGAM1968 include diagnosis, prevention and

treatment of diseases and clinical conditions associated with BUB3. The function of BUB3 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM1361.Cyclin D1 (PRAD1: parathyroid adenomatosis 1) (CCND1, Accession NM_053056) is another VGAM1968 host target gene. CCND1 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by CCND1, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of CCND1 BINDING SITE, designated SEQ ID:27599, to the nucleotide sequence of VGAM1968 RNA, herein designated VGAM RNA, also designated SEQ ID:4679.

[69351] Another function of VGAM1968 is therefore inhibition of Cyclin D1 (PRAD1: parathyroid adenomatosis 1) (CCND1, Accession NM_053056), a gene which is involved in the control of cell cycle and is required for Schwann cell proliferation to proceed normally during Wallerian degeneration. Accordingly, utilities of VGAM1968 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CCND1. The function of CCND1

and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM220.CIAO1 (Accession NM_004804) is another VGAM1968 host target gene. CIAO1 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by CIAO1, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of CIAO1 BINDING SITE, designated SEQ ID:11226, to the nucleotide sequence of VGAM1968 RNA, herein designated VGAM RNA, also designated SEQ ID:4679.

[69352] Another function of VGAM1968 is therefore inhibition of CIAO1 (Accession NM_004804), a gene which interacts in regulating cell cycle progression and apoptosis. Accordingly, utilities of VGAM1968 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CIAO1. The function of CIAO1 has been established by previous studies. The Wilms tumor gene (WT1; 607102) on 11p13 is involved in regulating cell cycle progression and apoptosis. In an attempt to dissect the molecular mechanisms of transcriptional activation and

repression by WT1, and to identify other proteins that may be involved in kidney and hematopoietic cell tumorigenesis, several groups have studied WT1-interacting proteins. WT1 binds in vivo and in vitro to p53 (OMIM Ref. No. 191170), resulting in WT1 functioning as a transcriptional repressor. Mutations in p53 increase the aggressiveness of Wilms tumors, resulting in poorer patient prognosis, but are not thought to be a primary genetic cause of Wilms tumor formation. WT1 also interacts with and regulates the transcriptional activity of steroidogenic factor-1 (OMIM Ref. No. 184757), a key molecule in gonadal development. Johnstone et al. (1996) identified a protein called PAWR (OMIM Ref. No. 601936), the gene for which maps to 12q21, that is capable of modulating the transcriptional activities of WT1. Johnstone et al. (1998) identified a second protein, which they named CIAO1 after the Chinese word for "bridge," that is also capable of modulating the transcriptional activities of WT1. CIAO1 is a 339-amino acid polypeptide containing 7 WD40 or beta-transducin repeats. It can inhibit the transcriptional activation function of WT1, but does not affect WT1-mediated transcriptional repression. Johnstone et al. (1998) demonstrated that the yeast Ciao1 homolog is an essential pro-

tein that appears to be highly evolutionarily conserved. Johnstone et al. (1999) described the structural organization of the CIAO1 gene, with the intron/exon boundaries closely matching the consensus 5-prime donor/3-prime acceptor splice site sequences. By FISH and radiation hybrid analysis, Johnstone et al. (1999) mapped the CIAO1 gene to the pericentric region of chromosome 2. They stated that the probable location is 2q11.2 based on the gene's inclusion within a previously mapped BAC clone (GenBank AC004020).

[69353] Full details of the abovementioned studies are described in the following publications, the disclosure of which are hereby incorporated by reference:

[69354] Johnstone, R. W.; See, R. H.; Sells, S. F.; Wang, J.; Muthukkumar, S.; Englert, C.; Haber, D. A.; Licht, J. D.; Sugrue, S. P.; Roberts, T.; Rangnekar, V. M.; Shi, Y. : A novel repressor, par-4, modulates transcription and growth suppression functions of the Wilms' tumor suppressor WT1. Molec. Cell. Biol. 16: 6945-6956, 1996. ; and

[69355] Johnstone, R. W.; Tommerup, N.; Hansen, C.; Vissing, H.; Shi, Y. : Structural organization, tissue expression, and chromosomal localization of Ciao 1, a functional modula-

tor of the Wilm.

[69356] Further studies establishing the function and utilities of CIAO1 are found in John Hopkins OMIM database record ID 604333, and in sited publications numbered 93 and 4985-4986 listed in the bibliography section hereinbelow, which are also hereby incorporated by reference.Coronin, Actin Binding Protein, 1C (CORO1C, Accession NM_014325) is another VGAM1968 host target gene. CORO1C BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by CORO1C, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of CORO1C BINDING SITE, designated SEQ ID:15630, to the nucleotide sequence of VGAM1968 RNA, herein designated VGAM RNA, also designated SEQ ID:4679.

[69357] Another function of VGAM1968 is therefore inhibition of Coronin, Actin Binding Protein, 1C (CORO1C, Accession NM_014325). Accordingly, utilities of VGAM1968 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CORO1C. Carboxypeptidase D (CPD, Accession NM_001304) is another VGAM1968

host target gene. CPD BINDING SITE1 and CPD BINDING SITE2 are HOST TARGET binding sites found in untranslated regions of mRNA encoded by CPD, corresponding to HOST TARGET binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of CPD BINDING SITE1 and CPD BINDING SITE2, designated SEQ ID:6984 and SEQ ID:6985 respectively, to the nucleotide sequence of VGAM1968 RNA, herein designated VGAM RNA, also designated SEQ ID:4679.

[69358] Another function of VGAM1968 is therefore inhibition of Carboxypeptidase D (CPD, Accession NM_001304), a gene which is a membrane-bound metalloprotease. Accordingly, utilities of VGAM1968 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CPD. The function of CPD and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM596.D1S155E (Accession NM_007158) is another VGAM1968 host target gene. D1S155E BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by D1S155E, corresponding to a HOST TARGET binding site

such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of D1S155E BINDING SITE, designated SEQ ID:14005, to the nucleotide sequence of VGAM1968 RNA, herein designated VGAM RNA, also designated SEQ ID:4679.

[69359] Another function of VGAM1968 is therefore inhibition of D1S155E (Accession NM_007158), a gene which regulates development of the testis. Accordingly, utilities of VGAM1968 include diagnosis, prevention and treatment of diseases and clinical conditions associated with D1S155E. The function of D1S155E has been established by previous studies. While investigating NRAS (OMIM Ref. No. 164790), Jeffers et al. (1990) isolated cDNAs that originated from a closely linked upstream gene on chromosome 1. RNase protection assays showed that this gene, termed UNR by them, is transcribed in the same direction as NRAS and that its 3-prime end is located only 130 bp from the transcription initiation site of NRAS. The close spatial relationship was conserved in all species from which the NRAS gene had been isolated. The UNR cDNA contained an open reading frame capable of encoding a protein of 798 amino acids. Neither the primary pro-

tein structure nor the nucleic acid sequence of UNR was homologous to any known gene, including NRAS. UNR transcripts were detected in mouse, rat, and human cells. Only a single copy of UNR was detected in the mouse. The gene produced multiple transcripts that differed in their 3-prime ends and apparently resulted from the differential use of multiple polyadenylation sites located in the 3-prime untranslated region of the gene. Both UNR and NRAS were expressed in all tissues examined and the 2 genes may be coordinately regulated. UNR was first isolated by Doniger and DiPaolo (1988) in tumorigenic guinea pig cells. They designated the gene UNR (for 'upstream of NRAS'). (This should not be confused with the gene encoding ubiquitously expressed nuclear receptor (UNR; 600380) on chromosome 19.)

[69360] Full details of the abovementioned studies are described in the following publications, the disclosure of which are hereby incorporated by reference:

[69361] Doniger, J.; DiPaolo, J. A. : Coordinate N-RAS mRNA up-regulation with mutational activation in tumorigenic guinea pig cells. Nucleic Acids Res. 16: 969-980, 1988. ; and

[69362] Jeffers, M.; Paciucci, R.; Pellicer, A. : Characterization of

UNR: a gene closely linked to N-RAS. Nucleic Acids Res. 18: 4891-4899, 1990.

[69363] Further studies establishing the function and utilities of D1S155E are found in John Hopkins OMIM database record ID 191510, and in sited publications numbered 12356-12357 listed in the bibliography section hereinbelow, which are also hereby incorporated by reference.Development and Differentiation Enhancing Factor 2 (DDEF2, Accession NM_003887) is another VGAM1968 host target gene. DDEF2 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by DDEF2, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of DDEF2 BINDING SITE, designated SEQ ID:9967, to the nucleotide sequence of VGAM1968 RNA, herein designated VGAM RNA, also designated SEQ ID:4679.

[69364] Another function of VGAM1968 is therefore inhibition of Development and Differentiation Enhancing Factor 2 (DDEF2, Accession NM_003887), a gene which interacts with members of the Arf and Src family. Accordingly, utilities of VGAM1968 include diagnosis, prevention and

treatment of diseases and clinical conditions associated with DDEF2. The function of DDEF2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM464.DEAD/H (Asp-Glu-Ala-Asp/His) Box Polypeptide 3 (DDX3, Accession NM_001356) is another VGAM1968 host target gene. DDX3 BINDING SITE1 through DDX3 BINDING SITE3 are HOST TARGET binding sites found in untranslated regions of mRNA encoded by DDX3, corresponding to HOST TARGET binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of DDX3 BINDING SITE1 through DDX3 BINDING SITE3, designated SEQ ID:7035, SEQ ID:7036 and SEQ ID:23432 respectively, to the nucleotide sequence of VGAM1968 RNA, herein designated VGAM RNA, also designated SEQ ID:4679.

[69365] Another function of VGAM1968 is therefore inhibition of DEAD/H (Asp-Glu-Ala-Asp/His) Box Polypeptide 3 (DDX3, Accession NM_001356), a gene which interacts with hepatitis c virus core protein resulting a change in intracellular location. Accordingly, utilities of VGAM1968 include diagnosis, prevention and treatment of diseases and clini-

cal conditions associated with DDX3. The function of DDX3 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM232.DnaJ (Hsp40) Homolog, Subfmaily B, Member 1 (DNAJB1, Accession NM_006145) is another VGAM1968 host target gene. DNAJB1 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by DNAJB1, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of DNAJB1 BINDING SITE, designated SEQ ID:12789, to the nucleotide sequence of VGAM1968 RNA, herein designated VGAM RNA, also designated SEQ ID:4679.

[69366] Another function of VGAM1968 is therefore inhibition of DnaJ (Hsp40) Homolog, Subfmaily B, Member 1 (DNAJB1, Accession NM_006145), a gene which may prevent aggregation of newly translated proteins. Accordingly, utilities of VGAM1968 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DNAJB1. The function of DNAJB1 and its association with various diseases and clinical conditions, has been estab-

lished by previous studies, as described hereinabove with reference to VGAM1778.Deoxyribonuclease I (DNASE1, Accession NM_005223) is another VGAM1968 host target gene. DNASE1 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by DNASE1, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of DNASE1 BINDING SITE, designated SEQ ID:11715, to the nucleotide sequence of VGAM1968 RNA, herein designated VGAM RNA, also designated SEQ ID:4679.

[69367] Another function of VGAM1968 is therefore inhibition of Deoxyribonuclease I (DNASE1, Accession NM_005223), a gene which seems to be involved in cell death. Accordingly, utilities of VGAM1968 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DNASE1. The function of DNASE1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM492.Ephrin-B1 (EFNB1, Accession NM_004429) is another VGAM1968 host target gene. EFNB1 BINDING SITE is HOST TARGET binding site

found in the 3` untranslated region of mRNA encoded by EFNB1, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of EFNB1 BINDING SITE, designated SEQ ID:10712, to the nucleotide sequence of VGAM1968 RNA, herein designated VGAM RNA, also designated SEQ ID:4679.

[69368] Another function of VGAM1968 is therefore inhibition of Ephrin-B1 (EFNB1, Accession NM_004429), a gene which is a transmembrane ligand of Eph-related receptor tyrosine kinases, has a role in cell adhesion. Accordingly, utilities of VGAM1968 include diagnosis, prevention and treatment of diseases and clinical conditions associated with EFNB1. The function of EFNB1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM390.V-erb-b2 Erythroblastic Leukemia Viral Oncogene Homolog 2, Neuro/glioblastoma Derived Oncogene Homolog (avian) (ERBB2, Accession NM_004448) is another VGAM1968 host target gene. ERBB2 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by ERBB2,

corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of ERBB2 BINDING SITE, designated SEQ ID:10746, to the nucleotide sequence of VGAM1968 RNA, herein designated VGAM RNA, also designated SEQ ID:4679.

[69369] Another function of VGAM1968 is therefore inhibition of V-erb-b2 Erythroblastic Leukemia Viral Oncogene Homolog 2, Neuro/glioblastoma Derived Oncogene Homolog (avian) (ERBB2, Accession NM_004448), a gene which Tyrosine kinase receptor. Accordingly, utilities of VGAM1968 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ERBB2. The function of ERBB2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM1366.Fucosyltransferase 5 (alpha (1,3) Fucosyltransferase) (FUT5, Accession NM_002034) is another VGAM1968 host target gene. FUT5 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by FUT5, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE

II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of FUT5 BINDING SITE, designated SEQ ID:7789, to the nucleotide sequence of VGAM1968 RNA, herein designated VGAM RNA, also designated SEQ ID:4679.

[69370] Another function of VGAM1968 is therefore inhibition of Fucosyltransferase 5 (alpha (1,3) Fucosyltransferase) (FUT5, Accession NM_002034), a gene which may catalyse alpha-1,3 glycosidic linkages involved in the expression of vim-2, lewis x/ssea-1 and sialyl lewis x antigens. Accordingly, utilities of VGAM1968 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FUT5. The function of FUT5 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM1519.Growth Arrest-specific 7 (GAS7, Accession NM_003644) is another VGAM1968 host target gene. GAS7 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by GAS7, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of GAS7 BINDING SITE,

designated SEQ ID:9715, to the nucleotide sequence of VGAM1968 RNA, herein designated VGAM RNA, also designated SEQ ID:4679.

[69371] Another function of VGAM1968 is therefore inhibition of Growth Arrest-specific 7 (GAS7, Accession NM_003644), a gene which may play a role in promoting maturation and morphological differentiation of cerebellar neurons. Accordingly, utilities of VGAM1968 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GAS7. The function of GAS7 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM232.G1 to S Phase Transition 1 (GSPT1, Accession NM_002094) is another VGAM1968 host target gene. GSPT1 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by GSPT1, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of GSPT1 BINDING SITE, designated SEQ ID:7883, to the nucleotide sequence of VGAM1968 RNA, herein designated VGAM RNA, also designated SEQ ID:4679.

[69372] Another function of VGAM1968 is therefore inhibition of G1 to S Phase Transition 1 (GSPT1, Accession NM_002094), a gene which involves in regulation of mammalian cell growth. Accordingly, utilities of VGAM1968 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GSPT1. The function of GSPT1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM1707.Glutathione S-transferase M5 (GSTM5, Accession NM_000851) is another VGAM1968 host target gene. GSTM5 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by GSTM5, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of GSTM5 BINDING SITE, designated SEQ ID:6520, to the nucleotide sequence of VGAM1968 RNA, herein designated VGAM RNA, also designated SEQ ID:4679.

[69373] Another function of VGAM1968 is therefore inhibition of Glutathione S-transferase M5 (GSTM5, Accession NM_000851), a gene which conjugates reduced glu-

tathione to a wide number of exogenous and endogenous hydrophobic electrophiles. Accordingly, utilities of VGAM1968 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GSTM5. The function of GSTM5 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM1957.H3 Histone, Family 3B (H3.3B) (H3F3B, Accession NM_005324) is another VGAM1968 host target gene. H3F3B BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by H3F3B, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of H3F3B BINDING SITE, designated SEQ ID:11795, to the nucleotide sequence of VGAM1968 RNA, herein designated VGAM RNA, also designated SEQ ID:4679.

[69374] Another function of VGAM1968 is therefore inhibition of H3 Histone, Family 3B (H3.3B) (H3F3B, Accession NM_005324). Accordingly, utilities of VGAM1968 include diagnosis, prevention and treatment of diseases and clinical conditions associated with H3F3B. High Mobility Group

AT-hook 2 (HMGA2, Accession NM_003483) is another VGAM1968 host target gene. HMGA2 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by HMGA2, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of HMGA2 BINDING SITE, designated SEQ ID:9568, to the nucleotide sequence of VGAM1968 RNA, herein designated VGAM RNA, also designated SEQ ID:4679.

[69375] Another function of VGAM1968 is therefore inhibition of High Mobility Group AT-hook 2 (HMGA2, Accession NM_003483), a gene which may affect transcription and cell differentiation; shares common DNA-binding motif with other HMG HMG I/Y family members. Accordingly, utilities of VGAM1968 include diagnosis, prevention and treatment of diseases and clinical conditions associated with HMGA2. The function of HMGA2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM552.Hairless Homolog (mouse) (HR, Accession NM_005144) is another VGAM1968 host target gene. HR BINDING SITE is HOST TARGET binding

site found in the 5` untranslated region of mRNA encoded by HR, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of HR BINDING SITE, designated SEQ ID:11616, to the nucleotide sequence of VGAM1968 RNA, herein designated VGAM RNA, also designated SEQ ID:4679.

[69376] Another function of VGAM1968 is therefore inhibition of Hairless Homolog (mouse) (HR, Accession NM_005144). Accordingly, utilities of VGAM1968 include diagnosis, prevention and treatment of diseases and clinical conditions associated with HR. Heparan Sulfate 2-O-sulfotransferase 1 (HS2ST1, Accession NM_012262) is another VGAM1968 host target gene. HS2ST1 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by HS2ST1, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of HS2ST1 BINDING SITE, designated SEQ ID:14573, to the nucleotide sequence of VGAM1968 RNA, herein designated VGAM RNA, also designated SEQ ID:4679.

[69377] Another function of VGAM1968 is therefore inhibition of

Heparan Sulfate 2-O-sulfotransferase 1 (HS2ST1, Accession NM_012262). Accordingly, utilities of VGAM1968 include diagnosis, prevention and treatment of diseases and clinical conditions associated with HS2ST1. Potassium Inwardly-rectifying Channel, Subfamily J, Member 15 (KCNJ15, Accession NM_002243) is another VGAM1968 host target gene. KCNJ15 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by KCNJ15, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of KCNJ15 BINDING SITE, designated SEQ ID:8029, to the nucleotide sequence of VGAM1968 RNA, herein designated VGAM RNA, also designated SEQ ID:4679.

[69378] Another function of VGAM1968 is therefore inhibition of Potassium Inwardly-rectifying Channel, Subfamily J, Member 15 (KCNJ15, Accession NM_002243). Accordingly, utilities of VGAM1968 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KCNJ15. Kinesin Heavy Chain Member 2 (KIF2, Accession NM_004520) is another VGAM1968 host target gene. KIF2 BINDING SITE is HOST TARGET binding site found in

the 3` untranslated region of mRNA encoded by KIF2, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of KIF2 BINDING SITE, designated SEQ ID:10848, to the nucleotide sequence of VGAM1968 RNA, herein designated VGAM RNA, also designated SEQ ID:4679.

[69379] Another function of VGAM1968 is therefore inhibition of Kinesin Heavy Chain Member 2 (KIF2, Accession NM_004520). Accordingly, utilities of VGAM1968 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIF2. Leukocyte Tyrosine Kinase (LTK, Accession NM_002344) is another VGAM1968 host target gene. LTK BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by LTK, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LTK BINDING SITE, designated SEQ ID:8143, to the nucleotide sequence of VGAM1968 RNA, herein designated VGAM RNA, also designated SEQ ID:4679.

[69380] Another function of VGAM1968 is therefore inhibition of

Leukocyte Tyrosine Kinase (LTK, Accession NM_002344), a gene which is probably a receptor with a tyrosine-protein kinase activity. Accordingly, utilities of VGAM1968 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LTK. The function of LTK has been established by previous studies. Ben-Neriah and Bauskin (1988) isolated and characterized the complementary DNA for the mouse leukocyte tyrosine kinase locus. They used the insulin receptor-related avian sarcoma oncogene v-ros (OMIM Ref. No. 165020) as a probe to isolate the cDNA from a mouse pre-B lymphocyte cDNA library. Northern analysis revealed expression of the gene in thymus, spleen, and kidney. Sequence analysis of the gene revealed similarities with several tyrosine kinase receptor genes of the insulin receptor family. The LTK gene, however, is unique in that it encodes a transmembrane protein that lacks an extracellular domain. The authors suggested that LTK may encode a signal transduction subunit for one or more of the hematopoietic receptors. Krolewski et al. (1990) mapped TYK1 to human chromosome 15 by Southern analysis of somatic cell hybrid DNAs. Richard et al. (1994) mapped many loci on chromosome 15, which they subdivided into 5 regions. By PCR,

they concluded that the LTK gene is located in their region III: 15q15.1-q21.1. Liao et al. (1996) found that the mouse Ltk gene is closely linked to the Tyro3 gene (OMIM Ref. No. 600341) which maps to mouse chromosome 2. Toyoshima et al. (1993) cloned a set of cDNAs representing differently spliced human LTK mRNAs. These cDNAs predicted a truncated receptor protein that lacks the tyrosine kinase domain and a soluble receptor protein that has neither a transmembrane nor a tyrosine kinase domain. A cDNA clone containing the complete open reading frame demonstrated that the extracellular domain of the receptor protein is larger than previously predicted. Thus, the LTK gene produces not only the putative receptor tyrosine kinase for an unknown ligand but also multiple protein products that may have different functions

[69381] Full details of the abovementioned studies are described in the following publications, the disclosure of which are hereby incorporated by reference:

[69382] Liao, X.; Zhou, R.; Gilbert, D. J.; Copeland, N. G.; Jenkins, N. A. : Receptor tyrosine kinase gene Tyro3 maps to mouse chromosome 2, closely linked to Ltk. Mammalian Genome 7: 395-396, 1996. ; and

[69383] Richard, I.; Broux, O.; Chiannilkulchai, N.; Fougerousse, F.;

Allamand, V.; Bourg, N.; Brenguier, L.; Devaud, C.; Pasturaud, P.; Roudaut, C.; Lorenzo, F.; Sebastiani-Kabatchis, C.; Schul.

[69384] Further studies establishing the function and utilities of LTK are found in John Hopkins OMIM database record ID 151520, and in sited publications numbered 5077-5079, 212 and 5080 listed in the bibliography section hereinbelow, which are also hereby incorporated by reference.Mitogen-activated Protein Kinase Kinase Kinase 7 (MAP3K7, Accession NM_003188) is another VGAM1968 host target gene. MAP3K7 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by MAP3K7, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of MAP3K7 BINDING SITE, designated SEQ ID:9164, to the nucleotide sequence of VGAM1968 RNA, herein designated VGAM RNA, also designated SEQ ID:4679.

[69385] Another function of VGAM1968 is therefore inhibition of Mitogen-activated Protein Kinase Kinase Kinase 7 (MAP3K7, Accession NM_003188), a gene which can phosphorylate and activate yet undefined mapkks. media-

tor of tgf-beta signal transduction. stimulates nf-kappa b activation. Accordingly, utilities of VGAM1968 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MAP3K7. The function of MAP3K7 has been established by previous studies. The MAP kinase (MAPK) cascades constitute functional units that couple upstream input signals to a variety of outputs through pathways that involve 3 protein kinases. MAPKKK (MAP3K; OMIM Ref. No. 602448) phosphorylates MAPKK (MAP2K; OMIM Ref. No. 176872), which in turn phosphorylates and activates MAPK (see OMIM Ref. No. 176948). One MAPK pathway in S. cerevisiae controls the response to mating pheromone. Yamaguchi et al. (1995) screened a mouse cDNA library for clones that could act as MAPKKKs, suppressing a defect in the mating pheromone response pathway. They identified a cDNA that encodes a predicted 579-amino acid protein, which they named TAK1 (TGF-beta-activated kinase). TAK1 has a putative N-terminal protein kinase domain. In mammalian cells, TAK1 regulates transcription by transforming growth factor-beta (TGFB; 190180). Only TAK1 protein missing the N-terminal 22 amino acids suppressed the yeast defect. This activated form also signaled in the absence of TGFB in

mammalian cells Kondo et al. (1998) identified human ESTs that were homologous to mouse TAK1 and used the resulting sequence information to clone human TAK1 from lung cDNA. The predicted 579-amino acid human TAK1 protein is 99% identical to the mouse TAK1 protein. On Northern blots, TAK1 was expressed as a 3-kb mRNA in all tissues tested. Kondo et al. (1998) found 2 isoforms of TAK1 that differed by an insertion of 27 amino acids after amino acid 403

[69386] Full details of the abovementioned studies are described in the following publications, the disclosure of which are hereby incorporated by reference:

[69389] Further studies establishing the function and utilities of MAP3K7 are found in John Hopkins OMIM database record

ID 602614, and in sited publications numbered 9048-9050, 902 and 9051 listed in the bibliography section hereinbelow, which are also hereby incorporated by reference.Matrix Metalloproteinase 14 (membrane-inserted) (MMP14, Accession NM_004995) is another VGAM1968 host target gene. MMP14 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by MMP14, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of MMP14 BINDING SITE, designated SEQ ID:11433, to the nucleotide sequence of VGAM1968 RNA, herein designated VGAM RNA, also designated SEQ ID:4679.

[69390] Another function of VGAM1968 is therefore inhibition of Matrix Metalloproteinase 14 (membrane-inserted) (MMP14, Accession NM_004995). Accordingly, utilities of VGAM1968 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MMP14. Myosin, Light Polypeptide Kinase (MYLK, Accession XM_173098) is another VGAM1968 host target gene. MYLK BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by MYLK,

corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of MYLK BINDING SITE, designated SEQ ID:46358, to the nucleotide sequence of VGAM1968 RNA, herein designated VGAM RNA, also designated SEQ ID:4679.

[69391] Another function of VGAM1968 is therefore inhibition of Myosin, Light Polypeptide Kinase (MYLK, Accession XM_173098), a gene which is involved in contraction of smooth muscle. Accordingly, utilities of VGAM1968 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MYLK. The function of MYLK and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM793.NDRG Family Member 3 (NDRG3, Accession NM_032013) is another VGAM1968 host target gene. NDRG3 BINDING SITE1 and NDRG3 BINDING SITE2 are HOST TARGET binding sites found in untranslated regions of mRNA encoded by NDRG3, corresponding to HOST TARGET binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of NDRG3 BINDING SITE1 and NDRG3 BINDING

SITE2, designated SEQ ID:25723 and SEQ ID:22847 respectively, to the nucleotide sequence of VGAM1968 RNA, herein designated VGAM RNA, also designated SEQ ID:4679.

[69392] Another function of VGAM1968 is therefore inhibition of NDRG Family Member 3 (NDRG3, Accession NM_032013). Accordingly, utilities of VGAM1968 include diagnosis, prevention and treatment of diseases and clinical conditions associated with NDRG3. Nuclear Factor of Kappa Light Polypeptide Gene Enhancer In B-cells Inhibitor-like 2 (NFKBIL2, Accession NM_013432) is another VGAM1968 host target gene. NFKBIL2 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by NFKBIL2, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of NFKBIL2 BINDING SITE, designated SEQ ID:15086, to the nucleotide sequence of VGAM1968 RNA, herein designated VGAM RNA, also designated SEQ ID:4679.

[69393] Another function of VGAM1968 is therefore inhibition of Nuclear Factor of Kappa Light Polypeptide Gene Enhancer In B-cells Inhibitor-like 2 (NFKBIL2, Accession

NM_013432), a gene which may have a role in regulating NF-kappa B function in epithelial cells. Accordingly, utilities of VGAM1968 include diagnosis, prevention and treatment of diseases and clinical conditions associated with NFKBIL2. The function of NFKBIL2 has been established by previous studies. By means of subtractive hybridization of lung fibroblast cDNAs from a lung epithelial cell line cDNA, degenerate PCR, and HeLa cell cDNA screening, Ray et al. (1995) identified a novel cDNA, which they called I-kappa-B-related (IKBR). IKBR cDNA encodes a deduced 481-amino acid protein containing 3 ankyrin-repeat motifs. Northern blot analysis revealed an approximately 5.5-kb transcript in lung and trachea epithelial but not fibroblast cells. In whole tissues, the transcript was detected in skeletal muscle and heart but not in lung (where epithelial cells constitute only 10% of adult alveolar epithelium), liver, kidney, pancreas, brain, or placenta. Western blot analysis demonstrated a 52-kD protein in HeLa cell lysates. In electrophoretic mobility shift assays, DNA binding by NFKB/RELA was inhibited in the presence of NFKBIL2. Norman and Barton (2000) showed that the NFKBIL2 gene contains 13 exons, spanning 6,550 bp of genomic sequence. They reported a revised mRNA and

protein sequence for IKBR, which predicted that the protein is larger than originally described.

[69394] Full details of the abovementioned studies are described in the following publications, the disclosure of which are hereby incorporated by reference:

[69395] Norman, D. A. M.; Barton, P. J. R. : Isolation, sequence, and chromosomal localisation of the human I(kappa)BR gene. Ann. Hum. Genet. 64: 15-23, 2000. ; and

[69396] Ray, P.; Zhang, D.-H.; Elias, J. A.; Ray, A. : Cloning of a differentially expressed I-kappa-B-related protein. J. Biol. Chem. 270: 10680-10685, 1995.

[69397] Further studies establishing the function and utilities of NFKBIL2 are found in John Hopkins OMIM database record ID 604546, and in sited publications numbered 7464-7465 listed in the bibliography section hereinbelow, which are also hereby incorporated by reference.Nucleoporin 98kDa (NUP98, Accession NM_016320) is another VGAM1968 host target gene. NUP98 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by NUP98, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of

NUP98 BINDING SITE, designated SEQ ID:18443, to the nucleotide sequence of VGAM1968 RNA, herein designated VGAM RNA, also designated SEQ ID:4679.

[69398] Another function of VGAM1968 is therefore inhibition of Nucleoporin 98kDa (NUP98, Accession NM_016320), a gene which functions in the nuclear transport of protein and RNA. Accordingly, utilities of VGAM1968 include diagnosis, prevention and treatment of diseases and clinical conditions associated with NUP98. The function of NUP98 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM55.OIP2 (Accession XM_085017) is another VGAM1968 host target gene. OIP2 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by OIP2, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of OIP2 BINDING SITE, designated SEQ ID:37794, to the nucleotide sequence of VGAM1968 RNA, herein designated VGAM RNA, also designated SEQ ID:4679.

[69399] Another function of VGAM1968 is therefore inhibition of OIP2 (Accession XM_085017), a gene which belongs to a

family of outer membrane proteins involved in gonococcal adhesion to and invasion of human cells. Accordingly, utilities of VGAM1968 include diagnosis, prevention and treatment of diseases and clinical conditions associated with OIP2. The function of OIP2 has been established by previous studies. Neisseria gonorrhoeae opacity-associated (Opa) proteins are a family of outer membrane proteins involved in gonococcal adhesion to and invasion of human cells. Opa expression appears to be necessary for gonococcal disease. Using the yeast 2-hybrid system to screen a HeLa cell cDNA library with an N. gonorrhoeae Opa protein as bait, Williams et al. (1998) identified partial cDNAs encoding Opa-interacting protein-1 (OIP1, or TRIP6; 602933), OIP2, OIP3 (PK3; 179050), OIP4 (PRAME; 606021), and OIP5 (OMIM Ref. No. 606020). Sequence analysis predicted that the partial OIP2 cDNA encodes a 265-amino acid peptide that is likely to be the C terminus of a longer protein. OIP2 contains a cluster of basic residues, but unlike OIP1, OIP4, and OIP5, it has no cysteine motif. Inherently unstable mammalian mRNAs contain AU-rich elements (AREs) within their 3-prime untranslated regions. In yeast, 3-prime-to-5-prime mRNA degradation is mediated by the exosome, a multisubunit

particle. Chen et al. (2001) purified and characterized the human exosome by mass spectrometry and found its composition to be similar to its yeast counterpart. They identified the following protein subunits within the human exosome: p7, which is homologous to the yeast Rrp4 protein (OMIM Ref. No. 602238); p8, which is homologous to the yeast Rrp42 protein (OMIM Ref. No. 606488); p9, which is homologous to the yeast Rrp43 protein (OIP2); p10, which is homologous to the yeast Rrp40 protein (OMIM Ref. No. 606489); p11, which is homologous to the yeast Mtr3 protein (OMIM Ref. No. 606490); p12A, which is homologous to the yeast Rrp41 protein (OMIM Ref. No. 606491); p12B, which is homologous to the yeast Rrp46 protein (OMIM Ref. No. 606492); and p13, which is homologous to the yeast Csl4 protein (OMIM Ref. No. 606493). They also identified 2 exosome-associated factors, p1 (OMIM Ref. No. 600478) and p14 (MPP6; 605500), that were not homologous to any yeast exosome components.

[69400] Full details of the abovementioned studies are described in the following publications, the disclosure of which are hereby incorporated by reference:

[69401] Chen, C.-Y.; Gherzi, R.; Ong, S.-E.; Chan, E. L.; Raijmak-

ers, R.; Pruijn, G. J. M.; Stoecklin, G.; Moroni, C.; Mann, M.; Karin, M. : AU binding proteins recruit the exosome to degrade ARE-containing mRNAs. Cell 107: 451-464, 2001. ; and

[69402] Williams, J. M.; Chen, G.-C.; Zhu, L.; Rest, R. F. : Using the yeast two-hybrid system to identify human epithelial cell proteins that bind gonococcal Opa proteins: intracellular gonoc.

[69403] Further studies establishing the function and utilities of OIP2 are found in John Hopkins OMIM database record ID 606019, and in sited publications numbered 9518 listed in the bibliography section hereinbelow, which are also hereby incorporated by reference.poly(A) Binding Protein, Nuclear 1 (PABPN1, Accession NM_004643) is another VGAM1968 host target gene. PABPN1 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by PABPN1, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of PABPN1 BINDING SITE, designated SEQ ID:11018, to the nucleotide sequence of VGAM1968 RNA, herein designated VGAM RNA, also designated SEQ ID:4679.

[69404] Another function of VGAM1968 is therefore inhibition of poly(A) Binding Protein, Nuclear 1 (PABPN1, Accession NM_004643), a gene which binds to Poly(A). Accordingly, utilities of VGAM1968 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PABPN1. The function of PABPN1 has been established by previous studies. In a search for a gene mutant in oculopharyngeal muscular dystrophy (OPMD; 164300), which maps to 14q11, Brais et al. (1998) isolated a promising candidate, a gene homologous to the bovine poly(A)-binding protein-2 gene. The authors called the human gene PABP2. PABP2 was considered a good candidate for OPMD because it maps to the genetically defined candidate interval in 14q11, its mRNA is highly expressed in skeletal muscle, and the PABP2 protein is exclusively localized to the nucleus, where it acts as a factor in mRNA polyadenylation. Brais et al. (1998) identified short N-terminal trinucleotide expansions (GCG) in the PABP2 gene of OPMD patients (e.g., 602279.0001) Using both immunoelectron microscopy and fluorescence confocal microscopy, Calado et al. (2000) determined that the OPMD-specific nuclear inclusions were stained anti-PABP2 antibodies. In addition, the inclusions were labeled with anti-

bodies directed against ubiquitin and the subunits of the proteasome, and contained a less soluble form of PABP2 as well as poly(A) RNA. The authors suggested that the polyalanine expansions in PABP2 induce a misfolding and aggregation of the protein into insoluble inclusions, similarly to events in neurodegenerative diseases caused by CAG/polyglutamine expansions, and that in OPMD the polyalanine expansions in the PABP2 protein may interfere with the cellular traffic of poly(A) RNA.

[69405] Full details of the abovementioned studies are described in the following publications, the disclosure of which are hereby incorporated by reference:

[69406] Brais, B.; Bouchard, J.-P.; Xie, Y.-G.; Rochefort, D. L.; Chretien, N.; Tome, F. M. S.; Lafreniere, R. G.; Rommens, J. M.; Uyama, E.; Nohira, O.; Blumen, S.; Korczyn, A. D.; Heutink, P.; Mathieu, J.; Duranceau, A.; Codere, F.; Fardeau, M.; Rouleau, G. A. : Short GCG expansions in the PABP2 gene cause oculopharyngeal muscular dystrophy. [69407] Calado, A.; Tome, F. M. S.; Brais, B.; Rouleau, G. A.; Kuhn, U.; Wahle, E.; Carmo-Fonseca, M. : Nuclear inclusions in oculopharyngeal muscular dystrophy consist of poly(A)

binding protei.

[69408] Further studies establishing the function and utilities of PABPN1 are found in John Hopkins OMIM database record ID 602279, and in sited publications numbered 8568-8569, 10685, 1114 and 11606 listed in the bibliography section hereinbelow, which are also hereby incorporated by reference.Platelet-derived Growth Factor Beta Polypeptide (simian sarcoma viral (v-sis) Oncogene Homolog) (PDGFB, Accession NM_002608) is another VGAM1968 host target gene. PDGFB BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by PDGFB, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of PDGFB BINDING SITE, designated SEQ ID:8470, to the nucleotide sequence of VGAM1968 RNA, herein designated VGAM RNA, also designated SEQ ID:4679.

[69409] Another function of VGAM1968 is therefore inhibition of Platelet-derived Growth Factor Beta Polypeptide (simian sarcoma viral (v-sis) Oncogene Homolog) (PDGFB, Accession NM_002608), a gene which plays an important role in stimulating adjacent cells to grow and thereby heal the

wound. Accordingly, utilities of VGAM1968 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PDGFB. The function of PDGFB and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM173.Placental Growth Factor, Vascular Endothelial Growth Factor-related Protein (PGF, Accession NM_002632) is another VGAM1968 host target gene. PGF BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by PGF, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of PGF BINDING SITE, designated SEQ ID:8493, to the nucleotide sequence of VGAM1968 RNA, herein designated VGAM RNA, also designated SEQ ID:4679.

[69410] Another function of VGAM1968 is therefore inhibition of Placental Growth Factor, Vascular Endothelial Growth Factor-related Protein (PGF, Accession NM_002632), a gene which is a growth factor active in angiogenesis, and endothelial cell growth, stimulating cell proliferation and migration. it binds to receptor vegfr-1/fl. Accordingly,

utilities of VGAM1968 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PGF. The function of PGF and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM1420.Phosphoinositide-3-kinase, Regulatory Subunit, Polypeptide 3 (p55, gamma) (PIK3R3, Accession XM_027982) is another VGAM1968 host target gene. PIK3R3 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by PIK3R3, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of PIK3R3 BINDING SITE, designated SEQ ID:30606, to the nucleotide sequence of VGAM1968 RNA, herein designated VGAM RNA, also designated SEQ ID:4679.

[69411] Another function of VGAM1968 is therefore inhibition of Phosphoinositide-3-kinase, Regulatory Subunit, Polypeptide 3 (p55, gamma) (PIK3R3, Accession XM_027982). Accordingly, utilities of VGAM1968 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PIK3R3. Pinin, Desmosome Associated

Protein (PNN, Accession XM_048719) is another VGAM1968 host target gene. PNN BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by PNN, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of PNN BINDING SITE, designated SEQ ID:35233, to the nucleotide sequence of VGAM1968 RNA, herein designated VGAM RNA, also designated SEQ ID:4679.

[69412] Another function of VGAM1968 is therefore inhibition of Pinin, Desmosome Associated Protein (PNN, Accession XM_048719), a gene which reinforces the intermediate filament-desmosome complex. Accordingly, utilities of VGAM1968 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PNN. The function of PNN and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM120.Polymerase (DNA directed), Eta (POLH, Accession NM_006502) is another VGAM1968 host target gene. POLH BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by

POLH, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of POLH BINDING SITE, designated SEQ ID:13251, to the nucleotide sequence of VGAM1968 RNA, herein designated VGAM RNA, also designated SEQ ID:4679.

[69413] Another function of VGAM1968 is therefore inhibition of Polymerase (DNA directed), Eta (POLH, Accession NM_006502). Accordingly, utilities of VGAM1968 include diagnosis, prevention and treatment of diseases and clinical conditions associated with POLH. Protein Kinase, Y-linked (PRKY, Accession NM_002760) is another VGAM1968 host target gene. PRKY BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by PRKY, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of PRKY BINDING SITE, designated SEQ ID:8647, to the nucleotide sequence of VGAM1968 RNA, herein designated VGAM RNA, also designated SEQ ID:4679.

[69414] Another function of VGAM1968 is therefore inhibition of Protein Kinase, Y-linked (PRKY, Accession NM_002760), a

gene which is a putative protein kinase. Accordingly, utilities of VGAM1968 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PRKY. The function of PRKY has been established by previous studies. PRKX (OMIM Ref. No. 300083) is a novel serine/threonine subtype of protein kinase that appears to encode a protein related to the catalytic subunit of the cAMP-dependent protein kinases, which are key players in the cellular responses to the second messenger cAMP. Klink et al. (1995) found that somatic cell hybrid analysis of PRKX under high stringency conditions revealed at least 3 further loci closely related to this gene in the human, constituting a small subfamily. Schiebel et al. (1997) isolated and characterized the PRKY gene, which is highly homologous to the PRKX gene on Xp22.3 and represents a member of the cAMP-dependent serine/threonine protein kinase gene family. Abnormal interchange can occur anywhere between Xp and Yp proximal to SRY (OMIM Ref. No. 480000). Schiebel et al. (1997) demonstrated that abnormal interchange in XX males (OMIM Ref. No. 278850) and XY females (OMIM Ref. No. 306100) happens particularly frequently between PRKX and PRKY. In a collection of 26 XX males and 4 XY females, between 27 and 35% of the

interchanges took place between PRK homologs, but at different sites within the gene. PRKY and PRKX are located far from the pseudoautosomal region, where XY exchange normally takes place. Schiebel et al. (1997) stated that the unprecedented high sequence identity and identical orientation of PRKY to its homologous partner on the X chromosome, PRKX, explains the high frequency of abnormal pairing and the subsequent ectopic recombination, leading to XX males and XY females and to the highest rate of recombination outside the pseudoautosomal region. Schiebel et al. (1997) used FISH analysis to map the PRKY gene to Yp11.2 in close proximity to AMELY (OMIM Ref. No. 410000); the autosomal copy, a pseudogene (OMIM Ref. No. PRKXP1), to 15q26; and a further X-linked pseudogene (OMIM Ref. No. PRKXP2) to Xq12-q13.

[69415] Full details of the abovementioned studies are described in the following publications, the disclosure of which are hereby incorporated by reference:

[69416] Schiebel, K.; Mertz, A.; Winkelmann, B.; Glaser, B.; Schempp, W.; Rappold, G. : FISH localization of the human Y-homolog of protein kinase PRKX (PRKY) to Yp11.2 and two pseudogenes to 15q26 and Xq12-q13. Cytogenet. Cell Genet. 76: 49-52, 1997. ; and

[69417] Schiebel, K.; Winkelmann, M.; Mertz, A.; Xu, X.; Page, D. C.; Weil, D.; Petit, C.; Rappold, G. A. : Abnormal XY inter-change between a novel isolated protein kinase gene, PRKY, and its h.

[69418] Further studies establishing the function and utilities of PRKY are found in John Hopkins OMIM database record ID 400008, and in sited publications numbered 10972-1097 and 8834 listed in the bibliography section hereinbelow, which are also hereby incorporated by reference.RAB5A, Member RAS Oncogene Family (RAB5A, Accession NM_004162) is another VGAM1968 host target gene. RAB5A BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by RAB5A, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of RAB5A BINDING SITE, designated SEQ ID:10372, to the nucleotide sequence of VGAM1968 RNA, herein designated VGAM RNA, also designated SEQ ID:4679.

[69419] Another function of VGAM1968 is therefore inhibition of RAB5A, Member RAS Oncogene Family (RAB5A, Accession NM_004162), a gene which is a rate-limiting component

of the machinery regulating the kinetics of membrane traffic. Accordingly, utilities of VGAM1968 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RAB5A. The function of RAB5A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM1342.Regulator of Nonsense Transcripts 1 (RENT1, Accession NM_002911) is another VGAM1968 host target gene. RENT1 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by RENT1, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of RENT1 BINDING SITE, designated SEQ ID:8815, to the nucleotide sequence of VGAM1968 RNA, herein designated VGAM RNA, also designated SEQ ID:4679.

[69420] Another function of VGAM1968 is therefore inhibition of Regulator of Nonsense Transcripts 1 (RENT1, Accession NM_002911), a gene which eliminates the production of nonsense-containing RNAs in mammalian cells. Accordingly, utilities of VGAM1968 include diagnosis, prevention

and treatment of diseases and clinical conditions associated with RENT1. The function of RENT1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM1959.SH3-domain Binding Protein 2 (SH3BP2, Accession NM_003023) is another VGAM1968 host target gene. SH3BP2 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by SH3BP2, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of SH3BP2 BINDING SITE, designated SEQ ID:8947, to the nucleotide sequence of VGAM1968 RNA, herein designated VGAM RNA, also designated SEQ ID:4679.

[69421] Another function of VGAM1968 is therefore inhibition of SH3-domain Binding Protein 2 (SH3BP2, Accession NM_003023). Accordingly, utilities of VGAM1968 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SH3BP2. SUSP1 (Accession NM_015571) is another VGAM1968 host target gene. SUSP1 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by SUSP1,

corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of SUSP1 BINDING SITE, designated SEQ ID:17844, to the nucleotide sequence of VGAM1968 RNA, herein designated VGAM RNA, also designated SEQ ID:4679.

[69422] Another function of VGAM1968 is therefore inhibition of SUSP1 (Accession NM_015571), a gene which may play a role in the regulation of SUMO-1-mediated cellular processes particularly related to reproduction. Accordingly, utilities of VGAM1968 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SUSP1. The function of SUSP1 has been established by previous studies. By screening human brain cDNAs for the potential to encode proteins that are at least 50 kD, Nagase et al. (1998) isolated a partial SUSP1 cDNA, which they called KIAA0797, that lacks 5-prime coding sequence. The deduced partial SUSP1 protein has 1,084 amino acids. RT-PCR followed by ELISA detected SUSP1 expression in all 10 human tissues examined, with highest expression in ovary and lowest expression in spleen. By 5-prime-anchored PCR using the KIAA0797 cDNA iso-

lated by Nagase et al. (1998), Kim et al. (2000) determined the complete SUSP1 coding sequence. The deduced 1,112-amino acid SUSP1 protein is a cysteine protease containing the conserved histidine, aspartic acid, and cysteine residues of the catalytic triad and the invariant glutamine residue that helps form the oxyanion hole. The sequence similarity of SUSP1 to other known UBL-specific proteases was largely restricted to the active site domains. Recombinant SUSP1 expressed in bacteria efficiently released SUMO1 from a SUMO1-beta-galactosidase fusion protein but not from a RANGAP1-SUMO1 conjugate, suggesting a role for SUSP1 in the generation of mature SUMO1 specifically from its precursor. SUSP1 showed a tight substrate specificity for SUMO1. Recombinant SUSP1 was exclusively localized to the cytoplasm of mammalian cells. Northern blot analysis detected a 4.4-kb SUSP1 transcript in various human tissues. The highest expression of SUSP1 was in reproductive organs, namely testis, ovary, and prostate. SUSP1 was also expressed in colon and peripheral blood leukocytes. Little or no SUSP1 transcripts were detected in brain, liver, lung, kidney, pancreas, spleen, thymus, heart, and skeletal muscle. Kim et al. (2000) suggested that SUSP1 may play a role in the

regulation of SUMO1-mediated cellular processes particularly related to reproduction.

[69423] Full details of the abovementioned studies are described in the following publications, the disclosure of which are hereby incorporated by reference:

[69424] Kim, K. I.; Baek, S. H.; Jeon, Y.-J.; Nishimori, S.; Suzuki, T.; Uchida, S.; Shimbara, N.; Saitoh, H.; Tanaka, K.; Chung, C. H. : A new SUMO-1-specific protease, SUSP1, that is highly expressed in reproductive organs. J. Biol. Chem. 275: 14102-14106, 2000. ; and

[69425] Nagase, T.; Ishikawa, K.; Suyama, M.; Kikuno, R.; Miyajima, N.; Tanaka, A.; Kotani, H.; Nomura, N.; Ohara, O. : Prediction of the coding sequences of unidentified human genes. XI. The.

[69426] Further studies establishing the function and utilities of SUSP1 are found in John Hopkins OMIM database record ID 605003, and in sited publications numbered 291 and 7048 listed in the bibliography section hereinbelow, which are also hereby incorporated by reference.Transducin (beta)-like 1X-linked (TBL1X, Accession NM_005647) is another VGAM1968 host target gene. TBL1X BINDING SITE1 and TBL1X BINDING SITE2 are HOST TARGET binding sites found in untranslated regions of mRNA encoded by

TBL1X, corresponding to HOST TARGET binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of TBL1X BINDING SITE1 and TBL1X BINDING SITE2, designated SEQ ID:12185 and SEQ ID:12186 respectively, to the nucleotide sequence of VGAM1968 RNA, herein designated VGAM RNA, also designated SEQ ID:4679.

[69427] Another function of VGAM1968 is therefore inhibition of Transducin (beta)-like 1X-linked (TBL1X, Accession NM_005647), a gene which activates latent HDAC3 activity. Accordingly, utilities of VGAM1968 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TBL1X. The function of TBL1X and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM1151.Transmembrane, Prostate Androgen Induced RNA (TMEPAI, Accession NM_020182) is another VGAM1968 host target gene. TMEPAI BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by TMEPAI, corresponding to a HOST TARGET binding site such as BINDING SITE I, BIND-

ING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of TMEPAI BINDING SITE, designated SEQ ID:21407, to the nucleotide sequence of VGAM1968 RNA, herein designated VGAM RNA, also designated SEQ ID:4679.

[69428] Another function of VGAM1968 is therefore inhibition of Transmembrane, Prostate Androgen Induced RNA (TMEPAI, Accession NM_020182). Accordingly, utilities of VGAM1968 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TMEPAI. Transformation/transcription Domain-associated Protein (TRRAP, Accession NM_003496) is another VGAM1968 host target gene. TRRAP BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by TRRAP, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of TRRAP BINDING SITE, designated SEQ ID:9589, to the nucleotide sequence of VGAM1968 RNA, herein designated VGAM RNA, also designated SEQ ID:4679.

[69429] Another function of VGAM1968 is therefore inhibition of Transformation/transcription Domain-associated Protein

(TRRAP, Accession NM_003496). Accordingly, utilities of VGAM1968 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TRRAP. Uncoupling Protein 3 (mitochondrial, proton carrier) (UCP3, Accession NM_003356) is another VGAM1968 host target gene. UCP3 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by UCP3, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of UCP3 BINDING SITE, designated SEQ ID:9385, to the nucleotide sequence of VGAM1968 RNA, herein designated VGAM RNA, also designated SEQ ID:4679.

[69430] Another function of VGAM1968 is therefore inhibition of Uncoupling Protein 3 (mitochondrial, proton carrier) (UCP3, Accession NM_003356), a gene which is a mitochondrial transporter protein that creates proton leaks across the inner mitochondrial membrane, thus uncoupling oxidative phosphorylation. Accordingly, utilities of VGAM1968 include diagnosis, prevention and treatment of diseases and clinical conditions associated with UCP3. The function of UCP3 and its association with various dis-

eases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM1317.WAS Protein Family, Member 3 (WASF3, Accession NM_006646) is another VGAM1968 host target gene. WASF3 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by WASF3, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of WASF3 BINDING SITE, designated SEQ ID:13442, to the nucleotide sequence of VGAM1968 RNA, herein designated VGAM RNA, also designated SEQ ID:4679.

[69431] Another function of VGAM1968 is therefore inhibition of WAS Protein Family, Member 3 (WASF3, Accession NM_006646), a gene which stimulates actin polymerization. Accordingly, utilities of VGAM1968 include diagnosis, prevention and treatment of diseases and clinical conditions associated with WASF3. The function of WASF3 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM1692.Tyrosine 3-monooxygenase/tryptophan

5-monooxygenase Activation Protein, Epsilon Polypeptide (YWHAE, Accession NM_006761) is another VGAM1968 host target gene. YWHAE BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by YWHAE, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of YWHAE BINDING SITE, designated SEQ ID:13614, to the nucleotide sequence of VGAM1968 RNA, herein designated VGAM RNA, also designated SEQ ID:4679.

[69432] Another function of VGAM1968 is therefore inhibition of Tyrosine 3-monooxygenase/tryptophan 5-monooxygenase Activation Protein, Epsilon Polypeptide (YWHAE, Accession NM_006761), a gene which binds to cdc25 and may facilitate cdc25 interaction with Raf-1 in vivo. Accordingly, utilities of VGAM1968 include diagnosis, prevention and treatment of diseases and clinical conditions associated with YWHAE. The function of YWHAE and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM656.AD-020 (Accession NM_020141) is another VGAM1968 host target

gene. AD-020 BINDING SITE1 and AD-020 BINDING SITE2 are HOST TARGET binding sites found in untranslated regions of mRNA encoded by AD-020, corresponding to HOST TARGET binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of AD-020 BINDING SITE1 and AD-020 BINDING SITE2, designated SEQ ID:21340 and SEQ ID:29870 respectively, to the nucleotide sequence of VGAM1968 RNA, herein designated VGAM RNA, also designated SEQ ID:4679.

[69433] Another function of VGAM1968 is therefore inhibition of AD-020 (Accession NM_020141). Accordingly, utilities of VGAM1968 include diagnosis, prevention and treatment of diseases and clinical conditions associated with AD-020. Adaptor-related Protein Complex 3, Delta 1 Subunit (AP3D1, Accession NM_003938) is another VGAM1968 host target gene. AP3D1 BINDING SITE1 and AP3D1 BINDING SITE2 are HOST TARGET binding sites found in untranslated regions of mRNA encoded by AP3D1, corresponding to HOST TARGET binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of AP3D1 BINDING SITE1 and AP3D1 BINDING SITE2, desig-

nated SEQ ID:10047 and SEQ ID:18509 respectively, to the nucleotide sequence of VGAM1968 RNA, herein designated VGAM RNA, also designated SEQ ID:4679.

[69434] Another function of VGAM1968 is therefore inhibition of Adaptor-related Protein Complex 3, Delta 1 Subunit (AP3D1, Accession NM_003938). Accordingly, utilities of VGAM1968 include diagnosis, prevention and treatment of diseases and clinical conditions associated with AP3D1. Chromosome 17 Open Reading Frame 31 (C17orf31, Accession NM_017575) is another VGAM1968 host target gene. C17orf31 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by C17orf31, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of C17orf31 BINDING SITE, designated SEQ ID:19006, to the nucleotide sequence of VGAM1968 RNA, herein designated VGAM RNA, also designated SEQ ID:4679.

[69435] Another function of VGAM1968 is therefore inhibition of Chromosome 17 Open Reading Frame 31 (C17orf31, Accession NM_017575). Accordingly, utilities of VGAM1968 include diagnosis, prevention and treatment of diseases

and clinical conditions associated with C17orf31. Chromosome 19 Open Reading Frame 7 (C19orf7, Accession XM_028253) is another VGAM1968 host target gene. C19orf7 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by C19orf7, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of C19orf7 BINDING SITE, designated SEQ ID:30636, to the nucleotide sequence of VGAM1968 RNA, herein designated VGAM RNA, also designated SEQ ID:4679.

[69436] Another function of VGAM1968 is therefore inhibition of Chromosome 19 Open Reading Frame 7 (C19orf7, Accession XM_028253). Accordingly, utilities of VGAM1968 include diagnosis, prevention and treatment of diseases and clinical conditions associated with C19orf7. Chromosome 20 Open Reading Frame 100 (C20orf100, Accession NM_032883) is another VGAM1968 host target gene. C20orf100 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by C20orf100, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III.

Table 2 illustrates the complementarity of the nucleotide sequences of C20orf100 BINDING SITE, designated SEQ ID:26704, to the nucleotide sequence of VGAM1968 RNA, herein designated VGAM RNA, also designated SEQ ID:4679.

[69437] Another function of VGAM1968 is therefore inhibition of Chromosome 20 Open Reading Frame 100 (C20orf100, Accession NM_032883). Accordingly, utilities of VGAM1968 include diagnosis, prevention and treatment of diseases and clinical conditions associated with C20orf100. Chromosome 21 Open Reading Frame 25 (C21orf25, Accession XM_032945) is another VGAM1968 host target gene. C21orf25 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by C21orf25, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of C21orf25 BINDING SITE, designated SEQ ID:31801, to the nucleotide sequence of VGAM1968 RNA, herein designated VGAM RNA, also designated SEQ ID:4679.

[69438] Another function of VGAM1968 is therefore inhibition of Chromosome 21 Open Reading Frame 25 (C21orf25, Ac-

cession XM_032945). Accordingly, utilities of VGAM1968 include diagnosis, prevention and treatment of diseases and clinical conditions associated with C21orf25. Chromosome 21 Open Reading Frame 59 (C21orf59, Accession NM_017835) is another VGAM1968 host target gene. C21orf59 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by C21orf59, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of C21orf59 BINDING SITE, designated SEQ ID:19501, to the nucleotide sequence of VGAM1968 RNA, herein designated VGAM RNA, also designated SEQ ID:4679.

[69439] Another function of VGAM1968 is therefore inhibition of Chromosome 21 Open Reading Frame 59 (C21orf59, Accession NM_017835). Accordingly, utilities of VGAM1968 include diagnosis, prevention and treatment of diseases and clinical conditions associated with C21orf59. Chemokine (C-C motif) Receptor 6 (CCR6, Accession NM_031409) is another VGAM1968 host target gene. CCR6 BINDING SITE1 and CCR6 BINDING SITE2 are HOST TARGET binding sites found in untranslated regions of

mRNA encoded by CCR6, corresponding to HOST TARGET binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of CCR6 BINDING SITE1 and CCR6 BINDING SITE2, designated SEQ ID:25370 and SEQ ID:10577 respectively, to the nucleotide sequence of VGAM1968 RNA, herein designated VGAM RNA, also designated SEQ ID:4679.

[69440] Another function of VGAM1968 is therefore inhibition of Chemokine (C-C motif) Receptor 6 (CCR6, Accession NM_031409). Accordingly, utilities of VGAM1968 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CCR6. DJ37E16.5 (Accession NM_020315) is another VGAM1968 host target gene. DJ37E16.5 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by DJ37E16.5, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of DJ37E16.5 BINDING SITE, designated SEQ ID:21576, to the nucleotide sequence of VGAM1968 RNA, herein designated VGAM RNA, also designated SEQ ID:4679.

[69441] Another function of VGAM1968 is therefore inhibition of DJ37E16.5 (Accession NM_020315). Accordingly, utilities of VGAM1968 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DJ37E16.5. DKFZP434E2135 (Accession NM_030804) is another VGAM1968 host target gene. DKFZP434E2135 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by DKFZP434E2135, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of DKFZP434E2135 BINDING SITE, designated SEQ ID:25115, to the nucleotide sequence of VGAM1968 RNA, herein designated VGAM RNA, also designated SEQ ID:4679.

[69442] Another function of VGAM1968 is therefore inhibition of DKFZP434E2135 (Accession NM_030804). Accordingly, utilities of VGAM1968 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZP434E2135. DKFZP434F091 (Accession NM_015453) is another VGAM1968 host target gene. DKFZP434F091 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by

DKFZP434F091, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of DKFZP434F091 BINDING SITE, designated SEQ ID:17739, to the nucleotide sequence of VGAM1968 RNA, herein designated VGAM RNA, also designated SEQ ID:4679.

[69443] Another function of VGAM1968 is therefore inhibition of DKFZP434F091 (Accession NM_015453). Accordingly, utilities of VGAM1968 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZP434F091. DKFZP564B1162 (Accession NM_031305) is another VGAM1968 host target gene. DKFZP564B1162 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by DKFZP564B1162, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of DKFZP564B1162 BINDING SITE, designated SEQ ID:25337, to the nucleotide sequence of VGAM1968 RNA, herein designated VGAM RNA, also designated SEQ ID:4679.

[69444] Another function of VGAM1968 is therefore inhibition of

DKFZP564B1162 (Accession NM_031305). Accordingly, utilities of VGAM1968 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZP564B1162. DKFZP586A0522 (Accession NM_014033) is another VGAM1968 host target gene. DKFZP586A0522 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by DKFZP586A0522, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of DKFZP586A0522 BINDING SITE, designated SEQ ID:15262, to the nucleotide sequence of VGAM1968 RNA, herein designated VGAM RNA, also designated SEQ ID:4679.

[69445] Another function of VGAM1968 is therefore inhibition of DKFZP586A0522 (Accession NM_014033). Accordingly, utilities of VGAM1968 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZP586A0522. F-box Only Protein 21 (FBXO21, Accession NM_033624) is another VGAM1968 host target gene. FBXO21 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by FBXO21, corresponding to a HOST TARGET binding site

such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of FBXO21 BINDING SITE, designated SEQ ID:27324, to the nucleotide sequence of VGAM1968 RNA, herein designated VGAM RNA, also designated SEQ ID:4679.

[69446] Another function of VGAM1968 is therefore inhibition of F-box Only Protein 21 (FBXO21, Accession NM_033624). Accordingly, utilities of VGAM1968 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FBXO21. FLJ10199 (Accession XM_048840) is another VGAM1968 host target gene. FLJ10199 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by FLJ10199, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of FLJ10199 BINDING SITE, designated SEQ ID:35285, to the nucleotide sequence of VGAM1968 RNA, herein designated VGAM RNA, also designated SEQ ID:4679.

[69447] Another function of VGAM1968 is therefore inhibition of FLJ10199 (Accession XM_048840). Accordingly, utilities of

VGAM1968 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ10199. FLJ11269 (Accession XM_052193) is another VGAM1968 host target gene. FLJ11269 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by FLJ11269, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of FLJ11269 BINDING SITE, designated SEQ ID:35954, to the nucleotide sequence of VGAM1968 RNA, herein designated VGAM RNA, also designated SEQ ID:4679.

[69448] Another function of VGAM1968 is therefore inhibition of FLJ11269 (Accession XM_052193). Accordingly, utilities of VGAM1968 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ11269. FLJ12783 (Accession NM_031426) is another VGAM1968 host target gene. FLJ12783 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by FLJ12783, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of FLJ12783

BINDING SITE, designated SEQ ID:25418, to the nucleotide sequence of VGAM1968 RNA, herein designated VGAM RNA, also designated SEQ ID:4679.

[69449] Another function of VGAM1968 is therefore inhibition of FLJ12783 (Accession NM_031426). Accordingly, utilities of VGAM1968 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ12783. FLJ13441 (Accession NM_023924) is another VGAM1968 host target gene. FLJ13441 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by FLJ13441, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of FLJ13441 BINDING SITE, designated SEQ ID:23393, to the nucleotide sequence of VGAM1968 RNA, herein designated VGAM RNA, also designated SEQ ID:4679.

[69450] Another function of VGAM1968 is therefore inhibition of FLJ13441 (Accession NM_023924). Accordingly, utilities of VGAM1968 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ13441. FLJ13646 (Accession NM_024584) is another VGAM1968 host target gene. FLJ13646 BINDING SITE is

HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by FLJ13646, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of FLJ13646 BINDING SITE, designated SEQ ID:23813, to the nucleotide sequence of VGAM1968 RNA, herein designated VGAM RNA, also designated SEQ ID:4679.

[69451] Another function of VGAM1968 is therefore inhibition of FLJ13646 (Accession NM_024584). Accordingly, utilities of VGAM1968 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ13646. FLJ14803 (Accession NM_032842) is another VGAM1968 host target gene. FLJ14803 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by FLJ14803, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of FLJ14803 BINDING SITE, designated SEQ ID:26627, to the nucleotide sequence of VGAM1968 RNA, herein designated VGAM RNA, also designated SEQ ID:4679.

[69452] Another function of VGAM1968 is therefore inhibition of

FLJ14803 (Accession NM_032842). Accordingly, utilities of VGAM1968 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ14803. FLJ20445 (Accession NM_017824) is another VGAM1968 host target gene. FLJ20445 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by FLJ20445, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of FLJ20445 BINDING SITE, designated SEQ ID:19481, to the nucleotide sequence of VGAM1968 RNA, herein designated VGAM RNA, also designated SEQ ID:4679.

[69453] Another function of VGAM1968 is therefore inhibition of FLJ20445 (Accession NM_017824). Accordingly, utilities of VGAM1968 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ20445. FLJ20548 (Accession NM_017873) is another VGAM1968 host target gene. FLJ20548 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by FLJ20548, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the com-

plementarity of the nucleotide sequences of FLJ20548 BINDING SITE, designated SEQ ID:19545, to the nucleotide sequence of VGAM1968 RNA, herein designated VGAM RNA, also designated SEQ ID:4679.

[69454] Another function of VGAM1968 is therefore inhibition of FLJ20548 (Accession NM_017873). Accordingly, utilities of VGAM1968 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ20548. FLJ22479 (Accession NM_024900) is another VGAM1968 host target gene. FLJ22479 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by FLJ22479, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of FLJ22479 BINDING SITE, designated SEQ ID:24386, to the nucleotide sequence of VGAM1968 RNA, herein designated VGAM RNA, also designated SEQ ID:4679.

[69455] Another function of VGAM1968 is therefore inhibition of FLJ22479 (Accession NM_024900). Accordingly, utilities of VGAM1968 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ22479. FLJ22679 (Accession NM_032227) is another

VGAM1968 host target gene. FLJ22679 BINDING SITE1 and FLJ22679 BINDING SITE2 are HOST TARGET binding sites found in untranslated regions of mRNA encoded by FLJ22679, corresponding to HOST TARGET binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of FLJ22679 BINDING SITE1 and FLJ22679 BINDING SITE2, designated SEQ ID:25950 and SEQ ID:19263 respectively, to the nucleotide sequence of VGAM1968 RNA, herein designated VGAM RNA, also designated SEQ ID:4679.

[69456] Another function of VGAM1968 is therefore inhibition of FLJ22679 (Accession NM_032227). Accordingly, utilities of VGAM1968 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ22679. GS3955 (Accession NM_021643) is another VGAM1968 host target gene. GS3955 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by GS3955, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of GS3955 BINDING SITE, designated SEQ ID:22301, to the nucleotide

sequence of VGAM1968 RNA, herein designated VGAM RNA, also designated SEQ ID:4679.

[69457] Another function of VGAM1968 is therefore inhibition of GS3955 (Accession NM_021643). Accordingly, utilities of VGAM1968 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GS3955. HCA4 (Accession XM_085287) is another VGAM1968 host target gene. HCA4 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by HCA4, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of HCA4 BINDING SITE, designated SEQ ID:38024, to the nucleotide sequence of VGAM1968 RNA, herein designated VGAM RNA, also designated SEQ ID:4679.

[69458] Another function of VGAM1968 is therefore inhibition of HCA4 (Accession XM_085287). Accordingly, utilities of VGAM1968 include diagnosis, prevention and treatment of diseases and clinical conditions associated with HCA4. HDAC9-PENDING (Accession NM_058176) is another VGAM1968 host target gene. HDAC9-PENDING BINDING SITE1 through HDAC9-PENDING BINDING SITE3 are HOST

TARGET binding sites found in untranslated regions of mRNA encoded by HDAC9-PENDING, corresponding to HOST TARGET binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of HDAC9-PENDING BINDING SITE1 through HDAC9-PENDING BINDING SITE3, designated SEQ ID:27728, SEQ ID:27729 and SEQ ID:16251 respectively, to the nucleotide sequence of VGAM1968 RNA, herein designated VGAM RNA, also designated SEQ ID:4679.

[69459] Another function of VGAM1968 is therefore inhibition of HDAC9-PENDING (Accession NM_058176). Accordingly, utilities of VGAM1968 include diagnosis, prevention and treatment of diseases and clinical conditions associated with HDAC9-PENDING. Potassium Channel, Subfamily T, Member 1 (KCNT1, Accession XM_029962) is another VGAM1968 host target gene. KCNT1 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by KCNT1, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of KCNT1 BINDING SITE, designated SEQ ID:30976, to the nucleotide se-

quence of VGAM1968 RNA, herein designated VGAM RNA, also designated SEQ ID:4679.

[69460] Another function of VGAM1968 is therefore inhibition of Potassium Channel, Subfamily T, Member 1 (KCNT1, Accession XM_029962). Accordingly, utilities of VGAM1968 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KCNT1. KIAA0057 (Accession NM_012288) is another VGAM1968 host target gene. KIAA0057 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by KIAA0057, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of KIAA0057 BINDING SITE, designated SEQ ID:14622, to the nucleotide sequence of VGAM1968 RNA, herein designated VGAM RNA, also designated SEQ ID:4679.

[69461] Another function of VGAM1968 is therefore inhibition of KIAA0057 (Accession NM_012288). Accordingly, utilities of VGAM1968 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0057. KIAA0335 (Accession NM_014803) is another VGAM1968 host target gene. KIAA0335 BINDING SITE is

HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by KIAA0335, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of KIAA0335 BINDING SITE, designated SEQ ID:16732, to the nucleotide sequence of VGAM1968 RNA, herein designated VGAM RNA, also designated SEQ ID:4679.

[69462] Another function of VGAM1968 is therefore inhibition of KIAA0335 (Accession NM_014803). Accordingly, utilities of VGAM1968 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0335. KIAA0446 (Accession XM_044155) is another VGAM1968 host target gene. KIAA0446 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by KIAA0446, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of KIAA0446 BINDING SITE, designated SEQ ID:34150, to the nucleotide sequence of VGAM1968 RNA, herein designated VGAM RNA, also designated SEQ ID:4679.

[69463] Another function of VGAM1968 is therefore inhibition of

KIAA0446 (Accession XM_044155). Accordingly, utilities of VGAM1968 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0446. KIAA0534 (Accession XM_049349) is another VGAM1968 host target gene. KIAA0534 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by KIAA0534, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of KIAA0534 BINDING SITE, designated SEQ ID:35385, to the nucleotide sequence of VGAM1968 RNA, herein designated VGAM RNA, also designated SEQ ID:4679.

[69464] Another function of VGAM1968 is therefore inhibition of KIAA0534 (Accession XM_049349). Accordingly, utilities of VGAM1968 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0534. KIAA0843 (Accession NM_014945) is another VGAM1968 host target gene. KIAA0843 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by KIAA0843, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the

complementarity of the nucleotide sequences of KIAA0843 BINDING SITE, designated SEQ ID:17260, to the nucleotide sequence of VGAM1968 RNA, herein designated VGAM RNA, also designated SEQ ID:4679.

[69465] Another function of VGAM1968 is therefore inhibition of KIAA0843 (Accession NM_014945). Accordingly, utilities of VGAM1968 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0843. KIAA0892 (Accession XM_048457) is another VGAM1968 host target gene. KIAA0892 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by KIAA0892, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of KIAA0892 BINDING SITE, designated SEQ ID:35172, to the nucleotide sequence of VGAM1968 RNA, herein designated VGAM RNA, also designated SEQ ID:4679.

[69466] Another function of VGAM1968 is therefore inhibition of KIAA0892 (Accession XM_048457). Accordingly, utilities of VGAM1968 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0892. KIAA0894 (Accession NM_014896) is another

VGAM1968 host target gene. KIAA0894 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by KIAA0894, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of KIAA0894 BINDING SITE, designated SEQ ID:17056, to the nucleotide sequence of VGAM1968 RNA, herein designated VGAM RNA, also designated SEQ ID:4679.

[69467] Another function of VGAM1968 is therefore inhibition of KIAA0894 (Accession NM_014896). Accordingly, utilities of VGAM1968 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0894. KIAA0981 (Accession XM_028867) is another VGAM1968 host target gene. KIAA0981 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by KIAA0981, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of KIAA0981 BINDING SITE, designated SEQ ID:30799, to the nucleotide sequence of VGAM1968 RNA, herein designated VGAM RNA, also designated SEQ ID:4679.

[69468] Another function of VGAM1968 is therefore inhibition of KIAA0981 (Accession XM_028867). Accordingly, utilities of VGAM1968 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0981. KIAA1157 (Accession XM_051093) is another VGAM1968 host target gene. KIAA1157 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by KIAA1157, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of KIAA1157 BINDING SITE, designated SEQ ID:35751, to the nucleotide sequence of VGAM1968 RNA, herein designated VGAM RNA, also designated SEQ ID:4679.

[69469] Another function of VGAM1968 is therefore inhibition of KIAA1157 (Accession XM_051093). Accordingly, utilities of VGAM1968 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1157. KIAA1274 (Accession XM_166125) is another VGAM1968 host target gene. KIAA1274 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by KIAA1274, corresponding to a HOST TARGET binding site such as BINDING SITE I,

BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of KIAA1274 BINDING SITE, designated SEQ ID:43911, to the nucleotide sequence of VGAM1968 RNA, herein designated VGAM RNA, also designated SEQ ID:4679.

[69470] Another function of VGAM1968 is therefore inhibition of KIAA1274 (Accession XM_166125). Accordingly, utilities of VGAM1968 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1274. KIAA1529 (Accession XM_047336) is another VGAM1968 host target gene. KIAA1529 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by KIAA1529, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of KIAA1529 BINDING SITE, designated SEQ ID:34947, to the nucleotide sequence of VGAM1968 RNA, herein designated VGAM RNA, also designated SEQ ID:4679.

[69471] Another function of VGAM1968 is therefore inhibition of KIAA1529 (Accession XM_047336). Accordingly, utilities of VGAM1968 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

KIAA1529. KIAA1538 (Accession XM_049474) is another VGAM1968 host target gene. KIAA1538 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by KIAA1538, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of KIAA1538 BINDING SITE, designated SEQ ID:35437, to the nucleotide sequence of VGAM1968 RNA, herein designated VGAM RNA, also designated SEQ ID:4679.

[69472] Another function of VGAM1968 is therefore inhibition of KIAA1538 (Accession XM_049474). Accordingly, utilities of VGAM1968 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1538. KIAA1576 (Accession XM_038186) is another VGAM1968 host target gene. KIAA1576 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by KIAA1576, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of KIAA1576 BINDING SITE, designated SEQ ID:32775, to the nucleotide sequence of VGAM1968 RNA, herein desig-

nated VGAM RNA, also designated SEQ ID:4679.

[69473] Another function of VGAM1968 is therefore inhibition of KIAA1576 (Accession XM_038186). Accordingly, utilities of VGAM1968 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1576. KIAA1821 (Accession XM_050101) is another VGAM1968 host target gene. KIAA1821 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by KIAA1821, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of KIAA1821 BINDING SITE, designated SEQ ID:35551, to the nucleotide sequence of VGAM1968 RNA, herein designated VGAM RNA, also designated SEQ ID:4679.

[69474] Another function of VGAM1968 is therefore inhibition of KIAA1821 (Accession XM_050101). Accordingly, utilities of VGAM1968 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1821. KIAA1894 (Accession XM_058025) is another VGAM1968 host target gene. KIAA1894 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by KIAA1894, corresponding to

a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of KIAA1894 BINDING SITE, designated SEQ ID:36561, to the nucleotide sequence of VGAM1968 RNA, herein designated VGAM RNA, also designated SEQ ID:4679.

[69475] Another function of VGAM1968 is therefore inhibition of KIAA1894 (Accession XM_058025). Accordingly, utilities of VGAM1968 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1894. V-maf Musculoaponeurotic Fibrosarcoma Oncogene Homolog B (avian) (MAFB, Accession NM_005461) is another VGAM1968 host target gene. MAFB BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by MAFB, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of MAFB BINDING SITE, designated SEQ ID:11943, to the nucleotide sequence of VGAM1968 RNA, herein designated VGAM RNA, also designated SEQ ID:4679.

[69476] Another function of VGAM1968 is therefore inhibition of V-maf Musculoaponeurotic Fibrosarcoma Oncogene Ho-

molog B (avian) (MAFB, Accession NM_005461). Accordingly, utilities of VGAM1968 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MAFB. Mitogen-activated Protein Kinase Kinase 6 (MAP2K6, Accession NM_002758) is another VGAM1968 host target gene. MAP2K6 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by MAP2K6, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of MAP2K6 BINDING SITE, designated SEQ ID:8641, to the nucleotide sequence of VGAM1968 RNA, herein designated VGAM RNA, also designated SEQ ID:4679.

[69477] Another function of VGAM1968 is therefore inhibition of Mitogen-activated Protein Kinase Kinase 6 (MAP2K6, Accession NM_002758). Accordingly, utilities of VGAM1968 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MAP2K6. MGC2628 (Accession NM_024076) is another VGAM1968 host target gene. MGC2628 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by MGC2628, corresponding to a HOST TARGET binding

site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of MGC2628 BINDING SITE, designated SEQ ID:23511, to the nucleotide sequence of VGAM1968 RNA, herein designated VGAM RNA, also designated SEQ ID:4679.

[69478] Another function of VGAM1968 is therefore inhibition of MGC2628 (Accession NM_024076). Accordingly, utilities of VGAM1968 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC2628. MGC30052 (Accession NM_144721) is another VGAM1968 host target gene. MGC30052 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by MGC30052, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of MGC30052 BINDING SITE, designated SEQ ID:29544, to the nucleotide sequence of VGAM1968 RNA, herein designated VGAM RNA, also designated SEQ ID:4679.

[69479] Another function of VGAM1968 is therefore inhibition of MGC30052 (Accession NM_144721). Accordingly, utilities of VGAM1968 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with MGC30052. MGC4294 (Accession NM_024314) is another VGAM1968 host target gene. MGC4294 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by MGC4294, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of MGC4294 BINDING SITE, designated SEQ ID:23608, to the nucleotide sequence of VGAM1968 RNA, herein designated VGAM RNA, also designated SEQ ID:4679.

[69480] Another function of VGAM1968 is therefore inhibition of MGC4294 (Accession NM_024314). Accordingly, utilities of VGAM1968 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC4294. Oxysterol Binding Protein-like 5 (OSBPL5, Accession XM_052567) is another VGAM1968 host target gene. OSBPL5 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by OSBPL5, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of OSBPL5 BINDING SITE, designated SEQ

ID:35991, to the nucleotide sequence of VGAM1968 RNA, herein designated VGAM RNA, also designated SEQ ID:4679.

[69481] Another function of VGAM1968 is therefore inhibition of Oxysterol Binding Protein-like 5 (OSBPL5, Accession XM_052567). Accordingly, utilities of VGAM1968 include diagnosis, prevention and treatment of diseases and clinical conditions associated with OSBPL5. pcnp (Accession NM_020357) is another VGAM1968 host target gene. pcnp BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by pcnp, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of pcnp BINDING SITE, designated SEQ ID:21628, to the nucleotide sequence of VGAM1968 RNA, herein designated VGAM RNA, also designated SEQ ID:4679.

[69482] Another function of VGAM1968 is therefore inhibition of pcnp (Accession NM_020357). Accordingly, utilities of VGAM1968 include diagnosis, prevention and treatment of diseases and clinical conditions associated with pcnp. PDZ Domain Containing 2 (PDZD2, Accession XM_087705) is another VGAM1968 host target gene. PDZD2 BINDING

SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by PDZD2, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of PDZD2 BINDING SITE, designated SEQ ID:39391, to the nucleotide sequence of VGAM1968 RNA, herein designated VGAM RNA, also designated SEQ ID:4679.

[69483] Another function of VGAM1968 is therefore inhibition of PDZ Domain Containing 2 (PDZD2, Accession XM_087705). Accordingly, utilities of VGAM1968 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PDZD2. Paraneoplastic Antigen MA3 (PNMA3, Accession NM_013364) is another VGAM1968 host target gene. PNMA3 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by PNMA3, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of PNMA3 BINDING SITE, designated SEQ ID:15010, to the nucleotide sequence of VGAM1968 RNA, herein designated VGAM RNA, also designated SEQ ID:4679.

[69484] Another function of VGAM1968 is therefore inhibition of Paraneoplastic Antigen MA3 (PNMA3, Accession NM_013364). Accordingly, utilities of VGAM1968 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PNMA3. Polymerase I and Transcript Release Factor (PTRF, Accession XM_032852) is another VGAM1968 host target gene. PTRF BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by PTRF, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of PTRF BINDING SITE, designated SEQ ID:31784, to the nucleotide sequence of VGAM1968 RNA, herein designated VGAM RNA, also designated SEQ ID:4679.

[69485] Another function of VGAM1968 is therefore inhibition of Polymerase I and Transcript Release Factor (PTRF, Accession XM_032852). Accordingly, utilities of VGAM1968 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PTRF. RAB14, Member RAS Oncogene Family (RAB14, Accession NM_016322) is another VGAM1968 host target gene. RAB14 BINDING SITE is HOST TARGET binding site found in the 3` untranslated

region of mRNA encoded by RAB14, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of RAB14 BINDING SITE, designated SEQ ID:18448, to the nucleotide sequence of VGAM1968 RNA, herein designated VGAM RNA, also designated SEQ ID:4679.

[69486] Another function of VGAM1968 is therefore inhibition of RAB14, Member RAS Oncogene Family (RAB14, Accession NM_016322). Accordingly, utilities of VGAM1968 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RAB14. RAS Guanyl Releasing Protein 4 (RASGRP4, Accession NM_052949) is another VGAM1968 host target gene. RASGRP4 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by RASGRP4, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of RASGRP4 BINDING SITE, designated SEQ ID:27504, to the nucleotide sequence of VGAM1968 RNA, herein designated VGAM RNA, also designated SEQ ID:4679.

[69487] Another function of VGAM1968 is therefore inhibition of

RAS Guanyl Releasing Protein 4 (RASGRP4, Accession NM_052949). Accordingly, utilities of VGAM1968 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RASGRP4. Retinoblastoma Binding Protein 1 (RBBP1, Accession NM_023001) is another VGAM1968 host target gene. RBBP1 BINDING SITE1 and RBBP1 BINDING SITE2 are HOST TARGET binding sites found in untranslated regions of mRNA encoded by RBBP1, corresponding to HOST TARGET binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of RBBP1 BINDING SITE1 and RBBP1 BINDING SITE2, designated SEQ ID:23261 and SEQ ID:8800 respectively, to the nucleotide sequence of VGAM1968 RNA, herein designated VGAM RNA, also designated SEQ ID:4679.

[69488] Another function of VGAM1968 is therefore inhibition of Retinoblastoma Binding Protein 1 (RBBP1, Accession NM_023001). Accordingly, utilities of VGAM1968 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RBBP1. RNAH (Accession XM_030392) is another VGAM1968 host target gene. RNAH BINDING SITE is HOST TARGET binding site found in

the 3` untranslated region of mRNA encoded by RNAH, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of RNAH BINDING SITE, designated SEQ ID:31039, to the nucleotide sequence of VGAM1968 RNA, herein designated VGAM RNA, also designated SEQ ID:4679.

[69489] Another function of VGAM1968 is therefore inhibition of RNAH (Accession XM_030392). Accordingly, utilities of VGAM1968 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RNAH. Ring Finger Protein 11 (RNF11, Accession NM_014372) is another VGAM1968 host target gene. RNF11 BINDING SITE1 and RNF11 BINDING SITE2 are HOST TARGET binding sites found in untranslated regions of mRNA encoded by RNF11, corresponding to HOST TARGET binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of RNF11 BINDING SITE1 and RNF11 BINDING SITE2, designated SEQ ID:15705 and SEQ ID:15706 respectively, to the nucleotide sequence of VGAM1968 RNA, herein designated VGAM RNA, also designated SEQ ID:4679.

[69490] Another function of VGAM1968 is therefore inhibition of Ring Finger Protein 11 (RNF11, Accession NM_014372). Accordingly, utilities of VGAM1968 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RNF11. SAST (Accession XM_032034) is another VGAM1968 host target gene. SAST BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by SAST, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of SAST BINDING SITE, designated SEQ ID:31542, to the nucleotide sequence of VGAM1968 RNA, herein designated VGAM RNA, also designated SEQ ID:4679.

[69491] Another function of VGAM1968 is therefore inhibition of SAST (Accession XM_032034). Accordingly, utilities of VGAM1968 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SAST. Sema Domain, Transmembrane Domain (TM), and Cytoplasmic Domain, (semaphorin) 6B (SEMA6B, Accession NM_032108) is another VGAM1968 host target gene. SEMA6B BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by

SEMA6B, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of SEMA6B BINDING SITE, designated SEQ ID:25801, to the nucleotide sequence of VGAM1968 RNA, herein designated VGAM RNA, also designated SEQ ID:4679.

[69492] Another function of VGAM1968 is therefore inhibition of Sema Domain, Transmembrane Domain (TM), and Cytoplasmic Domain, (semaphorin) 6B (SEMA6B, Accession NM_032108). Accordingly, utilities of VGAM1968 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SEMA6B. Solute Carrier Family 6 (neurotransmitter transporter), Member 14 (SLC6A14, Accession NM_007231) is another VGAM1968 host target gene. SLC6A14 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by SLC6A14, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of SLC6A14 BINDING SITE, designated SEQ ID:14103, to the nucleotide sequence of VGAM1968 RNA, herein designated VGAM RNA, also des-

ignated SEQ ID:4679.

[69493] Another function of VGAM1968 is therefore inhibition of Solute Carrier Family 6 (neurotransmitter transporter), Member 14 (SLC6A14, Accession NM_007231). Accordingly, utilities of VGAM1968 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SLC6A14. STATI2 (Accession XM_170547) is another VGAM1968 host target gene. STATI2 BINDING SITE1 and STATI2 BINDING SITE2 are HOST TARGET binding sites found in untranslated regions of mRNA encoded by STATI2, corresponding to HOST TARGET binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of STATI2 BINDING SITE1 and STATI2 BINDING SITE2, designated SEQ ID:45371 and SEQ ID:9960 respectively, to the nucleotide sequence of VGAM1968 RNA, herein designated VGAM RNA, also designated SEQ ID:4679.

[69494] Another function of VGAM1968 is therefore inhibition of STATI2 (Accession XM_170547). Accordingly, utilities of VGAM1968 include diagnosis, prevention and treatment of diseases and clinical conditions associated with STATI2. TA-PP2C (Accession NM_139283) is another VGAM1968

host target gene. TA-PP2C BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by TA-PP2C, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of TA-PP2C BINDING SITE, designated SEQ ID:29283, to the nucleotide sequence of VGAM1968 RNA, herein designated VGAM RNA, also designated SEQ ID:4679.

[69495] Another function of VGAM1968 is therefore inhibition of TA-PP2C (Accession NM_139283). Accordingly, utilities of VGAM1968 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TA-PP2C. TBLR1 (Accession NM_024665) is another VGAM1968 host target gene. TBLR1 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by TBLR1, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of TBLR1 BINDING SITE, designated SEQ ID:23966, to the nucleotide sequence of VGAM1968 RNA, herein designated VGAM RNA, also designated SEQ ID:4679.

[69496] Another function of VGAM1968 is therefore inhibition of TBLR1 (Accession NM_024665). Accordingly, utilities of VGAM1968 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TBLR1. TIP-1 (Accession NM_014604) is another VGAM1968 host target gene. TIP-1 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by TIP-1, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of TIP-1 BINDING SITE, designated SEQ ID:15968, to the nucleotide sequence of VGAM1968 RNA, herein designated VGAM RNA, also designated SEQ ID:4679.

[69497] Another function of VGAM1968 is therefore inhibition of TIP-1 (Accession NM_014604). Accordingly, utilities of VGAM1968 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TIP-1. TOLLIP (Accession NM_019009) is another VGAM1968 host target gene. TOLLIP BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by TOLLIP, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or

BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of TOLLIP BINDING SITE, designated SEQ ID:21091, to the nucleotide sequence of VGAM1968 RNA, herein designated VGAM RNA, also designated SEQ ID:4679.

[69498] Another function of VGAM1968 is therefore inhibition of TOLLIP (Accession NM_019009). Accordingly, utilities of VGAM1968 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TOLLIP. Tripartite Motif-containing 4 (TRIM4, Accession NM_033017) is another VGAM1968 host target gene. TRIM4 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by TRIM4, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of TRIM4 BINDING SITE, designated SEQ ID:26904, to the nucleotide sequence of VGAM1968 RNA, herein designated VGAM RNA, also designated SEQ ID:4679.

[69499] Another function of VGAM1968 is therefore inhibition of Tripartite Motif-containing 4 (TRIM4, Accession NM_033017). Accordingly, utilities of VGAM1968 include

diagnosis, prevention and treatment of diseases and clinical conditions associated with TRIM4. TRIP-Br2 (Accession NM_014755) is another VGAM1968 host target gene. TRIP-Br2 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by TRIP-Br2, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of TRIP-Br2 BINDING SITE, designated SEQ ID:16483, to the nucleotide sequence of VGAM1968 RNA, herein designated VGAM RNA, also designated SEQ ID:4679.

[69500] Another function of VGAM1968 is therefore inhibition of TRIP-Br2 (Accession NM_014755). Accordingly, utilities of VGAM1968 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TRIP-Br2. TSPAN-5 (Accession NM_005723) is another VGAM1968 host target gene. TSPAN-5 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by TSPAN-5, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of TSPAN-5

BINDING SITE, designated SEQ ID:12276, to the nucleotide sequence of VGAM1968 RNA, herein designated VGAM RNA, also designated SEQ ID:4679.

[69501] Another function of VGAM1968 is therefore inhibition of TSPAN-5 (Accession NM_005723). Accordingly, utilities of VGAM1968 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TSPAN-5. LOC115073 (Accession XM_055193) is another VGAM1968 host target gene. LOC115073 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC115073, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC115073 BINDING SITE, designated SEQ ID:36233, to the nucleotide sequence of VGAM1968 RNA, herein designated VGAM RNA, also designated SEQ ID:4679.

[69502] Another function of VGAM1968 is therefore inhibition of LOC115073 (Accession XM_055193). Accordingly, utilities of VGAM1968 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC115073. LOC115219 (Accession XM_055499) is another VGAM1968 host target gene. LOC115219 BINDING

SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by LOC115219, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC115219 BINDING SITE, designated SEQ ID:36281, to the nucleotide sequence of VGAM1968 RNA, herein designated VGAM RNA, also designated SEQ ID:4679.

[69503] Another function of VGAM1968 is therefore inhibition of LOC115219 (Accession XM_055499). Accordingly, utilities of VGAM1968 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC115219. LOC118709 (Accession XM_058338) is another VGAM1968 host target gene. LOC118709 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by LOC118709, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC118709 BINDING SITE, designated SEQ ID:36600, to the nucleotide sequence of VGAM1968 RNA, herein designated VGAM RNA, also designated SEQ ID:4679.

[69504] Another function of VGAM1968 is therefore inhibition of

LOC118709 (Accession XM_058338). Accordingly, utilities of VGAM1968 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC118709. LOC126353 (Accession XM_059034) is another VGAM1968 host target gene. LOC126353 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC126353, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC126353 BINDING SITE, designated SEQ ID:36830, to the nucleotide sequence of VGAM1968 RNA, herein designated VGAM RNA, also designated SEQ ID:4679.

[69505] Another function of VGAM1968 is therefore inhibition of LOC126353 (Accession XM_059034). Accordingly, utilities of VGAM1968 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC126353. LOC126661 (Accession XM_059061) is another VGAM1968 host target gene. LOC126661 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC126661, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 il-

lustrates the complementarity of the nucleotide sequences of LOC126661 BINDING SITE, designated SEQ ID:36853, to the nucleotide sequence of VGAM1968 RNA, herein designated VGAM RNA, also designated SEQ ID:4679.

[69506] Another function of VGAM1968 is therefore inhibition of LOC126661 (Accession XM_059061). Accordingly, utilities of VGAM1968 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC126661. LOC132321 (Accession XM_059585) is another VGAM1968 host target gene. LOC132321 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC132321, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC132321 BINDING SITE, designated SEQ ID:37027, to the nucleotide sequence of VGAM1968 RNA, herein designated VGAM RNA, also designated SEQ ID:4679.

[69507] Another function of VGAM1968 is therefore inhibition of LOC132321 (Accession XM_059585). Accordingly, utilities of VGAM1968 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC132321. LOC133686 (Accession XM_059667) is an-

other VGAM1968 host target gene. LOC133686 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC133686, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC133686 BINDING SITE, designated SEQ ID:37053, to the nucleotide sequence of VGAM1968 RNA, herein designated VGAM RNA, also designated SEQ ID:4679.

[69508] Another function of VGAM1968 is therefore inhibition of LOC133686 (Accession XM_059667). Accordingly, utilities of VGAM1968 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC133686. LOC144317 (Accession XM_084813) is another VGAM1968 host target gene. LOC144317 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC144317, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC144317 BINDING SITE, designated SEQ ID:37718, to the nucleotide sequence of VGAM1968 RNA, herein designated VGAM RNA, also designated SEQ ID:4679.

[69509] Another function of VGAM1968 is therefore inhibition of LOC144317 (Accession XM_084813). Accordingly, utilities of VGAM1968 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC144317. LOC144848 (Accession XM_056770) is another VGAM1968 host target gene. LOC144848 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC144848, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC144848 BINDING SITE, designated SEQ ID:36421, to the nucleotide sequence of VGAM1968 RNA, herein designated VGAM RNA, also designated SEQ ID:4679.

[69510] Another function of VGAM1968 is therefore inhibition of LOC144848 (Accession XM_056770). Accordingly, utilities of VGAM1968 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC144848. LOC145317 (Accession XM_096760) is another VGAM1968 host target gene. LOC145317 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by LOC145317, corresponding to a HOST TARGET binding site such as BIND-

ING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC145317 BINDING SITE, designated SEQ ID:40531, to the nucleotide sequence of VGAM1968 RNA, herein designated VGAM RNA, also designated SEQ ID:4679.

[69511] Another function of VGAM1968 is therefore inhibition of LOC145317 (Accession XM_096760). Accordingly, utilities of VGAM1968 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC145317. LOC145844 (Accession XM_085255) is another VGAM1968 host target gene. LOC145844 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC145844, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC145844 BINDING SITE, designated SEQ ID:38001, to the nucleotide sequence of VGAM1968 RNA, herein designated VGAM RNA, also designated SEQ ID:4679.

[69512] Another function of VGAM1968 is therefore inhibition of LOC145844 (Accession XM_085255). Accordingly, utilities of VGAM1968 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

LOC145844. LOC150185 (Accession XM_097834) is another VGAM1968 host target gene. LOC150185 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC150185, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC150185 BINDING SITE, designated SEQ ID:41152, to the nucleotide sequence of VGAM1968 RNA, herein designated VGAM RNA, also designated SEQ ID:4679.

[69513] Another function of VGAM1968 is therefore inhibition of LOC150185 (Accession XM_097834). Accordingly, utilities of VGAM1968 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC150185. LOC150407 (Accession XM_086906) is another VGAM1968 host target gene. LOC150407 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC150407, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC150407 BINDING SITE, designated SEQ ID:38952, to the nucleotide sequence of VGAM1968 RNA, herein desig-

nated VGAM RNA, also designated SEQ ID:4679.

[69514] Another function of VGAM1968 is therefore inhibition of LOC150407 (Accession XM_086906). Accordingly, utilities of VGAM1968 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC150407. LOC151405 (Accession XM_098058) is another VGAM1968 host target gene. LOC151405 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by LOC151405, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC151405 BINDING SITE, designated SEQ ID:41339, to the nucleotide sequence of VGAM1968 RNA, herein designated VGAM RNA, also designated SEQ ID:4679.

[69515] Another function of VGAM1968 is therefore inhibition of LOC151405 (Accession XM_098058). Accordingly, utilities of VGAM1968 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC151405. LOC157660 (Accession XM_098805) is another VGAM1968 host target gene. LOC157660 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC157660, cor-

responding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC157660 BINDING SITE, designated SEQ ID:41830, to the nucleotide sequence of VGAM1968 RNA, herein designated VGAM RNA, also designated SEQ ID:4679.

[69516] Another function of VGAM1968 is therefore inhibition of LOC157660 (Accession XM_098805). Accordingly, utilities of VGAM1968 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC157660. LOC158434 (Accession XM_098939) is another VGAM1968 host target gene. LOC158434 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by LOC158434, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC158434 BINDING SITE, designated SEQ ID:41986, to the nucleotide sequence of VGAM1968 RNA, herein designated VGAM RNA, also designated SEQ ID:4679.

[69517] Another function of VGAM1968 is therefore inhibition of LOC158434 (Accession XM_098939). Accordingly, utilities of VGAM1968 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with LOC158434. LOC164173 (Accession XM_089424) is another VGAM1968 host target gene. LOC164173 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC164173, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC164173 BINDING SITE, designated SEQ ID:39975, to the nucleotide sequence of VGAM1968 RNA, herein designated VGAM RNA, also designated SEQ ID:4679.

[69518] Another function of VGAM1968 is therefore inhibition of LOC164173 (Accession XM_089424). Accordingly, utilities of VGAM1968 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC164173. LOC165741 (Accession XM_105272) is another VGAM1968 host target gene. LOC165741 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC165741, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC165741 BINDING SITE, designated SEQ ID:42192, to

the nucleotide sequence of VGAM1968 RNA, herein designated VGAM RNA, also designated SEQ ID:4679.

[69519] Another function of VGAM1968 is therefore inhibition of LOC165741 (Accession XM_105272). Accordingly, utilities of VGAM1968 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC165741. LOC196047 (Accession XM_116883) is another VGAM1968 host target gene. LOC196047 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by LOC196047, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC196047 BINDING SITE, designated SEQ ID:43145, to the nucleotide sequence of VGAM1968 RNA, herein designated VGAM RNA, also designated SEQ ID:4679.

[69520] Another function of VGAM1968 is therefore inhibition of LOC196047 (Accession XM_116883). Accordingly, utilities of VGAM1968 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC196047. LOC196529 (Accession XM_113746) is another VGAM1968 host target gene. LOC196529 BINDING SITE is HOST TARGET binding site found in the 3` un-

translated region of mRNA encoded by LOC196529, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC196529 BINDING SITE, designated SEQ ID:42409, to the nucleotide sequence of VGAM1968 RNA, herein designated VGAM RNA, also designated SEQ ID:4679.

[69521] Another function of VGAM1968 is therefore inhibition of LOC196529 (Accession XM_113746). Accordingly, utilities of VGAM1968 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC196529. LOC200942 (Accession XM_114323) is another VGAM1968 host target gene. LOC200942 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC200942, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC200942 BINDING SITE, designated SEQ ID:42873, to the nucleotide sequence of VGAM1968 RNA, herein designated VGAM RNA, also designated SEQ ID:4679.

[69522] Another function of VGAM1968 is therefore inhibition of LOC200942 (Accession XM_114323). Accordingly, utilities

of VGAM1968 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC200942. LOC201685 (Accession XM_117325) is another VGAM1968 host target gene. LOC201685 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by LOC201685, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC201685 BINDING SITE, designated SEQ ID:43386, to the nucleotide sequence of VGAM1968 RNA, herein designated VGAM RNA, also designated SEQ ID:4679.

[69523] Another function of VGAM1968 is therefore inhibition of LOC201685 (Accession XM_117325). Accordingly, utilities of VGAM1968 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC201685. LOC202020 (Accession XM_114419) is another VGAM1968 host target gene. LOC202020 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC202020, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences

of LOC202020 BINDING SITE, designated SEQ ID:42954, to the nucleotide sequence of VGAM1968 RNA, herein designated VGAM RNA, also designated SEQ ID:4679.

[69524] Another function of VGAM1968 is therefore inhibition of LOC202020 (Accession XM_114419). Accordingly, utilities of VGAM1968 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC202020. LOC202934 (Accession XM_117486) is another VGAM1968 host target gene. LOC202934 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by LOC202934, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC202934 BINDING SITE, designated SEQ ID:43469, to the nucleotide sequence of VGAM1968 RNA, herein designated VGAM RNA, also designated SEQ ID:4679.

[69525] Another function of VGAM1968 is therefore inhibition of LOC202934 (Accession XM_117486). Accordingly, utilities of VGAM1968 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC202934. LOC220672 (Accession XM_017177) is another VGAM1968 host target gene. LOC220672 BINDING

SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC220672, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC220672 BINDING SITE, designated SEQ ID:30309, to the nucleotide sequence of VGAM1968 RNA, herein designated VGAM RNA, also designated SEQ ID:4679.

[69526] Another function of VGAM1968 is therefore inhibition of LOC220672 (Accession XM_017177). Accordingly, utilities of VGAM1968 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC220672. LOC254158 (Accession XM_172799) is another VGAM1968 host target gene. LOC254158 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by LOC254158, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC254158 BINDING SITE, designated SEQ ID:46082, to the nucleotide sequence of VGAM1968 RNA, herein designated VGAM RNA, also designated SEQ ID:4679.

[69527] Another function of VGAM1968 is therefore inhibition of

LOC254158 (Accession XM_172799). Accordingly, utilities of VGAM1968 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC254158. LOC255045 (Accession XM_171243) is another VGAM1968 host target gene. LOC255045 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC255045, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC255045 BINDING SITE, designated SEQ ID:46033, to the nucleotide sequence of VGAM1968 RNA, herein designated VGAM RNA, also designated SEQ ID:4679.

[69528] Another function of VGAM1968 is therefore inhibition of LOC255045 (Accession XM_171243). Accordingly, utilities of VGAM1968 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC255045. LOC256536 (Accession XM_170651) is another VGAM1968 host target gene. LOC256536 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC256536, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 il-

lustrates the complementarity of the nucleotide sequences of LOC256536 BINDING SITE, designated SEQ ID:45428, to the nucleotide sequence of VGAM1968 RNA, herein designated VGAM RNA, also designated SEQ ID:4679.

[69529] Another function of VGAM1968 is therefore inhibition of LOC256536 (Accession XM_170651). Accordingly, utilities of VGAM1968 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC256536. LOC257017 (Accession XM_173227) is another VGAM1968 host target gene. LOC257017 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by LOC257017, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC257017 BINDING SITE, designated SEQ ID:46496, to the nucleotide sequence of VGAM1968 RNA, herein designated VGAM RNA, also designated SEQ ID:4679.

[69530] Another function of VGAM1968 is therefore inhibition of LOC257017 (Accession XM_173227). Accordingly, utilities of VGAM1968 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC257017. LOC56912 (Accession NM_020153) is an-

other VGAM1968 host target gene. LOC56912 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by LOC56912, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC56912 BINDING SITE, designated SEQ ID:21365, to the nucleotide sequence of VGAM1968 RNA, herein designated VGAM RNA, also designated SEQ ID:4679.

[69531] Another function of VGAM1968 is therefore inhibition of LOC56912 (Accession NM_020153). Accordingly, utilities of VGAM1968 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC56912. LOC85414 (Accession NM_033102) is another VGAM1968 host target gene. LOC85414 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC85414, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC85414 BINDING SITE, designated SEQ ID:26952, to the nucleotide sequence of VGAM1968 RNA, herein designated VGAM RNA, also designated SEQ ID:4679.

[69532] Another function of VGAM1968 is therefore inhibition of LOC85414 (Accession NM_033102). Accordingly, utilities of VGAM1968 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC85414. LOC90183 (Accession XM_029709) is another VGAM1968 host target gene. LOC90183 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC90183, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC90183 BINDING SITE, designated SEQ ID:30926, to the nucleotide sequence of VGAM1968 RNA, herein designated VGAM RNA, also designated SEQ ID:4679.

[69533] Another function of VGAM1968 is therefore inhibition of LOC90183 (Accession XM_029709). Accordingly, utilities of VGAM1968 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC90183. LOC91272 (Accession XM_037317) is another VGAM1968 host target gene. LOC91272 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by LOC91272, corresponding to a HOST TARGET binding site such as BINDING SITE I,

BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC91272 BINDING SITE, designated SEQ ID:32612, to the nucleotide sequence of VGAM1968 RNA, herein designated VGAM RNA, also designated SEQ ID:4679.

[69534] Another function of VGAM1968 is therefore inhibition of LOC91272 (Accession XM_037317). Accordingly, utilities of VGAM1968 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC91272. LOC91301 (Accession XM_037564) is another VGAM1968 host target gene. LOC91301 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by LOC91301, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC91301 BINDING SITE, designated SEQ ID:32651, to the nucleotide sequence of VGAM1968 RNA, herein designated VGAM RNA, also designated SEQ ID:4679.

[69535] Another function of VGAM1968 is therefore inhibition of LOC91301 (Accession XM_037564). Accordingly, utilities of VGAM1968 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

LOC91301. LOC91516 (Accession XM_038924) is another VGAM1968 host target gene. LOC91516 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by LOC91516, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC91516 BINDING SITE, designated SEQ ID:32956, to the nucleotide sequence of VGAM1968 RNA, herein designated VGAM RNA, also designated SEQ ID:4679.

[69536] Another function of VGAM1968 is therefore inhibition of LOC91516 (Accession XM_038924). Accordingly, utilities of VGAM1968 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC91516. LOC91585 (Accession XM_039395) is another VGAM1968 host target gene. LOC91585 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC91585, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC91585 BINDING SITE, designated SEQ ID:33076, to the nucleotide sequence of VGAM1968 RNA, herein desig-

nated VGAM RNA, also designated SEQ ID:4679.

[69537] Another function of VGAM1968 is therefore inhibition of LOC91585 (Accession XM_039395). Accordingly, utilities of VGAM1968 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC91585. LOC93166 (Accession XM_049619) is another VGAM1968 host target gene. LOC93166 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC93166, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC93166 BINDING SITE, designated SEQ ID:35462, to the nucleotide sequence of VGAM1968 RNA, herein designated VGAM RNA, also designated SEQ ID:4679.

[69538] Another function of VGAM1968 is therefore inhibition of LOC93166 (Accession XM_049619). Accordingly, utilities of VGAM1968 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC93166. Fig. 1 further provides a conceptual description of a novel bioinformatically detected viral gene of the present invention, referred to here as Viral Genomic Address Messenger 1969 (VGAM1969) viral gene, which

modulates expression of respective host target genes thereof, the function and utility of which host target genes is known in the art.

[69539] VGAM1969 is a novel bioinformatically detected regulatory, non protein coding, viral micro RNA (miRNA) gene. The method by which VGAM1969 was detected is described hereinabove with reference to Figs. 1-8.

[69540] VGAM1969 gene, herein designated VGAM GENE, is a viral gene contained in the genome of Rana Tigrina Ranavirus. VGAM1969 host target gene, herein designated VGAM HOST TARGET GENE, is a human gene contained in the human genome.

[69541] VGAM1969 gene encodes a VGAM1969 precursor RNA, herein designated VGAM PRECURSOR RNA. Similar to other miRNA genes, and unlike most ordinary genes, VGAM1969 precursor RNA does not encode a protein. A nucleotide sequence identical or highly similar to the nucleotide sequence of VGAM1969 precursor RNA is designated SEQ ID:1955, and is provided hereinbelow with reference to the sequence listing part. Nucleotide sequence SEQ ID:1955 is located at position 88273 relative to the genome of Rana Tigrina Ranavirus.

[69542] VGAM1969 precursor RNA folds onto itself, forming

VGAM1969 folded precursor RNA, herein designated VGAM FOLDED PRECURSOR RNA, which has a two-dimensional `hairpin structure`. As is well known in the art, this `hairpin structure`, is typical of RNA encoded by miRNA genes, and is due to the fact that the nucleotide sequence of the first half of the RNA encoded by a miRNA gene is an accurate or partial inversed-reversed sequence of the nucleotide sequence of the second half thereof.

[69543] An enzyme complex designated DICER COMPLEX, `dices` the VGAM1969 folded precursor RNA into VGAM1969 RNA, herein designated VGAM RNA, a single stranded ~22 nt long RNA segment. As is known in the art, `dicing` of a hairpin structured RNA precursor product into a short ~22nt RNA segment is catalyzed by an enzyme complex comprising an enzyme called Dicer together with other necessary proteins. A probable (over 62%) nucleotide sequence of VGAM1969 RNA is designated SEQ ID:4680, and is provided hereinbelow with reference to the sequence listing part.

[69544] VGAM1969 host target gene, herein designated VGAM HOST TARGET GENE, encodes a corresponding messenger RNA, VGAM1969 host target RNA, herein designated VGAM HOST TARGET RNA. VGAM1969 host target RNA

comprises three regions, as is typical of mRNA of a protein coding gene: a 5` untranslated region, a protein coding region and a 3` untranslated region, designated 5`UTR, PROTEIN CODING and 3`UTR respectively.

[69545] VGAM1969 RNA, herein designated VGAM RNA, binds complementarily to one or more host target binding sites located in untranslated regions of VGAM1969 host target RNA, herein designated VGAM HOST TARGET RNA. This complementary binding is due to the fact that the nucleotide sequence of VGAM1969 RNA is an accurate or a partial inversed-reversed sequence of the nucleotide sequence of each of the host target binding sites. As an illustration, Fig. 1 shows three such host target binding sites, designated BINDING SITE I, BINDING SITE II and BINDING SITE III respectively. It is appreciated that the number of host target binding sites shown in Fig. 1 is meant as an illustration only, and is not meant to be limiting - VGAM1969 RNA, herein designated VGAM RNA, may have a different number of host target binding sites in untranslated regions of a VGAM1969 host target RNA, herein designated VGAM HOST TARGET RNA. It is further appreciated that while Fig. 1 depicts host target binding sites in the 3`UTR region, this is meant as an example

only - these host target binding sites may be located in the 3`UTR region, the 5`UTR region, or in both 3`UTR and 5`UTR regions.

[69546] The complementary binding of VGAM1969 RNA, herein designated VGAM RNA, to host target binding sites on VGAM1969 host target RNA, herein designated VGAM HOST TARGET RNA, such as BINDING SITE I, BINDING SITE II and BINDING SITE III, inhibits translation of VGAM1969 host target RNA into VGAM1969 host target protein, herein designated VGAM HOST TARGET PROTEIN. VGAM host target protein is therefore outlined by a broken line.

[69547] It is appreciated that VGAM1969 host target gene, herein designated VGAM HOST TARGET GENE, in fact represents a plurality of VGAM1969 host target genes. The mRNA of each one of this plurality of VGAM1969 host target genes comprises one or more host target binding sites, each having a nucleotide sequence which is at least partly complementary to VGAM1969 RNA, herein designated VGAM RNA, and which when bound by VGAM1969 RNA causes inhibition of translation of respective one or more VGAM1969 host target proteins.

[69548] It is further appreciated by one skilled in the art that the mode of translational inhibition illustrated by Fig. 1 with

specific reference to translational inhibition exerted by VGAM1969 gene, herein designated VGAM GENE, on one or more VGAM1969 host target gene, herein designated VGAM HOST TARGET GENE, is in fact common to other known non-viral miRNA genes. As mentioned hereinabove with reference to the background section, although a specific complementary binding site has been demonstrated only for some of the known miRNA genes (primarily Lin-4 and Let-7), all other recently discovered miRNA genes are also believed by those skilled in the art to modulate expression of other genes by complementary binding, although specific complementary binding sites of these other miRNA genes have not yet been found (Ruvkun G., `Perspective: Glimpses of a tiny RNA world`, Science 294,779 (2001)).

[69549] It is yet further appreciated that a function of VGAM1969 is inhibition of expression of host target genes, as part of a novel viral mechanism of attacking a host. Accordingly, utilities of VGAM1969 include diagnosis, prevention and treatment of viral infection by Rana Tigrina Ranavirus. Specific functions, and accordingly utilities, of VGAM1969 correlate with, and may be deduced from, the identity of the host target genes which VGAM1969 binds and in-

hibits, and the function of these host target genes, as elaborated hereinbelow.

[69550] Nucleotide sequences of the VGAM1969 precursor RNA, herein designated VGAM PRECURSOR RNA, and of the `diced` VGAM1969 RNA, herein designated VGAM RNA, and a schematic representation of the secondary folding of VGAM1969 folded precursor RNA, herein designated VGAM FOLDED PRECURSOR RNA, of VGAM1969 are further described hereinbelow with reference to Table 1.

[69551] Nucleotide sequences of host target binding sites, such as BINDING SITE-I, BINDING SITE-II and BINDING SITE-III of Fig. 1, found on VGAM1969 host target RNA, and schematic representation of the complementarity of each of these host target binding sites to VGAM1969 RNA, herein designated VGAM RNA, are described hereinbelow with reference to Table 2.

[69552] As mentioned hereinabove with reference to Fig. 1, a function of VGAM1969 gene, herein designated VGAM is inhibition of expression of VGAM1969 target genes. It is appreciated that specific functions, and accordingly utilities, of VGAM1969 correlate with, and may be deduced from, the identity of the target genes which VGAM1969 binds and inhibits, and the function of these target genes,

as elaborated hereinbelow.

[69553] FLJ21432 (Accession NM_024551) is a VGAM1969 host target gene. FLJ21432 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by FLJ21432, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of FLJ21432 BINDING SITE, designated SEQ ID:23767, to the nucleotide sequence of VGAM1969 RNA, herein designated VGAM RNA, also designated SEQ ID:4680.

[69554] A function of VGAM1969 is therefore inhibition of FLJ21432 (Accession NM_024551). Accordingly, utilities of VGAM1969 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ21432. KIAA1538 (Accession XM_049474) is another VGAM1969 host target gene. KIAA1538 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by KIAA1538, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of KIAA1538 BINDING SITE, designated SEQ ID:35432, to the

nucleotide sequence of VGAM1969 RNA, herein designated VGAM RNA, also designated SEQ ID:4680.

[69555] Another function of VGAM1969 is therefore inhibition of KIAA1538 (Accession XM_049474). Accordingly, utilities of VGAM1969 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1538. LOC143914 (Accession XM_084654) is another VGAM1969 host target gene. LOC143914 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by LOC143914, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC143914 BINDING SITE, designated SEQ ID:37635, to the nucleotide sequence of VGAM1969 RNA, herein designated VGAM RNA, also designated SEQ ID:4680.

[69556] Another function of VGAM1969 is therefore inhibition of LOC143914 (Accession XM_084654). Accordingly, utilities of VGAM1969 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC143914. LOC146795 (Accession XM_085593) is another VGAM1969 host target gene. LOC146795 BINDING SITE is HOST TARGET binding site found in the 5` un-

translated region of mRNA encoded by LOC146795, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC146795 BINDING SITE, designated SEQ ID:38243, to the nucleotide sequence of VGAM1969 RNA, herein designated VGAM RNA, also designated SEQ ID:4680.

[69557] Another function of VGAM1969 is therefore inhibition of LOC146795 (Accession XM_085593). Accordingly, utilities of VGAM1969 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC146795. LOC154860 (Accession XM_098623) is another VGAM1969 host target gene. LOC154860 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC154860, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC154860 BINDING SITE, designated SEQ ID:41736, to the nucleotide sequence of VGAM1969 RNA, herein designated VGAM RNA, also designated SEQ ID:4680.

[69558] Another function of VGAM1969 is therefore inhibition of LOC154860 (Accession XM_098623). Accordingly, utilities

of VGAM1969 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC154860. Fig. 1 further provides a conceptual description of a novel bioinformatically detected viral gene of the present invention, referred to here as Viral Genomic Address Messenger 1970 (VGAM1970) viral gene, which modulates expression of respective host target genes thereof, the function and utility of which host target genes is known in the art.

[69559] VGAM1970 is a novel bioinformatically detected regulatory, non protein coding, viral micro RNA (miRNA) gene. The method by which VGAM1970 was detected is described hereinabove with reference to Figs. 1-8.

[69560] VGAM1970 gene, herein designated VGAM GENE, is a viral gene contained in the genome of Rana Tigrina Ranavirus. VGAM1970 host target gene, herein designated VGAM HOST TARGET GENE, is a human gene contained in the human genome.

[69561] VGAM1970 gene encodes a VGAM1970 precursor RNA, herein designated VGAM PRECURSOR RNA. Similar to other miRNA genes, and unlike most ordinary genes, VGAM1970 precursor RNA does not encode a protein. A nucleotide sequence identical or highly similar to the nu-

cleotide sequence of VGAM1970 precursor RNA is designated SEQ ID:1956, and is provided hereinbelow with reference to the sequence listing part. Nucleotide sequence SEQ ID:1956 is located at position 98318 relative to the genome of Rana Tigrina Ranavirus.

[69562] VGAM1970 precursor RNA folds onto itself, forming VGAM1970 folded precursor RNA, herein designated VGAM FOLDED PRECURSOR RNA, which has a two-dimensional `hairpin structure`. As is well known in the art, this `hairpin structure`, is typical of RNA encoded by miRNA genes, and is due to the fact that the nucleotide sequence of the first half of the RNA encoded by a miRNA gene is an accurate or partial inversed-reversed sequence of the nucleotide sequence of the second half thereof.

[69563] An enzyme complex designated DICER COMPLEX, `dices` the VGAM1970 folded precursor RNA into VGAM1970 RNA, herein designated VGAM RNA, a single stranded ~22 nt long RNA segment. As is known in the art, `dicing` of a hairpin structured RNA precursor product into a short ~22nt RNA segment is catalyzed by an enzyme complex comprising an enzyme called Dicer together with other necessary proteins. A probable (over 67%) nucleotide sequence of VGAM1970 RNA is designated SEQ ID:4681, and

is provided hereinbelow with reference to the sequence listing part.

[69564] VGAM1970 host target gene, herein designated VGAM HOST TARGET GENE, encodes a corresponding messenger RNA, VGAM1970 host target RNA, herein designated VGAM HOST TARGET RNA. VGAM1970 host target RNA comprises three regions, as is typical of mRNA of a protein coding gene: a 5` untranslated region, a protein coding region and a 3` untranslated region, designated 5`UTR, PROTEIN CODING and 3`UTR respectively.

[69565] VGAM1970 RNA, herein designated VGAM RNA, binds complementarily to one or more host target binding sites located in untranslated regions of VGAM1970 host target RNA, herein designated VGAM HOST TARGET RNA. This complementary binding is due to the fact that the nucleotide sequence of VGAM1970 RNA is an accurate or a partial inversed-reversed sequence of the nucleotide sequence of each of the host target binding sites. As an illustration, Fig. 1 shows three such host target binding sites, designated BINDING SITE I, BINDING SITE II and BINDING SITE III respectively. It is appreciated that the number of host target binding sites shown in Fig. 1 is meant as an illustration only, and is not meant to be limit-

ing - VGAM1970 RNA, herein designated VGAM RNA, may have a different number of host target binding sites in untranslated regions of a VGAM1970 host target RNA, herein designated VGAM HOST TARGET RNA. It is further appreciated that while Fig. 1 depicts host target binding sites in the 3`UTR region, this is meant as an example only - these host target binding sites may be located in the 3`UTR region, the 5`UTR region, or in both 3`UTR and 5`UTR regions.

[69566] The complementary binding of VGAM1970 RNA, herein designated VGAM RNA, to host target binding sites on VGAM1970 host target RNA, herein designated VGAM HOST TARGET RNA, such as BINDING SITE I, BINDING SITE II and BINDING SITE III, inhibits translation of VGAM1970 host target RNA into VGAM1970 host target protein, herein designated VGAM HOST TARGET PROTEIN. VGAM host target protein is therefore outlined by a broken line.

[69567] It is appreciated that VGAM1970 host target gene, herein designated VGAM HOST TARGET GENE, in fact represents a plurality of VGAM1970 host target genes. The mRNA of each one of this plurality of VGAM1970 host target genes comprises one or more host target binding sites, each having a nucleotide sequence which is at least partly com-

plementary to VGAM1970 RNA, herein designated VGAM RNA, and which when bound by VGAM1970 RNA causes inhibition of translation of respective one or more VGAM1970 host target proteins.

[69568] It is further appreciated by one skilled in the art that the mode of translational inhibition illustrated by Fig. 1 with specific reference to translational inhibition exerted by VGAM1970 gene, herein designated VGAM GENE, on one or more VGAM1970 host target gene, herein designated VGAM HOST TARGET GENE, is in fact common to other known non-viral miRNA genes. As mentioned hereinabove with reference to the background section, although a specific complementary binding site has been demonstrated only for some of the known miRNA genes (primarily Lin-4 and Let-7), all other recently discovered miRNA genes are also believed by those skilled in the art to modulate expression of other genes by complementary binding, although specific complementary binding sites of these other miRNA genes have not yet been found (Ruvkun G., `Perspective: Glimpses of a tiny RNA world`, Science 294,779 (2001)).

[69569] It is yet further appreciated that a function of VGAM1970 is inhibition of expression of host target genes, as part of

a novel viral mechanism of attacking a host. Accordingly, utilities of VGAM1970 include diagnosis, prevention and treatment of viral infection by Rana Tigrina Ranavirus. Specific functions, and accordingly utilities, of VGAM1970 correlate with, and may be deduced from, the identity of the host target genes which VGAM1970 binds and inhibits, and the function of these host target genes, as elaborated hereinbelow.

[69570] Nucleotide sequences of the VGAM1970 precursor RNA, herein designated VGAM PRECURSOR RNA, and of the `diced` VGAM1970 RNA, herein designated VGAM RNA, and a schematic representation of the secondary folding of VGAM1970 folded precursor RNA, herein designated VGAM FOLDED PRECURSOR RNA, of VGAM1970 are further described hereinbelow with reference to Table 1.

[69571] Nucleotide sequences of host target binding sites, such as BINDING SITE-I, BINDING SITE-II and BINDING SITE-III of Fig. 1, found on VGAM1970 host target RNA, and schematic representation of the complementarity of each of these host target binding sites to VGAM1970 RNA, herein designated VGAM RNA, are described hereinbelow with reference to Table 2.

[69572] As mentioned hereinabove with reference to Fig. 1, a

function of VGAM1970 gene, herein designated VGAM is inhibition of expression of VGAM1970 target genes. It is appreciated that specific functions, and accordingly utilities, of VGAM1970 correlate with, and may be deduced from, the identity of the target genes which VGAM1970 binds and inhibits, and the function of these target genes, as elaborated hereinbelow.

[69573] Casein Kinase 1, Gamma 2 (CSNK1G2, Accession NM_001319) is a VGAM1970 host target gene. CSNK1G2 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by CSNK1G2, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of CSNK1G2 BINDING SITE, designated SEQ ID:7006, to the nucleotide sequence of VGAM1970 RNA, herein designated VGAM RNA, also designated SEQ ID:4681.

[69574] A function of VGAM1970 is therefore inhibition of Casein Kinase 1, Gamma 2 (CSNK1G2, Accession NM_001319). Accordingly, utilities of VGAM1970 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CSNK1G2. Zinc Finger Protein 200

(ZNF200, Accession NM_003454) is another VGAM1970 host target gene. ZNF200 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by ZNF200, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of ZNF200 BINDING SITE, designated SEQ ID:9504, to the nucleotide sequence of VGAM1970 RNA, herein designated VGAM RNA, also designated SEQ ID:4681.

[69575] Another function of VGAM1970 is therefore inhibition of Zinc Finger Protein 200 (ZNF200, Accession NM_003454). Accordingly, utilities of VGAM1970 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ZNF200. BLP1 (Accession NM_031940) is another VGAM1970 host target gene. BLP1 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by BLP1, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of BLP1 BINDING SITE, designated SEQ ID:25686, to the nucleotide sequence of VGAM1970 RNA, herein designated

VGAM RNA, also designated SEQ ID:4681.

[69576] Another function of VGAM1970 is therefore inhibition of BLP1 (Accession NM_031940). Accordingly, utilities of VGAM1970 include diagnosis, prevention and treatment of diseases and clinical conditions associated with BLP1. GFR (Accession NM_012294) is another VGAM1970 host target gene. GFR BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by GFR, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of GFR BINDING SITE, designated SEQ ID:14633, to the nucleotide sequence of VGAM1970 RNA, herein designated VGAM RNA, also designated SEQ ID:4681.

[69577] Another function of VGAM1970 is therefore inhibition of GFR (Accession NM_012294). Accordingly, utilities of VGAM1970 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GFR. Interleukin 1 Receptor Accessory Protein-like 1 (IL1RAPL1, Accession NM_014271) is another VGAM1970 host target gene. IL1RAPL1 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded

by IL1RAPL1, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of IL1RAPL1 BINDING SITE, designated SEQ ID:15551, to the nucleotide sequence of VGAM1970 RNA, herein designated VGAM RNA, also designated SEQ ID:4681.

[69578] Another function of VGAM1970 is therefore inhibition of Interleukin 1 Receptor Accessory Protein-like 1 (IL1RAPL1, Accession NM_014271). Accordingly, utilities of VGAM1970 include diagnosis, prevention and treatment of diseases and clinical conditions associated with IL1RAPL1. LOC143187 (Accession NM_145206) is another VGAM1970 host target gene. LOC143187 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC143187, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC143187 BINDING SITE, designated SEQ ID:29746, to the nucleotide sequence of VGAM1970 RNA, herein designated VGAM RNA, also designated SEQ ID:4681.

[69579] Another function of VGAM1970 is therefore inhibition of

LOC143187 (Accession NM_145206). Accordingly, utilities of VGAM1970 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC143187. LOC149711 (Accession XM_097720) is another VGAM1970 host target gene. LOC149711 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by LOC149711, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC149711 BINDING SITE, designated SEQ ID:41070, to the nucleotide sequence of VGAM1970 RNA, herein designated VGAM RNA, also designated SEQ ID:4681.

[69580] Another function of VGAM1970 is therefore inhibition of LOC149711 (Accession XM_097720). Accordingly, utilities of VGAM1970 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC149711. LOC90906 (Accession XM_034809) is another VGAM1970 host target gene. LOC90906 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC90906, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illus-

trates the complementarity of the nucleotide sequences of LOC90906 BINDING SITE, designated SEQ ID:32151, to the nucleotide sequence of VGAM1970 RNA, herein designated VGAM RNA, also designated SEQ ID:4681.

[69581] Another function of VGAM1970 is therefore inhibition of LOC90906 (Accession XM_034809). Accordingly, utilities of VGAM1970 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC90906. Fig. 1 further provides a conceptual description of a novel bioinformatically detected viral gene of the present invention, referred to here as Viral Genomic Address Messenger 1971 (VGAM1971) viral gene, which modulates expression of respective host target genes thereof, the function and utility of which host target genes is known in the art.

[69582] VGAM1971 is a novel bioinformatically detected regulatory, non protein coding, viral micro RNA (miRNA) gene. The method by which VGAM1971 was detected is described hereinabove with reference to Figs. 1-8.

[69583] VGAM1971 gene, herein designated VGAM GENE, is a viral gene contained in the genome of Rana Tigrina Ranavirus. VGAM1971 host target gene, herein designated VGAM HOST TARGET GENE, is a human gene contained in the

human genome.

[69584] VGAM1971 gene encodes a VGAM1971 precursor RNA, herein designated VGAM PRECURSOR RNA. Similar to other miRNA genes, and unlike most ordinary genes, VGAM1971 precursor RNA does not encode a protein. A nucleotide sequence identical or highly similar to the nucleotide sequence of VGAM1971 precursor RNA is designated SEQ ID:1957, and is provided hereinbelow with reference to the sequence listing part. Nucleotide sequence SEQ ID:1957 is located at position 90823 relative to the genome of Rana Tigrina Ranavirus.

[69585] VGAM1971 precursor RNA folds onto itself, forming VGAM1971 folded precursor RNA, herein designated VGAM FOLDED PRECURSOR RNA, which has a two-dimensional `hairpin structure`. As is well known in the art, this `hairpin structure`, is typical of RNA encoded by miRNA genes, and is due to the fact that the nucleotide sequence of the first half of the RNA encoded by a miRNA gene is an accurate or partial inversed-reversed sequence of the nucleotide sequence of the second half thereof.

[69586] An enzyme complex designated DICER COMPLEX, `dices` the VGAM1971 folded precursor RNA into VGAM1971 RNA, herein designated VGAM RNA, a single stranded ~22

nt long RNA segment. As is known in the art, `dicing` of a hairpin structured RNA precursor product into a short ~22nt RNA segment is catalyzed by an enzyme complex comprising an enzyme called Dicer together with other necessary proteins. A probable (over 42%) nucleotide sequence of VGAM1971 RNA is designated SEQ ID:4682, and is provided hereinbelow with reference to the sequence listing part.

[69587] VGAM1971 host target gene, herein designated VGAM HOST TARGET GENE, encodes a corresponding messenger RNA, VGAM1971 host target RNA, herein designated VGAM HOST TARGET RNA. VGAM1971 host target RNA comprises three regions, as is typical of mRNA of a protein coding gene: a 5` untranslated region, a protein coding region and a 3` untranslated region, designated 5`UTR, PROTEIN CODING and 3`UTR respectively.

[69588] VGAM1971 RNA, herein designated VGAM RNA, binds complementarily to one or more host target binding sites located in untranslated regions of VGAM1971 host target RNA, herein designated VGAM HOST TARGET RNA. This complementary binding is due to the fact that the nucleotide sequence of VGAM1971 RNA is an accurate or a partial inversed-reversed sequence of the nucleotide se-

quence of each of the host target binding sites. As an illustration, Fig. 1 shows three such host target binding sites, designated BINDING SITE I, BINDING SITE II and BINDING SITE III respectively. It is appreciated that the number of host target binding sites shown in Fig. 1 is meant as an illustration only, and is not meant to be limiting - VGAM1971 RNA, herein designated VGAM RNA, may have a different number of host target binding sites in untranslated regions of a VGAM1971 host target RNA, herein designated VGAM HOST TARGET RNA. It is further appreciated that while Fig. 1 depicts host target binding sites in the 3`UTR region, this is meant as an example only - these host target binding sites may be located in the 3`UTR region, the 5`UTR region, or in both 3`UTR and 5`UTR regions.

[69589] The complementary binding of VGAM1971 RNA, herein designated VGAM RNA, to host target binding sites on VGAM1971 host target RNA, herein designated VGAM HOST TARGET RNA, such as BINDING SITE I, BINDING SITE II and BINDING SITE III, inhibits translation of VGAM1971 host target RNA into VGAM1971 host target protein, herein designated VGAM HOST TARGET PROTEIN. VGAM host target protein is therefore outlined by a broken line.

[69590] It is appreciated that VGAM1971 host target gene, herein designated VGAM HOST TARGET GENE, in fact represents a plurality of VGAM1971 host target genes. The mRNA of each one of this plurality of VGAM1971 host target genes comprises one or more host target binding sites, each having a nucleotide sequence which is at least partly complementary to VGAM1971 RNA, herein designated VGAM RNA, and which when bound by VGAM1971 RNA causes inhibition of translation of respective one or more VGAM1971 host target proteins.

[69591] It is further appreciated by one skilled in the art that the mode of translational inhibition illustrated by Fig. 1 with specific reference to translational inhibition exerted by VGAM1971 gene, herein designated VGAM GENE, on one or more VGAM1971 host target gene, herein designated VGAM HOST TARGET GENE, is in fact common to other known non-viral miRNA genes. As mentioned hereinabove with reference to the background section, although a specific complementary binding site has been demonstrated only for some of the known miRNA genes (primarily Lin-4 and Let-7), all other recently discovered miRNA genes are also believed by those skilled in the art to modulate expression of other genes by complementary binding, al-

though specific complementary binding sites of these other miRNA genes have not yet been found (Ruvkun G., `Perspective: Glimpses of a tiny RNA world`, Science 294,779 (2001)).

[69592] It is yet further appreciated that a function of VGAM1971 is inhibition of expression of host target genes, as part of a novel viral mechanism of attacking a host. Accordingly, utilities of VGAM1971 include diagnosis, prevention and treatment of viral infection by Rana Tigrina Ranavirus. Specific functions, and accordingly utilities, of VGAM1971 correlate with, and may be deduced from, the identity of the host target genes which VGAM1971 binds and inhibits, and the function of these host target genes, as elaborated hereinbelow.

[69593] Nucleotide sequences of the VGAM1971 precursor RNA, herein designated VGAM PRECURSOR RNA, and of the `diced` VGAM1971 RNA, herein designated VGAM RNA, and a schematic representation of the secondary folding of VGAM1971 folded precursor RNA, herein designated VGAM FOLDED PRECURSOR RNA, of VGAM1971 are further described hereinbelow with reference to Table 1.

[69594] Nucleotide sequences of host target binding sites, such as BINDING SITE-I, BINDING SITE-II and BINDING SITE-III of

Fig. 1, found on VGAM1971 host target RNA, and schematic representation of the complementarity of each of these host target binding sites to VGAM1971 RNA, herein designated VGAM RNA, are described hereinbelow with reference to Table 2.

[69595] As mentioned hereinabove with reference to Fig. 1, a function of VGAM1971 gene, herein designated VGAM is inhibition of expression of VGAM1971 target genes. It is appreciated that specific functions, and accordingly utilities, of VGAM1971 correlate with, and may be deduced from, the identity of the target genes which VGAM1971 binds and inhibits, and the function of these target genes, as elaborated hereinbelow.

[69596] Androgen Receptor (dihydrotestosterone receptor; testicular feminization; spinal and bulbar muscular atrophy; Kennedy disease) (AR, Accession NM_000044) is a VGAM1971 host target gene. AR BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by AR, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of AR BINDING SITE, designated SEQ ID:5487, to the nucleotide sequence of

VGAM1971 RNA, herein designated VGAM RNA, also designated SEQ ID:4682.

[69597] A function of VGAM1971 is therefore inhibition of Androgen Receptor (dihydrotestosterone receptor; testicular feminization; spinal and bulbar muscular atrophy; Kennedy disease) (AR, Accession NM_000044), a gene which are involved in the regulation of eukaryotic gene expression and affect cellular proliferation and differentiation in target tissues. Accordingly, utilities of VGAM1971 include diagnosis, prevention and treatment of diseases and clinical conditions associated with AR. The function of AR has been established by previous studies. The length of a polymorphic CAG repeat sequence occurring in the androgen receptor gene is inversely correlated with transcriptional activity by the androgen receptor. Men who possess exceptionally long CAG repeat lengths experience clinical androgen insensitivity, presumably related to reduced transcriptional activity of the receptor. Prostate carcinogenesis is dependent on androgens. Because shorter CAG repeat lengths are associated with high transcriptional activity of AR, Irvine et al. (1995) proposed that men with shorter repeat lengths will be at higher risk for prostate cancer. Some indirect evidence is consistent with

this hypothesis. African-Americans, who have generally shorter CAG repeat lengths in the AR gene, have a higher incidence and mortality rate from prostate cancer (Coetzee and Ross, 1994). Moreover, because of X linkage, a history of disease in a brother carries greater risk than paternal history. Against this background, Giovannucci et al. (1997) conducted within the Physician's Health Study a nested case-controlled study of 587 newly diagnosed cases of prostate cancer detected between 1982 and 1995, and 588 controls without prostate cancer. They found an association between fewer androgen receptor gene CAG repeats and higher risk of total prostate cancer. In particular, a shorter CAG repeat sequence was associated with cancers characterized by extraprostatic extension, distant metastases, or high histologic grade. Variability in the CAG repeat length was not associated with low-grade or low-stage disease. Animal model experiments lend further support to the function of AR. Abel et al. (2001) created transgenic mice that developed many of the motor symptoms of SBMA and had a truncated, highly expanded androgen receptor gene driven by the neurofilament light chain (OMIM Ref. No. 162280) promoter. In addition, transgenic mice created with the prion protein

(OMIM Ref. No. 176640) promoter developed widespread neurologic disease, reminiscent of juvenile forms of other polyglutamine diseases. The distribution of neurologic symptoms depended on the expression level and pattern of the promoter used, rather than on specific characteristics of androgen receptor metabolism or function. The transgenic mice that were generated developed neuronal intranuclear inclusions (NIIs), a hallmark of SBMA and the other polyglutamine diseases. These inclusions were ubiquitinated and sequestered molecular chaperones, components of the 26S proteasome (OMIM Ref. No. 604449) and the transcriptional activator CREB-binding protein. Apart from the presence of NIIs, evidence of neuropathology or neurogenic muscle atrophy was absent, suggesting to the authors that the neurologic phenotypes observed were the result of neuronal dysfunction rather than neuronal degeneration.

[69598] It is appreciated that the abovementioned animal model for AR is acknowledged by those skilled in the art as a scientifically valid animal model, as can be further appreciated from the publications sited hereinbelow.

[69599] Full details of the abovementioned studies are described in the following publications, the disclosure of which are

hereby incorporated by reference:

[69600] Abel, A.; Walcott, J.; Woods, J.; Duda, J.; Merry, D. E. : Expression of expanded repeat androgen receptor produces neurologic disease in transgenic mice. Hum. Molec. Genet. 10: 107-116, 2001. ; and

[69601] Irvine, R. A.; Yu, M. C.; Ross, R. K.; Coetzee, G. A. : The CAG and GGC microsatellites of the androgen receptor gene are in linkage disequilibrium in men with prostate cancer. Cancer.

[69602] Further studies establishing the function and utilities of AR are found in John Hopkins OMIM database record ID 313700, and in sited publications numbered 8395-8396, 9166-8409, 8413, 8431-8439, 1634, 8440-8449, 9181-8455, 9182, 8805, 9183, 9184, 8809, 9185, 9186-9187, 8811, 9188-8818, 1230, 8819, 9189, 9190-8825, 8229, 8838, 8976-8981, 311 and 8982-8995 listed in the bibliography section hereinbelow, which are also hereby incorporated by reference.Insulin Receptor-related Receptor (INSRR, Accession XM_043563) is another VGAM1971 host target gene. INSRR BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by INSRR, corresponding to a HOST TARGET binding site such as BINDING

SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of INSRR BINDING SITE, designated SEQ ID:33962, to the nucleotide sequence of VGAM1971 RNA, herein designated VGAM RNA, also designated SEQ ID:4682.

[69603] Another function of VGAM1971 is therefore inhibition of Insulin Receptor-related Receptor (INSRR, Accession XM_043563), a gene which phosphorylates the insulin receptor substrates irs-1 and irs-2. Accordingly, utilities of VGAM1971 include diagnosis, prevention and treatment of diseases and clinical conditions associated with INSRR. The function of INSRR has been established by previous studies. Shier and Watt (1989) isolated genomic DNA that appeared to encode a novel receptor that was structurally as similar to the insulin receptor (OMIM Ref. No. 147670) and the IGF1 receptor (OMIM Ref. No. 147370) as the last two are to each other. This similarity suggested that the insulin receptor-related receptor (IRR) mediates the action of a ligand that is identical or very similar to insulin, IGF1, or IGF2. Kurachi et al. (1992) isolated IRR cDNA from rat brain and examined the expression of IRR mRNA in a variety of rat tissues. They demonstrated that, in contrast to the wide distribution of the insulin receptor and the IGF1

receptor mRNAs, the IRR mRNA is expressed preferentially in the kidney, which indicates that it has unique functions as a member of the insulin receptor family. Using genomic DNA encoding part of IRR in Southern blot analysis of DNA from human-mouse cell hybrids, Shier et al. (1990) assigned the INSRR gene to human chromosome 1. By radiation hybrid analysis, Whitmore et al. (1999) mapped the gene to chromosome 1q21-q23

[69604] Full details of the abovementioned studies are described in the following publications, the disclosure of which are hereby incorporated by reference:

[69605] Shier, P.; Willard, H. F.; Watt, V. M. : Localization of the insulin receptor-related receptor gene to human chromosome 1. Cytogenet. Cell Genet. 54: 80-81, 1990. ; and

[69606] Whitmore, T. E.; Maurer, M. F.; Day, H. L.; Jelmberg, A. C.; Dasovich, M. M.; Sundborg, L. M.; Burkhead, S. K.; Heipel, M. D.; Madden, K. L.; Kramer, J. M.; Kuijper, J. L.; Xu, W. F.; Ja.

[69607] Further studies establishing the function and utilities of INSRR are found in John Hopkins OMIM database record ID 147671, and in sited publications numbered 3210-3213 listed in the bibliography section hereinbelow, which are also hereby incorporated by refer-

ence.6-phosphofructo-2-kinase/fructose-2,6-biphosphatase 4 (PFKFB4, Accession NM_004567) is another VGAM1971 host target gene. PFKFB4 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by PFKFB4, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of PFKFB4 BINDING SITE, designated SEQ ID:10910, to the nucleotide sequence of VGAM1971 RNA, herein designated VGAM RNA, also designated SEQ ID:4682.

[69608] Another function of VGAM1971 is therefore inhibition of 6-phosphofructo-2-kinase/fructose-2,6-biphosphatase 4 (PFKFB4, Accession NM_004567), a gene which catalizes synthesis and degradation of fructose 2,6-bisphosphate. Accordingly, utilities of VGAM1971 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PFKFB4. The function of PFKFB4 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM1316.Phosphomannomutase 2 (PMM2, Accession XM_050755) is another VGAM1971 host target gene.

PMM2 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by PMM2, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of PMM2 BINDING SITE, designated SEQ ID:35682, to the nucleotide sequence of VGAM1971 RNA, herein designated VGAM RNA, also designated SEQ ID:4682.

[69609] Another function of VGAM1971 is therefore inhibition of Phosphomannomutase 2 (PMM2, Accession XM_050755). Accordingly, utilities of VGAM1971 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PMM2. Protein Kinase C, Alpha Binding Protein (PRKCABP, Accession NM_012407) is another VGAM1971 host target gene. PRKCABP BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by PRKCABP, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of PRKCABP BINDING SITE, designated SEQ ID:14788, to the nucleotide sequence of VGAM1971 RNA, herein designated VGAM

RNA, also designated SEQ ID:4682.

[69610] Another function of VGAM1971 is therefore inhibition of Protein Kinase C, Alpha Binding Protein (PRKCABP, Accession NM_012407), a gene which may interact with the catalytic domain of protein C kinase. Accordingly, utilities of VGAM1971 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PRKCABP. The function of PRKCABP and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM1958.Parathyroid Hormone-like Hormone (PTHLH, Accession NM_002820) is another VGAM1971 host target gene. PTHLH BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by PTHLH, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of PTHLH BINDING SITE, designated SEQ ID:8687, to the nucleotide sequence of VGAM1971 RNA, herein designated VGAM RNA, also designated SEQ ID:4682.

[69611] Another function of VGAM1971 is therefore inhibition of Parathyroid Hormone-like Hormone (PTHLH, Accession

NM_002820), a gene which plays a physiological role in lactation, possibly as a hormone for the mobilization and/or transfer of calcium to the milk. Accordingly, utilities of VGAM1971 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PTHLH. The function of PTHLH and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM1590.Chromosome 2 Open Reading Frame 6 (C2orf6, Accession NM_018221) is another VGAM1971 host target gene. C2orf6 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by C2orf6, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of C2orf6 BINDING SITE, designated SEQ ID:20142, to the nucleotide sequence of VGAM1971 RNA, herein designated VGAM RNA, also designated SEQ ID:4682.

[69612] Another function of VGAM1971 is therefore inhibition of Chromosome 2 Open Reading Frame 6 (C2orf6, Accession NM_018221). Accordingly, utilities of VGAM1971 include diagnosis, prevention and treatment of diseases and clini-

cal conditions associated with C2orf6. DKFZp547I014 (Accession NM_020217) is another VGAM1971 host target gene. DKFZp547I014 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by DKFZp547I014, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of DKFZp547I014 BINDING SITE, designated SEQ ID:21467, to the nucleotide sequence of VGAM1971 RNA, herein designated VGAM RNA, also designated SEQ ID:4682.

[69613] Another function of VGAM1971 is therefore inhibition of DKFZp547I014 (Accession NM_020217). Accordingly, utilities of VGAM1971 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZp547I014. EDR2 (Accession XM_018136) is another VGAM1971 host target gene. EDR2 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by EDR2, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of EDR2 BINDING SITE, designated SEQ ID:30339, to the nucleotide se-

quence of VGAM1971 RNA, herein designated VGAM RNA, also designated SEQ ID:4682.

[69614] Another function of VGAM1971 is therefore inhibition of EDR2 (Accession XM_018136). Accordingly, utilities of VGAM1971 include diagnosis, prevention and treatment of diseases and clinical conditions associated with EDR2. FLJ10700 (Accession NM_018182) is another VGAM1971 host target gene. FLJ10700 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by FLJ10700, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of FLJ10700 BINDING SITE, designated SEQ ID:20020, to the nucleotide sequence of VGAM1971 RNA, herein designated VGAM RNA, also designated SEQ ID:4682.

[69615] Another function of VGAM1971 is therefore inhibition of FLJ10700 (Accession NM_018182). Accordingly, utilities of VGAM1971 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ10700. FLJ11160 (Accession NM_018344) is another VGAM1971 host target gene. FLJ11160 BINDING SITE is HOST TARGET binding site found in the 3` untranslated

region of mRNA encoded by FLJ11160, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of FLJ11160 BINDING SITE, designated SEQ ID:20353, to the nucleotide sequence of VGAM1971 RNA, herein designated VGAM RNA, also designated SEQ ID:4682.

[69616] Another function of VGAM1971 is therefore inhibition of FLJ11160 (Accession NM_018344). Accordingly, utilities of VGAM1971 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ11160. FLJ12270 (Accession NM_030581) is another VGAM1971 host target gene. FLJ12270 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by FLJ12270, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of FLJ12270 BINDING SITE, designated SEQ ID:24954, to the nucleotide sequence of VGAM1971 RNA, herein designated VGAM RNA, also designated SEQ ID:4682.

[69617] Another function of VGAM1971 is therefore inhibition of FLJ12270 (Accession NM_030581). Accordingly, utilities of

VGAM1971 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ12270. FLJ12294 (Accession NM_025100) is another VGAM1971 host target gene. FLJ12294 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by FLJ12294, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of FLJ12294 BINDING SITE, designated SEQ ID:24746, to the nucleotide sequence of VGAM1971 RNA, herein designated VGAM RNA, also designated SEQ ID:4682.

[69618] Another function of VGAM1971 is therefore inhibition of FLJ12294 (Accession NM_025100). Accordingly, utilities of VGAM1971 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ12294. FLJ14297 (Accession NM_024903) is another VGAM1971 host target gene. FLJ14297 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by FLJ14297, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of FLJ14297

BINDING SITE, designated SEQ ID:24392, to the nucleotide sequence of VGAM1971 RNA, herein designated VGAM RNA, also designated SEQ ID:4682.

[69619] Another function of VGAM1971 is therefore inhibition of FLJ14297 (Accession NM_024903). Accordingly, utilities of VGAM1971 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ14297. FLJ22329 (Accession NM_024656) is another VGAM1971 host target gene. FLJ22329 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by FLJ22329, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of FLJ22329 BINDING SITE, designated SEQ ID:23958, to the nucleotide sequence of VGAM1971 RNA, herein designated VGAM RNA, also designated SEQ ID:4682.

[69620] Another function of VGAM1971 is therefore inhibition of FLJ22329 (Accession NM_024656). Accordingly, utilities of VGAM1971 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ22329. IKKE (Accession NM_014002) is another VGAM1971 host target gene. IKKE BINDING SITE is HOST

TARGET binding site found in the 5` untranslated region of mRNA encoded by IKKE, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of IKKE BINDING SITE, designated SEQ ID:15202, to the nucleotide sequence of VGAM1971 RNA, herein designated VGAM RNA, also designated SEQ ID:4682.

[69621] Another function of VGAM1971 is therefore inhibition of IKKE (Accession NM_014002). Accordingly, utilities of VGAM1971 include diagnosis, prevention and treatment of diseases and clinical conditions associated with IKKE. KIAA1344 (Accession XM_051699) is another VGAM1971 host target gene. KIAA1344 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by KIAA1344, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of KIAA1344 BINDING SITE, designated SEQ ID:35874, to the nucleotide sequence of VGAM1971 RNA, herein designated VGAM RNA, also designated SEQ ID:4682.

[69622] Another function of VGAM1971 is therefore inhibition of

KIAA1344 (Accession XM_051699). Accordingly, utilities of VGAM1971 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1344. MAP (Accession NM_022818) is another VGAM1971 host target gene. MAP BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by MAP, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of MAP BINDING SITE, designated SEQ ID:23097, to the nucleotide sequence of VGAM1971 RNA, herein designated VGAM RNA, also designated SEQ ID:4682.

[69623] Another function of VGAM1971 is therefore inhibition of MAP (Accession NM_022818). Accordingly, utilities of VGAM1971 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MAP. MGC13061 (Accession NM_032322) is another VGAM1971 host target gene. MGC13061 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by MGC13061, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complemen-

tarity of the nucleotide sequences of MGC13061 BINDING SITE, designated SEQ ID:26130, to the nucleotide sequence of VGAM1971 RNA, herein designated VGAM RNA, also designated SEQ ID:4682.

[69624] Another function of VGAM1971 is therefore inhibition of MGC13061 (Accession NM_032322). Accordingly, utilities of VGAM1971 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC13061. MGC1842 (Accession XM_037797) is another VGAM1971 host target gene. MGC1842 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by MGC1842, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of MGC1842 BINDING SITE, designated SEQ ID:32688, to the nucleotide sequence of VGAM1971 RNA, herein designated VGAM RNA, also designated SEQ ID:4682.

[69625] Another function of VGAM1971 is therefore inhibition of MGC1842 (Accession XM_037797). Accordingly, utilities of VGAM1971 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC1842. PRO0943 (Accession NM_018568) is another

VGAM1971 host target gene. PRO0943 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by PRO0943, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of PRO0943 BINDING SITE, designated SEQ ID:20651, to the nucleotide sequence of VGAM1971 RNA, herein designated VGAM RNA, also designated SEQ ID:4682.

[69626] Another function of VGAM1971 is therefore inhibition of PRO0943 (Accession NM_018568). Accordingly, utilities of VGAM1971 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PRO0943. SEC14-like 1 (S. cerevisiae) (SEC14L1, Accession NM_003003) is another VGAM1971 host target gene. SEC14L1 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by SEC14L1, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of SEC14L1 BINDING SITE, designated SEQ ID:8903, to the nucleotide sequence of VGAM1971 RNA, herein designated VGAM RNA, also designated SEQ

ID:4682.

[69627] Another function of VGAM1971 is therefore inhibition of SEC14-like 1 (S. cerevisiae) (SEC14L1, Accession NM_003003). Accordingly, utilities of VGAM1971 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SEC14L1. Solute Carrier Family 26, Member 9 (SLC26A9, Accession NM_052934) is another VGAM1971 host target gene. SLC26A9 BINDING SITE1 and SLC26A9 BINDING SITE2 are HOST TARGET binding sites found in untranslated regions of mRNA encoded by SLC26A9, corresponding to HOST TARGET binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of SLC26A9 BINDING SITE1 and SLC26A9 BINDING SITE2, designated SEQ ID:27494 and SEQ ID:28632 respectively, to the nucleotide sequence of VGAM1971 RNA, herein designated VGAM RNA, also designated SEQ ID:4682.

[69628] Another function of VGAM1971 is therefore inhibition of Solute Carrier Family 26, Member 9 (SLC26A9, Accession NM_052934). Accordingly, utilities of VGAM1971 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SLC26A9. Zinc Finger Pro-

tein 387 (ZNF387, Accession NM_014682) is another VGAM1971 host target gene. ZNF387 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by ZNF387, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of ZNF387 BINDING SITE, designated SEQ ID:16180, to the nucleotide sequence of VGAM1971 RNA, herein designated VGAM RNA, also designated SEQ ID:4682.

[69629] Another function of VGAM1971 is therefore inhibition of Zinc Finger Protein 387 (ZNF387, Accession NM_014682). Accordingly, utilities of VGAM1971 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ZNF387. LOC153688 (Accession XM_098416) is another VGAM1971 host target gene. LOC153688 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC153688, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC153688 BINDING SITE, designated SEQ ID:41660, to the nucleotide sequence of

VGAM1971 RNA, herein designated VGAM RNA, also designated SEQ ID:4682.

[69630] Another function of VGAM1971 is therefore inhibition of LOC153688 (Accession XM_098416). Accordingly, utilities of VGAM1971 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC153688. LOC154428 (Accession XM_098528) is another VGAM1971 host target gene. LOC154428 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by LOC154428, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC154428 BINDING SITE, designated SEQ ID:41703, to the nucleotide sequence of VGAM1971 RNA, herein designated VGAM RNA, also designated SEQ ID:4682.

[69631] Another function of VGAM1971 is therefore inhibition of LOC154428 (Accession XM_098528). Accordingly, utilities of VGAM1971 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC154428. LOC157273 (Accession XM_098743) is another VGAM1971 host target gene. LOC157273 BINDING SITE is HOST TARGET binding site found in the 3` un-

translated region of mRNA encoded by LOC157273, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC157273 BINDING SITE, designated SEQ ID:41786, to the nucleotide sequence of VGAM1971 RNA, herein designated VGAM RNA, also designated SEQ ID:4682.

[69632] Another function of VGAM1971 is therefore inhibition of LOC157273 (Accession XM_098743). Accordingly, utilities of VGAM1971 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC157273. LOC163255 (Accession XM_092121) is another VGAM1971 host target gene. LOC163255 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by LOC163255, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC163255 BINDING SITE, designated SEQ ID:40109, to the nucleotide sequence of VGAM1971 RNA, herein designated VGAM RNA, also designated SEQ ID:4682.

[69633] Another function of VGAM1971 is therefore inhibition of LOC163255 (Accession XM_092121). Accordingly, utilities

of VGAM1971 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC163255. LOC220020 (Accession XM_167821) is another VGAM1971 host target gene. LOC220020 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC220020, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC220020 BINDING SITE, designated SEQ ID:44867, to the nucleotide sequence of VGAM1971 RNA, herein designated VGAM RNA, also designated SEQ ID:4682.

[69634] Another function of VGAM1971 is therefore inhibition of LOC220020 (Accession XM_167821). Accordingly, utilities of VGAM1971 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC220020. LOC91266 (Accession XM_037268) is another VGAM1971 host target gene. LOC91266 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by LOC91266, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of

LOC91266 BINDING SITE, designated SEQ ID:32604, to the nucleotide sequence of VGAM1971 RNA, herein designated VGAM RNA, also designated SEQ ID:4682.

[69635] Another function of VGAM1971 is therefore inhibition of LOC91266 (Accession XM_037268). Accordingly, utilities of VGAM1971 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC91266. Fig. 1 further provides a conceptual description of a novel bioinformatically detected viral gene of the present invention, referred to here as Viral Genomic Address Messenger 1972 (VGAM1972) viral gene, which modulates expression of respective host target genes thereof, the function and utility of which host target genes is known in the art.

[69636] VGAM1972 is a novel bioinformatically detected regulatory, non protein coding, viral micro RNA (miRNA) gene. The method by which VGAM1972 was detected is described hereinabove with reference to Figs. 1-8.

[69637] VGAM1972 gene, herein designated VGAM GENE, is a viral gene contained in the genome of Bovine Herpesvirus 4. VGAM1972 host target gene, herein designated VGAM HOST TARGET GENE, is a human gene contained in the human genome.

[69638] VGAM1972 gene encodes a VGAM1972 precursor RNA, herein designated VGAM PRECURSOR RNA. Similar to other miRNA genes, and unlike most ordinary genes, VGAM1972 precursor RNA does not encode a protein. A nucleotide sequence identical or highly similar to the nucleotide sequence of VGAM1972 precursor RNA is designated SEQ ID:1958, and is provided hereinbelow with reference to the sequence listing part. Nucleotide sequence SEQ ID:1958 is located at position 10062 relative to the genome of Bovine Herpesvirus 4.

[69639] VGAM1972 precursor RNA folds onto itself, forming VGAM1972 folded precursor RNA, herein designated VGAM FOLDED PRECURSOR RNA, which has a two-dimensional `hairpin structure`. As is well known in the art, this `hairpin structure`, is typical of RNA encoded by miRNA genes, and is due to the fact that the nucleotide sequence of the first half of the RNA encoded by a miRNA gene is an accurate or partial inversed-reversed sequence of the nucleotide sequence of the second half thereof.

[69640] An enzyme complex designated DICER COMPLEX, `dices` the VGAM1972 folded precursor RNA into VGAM1972 RNA, herein designated VGAM RNA, a single stranded ~22 nt long RNA segment. As is known in the art, `dicing` of a

hairpin structured RNA precursor product into a short ~22nt RNA segment is catalyzed by an enzyme complex comprising an enzyme called Dicer together with other necessary proteins. A probable (over 84%) nucleotide sequence of VGAM1972 RNA is designated SEQ ID:4683, and is provided hereinbelow with reference to the sequence listing part.

[69641] VGAM1972 host target gene, herein designated VGAM HOST TARGET GENE, encodes a corresponding messenger RNA, VGAM1972 host target RNA, herein designated VGAM HOST TARGET RNA. VGAM1972 host target RNA comprises three regions, as is typical of mRNA of a protein coding gene: a 5` untranslated region, a protein coding region and a 3` untranslated region, designated 5`UTR, PROTEIN CODING and 3`UTR respectively.

[69642] VGAM1972 RNA, herein designated VGAM RNA, binds complementarily to one or more host target binding sites located in untranslated regions of VGAM1972 host target RNA, herein designated VGAM HOST TARGET RNA. This complementary binding is due to the fact that the nucleotide sequence of VGAM1972 RNA is an accurate or a partial inversed-reversed sequence of the nucleotide sequence of each of the host target binding sites. As an il-

lustration, Fig. 1 shows three such host target binding sites, designated BINDING SITE I, BINDING SITE II and BINDING SITE III respectively. It is appreciated that the number of host target binding sites shown in Fig. 1 is meant as an illustration only, and is not meant to be limiting - VGAM1972 RNA, herein designated VGAM RNA, may have a different number of host target binding sites in untranslated regions of a VGAM1972 host target RNA, herein designated VGAM HOST TARGET RNA. It is further appreciated that while Fig. 1 depicts host target binding sites in the 3`UTR region, this is meant as an example only - these host target binding sites may be located in the 3`UTR region, the 5`UTR region, or in both 3`UTR and 5`UTR regions.

[69643] The complementary binding of VGAM1972 RNA, herein designated VGAM RNA, to host target binding sites on VGAM1972 host target RNA, herein designated VGAM HOST TARGET RNA, such as BINDING SITE I, BINDING SITE II and BINDING SITE III, inhibits translation of VGAM1972 host target RNA into VGAM1972 host target protein, herein designated VGAM HOST TARGET PROTEIN. VGAM host target protein is therefore outlined by a broken line.

[69644] It is appreciated that VGAM1972 host target gene, herein

designated VGAM HOST TARGET GENE, in fact represents a plurality of VGAM1972 host target genes. The mRNA of each one of this plurality of VGAM1972 host target genes comprises one or more host target binding sites, each having a nucleotide sequence which is at least partly complementary to VGAM1972 RNA, herein designated VGAM RNA, and which when bound by VGAM1972 RNA causes inhibition of translation of respective one or more VGAM1972 host target proteins.

[69645] It is further appreciated by one skilled in the art that the mode of translational inhibition illustrated by Fig. 1 with specific reference to translational inhibition exerted by VGAM1972 gene, herein designated VGAM GENE, on one or more VGAM1972 host target gene, herein designated VGAM HOST TARGET GENE, is in fact common to other known non-viral miRNA genes. As mentioned hereinabove with reference to the background section, although a specific complementary binding site has been demonstrated only for some of the known miRNA genes (primarily Lin-4 and Let-7), all other recently discovered miRNA genes are also believed by those skilled in the art to modulate expression of other genes by complementary binding, although specific complementary binding sites of these

other miRNA genes have not yet been found (Ruvkun G., `Perspective: Glimpses of a tiny RNA world`, Science 294,779 (2001)).

[69646] It is yet further appreciated that a function of VGAM1972 is inhibition of expression of host target genes, as part of a novel viral mechanism of attacking a host. Accordingly, utilities of VGAM1972 include diagnosis, prevention and treatment of viral infection by Bovine Herpesvirus 4. Specific functions, and accordingly utilities, of VGAM1972 correlate with, and may be deduced from, the identity of the host target genes which VGAM1972 binds and inhibits, and the function of these host target genes, as elaborated hereinbelow.

[69647] Nucleotide sequences of the VGAM1972 precursor RNA, herein designated VGAM PRECURSOR RNA, and of the `diced` VGAM1972 RNA, herein designated VGAM RNA, and a schematic representation of the secondary folding of VGAM1972 folded precursor RNA, herein designated VGAM FOLDED PRECURSOR RNA, of VGAM1972 are further described hereinbelow with reference to Table 1.

[69648] Nucleotide sequences of host target binding sites, such as BINDING SITE-I, BINDING SITE-II and BINDING SITE-III of Fig. 1, found on VGAM1972 host target RNA, and

schematic representation of the complementarity of each of these host target binding sites to VGAM1972 RNA, herein designated VGAM RNA, are described hereinbelow with reference to Table 2.

[69649] As mentioned hereinabove with reference to Fig. 1, a function of VGAM1972 gene, herein designated VGAM is inhibition of expression of VGAM1972 target genes. It is appreciated that specific functions, and accordingly utilities, of VGAM1972 correlate with, and may be deduced from, the identity of the target genes which VGAM1972 binds and inhibits, and the function of these target genes, as elaborated hereinbelow.

[69650] B-cell CLL/lymphoma 10 (BCL10, Accession NM_003921) is a VGAM1972 host target gene. BCL10 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by BCL10, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of BCL10 BINDING SITE, designated SEQ ID:10009, to the nucleotide sequence of VGAM1972 RNA, herein designated VGAM RNA, also designated SEQ ID:4683.

[69651] A function of VGAM1972 is therefore inhibition of B-cell

CLL/lymphoma 10 (BCL10, Accession NM_003921), a gene which is a positive regulator of lymphocyte proliferation, NF-kappaB activator. Accordingly, utilities of VGAM1972 include diagnosis, prevention and treatment of diseases and clinical conditions associated with BCL10. The function of BCL10 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM433.Golgi Complex Associated Protein 1, 60kDa (GOCAP1, Accession NM_022735) is another VGAM1972 host target gene. GOCAP1 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by GOCAP1, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of GOCAP1 BINDING SITE, designated SEQ ID:22939, to the nucleotide sequence of VGAM1972 RNA, herein designated VGAM RNA, also designated SEQ ID:4683.

[69652] Another function of VGAM1972 is therefore inhibition of Golgi Complex Associated Protein 1, 60kDa (GOCAP1, Accession NM_022735). Accordingly, utilities of VGAM1972 include diagnosis, prevention and treatment of diseases

and clinical conditions associated with GOCAP1. G Protein-coupled Receptor 86 (GPR86, Accession NM_023914) is another VGAM1972 host target gene. GPR86 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by GPR86, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of GPR86 BINDING SITE, designated SEQ ID:23387, to the nucleotide sequence of VGAM1972 RNA, herein designated VGAM RNA, also designated SEQ ID:4683.

[69653] Another function of VGAM1972 is therefore inhibition of G Protein-coupled Receptor 86 (GPR86, Accession NM_023914), a gene which plays a role in cell communication. Accordingly, utilities of VGAM1972 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GPR86. The function of GPR86 has been established by previous studies. By batch EST database searching, Wittenberger et al. (2001) identified a cDNA encoding GPR86. The deduced 333-amino acid protein lacks a leader peptide but possesses a DRF motif. Northern blot analysis revealed wide expression of a 2.9-kb GPR86 transcript in spleen, with weaker expres-

sion in placenta, leukocytes, and brain. In brain, expression was strongest in substantia nigra, thalamus, and medulla. Communi et al. (2001) determined that GPR86 shows a high affinity for ADP through pharmacologic characterization of GPR86-transfected human astrocytoma cells and CHO cells. Stimulation of GPR86 by ADP in stably expressing CHO cells resulted in inhibition of adenylyl cyclase and the phosphorylation of the MAP kinases Erk1 (OMIM Ref. No. 601795) and Erk2 (OMIM Ref. No. 176948). Communi et al. (2001) noted that inhibition of adenylyl cyclase and phosphorylation of the MAP kinases are transduction mechanisms that involve Gi proteins (see OMIM Ref. No. 139310).

[69654] Full details of the abovementioned studies are described in the following publications, the disclosure of which are hereby incorporated by reference:

Molec. Biol.

[69657] Further studies establishing the function and utilities of GPR86 are found in John Hopkins OMIM database record ID 606380, and in sited publications numbered 647 and 10637 listed in the bibliography section hereinbelow, which are also hereby incorporated by reference.Nuclear Receptor Subfamily 3, Group C, Member 1 (glucocorticoid receptor) (NR3C1, Accession NM_000176) is another VGAM1972 host target gene. NR3C1 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by NR3C1, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of NR3C1 BINDING SITE, designated SEQ ID:5685, to the nucleotide sequence of VGAM1972 RNA, herein designated VGAM RNA, also designated SEQ ID:4683.

[69658] Another function of VGAM1972 is therefore inhibition of Nuclear Receptor Subfamily 3, Group C, Member 1 (glucocorticoid receptor) (NR3C1, Accession NM_000176). Accordingly, utilities of VGAM1972 include diagnosis, prevention and treatment of diseases and clinical conditions associated with NR3C1. Calneuron 1 (CALN1, Acces-

sion NM_031468) is another VGAM1972 host target gene. CALN1 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by CALN1, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of CALN1 BINDING SITE, designated SEQ ID:25515, to the nucleotide sequence of VGAM1972 RNA, herein designated VGAM RNA, also designated SEQ ID:4683.

[69659] Another function of VGAM1972 is therefore inhibition of Calneuron 1 (CALN1, Accession NM_031468). Accordingly, utilities of VGAM1972 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CALN1. Isopentenyl-diphosphate Delta Isomerase (IDI1, Accession XM_040272) is another VGAM1972 host target gene. IDI1 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by IDI1, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of IDI1 BINDING SITE, designated SEQ ID:33285, to the nucleotide sequence of VGAM1972 RNA,

herein designated VGAM RNA, also designated SEQ ID:4683.

[69660] Another function of VGAM1972 is therefore inhibition of Isopentenyl-diphosphate Delta Isomerase (IDI1, Accession XM_040272). Accordingly, utilities of VGAM1972 include diagnosis, prevention and treatment of diseases and clinical conditions associated with IDI1. Fig. 1 further provides a conceptual description of a novel bioinformatically detected viral gene of the present invention, referred to here as Viral Genomic Address Messenger 1973 (VGAM1973) viral gene, which modulates expression of respective host target genes thereof, the function and utility of which host target genes is known in the art.

[69661] VGAM1973 is a novel bioinformatically detected regulatory, non protein coding, viral micro RNA (miRNA) gene. The method by which VGAM1973 was detected is described hereinabove with reference to Figs. 1-8.

[69662] VGAM1973 gene, herein designated VGAM GENE, is a viral gene contained in the genome of Bovine Herpesvirus 4. VGAM1973 host target gene, herein designated VGAM HOST TARGET GENE, is a human gene contained in the human genome.

[69663] VGAM1973 gene encodes a VGAM1973 precursor RNA,

herein designated VGAM PRECURSOR RNA. Similar to other miRNA genes, and unlike most ordinary genes, VGAM1973 precursor RNA does not encode a protein. A nucleotide sequence identical or highly similar to the nucleotide sequence of VGAM1973 precursor RNA is designated SEQ ID:1959, and is provided hereinbelow with reference to the sequence listing part. Nucleotide sequence SEQ ID:1959 is located at position 5233 relative to the genome of Bovine Herpesvirus 4.

[69664] VGAM1973 precursor RNA folds onto itself, forming VGAM1973 folded precursor RNA, herein designated VGAM FOLDED PRECURSOR RNA, which has a two-dimensional `hairpin structure`. As is well known in the art, this `hairpin structure`, is typical of RNA encoded by miRNA genes, and is due to the fact that the nucleotide sequence of the first half of the RNA encoded by a miRNA gene is an accurate or partial inversed-reversed sequence of the nucleotide sequence of the second half thereof.

[69665] An enzyme complex designated DICER COMPLEX, `dices` the VGAM1973 folded precursor RNA into VGAM1973 RNA, herein designated VGAM RNA, a single stranded ~22 nt long RNA segment. As is known in the art, `dicing` of a hairpin structured RNA precursor product into a short

~22nt RNA segment is catalyzed by an enzyme complex comprising an enzyme called Dicer together with other necessary proteins. A probable (over 42%) nucleotide sequence of VGAM1973 RNA is designated SEQ ID:4684, and is provided hereinbelow with reference to the sequence listing part.

[69666] VGAM1973 host target gene, herein designated VGAM HOST TARGET GENE, encodes a corresponding messenger RNA, VGAM1973 host target RNA, herein designated VGAM HOST TARGET RNA. VGAM1973 host target RNA comprises three regions, as is typical of mRNA of a protein coding gene: a 5` untranslated region, a protein coding region and a 3` untranslated region, designated 5`UTR, PROTEIN CODING and 3`UTR respectively.

[69667] VGAM1973 RNA, herein designated VGAM RNA, binds complementarily to one or more host target binding sites located in untranslated regions of VGAM1973 host target RNA, herein designated VGAM HOST TARGET RNA. This complementary binding is due to the fact that the nucleotide sequence of VGAM1973 RNA is an accurate or a partial inversed-reversed sequence of the nucleotide sequence of each of the host target binding sites. As an illustration, Fig. 1 shows three such host target binding

sites, designated BINDING SITE I, BINDING SITE II and BINDING SITE III respectively. It is appreciated that the number of host target binding sites shown in Fig. 1 is meant as an illustration only, and is not meant to be limiting - VGAM1973 RNA, herein designated VGAM RNA, may have a different number of host target binding sites in untranslated regions of a VGAM1973 host target RNA, herein designated VGAM HOST TARGET RNA. It is further appreciated that while Fig. 1 depicts host target binding sites in the 3`UTR region, this is meant as an example only - these host target binding sites may be located in the 3`UTR region, the 5`UTR region, or in both 3`UTR and 5`UTR regions.

[69668] The complementary binding of VGAM1973 RNA, herein designated VGAM RNA, to host target binding sites on VGAM1973 host target RNA, herein designated VGAM HOST TARGET RNA, such as BINDING SITE I, BINDING SITE II and BINDING SITE III, inhibits translation of VGAM1973 host target RNA into VGAM1973 host target protein, herein designated VGAM HOST TARGET PROTEIN. VGAM host target protein is therefore outlined by a broken line.

[69669] It is appreciated that VGAM1973 host target gene, herein designated VGAM HOST TARGET GENE, in fact represents

a plurality of VGAM1973 host target genes. The mRNA of each one of this plurality of VGAM1973 host target genes comprises one or more host target binding sites, each having a nucleotide sequence which is at least partly complementary to VGAM1973 RNA, herein designated VGAM RNA, and which when bound by VGAM1973 RNA causes inhibition of translation of respective one or more VGAM1973 host target proteins.

[69670] It is further appreciated by one skilled in the art that the mode of translational inhibition illustrated by Fig. 1 with specific reference to translational inhibition exerted by VGAM1973 gene, herein designated VGAM GENE, on one or more VGAM1973 host target gene, herein designated VGAM HOST TARGET GENE, is in fact common to other known non-viral miRNA genes. As mentioned hereinabove with reference to the background section, although a specific complementary binding site has been demonstrated only for some of the known miRNA genes (primarily Lin-4 and Let-7), all other recently discovered miRNA genes are also believed by those skilled in the art to modulate expression of other genes by complementary binding, although specific complementary binding sites of these other miRNA genes have not yet been found (Ruvkun G.,

`Perspective: Glimpses of a tiny RNA world`, Science 294,779 (2001)).

[69671] It is yet further appreciated that a function of VGAM1973 is inhibition of expression of host target genes, as part of a novel viral mechanism of attacking a host. Accordingly, utilities of VGAM1973 include diagnosis, prevention and treatment of viral infection by Bovine Herpesvirus 4. Specific functions, and accordingly utilities, of VGAM1973 correlate with, and may be deduced from, the identity of the host target genes which VGAM1973 binds and inhibits, and the function of these host target genes, as elaborated hereinbelow.

[69672] Nucleotide sequences of the VGAM1973 precursor RNA, herein designated VGAM PRECURSOR RNA, and of the `diced` VGAM1973 RNA, herein designated VGAM RNA, and a schematic representation of the secondary folding of VGAM1973 folded precursor RNA, herein designated VGAM FOLDED PRECURSOR RNA, of VGAM1973 are further described hereinbelow with reference to Table 1.

[69673] Nucleotide sequences of host target binding sites, such as BINDING SITE-I, BINDING SITE-II and BINDING SITE-III of Fig. 1, found on VGAM1973 host target RNA, and schematic representation of the complementarity of each

of these host target binding sites to VGAM1973 RNA, herein designated VGAM RNA, are described hereinbelow with reference to Table 2.

[69674] As mentioned hereinabove with reference to Fig. 1, a function of VGAM1973 gene, herein designated VGAM is inhibition of expression of VGAM1973 target genes. It is appreciated that specific functions, and accordingly utilities, of VGAM1973 correlate with, and may be deduced from, the identity of the target genes which VGAM1973 binds and inhibits, and the function of these target genes, as elaborated hereinbelow.

[69675] V-abl Abelson Murine Leukemia Viral Oncogene Homolog 1 (ABL1, Accession NM_005157) is a VGAM1973 host target gene. ABL1 BINDING SITE1 and ABL1 BINDING SITE2 are HOST TARGET binding sites found in untranslated regions of mRNA encoded by ABL1, corresponding to HOST TARGET binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of ABL1 BINDING SITE1 and ABL1 BINDING SITE2, designated SEQ ID:11638 and SEQ ID:14227 respectively, to the nucleotide sequence of VGAM1973 RNA, herein designated VGAM RNA, also designated SEQ ID:4684.

[69676] A function of VGAM1973 is therefore inhibition of V-abl Abelson Murine Leukemia Viral Oncogene Homolog 1 (ABL1, Accession NM_005157). Accordingly, utilities of VGAM1973 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ABL1. Kinesin-like 3 (KNSL3, Accession NM_005355) is another VGAM1973 host target gene. KNSL3 BINDING SITE1 and KNSL3 BINDING SITE2 are HOST TARGET binding sites found in untranslated regions of mRNA encoded by KNSL3, corresponding to HOST TARGET binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of KNSL3 BINDING SITE1 and KNSL3 BINDING SITE2, designated SEQ ID:11823 and SEQ ID:24961 respectively, to the nucleotide sequence of VGAM1973 RNA, herein designated VGAM RNA, also designated SEQ ID:4684.

[69677] Another function of VGAM1973 is therefore inhibition of Kinesin-like 3 (KNSL3, Accession NM_005355), a gene which may function in intracellular transport and mitosis. Accordingly, utilities of VGAM1973 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KNSL3. The function of KNSL3 and

its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM1958.Cellular Repressor of E1A-stimulated Genes (CREG, Accession NM_003851) is another VGAM1973 host target gene. CREG BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by CREG, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of CREG BINDING SITE, designated SEQ ID:9947, to the nucleotide sequence of VGAM1973 RNA, herein designated VGAM RNA, also designated SEQ ID:4684.

[69678] Another function of VGAM1973 is therefore inhibition of Cellular Repressor of E1A-stimulated Genes (CREG, Accession NM_003851). Accordingly, utilities of VGAM1973 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CREG. FLJ22794 (Accession XM_166220) is another VGAM1973 host target gene. FLJ22794 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by FLJ22794, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING

SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of FLJ22794 BINDING SITE, designated SEQ ID:44027, to the nucleotide sequence of VGAM1973 RNA, herein designated VGAM RNA, also designated SEQ ID:4684.

[69679] Another function of VGAM1973 is therefore inhibition of FLJ22794 (Accession XM_166220). Accordingly, utilities of VGAM1973 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ22794. KIAA0522 (Accession XM_050404) is another VGAM1973 host target gene. KIAA0522 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by KIAA0522, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of KIAA0522 BINDING SITE, designated SEQ ID:35622, to the nucleotide sequence of VGAM1973 RNA, herein designated VGAM RNA, also designated SEQ ID:4684.

[69680] Another function of VGAM1973 is therefore inhibition of KIAA0522 (Accession XM_050404). Accordingly, utilities of VGAM1973 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

KIAA0522. KIAA0532 (Accession XM_047659) is another VGAM1973 host target gene. KIAA0532 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by KIAA0532, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of KIAA0532 BINDING SITE, designated SEQ ID:35023, to the nucleotide sequence of VGAM1973 RNA, herein designated VGAM RNA, also designated SEQ ID:4684.

[69681] Another function of VGAM1973 is therefore inhibition of KIAA0532 (Accession XM_047659). Accordingly, utilities of VGAM1973 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0532. MIL1 (Accession NM_015367) is another VGAM1973 host target gene. MIL1 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by MIL1, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of MIL1 BINDING SITE, designated SEQ ID:17666, to the nucleotide sequence of VGAM1973 RNA, herein designated VGAM RNA, also des-

ignated SEQ ID:4684.

[69682] Another function of VGAM1973 is therefore inhibition of MIL1 (Accession NM_015367). Accordingly, utilities of VGAM1973 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MIL1. Fig. 1 further provides a conceptual description of a novel bioinformatically detected viral gene of the present invention, referred to here as Viral Genomic Address Messenger 1974 (VGAM1974) viral gene, which modulates expression of respective host target genes thereof, the function and utility of which host target genes is known in the art.

[69683] VGAM1974 is a novel bioinformatically detected regulatory, non protein coding, viral micro RNA (miRNA) gene. The method by which VGAM1974 was detected is described hereinabove with reference to Figs. 1-8.

[69684] VGAM1974 gene, herein designated VGAM GENE, is a viral gene contained in the genome of Bovine Herpesvirus 4. VGAM1974 host target gene, herein designated VGAM HOST TARGET GENE, is a human gene contained in the human genome.

[69685] VGAM1974 gene encodes a VGAM1974 precursor RNA, herein designated VGAM PRECURSOR RNA. Similar to other miRNA genes, and unlike most ordinary genes,

VGAM1974 precursor RNA does not encode a protein. A nucleotide sequence identical or highly similar to the nucleotide sequence of VGAM1974 precursor RNA is designated SEQ ID:1960, and is provided hereinbelow with reference to the sequence listing part. Nucleotide sequence SEQ ID:1960 is located at position 14078 relative to the genome of Bovine Herpesvirus 4.

[69686] VGAM1974 precursor RNA folds onto itself, forming VGAM1974 folded precursor RNA, herein designated VGAM FOLDED PRECURSOR RNA, which has a two-dimensional `hairpin structure`. As is well known in the art, this `hairpin structure`, is typical of RNA encoded by miRNA genes, and is due to the fact that the nucleotide sequence of the first half of the RNA encoded by a miRNA gene is an accurate or partial inversed-reversed sequence of the nucleotide sequence of the second half thereof.

[69687] An enzyme complex designated DICER COMPLEX, `dices` the VGAM1974 folded precursor RNA into VGAM1974 RNA, herein designated VGAM RNA, a single stranded ~22 nt long RNA segment. As is known in the art, `dicing` of a hairpin structured RNA precursor product into a short ~22nt RNA segment is catalyzed by an enzyme complex comprising an enzyme called Dicer together with other

necessary proteins. A probable (over 44%) nucleotide sequence of VGAM1974 RNA is designated SEQ ID:4685, and is provided hereinbelow with reference to the sequence listing part.

[69688] VGAM1974 host target gene, herein designated VGAM HOST TARGET GENE, encodes a corresponding messenger RNA, VGAM1974 host target RNA, herein designated VGAM HOST TARGET RNA. VGAM1974 host target RNA comprises three regions, as is typical of mRNA of a protein coding gene: a 5` untranslated region, a protein coding region and a 3` untranslated region, designated 5`UTR, PROTEIN CODING and 3`UTR respectively.

[69689] VGAM1974 RNA, herein designated VGAM RNA, binds complementarily to one or more host target binding sites located in untranslated regions of VGAM1974 host target RNA, herein designated VGAM HOST TARGET RNA. This complementary binding is due to the fact that the nucleotide sequence of VGAM1974 RNA is an accurate or a partial inversed-reversed sequence of the nucleotide sequence of each of the host target binding sites. As an illustration, Fig. 1 shows three such host target binding sites, designated BINDING SITE I, BINDING SITE II and BINDING SITE III respectively. It is appreciated that the

number of host target binding sites shown in Fig. 1 is meant as an illustration only, and is not meant to be limiting - VGAM1974 RNA, herein designated VGAM RNA, may have a different number of host target binding sites in untranslated regions of a VGAM1974 host target RNA, herein designated VGAM HOST TARGET RNA. It is further appreciated that while Fig. 1 depicts host target binding sites in the 3`UTR region, this is meant as an example only - these host target binding sites may be located in the 3`UTR region, the 5`UTR region, or in both 3`UTR and 5`UTR regions.

[69690] The complementary binding of VGAM1974 RNA, herein designated VGAM RNA, to host target binding sites on VGAM1974 host target RNA, herein designated VGAM HOST TARGET RNA, such as BINDING SITE I, BINDING SITE II and BINDING SITE III, inhibits translation of VGAM1974 host target RNA into VGAM1974 host target protein, herein designated VGAM HOST TARGET PROTEIN. VGAM host target protein is therefore outlined by a broken line.

[69691] It is appreciated that VGAM1974 host target gene, herein designated VGAM HOST TARGET GENE, in fact represents a plurality of VGAM1974 host target genes. The mRNA of each one of this plurality of VGAM1974 host target genes

comprises one or more host target binding sites, each having a nucleotide sequence which is at least partly complementary to VGAM1974 RNA, herein designated VGAM RNA, and which when bound by VGAM1974 RNA causes inhibition of translation of respective one or more VGAM1974 host target proteins.

[69692] It is further appreciated by one skilled in the art that the mode of translational inhibition illustrated by Fig. 1 with specific reference to translational inhibition exerted by VGAM1974 gene, herein designated VGAM GENE, on one or more VGAM1974 host target gene, herein designated VGAM HOST TARGET GENE, is in fact common to other known non-viral miRNA genes. As mentioned hereinabove with reference to the background section, although a specific complementary binding site has been demonstrated only for some of the known miRNA genes (primarily Lin-4 and Let-7), all other recently discovered miRNA genes are also believed by those skilled in the art to modulate expression of other genes by complementary binding, although specific complementary binding sites of these other miRNA genes have not yet been found (Ruvkun G., `Perspective: Glimpses of a tiny RNA world`, Science 294,779 (2001)).

[69693] It is yet further appreciated that a function of VGAM1974 is inhibition of expression of host target genes, as part of a novel viral mechanism of attacking a host. Accordingly, utilities of VGAM1974 include diagnosis, prevention and treatment of viral infection by Bovine Herpesvirus 4. Specific functions, and accordingly utilities, of VGAM1974 correlate with, and may be deduced from, the identity of the host target genes which VGAM1974 binds and inhibits, and the function of these host target genes, as elaborated hereinbelow.

[69694] Nucleotide sequences of the VGAM1974 precursor RNA, herein designated VGAM PRECURSOR RNA, and of the `diced` VGAM1974 RNA, herein designated VGAM RNA, and a schematic representation of the secondary folding of VGAM1974 folded precursor RNA, herein designated VGAM FOLDED PRECURSOR RNA, of VGAM1974 are further described hereinbelow with reference to Table 1.

[69695] Nucleotide sequences of host target binding sites, such as BINDING SITE-I, BINDING SITE-II and BINDING SITE-III of Fig. 1, found on VGAM1974 host target RNA, and schematic representation of the complementarity of each of these host target binding sites to VGAM1974 RNA, herein designated VGAM RNA, are described hereinbelow

with reference to Table 2.

[69696] As mentioned hereinabove with reference to Fig. 1, a function of VGAM1974 gene, herein designated VGAM is inhibition of expression of VGAM1974 target genes. It is appreciated that specific functions, and accordingly utilities, of VGAM1974 correlate with, and may be deduced from, the identity of the target genes which VGAM1974 binds and inhibits, and the function of these target genes, as elaborated hereinbelow.

[69697] Frizzled Homolog 10 (Drosophila) (FZD10, Accession NM_007197) is a VGAM1974 host target gene. FZD10 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by FZD10, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of FZD10 BINDING SITE, designated SEQ ID:14050, to the nucleotide sequence of VGAM1974 RNA, herein designated VGAM RNA, also designated SEQ ID:4685.

[69698] A function of VGAM1974 is therefore inhibition of Frizzled Homolog 10 (Drosophila) (FZD10, Accession NM_007197). Accordingly, utilities of VGAM1974 include diagnosis, prevention and treatment of diseases and clinical condi-

tions associated with FZD10. FLJ13621 (Accession NM_025009) is another VGAM1974 host target gene. FLJ13621 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by FLJ13621, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of FLJ13621 BINDING SITE, designated SEQ ID:24580, to the nucleotide sequence of VGAM1974 RNA, herein designated VGAM RNA, also designated SEQ ID:4685.

[69699] Another function of VGAM1974 is therefore inhibition of FLJ13621 (Accession NM_025009). Accordingly, utilities of VGAM1974 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ13621. KIAA0781 (Accession XM_041314) is another VGAM1974 host target gene. KIAA0781 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by KIAA0781, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of KIAA0781 BINDING SITE, designated SEQ ID:33497, to the

nucleotide sequence of VGAM1974 RNA, herein designated VGAM RNA, also designated SEQ ID:4685.

[69700] Another function of VGAM1974 is therefore inhibition of KIAA0781 (Accession XM_041314). Accordingly, utilities of VGAM1974 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0781. Kruppel-like Factor 5 (intestinal) (KLF5, Accession NM_001730) is another VGAM1974 host target gene. KLF5 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by KLF5, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of KLF5 BINDING SITE, designated SEQ ID:7460, to the nucleotide sequence of VGAM1974 RNA, herein designated VGAM RNA, also designated SEQ ID:4685.

[69701] Another function of VGAM1974 is therefore inhibition of Kruppel-like Factor 5 (intestinal) (KLF5, Accession NM_001730). Accordingly, utilities of VGAM1974 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KLF5. N-acetylated Alpha-linked Acidic Dipeptidase 2 (NAALAD2, Accession NM_005467) is another VGAM1974 host target gene.

NAALAD2 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by NAALAD2, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of NAALAD2 BINDING SITE, designated SEQ ID:11962, to the nucleotide sequence of VGAM1974 RNA, herein designated VGAM RNA, also designated SEQ ID:4685.

[69702] Another function of VGAM1974 is therefore inhibition of N-acetylated Alpha-linked Acidic Dipeptidase 2 (NAALAD2, Accession NM_005467). Accordingly, utilities of VGAM1974 include diagnosis, prevention and treatment of diseases and clinical conditions associated with NAALAD2. LOC148266 (Accession XM_086128) is another VGAM1974 host target gene. LOC148266 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC148266, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC148266 BINDING SITE, designated SEQ ID:38515, to the nucleotide sequence of VGAM1974 RNA, herein desig-

nated VGAM RNA, also designated SEQ ID:4685.

[69703] Another function of VGAM1974 is therefore inhibition of LOC148266 (Accession XM_086128). Accordingly, utilities of VGAM1974 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC148266. Fig. 1 further provides a conceptual description of a novel bioinformatically detected viral gene of the present invention, referred to here as Viral Genomic Address Messenger 1975 (VGAM1975) viral gene, which modulates expression of respective host target genes thereof, the function and utility of which host target genes is known in the art.

[69704] VGAM1975 is a novel bioinformatically detected regulatory, non protein coding, viral micro RNA (miRNA) gene. The method by which VGAM1975 was detected is described hereinabove with reference to Figs. 1-8.

[69705] VGAM1975 gene, herein designated VGAM GENE, is a viral gene contained in the genome of Bovine Herpesvirus 4. VGAM1975 host target gene, herein designated VGAM HOST TARGET GENE, is a human gene contained in the human genome.

[69706] VGAM1975 gene encodes a VGAM1975 precursor RNA, herein designated VGAM PRECURSOR RNA. Similar to other

miRNA genes, and unlike most ordinary genes, VGAM1975 precursor RNA does not encode a protein. A nucleotide sequence identical or highly similar to the nucleotide sequence of VGAM1975 precursor RNA is designated SEQ ID:1961, and is provided hereinbelow with reference to the sequence listing part. Nucleotide sequence SEQ ID:1961 is located at position 9804 relative to the genome of Bovine Herpesvirus 4.

[69707] VGAM1975 precursor RNA folds onto itself, forming VGAM1975 folded precursor RNA, herein designated VGAM FOLDED PRECURSOR RNA, which has a two-dimensional `hairpin structure`. As is well known in the art, this `hairpin structure`, is typical of RNA encoded by miRNA genes, and is due to the fact that the nucleotide sequence of the first half of the RNA encoded by a miRNA gene is an accurate or partial inversed-reversed sequence of the nucleotide sequence of the second half thereof.

[69708] An enzyme complex designated DICER COMPLEX, `dices` the VGAM1975 folded precursor RNA into VGAM1975 RNA, herein designated VGAM RNA, a single stranded ~22 nt long RNA segment. As is known in the art, `dicing` of a hairpin structured RNA precursor product into a short ~22nt RNA segment is catalyzed by an enzyme complex

comprising an enzyme called Dicer together with other necessary proteins. A probable (over 42%) nucleotide sequence of VGAM1975 RNA is designated SEQ ID:4686, and is provided hereinbelow with reference to the sequence listing part.

[69709] VGAM1975 host target gene, herein designated VGAM HOST TARGET GENE, encodes a corresponding messenger RNA, VGAM1975 host target RNA, herein designated VGAM HOST TARGET RNA. VGAM1975 host target RNA comprises three regions, as is typical of mRNA of a protein coding gene: a 5` untranslated region, a protein coding region and a 3` untranslated region, designated 5`UTR, PROTEIN CODING and 3`UTR respectively.

[69710] VGAM1975 RNA, herein designated VGAM RNA, binds complementarily to one or more host target binding sites located in untranslated regions of VGAM1975 host target RNA, herein designated VGAM HOST TARGET RNA. This complementary binding is due to the fact that the nucleotide sequence of VGAM1975 RNA is an accurate or a partial inversed-reversed sequence of the nucleotide sequence of each of the host target binding sites. As an illustration, Fig. 1 shows three such host target binding sites, designated BINDING SITE I, BINDING SITE II and

BINDING SITE III respectively. It is appreciated that the number of host target binding sites shown in Fig. 1 is meant as an illustration only, and is not meant to be limiting - VGAM1975 RNA, herein designated VGAM RNA, may have a different number of host target binding sites in untranslated regions of a VGAM1975 host target RNA, herein designated VGAM HOST TARGET RNA. It is further appreciated that while Fig. 1 depicts host target binding sites in the 3`UTR region, this is meant as an example only - these host target binding sites may be located in the 3`UTR region, the 5`UTR region, or in both 3`UTR and 5`UTR regions.

[69711] The complementary binding of VGAM1975 RNA, herein designated VGAM RNA, to host target binding sites on VGAM1975 host target RNA, herein designated VGAM HOST TARGET RNA, such as BINDING SITE I, BINDING SITE II and BINDING SITE III, inhibits translation of VGAM1975 host target RNA into VGAM1975 host target protein, herein designated VGAM HOST TARGET PROTEIN. VGAM host target protein is therefore outlined by a broken line.

[69712] It is appreciated that VGAM1975 host target gene, herein designated VGAM HOST TARGET GENE, in fact represents a plurality of VGAM1975 host target genes. The mRNA of

each one of this plurality of VGAM1975 host target genes comprises one or more host target binding sites, each having a nucleotide sequence which is at least partly complementary to VGAM1975 RNA, herein designated VGAM RNA, and which when bound by VGAM1975 RNA causes inhibition of translation of respective one or more VGAM1975 host target proteins.

[69713] It is further appreciated by one skilled in the art that the mode of translational inhibition illustrated by Fig. 1 with specific reference to translational inhibition exerted by VGAM1975 gene, herein designated VGAM GENE, on one or more VGAM1975 host target gene, herein designated VGAM HOST TARGET GENE, is in fact common to other known non-viral miRNA genes. As mentioned hereinabove with reference to the background section, although a specific complementary binding site has been demonstrated only for some of the known miRNA genes (primarily Lin-4 and Let-7), all other recently discovered miRNA genes are also believed by those skilled in the art to modulate expression of other genes by complementary binding, although specific complementary binding sites of these other miRNA genes have not yet been found (Ruvkun G., `Perspective: Glimpses of a tiny RNA world`, Science

294,779 (2001)).

[69714] It is yet further appreciated that a function of VGAM1975 is inhibition of expression of host target genes, as part of a novel viral mechanism of attacking a host. Accordingly, utilities of VGAM1975 include diagnosis, prevention and treatment of viral infection by Bovine Herpesvirus 4. Specific functions, and accordingly utilities, of VGAM1975 correlate with, and may be deduced from, the identity of the host target genes which VGAM1975 binds and inhibits, and the function of these host target genes, as elaborated hereinbelow.

[69715] Nucleotide sequences of the VGAM1975 precursor RNA, herein designated VGAM PRECURSOR RNA, and of the `diced` VGAM1975 RNA, herein designated VGAM RNA, and a schematic representation of the secondary folding of VGAM1975 folded precursor RNA, herein designated VGAM FOLDED PRECURSOR RNA, of VGAM1975 are further described hereinbelow with reference to Table 1.

[69716] Nucleotide sequences of host target binding sites, such as BINDING SITE-I, BINDING SITE-II and BINDING SITE-III of Fig. 1, found on VGAM1975 host target RNA, and schematic representation of the complementarity of each of these host target binding sites to VGAM1975 RNA,

herein designated VGAM RNA, are described hereinbelow with reference to Table 2.

[69717] As mentioned hereinabove with reference to Fig. 1, a function of VGAM1975 gene, herein designated VGAM is inhibition of expression of VGAM1975 target genes. It is appreciated that specific functions, and accordingly utilities, of VGAM1975 correlate with, and may be deduced from, the identity of the target genes which VGAM1975 binds and inhibits, and the function of these target genes, as elaborated hereinbelow.

[69718] Fibroblast Growth Factor 7 (keratinocyte growth factor) (FGF7, Accession NM_002009) is a VGAM1975 host target gene. FGF7 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by FGF7, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of FGF7 BINDING SITE, designated SEQ ID:7748, to the nucleotide sequence of VGAM1975 RNA, herein designated VGAM RNA, also designated SEQ ID:4686.

[69719] A function of VGAM1975 is therefore inhibition of Fibroblast Growth Factor 7 (keratinocyte growth factor) (FGF7, Accession NM_002009), a gene which growth factor active

on keratinocytes. Accordingly, utilities of VGAM1975 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FGF7. The function of FGF7 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM678.Mannan-binding Lectin Serine Protease 1 (C4/C2 activating component of Ra-reactive factor) (MASP1, Accession NM_001879) is another VGAM1975 host target gene. MASP1 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by MASP1, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of MASP1 BINDING SITE, designated SEQ ID:7604, to the nucleotide sequence of VGAM1975 RNA, herein designated VGAM RNA, also designated SEQ ID:4686.

[69720] Another function of VGAM1975 is therefore inhibition of Mannan-binding Lectin Serine Protease 1 (C4/C2 activating component of Ra-reactive factor) (MASP1, Accession NM_001879), a gene which a complement-dependent bactericidal factor . Accordingly, utilities of VGAM1975 in-

clude diagnosis, prevention and treatment of diseases and clinical conditions associated with MASP1. The function of MASP1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM566.Methyltransferase-like 1 (METTL1, Accession NM_023032) is another VGAM1975 host target gene. METTL1 BINDING SITE1 and METTL1 BINDING SITE2 are HOST TARGET binding sites found in untranslated regions of mRNA encoded by METTL1, corresponding to HOST TARGET binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of METTL1 BINDING SITE1 and METTL1 BINDING SITE2, designated SEQ ID:23308 and SEQ ID:23313 respectively, to the nucleotide sequence of VGAM1975 RNA, herein designated VGAM RNA, also designated SEQ ID:4686.

[69721] Another function of VGAM1975 is therefore inhibition of Methyltransferase-like 1 (METTL1, Accession NM_023032). Accordingly, utilities of VGAM1975 include diagnosis, prevention and treatment of diseases and clinical conditions associated with METTL1. Myosin, Heavy Polypeptide 11, Smooth Muscle (MYH11, Accession

NM_002474) is another VGAM1975 host target gene. MYH11 BINDING SITE1 and MYH11 BINDING SITE2 are HOST TARGET binding sites found in untranslated regions of mRNA encoded by MYH11, corresponding to HOST TARGET binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of MYH11 BINDING SITE1 and MYH11 BINDING SITE2, designated SEQ ID:8298 and SEQ ID:8334 respectively, to the nucleotide sequence of VGAM1975 RNA, herein designated VGAM RNA, also designated SEQ ID:4686.

[69722] Another function of VGAM1975 is therefore inhibition of Myosin, Heavy Polypeptide 11, Smooth Muscle (MYH11, Accession NM_002474), a gene which is involved in muscle contraction. Accordingly, utilities of VGAM1975 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MYH11. The function of MYH11 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM178.Paired Mesoderm Homeo Box 1 (PMX1, Accession NM_006902) is another VGAM1975 host target gene. PMX1 BINDING SITE1 and PMX1 BINDING SITE2 are HOST

TARGET binding sites found in untranslated regions of mRNA encoded by PMX1, corresponding to HOST TARGET binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of PMX1 BINDING SITE1 and PMX1 BINDING SITE2, designated SEQ ID:13777 and SEQ ID:22912 respectively, to the nucleotide sequence of VGAM1975 RNA, herein designated VGAM RNA, also designated SEQ ID:4686.

[69723] Another function of VGAM1975 is therefore inhibition of Paired Mesoderm Homeo Box 1 (PMX1, Accession NM_006902), a gene which acts as a transcriptional regulator of muscle creatine kinase. Accordingly, utilities of VGAM1975 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PMX1. The function of PMX1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM381.Contactin Associated Protein 1 (CNTNAP1, Accession NM_003632) is another VGAM1975 host target gene. CNTNAP1 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by CNTNAP1, corresponding to a HOST TARGET binding

site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of CNTNAP1 BINDING SITE, designated SEQ ID:9694, to the nucleotide sequence of VGAM1975 RNA, herein designated VGAM RNA, also designated SEQ ID:4686.

[69724] Another function of VGAM1975 is therefore inhibition of Contactin Associated Protein 1 (CNTNAP1, Accession NM_003632). Accordingly, utilities of VGAM1975 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CNTNAP1. DKFZP434P1750 (Accession NM_015527) is another VGAM1975 host target gene. DKFZP434P1750 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by DKFZP434P1750, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of DKFZP434P1750 BINDING SITE, designated SEQ ID:17792, to the nucleotide sequence of VGAM1975 RNA, herein designated VGAM RNA, also designated SEQ ID:4686.

[69725] Another function of VGAM1975 is therefore inhibition of DKFZP434P1750 (Accession NM_015527). Accordingly,

utilities of VGAM1975 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZP434P1750. FLJ10687 (Accession NM_018178) is another VGAM1975 host target gene. FLJ10687 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by FLJ10687, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of FLJ10687 BINDING SITE, designated SEQ ID:20006, to the nucleotide sequence of VGAM1975 RNA, herein designated VGAM RNA, also designated SEQ ID:4686.

[69726] Another function of VGAM1975 is therefore inhibition of FLJ10687 (Accession NM_018178). Accordingly, utilities of VGAM1975 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ10687. FLJ11286 (Accession NM_018381) is another VGAM1975 host target gene. FLJ11286 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by FLJ11286, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of FLJ11286

BINDING SITE, designated SEQ ID:20412, to the nucleotide sequence of VGAM1975 RNA, herein designated VGAM RNA, also designated SEQ ID:4686.

[69727] Another function of VGAM1975 is therefore inhibition of FLJ11286 (Accession NM_018381). Accordingly, utilities of VGAM1975 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ11286. FLJ14154 (Accession NM_024845) is another VGAM1975 host target gene. FLJ14154 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by FLJ14154, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of FLJ14154 BINDING SITE, designated SEQ ID:24272, to the nucleotide sequence of VGAM1975 RNA, herein designated VGAM RNA, also designated SEQ ID:4686.

[69728] Another function of VGAM1975 is therefore inhibition of FLJ14154 (Accession NM_024845). Accordingly, utilities of VGAM1975 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ14154. FLJ20619 (Accession NM_017904) is another VGAM1975 host target gene. FLJ20619 BINDING SITE is

HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by FLJ20619, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of FLJ20619 BINDING SITE, designated SEQ ID:19570, to the nucleotide sequence of VGAM1975 RNA, herein designated VGAM RNA, also designated SEQ ID:4686.

[69729] Another function of VGAM1975 is therefore inhibition of FLJ20619 (Accession NM_017904). Accordingly, utilities of VGAM1975 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ20619. HN1L (Accession NM_144570) is another VGAM1975 host target gene. HN1L BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by HN1L, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of HN1L BINDING SITE, designated SEQ ID:29377, to the nucleotide sequence of VGAM1975 RNA, herein designated VGAM RNA, also designated SEQ ID:4686.

[69730] Another function of VGAM1975 is therefore inhibition of

HN1L (Accession NM_144570). Accordingly, utilities of VGAM1975 include diagnosis, prevention and treatment of diseases and clinical conditions associated with HN1L. Potassium Voltage-gated Channel, Delayed-rectifier, Subfamily S, Member 1 (KCNS1, Accession NM_002251) is another VGAM1975 host target gene. KCNS1 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by KCNS1, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of KCNS1 BINDING SITE, designated SEQ ID:8040, to the nucleotide sequence of VGAM1975 RNA, herein designated VGAM RNA, also designated SEQ ID:4686.

[69731] Another function of VGAM1975 is therefore inhibition of Potassium Voltage-gated Channel, Delayed-rectifier, Subfamily S, Member 1 (KCNS1, Accession NM_002251). Accordingly, utilities of VGAM1975 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KCNS1. KIAA0435 (Accession NM_014801) is another VGAM1975 host target gene. KIAA0435 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by KIAA0435, corre-

sponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of KIAA0435 BINDING SITE, designated SEQ ID:16720, to the nucleotide sequence of VGAM1975 RNA, herein designated VGAM RNA, also designated SEQ ID:4686.

[69732] Another function of VGAM1975 is therefore inhibition of KIAA0435 (Accession NM_014801). Accordingly, utilities of VGAM1975 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0435. KIAA0544 (Accession XM_048119) is another VGAM1975 host target gene. KIAA0544 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by KIAA0544, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of KIAA0544 BINDING SITE, designated SEQ ID:35112, to the nucleotide sequence of VGAM1975 RNA, herein designated VGAM RNA, also designated SEQ ID:4686.

[69733] Another function of VGAM1975 is therefore inhibition of KIAA0544 (Accession XM_048119). Accordingly, utilities of VGAM1975 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with KIAA0544. KIAA0556 (Accession XM_044632) is another VGAM1975 host target gene. KIAA0556 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by KIAA0556, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of KIAA0556 BINDING SITE, designated SEQ ID:34251, to the nucleotide sequence of VGAM1975 RNA, herein designated VGAM RNA, also designated SEQ ID:4686.

[69734] Another function of VGAM1975 is therefore inhibition of KIAA0556 (Accession XM_044632). Accordingly, utilities of VGAM1975 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0556. KIAA0848 (Accession NM_014926) is another VGAM1975 host target gene. KIAA0848 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by KIAA0848, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of KIAA0848 BINDING SITE, designated SEQ ID:17212, to the

nucleotide sequence of VGAM1975 RNA, herein designated VGAM RNA, also designated SEQ ID:4686.

[69735] Another function of VGAM1975 is therefore inhibition of KIAA0848 (Accession NM_014926). Accordingly, utilities of VGAM1975 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0848. MGC2574 (Accession NM_024098) is another VGAM1975 host target gene. MGC2574 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by MGC2574, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of MGC2574 BINDING SITE, designated SEQ ID:23539, to the nucleotide sequence of VGAM1975 RNA, herein designated VGAM RNA, also designated SEQ ID:4686.

[69736] Another function of VGAM1975 is therefore inhibition of MGC2574 (Accession NM_024098). Accordingly, utilities of VGAM1975 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC2574. N4BP3 (Accession XM_038920) is another VGAM1975 host target gene. N4BP3 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region

of mRNA encoded by N4BP3, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of N4BP3 BINDING SITE, designated SEQ ID:32936, to the nucleotide sequence of VGAM1975 RNA, herein designated VGAM RNA, also designated SEQ ID:4686.

[69737] Another function of VGAM1975 is therefore inhibition of N4BP3 (Accession XM_038920). Accordingly, utilities of VGAM1975 include diagnosis, prevention and treatment of diseases and clinical conditions associated with N4BP3. SARM (Accession NM_015077) is another VGAM1975 host target gene. SARM BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by SARM, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of SARM BINDING SITE, designated SEQ ID:17450, to the nucleotide sequence of VGAM1975 RNA, herein designated VGAM RNA, also designated SEQ ID:4686.

[69738] Another function of VGAM1975 is therefore inhibition of SARM (Accession NM_015077). Accordingly, utilities of

VGAM1975 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SARM. SCYA16 (Accession NM_004590) is another VGAM1975 host target gene. SCYA16 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by SCYA16, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of SCYA16 BINDING SITE, designated SEQ ID:10933, to the nucleotide sequence of VGAM1975 RNA, herein designated VGAM RNA, also designated SEQ ID:4686.

[69739] Another function of VGAM1975 is therefore inhibition of SCYA16 (Accession NM_004590). Accordingly, utilities of VGAM1975 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SCYA16. Synaptotagmin-like 2 (SYTL2, Accession NM_032943) is another VGAM1975 host target gene. SYTL2 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by SYTL2, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide se-

quences of SYTL2 BINDING SITE, designated SEQ ID:26757, to the nucleotide sequence of VGAM1975 RNA, herein designated VGAM RNA, also designated SEQ ID:4686.

[69740] Another function of VGAM1975 is therefore inhibition of Synaptotagmin-like 2 (SYTL2, Accession NM_032943). Accordingly, utilities of VGAM1975 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SYTL2. XT2 (Accession NM_022167) is another VGAM1975 host target gene. XT2 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by XT2, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of XT2 BINDING SITE, designated SEQ ID:22721, to the nucleotide sequence of VGAM1975 RNA, herein designated VGAM RNA, also designated SEQ ID:4686.

[69741] Another function of VGAM1975 is therefore inhibition of XT2 (Accession NM_022167). Accordingly, utilities of VGAM1975 include diagnosis, prevention and treatment of diseases and clinical conditions associated with XT2. LOC145195 (Accession XM_096731) is another

VGAM1975 host target gene. LOC145195 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by LOC145195, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC145195 BINDING SITE, designated SEQ ID:40511, to the nucleotide sequence of VGAM1975 RNA, herein designated VGAM RNA, also designated SEQ ID:4686.

[69742] Another function of VGAM1975 is therefore inhibition of LOC145195 (Accession XM_096731). Accordingly, utilities of VGAM1975 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC145195. LOC148137 (Accession NM_144692) is another VGAM1975 host target gene. LOC148137 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC148137, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC148137 BINDING SITE, designated SEQ ID:29512, to the nucleotide sequence of VGAM1975 RNA, herein designated VGAM RNA, also designated SEQ ID:4686.

[69743] Another function of VGAM1975 is therefore inhibition of LOC148137 (Accession NM_144692). Accordingly, utilities of VGAM1975 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC148137. LOC158116 (Accession XM_016240) is another VGAM1975 host target gene. LOC158116 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC158116, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC158116 BINDING SITE, designated SEQ ID:30251, to the nucleotide sequence of VGAM1975 RNA, herein designated VGAM RNA, also designated SEQ ID:4686.

[69744] Another function of VGAM1975 is therefore inhibition of LOC158116 (Accession XM_016240). Accordingly, utilities of VGAM1975 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC158116. LOC160646 (Accession XM_090413) is another VGAM1975 host target gene. LOC160646 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC160646, corresponding to a HOST TARGET binding site such as BIND-

ING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC160646 BINDING SITE, designated SEQ ID:40003, to the nucleotide sequence of VGAM1975 RNA, herein designated VGAM RNA, also designated SEQ ID:4686.

[69745] Another function of VGAM1975 is therefore inhibition of LOC160646 (Accession XM_090413). Accordingly, utilities of VGAM1975 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC160646. LOC51200 (Accession NM_016352) is another VGAM1975 host target gene. LOC51200 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC51200, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC51200 BINDING SITE, designated SEQ ID:18479, to the nucleotide sequence of VGAM1975 RNA, herein designated VGAM RNA, also designated SEQ ID:4686.

[69746] Another function of VGAM1975 is therefore inhibition of LOC51200 (Accession NM_016352). Accordingly, utilities of VGAM1975 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

LOC51200. LOC51267 (Accession NM_016511) is another VGAM1975 host target gene. LOC51267 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC51267, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC51267 BINDING SITE, designated SEQ ID:18590, to the nucleotide sequence of VGAM1975 RNA, herein designated VGAM RNA, also designated SEQ ID:4686.

[69747] Another function of VGAM1975 is therefore inhibition of LOC51267 (Accession NM_016511). Accordingly, utilities of VGAM1975 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC51267. LOC81558 (Accession NM_030802) is another VGAM1975 host target gene. LOC81558 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC81558, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC81558 BINDING SITE, designated SEQ ID:25110, to the nucleotide sequence of VGAM1975 RNA, herein desig-

nated VGAM RNA, also designated SEQ ID:4686.

[69748] Another function of VGAM1975 is therefore inhibition of LOC81558 (Accession NM_030802). Accordingly, utilities of VGAM1975 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC81558. Fig. 1 further provides a conceptual description of a novel bioinformatically detected viral gene of the present invention, referred to here as Viral Genomic Address Messenger 1976 (VGAM1976) viral gene, which modulates expression of respective host target genes thereof, the function and utility of which host target genes is known in the art.

[69749] VGAM1976 is a novel bioinformatically detected regulatory, non protein coding, viral micro RNA (miRNA) gene. The method by which VGAM1976 was detected is described hereinabove with reference to Figs. 1-8.

[69750] VGAM1976 gene, herein designated VGAM GENE, is a viral gene contained in the genome of Bovine Herpesvirus 4. VGAM1976 host target gene, herein designated VGAM HOST TARGET GENE, is a human gene contained in the human genome.

[69751] VGAM1976 gene encodes a VGAM1976 precursor RNA, herein designated VGAM PRECURSOR RNA. Similar to other

miRNA genes, and unlike most ordinary genes, VGAM1976 precursor RNA does not encode a protein. A nucleotide sequence identical or highly similar to the nucleotide sequence of VGAM1976 precursor RNA is designated SEQ ID:1962, and is provided hereinbelow with reference to the sequence listing part. Nucleotide sequence SEQ ID:1962 is located at position 13694 relative to the genome of Bovine Herpesvirus 4.

[69752] VGAM1976 precursor RNA folds onto itself, forming VGAM1976 folded precursor RNA, herein designated VGAM FOLDED PRECURSOR RNA, which has a two-dimensional `hairpin structure`. As is well known in the art, this `hairpin structure`, is typical of RNA encoded by miRNA genes, and is due to the fact that the nucleotide sequence of the first half of the RNA encoded by a miRNA gene is an accurate or partial inversed-reversed sequence of the nucleotide sequence of the second half thereof.

[69753] An enzyme complex designated DICER COMPLEX, `dices` the VGAM1976 folded precursor RNA into VGAM1976 RNA, herein designated VGAM RNA, a single stranded ~22 nt long RNA segment. As is known in the art, `dicing` of a hairpin structured RNA precursor product into a short ~22nt RNA segment is catalyzed by an enzyme complex

comprising an enzyme called Dicer together with other necessary proteins. A probable (over 46%) nucleotide sequence of VGAM1976 RNA is designated SEQ ID:4687, and is provided hereinbelow with reference to the sequence listing part.

[69754] VGAM1976 host target gene, herein designated VGAM HOST TARGET GENE, encodes a corresponding messenger RNA, VGAM1976 host target RNA, herein designated VGAM HOST TARGET RNA. VGAM1976 host target RNA comprises three regions, as is typical of mRNA of a protein coding gene: a 5` untranslated region, a protein coding region and a 3` untranslated region, designated 5`UTR, PROTEIN CODING and 3`UTR respectively.

[69755] VGAM1976 RNA, herein designated VGAM RNA, binds complementarily to one or more host target binding sites located in untranslated regions of VGAM1976 host target RNA, herein designated VGAM HOST TARGET RNA. This complementary binding is due to the fact that the nucleotide sequence of VGAM1976 RNA is an accurate or a partial inversed-reversed sequence of the nucleotide sequence of each of the host target binding sites. As an illustration, Fig. 1 shows three such host target binding sites, designated BINDING SITE I, BINDING SITE II and

BINDING SITE III respectively. It is appreciated that the number of host target binding sites shown in Fig. 1 is meant as an illustration only, and is not meant to be limiting - VGAM1976 RNA, herein designated VGAM RNA, may have a different number of host target binding sites in untranslated regions of a VGAM1976 host target RNA, herein designated VGAM HOST TARGET RNA. It is further appreciated that while Fig. 1 depicts host target binding sites in the 3`UTR region, this is meant as an example only - these host target binding sites may be located in the 3`UTR region, the 5`UTR region, or in both 3`UTR and 5`UTR regions.

[69756] The complementary binding of VGAM1976 RNA, herein designated VGAM RNA, to host target binding sites on VGAM1976 host target RNA, herein designated VGAM HOST TARGET RNA, such as BINDING SITE I, BINDING SITE II and BINDING SITE III, inhibits translation of VGAM1976 host target RNA into VGAM1976 host target protein, herein designated VGAM HOST TARGET PROTEIN. VGAM host target protein is therefore outlined by a broken line.

[69757] It is appreciated that VGAM1976 host target gene, herein designated VGAM HOST TARGET GENE, in fact represents a plurality of VGAM1976 host target genes. The mRNA of

each one of this plurality of VGAM1976 host target genes comprises one or more host target binding sites, each having a nucleotide sequence which is at least partly complementary to VGAM1976 RNA, herein designated VGAM RNA, and which when bound by VGAM1976 RNA causes inhibition of translation of respective one or more VGAM1976 host target proteins.

[69758] It is further appreciated by one skilled in the art that the mode of translational inhibition illustrated by Fig. 1 with specific reference to translational inhibition exerted by VGAM1976 gene, herein designated VGAM GENE, on one or more VGAM1976 host target gene, herein designated VGAM HOST TARGET GENE, is in fact common to other known non-viral miRNA genes. As mentioned hereinabove with reference to the background section, although a specific complementary binding site has been demonstrated only for some of the known miRNA genes (primarily Lin-4 and Let-7), all other recently discovered miRNA genes are also believed by those skilled in the art to modulate expression of other genes by complementary binding, although specific complementary binding sites of these other miRNA genes have not yet been found (Ruvkun G., `Perspective: Glimpses of a tiny RNA world`, Science

294,779 (2001)).

[69759] It is yet further appreciated that a function of VGAM1976 is inhibition of expression of host target genes, as part of a novel viral mechanism of attacking a host. Accordingly, utilities of VGAM1976 include diagnosis, prevention and treatment of viral infection by Bovine Herpesvirus 4. Specific functions, and accordingly utilities, of VGAM1976 correlate with, and may be deduced from, the identity of the host target genes which VGAM1976 binds and inhibits, and the function of these host target genes, as elaborated hereinbelow.

[69760] Nucleotide sequences of the VGAM1976 precursor RNA, herein designated VGAM PRECURSOR RNA, and of the `diced` VGAM1976 RNA, herein designated VGAM RNA, and a schematic representation of the secondary folding of VGAM1976 folded precursor RNA, herein designated VGAM FOLDED PRECURSOR RNA, of VGAM1976 are further described hereinbelow with reference to Table 1.

[69761] Nucleotide sequences of host target binding sites, such as BINDING SITE-I, BINDING SITE-II and BINDING SITE-III of Fig. 1, found on VGAM1976 host target RNA, and schematic representation of the complementarity of each of these host target binding sites to VGAM1976 RNA,

herein designated VGAM RNA, are described hereinbelow with reference to Table 2.

[69762] As mentioned hereinabove with reference to Fig. 1, a function of VGAM1976 gene, herein designated VGAM is inhibition of expression of VGAM1976 target genes. It is appreciated that specific functions, and accordingly utilities, of VGAM1976 correlate with, and may be deduced from, the identity of the target genes which VGAM1976 binds and inhibits, and the function of these target genes, as elaborated hereinbelow.

[69763] Dystrophin (muscular dystrophy, Duchenne and Becker types) (DMD, Accession NM_000109) is a VGAM1976 host target gene. DMD BINDING SITE1 through DMD BINDING SITE13 are HOST TARGET binding sites found in untranslated regions of mRNA encoded by DMD, corresponding to HOST TARGET binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of DMD BINDING SITE1 through DMD BINDING SITE13, designated SEQ ID:5574, SEQ ID:10157, SEQ ID:10164, SEQ ID:10170, SEQ ID:10178, SEQ ID:10183, SEQ ID:10188, SEQ ID:10199, SEQ ID:10205, SEQ ID:10210, SEQ ID:10215, SEQ ID:10226 and SEQ ID:10238 respectively, to the nu-

cleotide sequence of VGAM1976 RNA, herein designated VGAM RNA, also designated SEQ ID:4687.

[69764] A function of VGAM1976 is therefore inhibition of Dystrophin (muscular dystrophy, Duchenne and Becker types) (DMD, Accession NM_000109), a gene which muscular dystrophy . Accordingly, utilities of VGAM1976 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DMD. The function of DMD and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM218.Protocadherin 11 X-linked (PCDH11X, Accession NM_032968) is another VGAM1976 host target gene. PCDH11X BINDING SITE1 and PCDH11X BINDING SITE2 are HOST TARGET binding sites found in untranslated regions of mRNA encoded by PCDH11X, corresponding to HOST TARGET binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of PCDH11X BINDING SITE1 and PCDH11X BINDING SITE2, designated SEQ ID:26792 and SEQ ID:26807 respectively, to the nucleotide sequence of VGAM1976 RNA, herein designated VGAM RNA, also designated SEQ ID:4687.

[69765] Another function of VGAM1976 is therefore inhibition of Protocadherin 11 X-linked (PCDH11X, Accession NM_032968), a gene which is thought to play a fundamental role in cell-cell recognition essential for the segmental development and function of the central nervous system. Accordingly, utilities of VGAM1976 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PCDH11X. The function of PCDH11X and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM433.PDGFA Associated Protein 1 (PDAP1, Accession XM_166484) is another VGAM1976 host target gene. PDAP1 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by PDAP1, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of PDAP1 BINDING SITE, designated SEQ ID:44422, to the nucleotide sequence of VGAM1976 RNA, herein designated VGAM RNA, also designated SEQ ID:4687.

[69766] Another function of VGAM1976 is therefore inhibition of

PDGFA Associated Protein 1 (PDAP1, Accession XM_166484). Accordingly, utilities of VGAM1976 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PDAP1. Phosphatidylinositol Glycan, Class A (paroxysmal nocturnal hemoglobinuria) (PIGA, Accession NM_020472) is another VGAM1976 host target gene. PIGA BINDING SITE1 through PIGA BINDING SITE3 are HOST TARGET binding sites found in untranslated regions of mRNA encoded by PIGA, corresponding to HOST TARGET binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of PIGA BINDING SITE1 through PIGA BINDING SITE3, designated SEQ ID:21714, SEQ ID:21721 and SEQ ID:8501 respectively, to the nucleotide sequence of VGAM1976 RNA, herein designated VGAM RNA, also designated SEQ ID:4687.

[69767] Another function of VGAM1976 is therefore inhibition of Phosphatidylinositol Glycan, Class A (paroxysmal nocturnal hemoglobinuria) (PIGA, Accession NM_020472). Accordingly, utilities of VGAM1976 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PIGA. SWI/SNF Related, Matrix Associated, Actin Dependent Regulator of Chromatin, Subfamily A,

Member 1 (SMARCA1, Accession NM_139035) is another VGAM1976 host target gene. SMARCA1 BINDING SITE1 and SMARCA1 BINDING SITE2 are HOST TARGET binding sites found in untranslated regions of mRNA encoded by SMARCA1, corresponding to HOST TARGET binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of SMARCA1 BINDING SITE1 and SMARCA1 BINDING SITE2, designated SEQ ID:29132 and SEQ ID:15723 respectively, to the nucleotide sequence of VGAM1976 RNA, herein designated VGAM RNA, also designated SEQ ID:4687.

[69768] Another function of VGAM1976 is therefore inhibition of SWI/SNF Related, Matrix Associated, Actin Dependent Regulator of Chromatin, Subfamily A, Member 1 (SMARCA1, Accession NM_139035), a gene which regulates transcription via it effects on chromatin structure. Accordingly, utilities of VGAM1976 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SMARCA1. The function of SMARCA1 has been established by previous studies. In the course of positional cloning of genes carried on YACs that span the breakpoint in a t(X;3) translocation in a female with Lowe

syndrome (OMIM Ref. No. 309000), Okabe et al. (1992) isolated by chance a human gene with strong homology to SNF2 in S. cerevisiae. Despite strong homology at the amino acid level, the SNF2L1 gene in the human was not capable of complementing the yeast mutation. Furthermore, in contrast to SNF2 itself, a fusion protein consisting of the DNA binding domain of LexA and the human gene did not transactivate a reporter gene downstream of LexA binding sites in a yeast expression system. The similarity between SNF2L1 and the yeast gene suggested that the mammalian gene is part of an evolutionarily conserved family that has been implicated as a global activator of transcription in yeast, but its function in mammals remains unknown. See also SNF2L2 (OMIM Ref. No. 600014) and ATRX (OMIM Ref. No. 300032). Lazzaro and Picketts (2001) cloned the murine homologs of the Drosophila 'imitation switch' (ISWI) protein, Snf2h (SMARCA5; 603375) and Snf2l. In situ hybridization of mouse adult tissues and embryos showed that Snf2h expression correlated with cell proliferation, while Snf2l expression correlated with differentiation. Snf2l was expressed in terminally differentiated neurons after birth and in adult mice, as well as in adult ovaries and testes

[69769] Full details of the abovementioned studies are described in the following publications, the disclosure of which are hereby incorporated by reference:

[69770] Lazzaro, M. A.; Picketts, D. J. : Cloning and characterization of the murine Imitation Switch (ISWI) genes: differential expression patterns suggest distinct developmental roles for Snf2h and Snf2l. J. Neurochem. 77: 1145-1156, 2001. ; and

[69771] Okabe, I.; Bailey, L. C.; Attree, O.; Srinivasan, S.; Perkel, J. M.; Laurent, B. C.; Carlson, M.; Nelson, D. L.; Nussbaum, R. L. : Cloning of human and bovine homologs of SNF2/SWI2: a g.

[69772] Further studies establishing the function and utilities of SMARCA1 are found in John Hopkins OMIM database record ID 300012, and in sited publications numbered 7226-7227 listed in the bibliography section hereinbelow, which are also hereby incorporated by reference.FLJ14117 (Accession NM_022777) is another VGAM1976 host target gene. FLJ14117 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by FLJ14117, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nu-

cleotide sequences of FLJ14117 BINDING SITE, designated SEQ ID:23050, to the nucleotide sequence of VGAM1976 RNA, herein designated VGAM RNA, also designated SEQ ID:4687.

[69773] Another function of VGAM1976 is therefore inhibition of FLJ14117 (Accession NM_022777). Accordingly, utilities of VGAM1976 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ14117. FLJ14751 (Accession NM_032834) is another VGAM1976 host target gene. FLJ14751 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by FLJ14751, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of FLJ14751 BINDING SITE, designated SEQ ID:26613, to the nucleotide sequence of VGAM1976 RNA, herein designated VGAM RNA, also designated SEQ ID:4687.

[69774] Another function of VGAM1976 is therefore inhibition of FLJ14751 (Accession NM_032834). Accordingly, utilities of VGAM1976 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ14751. FLJ23153 (Accession NM_024636) is another

VGAM1976 host target gene. FLJ23153 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by FLJ23153, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of FLJ23153 BINDING SITE, designated SEQ ID:23909, to the nucleotide sequence of VGAM1976 RNA, herein designated VGAM RNA, also designated SEQ ID:4687.

[69775] Another function of VGAM1976 is therefore inhibition of FLJ23153 (Accession NM_024636). Accordingly, utilities of VGAM1976 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ23153. HSPC195 (Accession XM_087785) is another VGAM1976 host target gene. HSPC195 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by HSPC195, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of HSPC195 BINDING SITE, designated SEQ ID:39425, to the nucleotide sequence of VGAM1976 RNA, herein designated VGAM RNA, also designated SEQ ID:4687.

[69776] Another function of VGAM1976 is therefore inhibition of HSPC195 (Accession XM_087785). Accordingly, utilities of VGAM1976 include diagnosis, prevention and treatment of diseases and clinical conditions associated with HSPC195. KIAA0562 (Accession NM_014704) is another VGAM1976 host target gene. KIAA0562 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by KIAA0562, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of KIAA0562 BINDING SITE, designated SEQ ID:16239, to the nucleotide sequence of VGAM1976 RNA, herein designated VGAM RNA, also designated SEQ ID:4687.

[69777] Another function of VGAM1976 is therefore inhibition of KIAA0562 (Accession NM_014704). Accordingly, utilities of VGAM1976 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0562. KIAA0923 (Accession NM_014021) is another VGAM1976 host target gene. KIAA0923 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by KIAA0923, corresponding to a HOST TARGET binding site such as BINDING SITE I,

BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of KIAA0923 BINDING SITE, designated SEQ ID:15242, to the nucleotide sequence of VGAM1976 RNA, herein designated VGAM RNA, also designated SEQ ID:4687.

[69778] Another function of VGAM1976 is therefore inhibition of KIAA0923 (Accession NM_014021). Accordingly, utilities of VGAM1976 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0923. KIAA1327 (Accession XM_051146) is another VGAM1976 host target gene. KIAA1327 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by KIAA1327, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of KIAA1327 BINDING SITE, designated SEQ ID:35763, to the nucleotide sequence of VGAM1976 RNA, herein designated VGAM RNA, also designated SEQ ID:4687.

[69779] Another function of VGAM1976 is therefore inhibition of KIAA1327 (Accession XM_051146). Accordingly, utilities of VGAM1976 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

KIAA1327. Mitochondrial Ribosomal Protein L20 (MRPL20, Accession NM_017971) is another VGAM1976 host target gene. MRPL20 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by MRPL20, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of MRPL20 BINDING SITE, designated SEQ ID:19694, to the nucleotide sequence of VGAM1976 RNA, herein designated VGAM RNA, also designated SEQ ID:4687.

[69780] Another function of VGAM1976 is therefore inhibition of Mitochondrial Ribosomal Protein L20 (MRPL20, Accession NM_017971). Accordingly, utilities of VGAM1976 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MRPL20. Prefoldin 4 (PFDN4, Accession NM_002623) is another VGAM1976 host target gene. PFDN4 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by PFDN4, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of PFDN4 BINDING SITE, des-

ignated SEQ ID:8486, to the nucleotide sequence of VGAM1976 RNA, herein designated VGAM RNA, also designated SEQ ID:4687.

[69781] Another function of VGAM1976 is therefore inhibition of Prefoldin 4 (PFDN4, Accession NM_002623). Accordingly, utilities of VGAM1976 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PFDN4. RAB14, Member RAS Oncogene Family (RAB14, Accession NM_016322) is another VGAM1976 host target gene. RAB14 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by RAB14, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of RAB14 BINDING SITE, designated SEQ ID:18449, to the nucleotide sequence of VGAM1976 RNA, herein designated VGAM RNA, also designated SEQ ID:4687.

[69782] Another function of VGAM1976 is therefore inhibition of RAB14, Member RAS Oncogene Family (RAB14, Accession NM_016322). Accordingly, utilities of VGAM1976 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RAB14. RYK Receptor-like

Tyrosine Kinase (RYK, Accession XM_093692) is another VGAM1976 host target gene. RYK BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by RYK, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of RYK BINDING SITE, designated SEQ ID:40203, to the nucleotide sequence of VGAM1976 RNA, herein designated VGAM RNA, also designated SEQ ID:4687.

[69783] Another function of VGAM1976 is therefore inhibition of RYK Receptor-like Tyrosine Kinase (RYK, Accession XM_093692). Accordingly, utilities of VGAM1976 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RYK. Wingless-type MMTV Integration Site Family, Member 16 (WNT16, Accession NM_057168) is another VGAM1976 host target gene. WNT16 BINDING SITE1 and WNT16 BINDING SITE2 are HOST TARGET binding sites found in untranslated regions of mRNA encoded by WNT16, corresponding to HOST TARGET binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of WNT16 BINDING

SITE1 and WNT16 BINDING SITE2, designated SEQ ID:27675 and SEQ ID:18171 respectively, to the nucleotide sequence of VGAM1976 RNA, herein designated VGAM RNA, also designated SEQ ID:4687.

[69784] Another function of VGAM1976 is therefore inhibition of Wingless-type MMTV Integration Site Family, Member 16 (WNT16, Accession NM_057168). Accordingly, utilities of VGAM1976 include diagnosis, prevention and treatment of diseases and clinical conditions associated with WNT16. LOC144245 (Accession XM_047770) is another VGAM1976 host target gene. LOC144245 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC144245, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC144245 BINDING SITE, designated SEQ ID:35052, to the nucleotide sequence of VGAM1976 RNA, herein designated VGAM RNA, also designated SEQ ID:4687.

[69785] Another function of VGAM1976 is therefore inhibition of LOC144245 (Accession XM_047770). Accordingly, utilities of VGAM1976 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

LOC144245. LOC148697 (Accession XM_086276) is another VGAM1976 host target gene. LOC148697 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC148697, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC148697 BINDING SITE, designated SEQ ID:38576, to the nucleotide sequence of VGAM1976 RNA, herein designated VGAM RNA, also designated SEQ ID:4687.

[69786] Another function of VGAM1976 is therefore inhibition of LOC148697 (Accession XM_086276). Accordingly, utilities of VGAM1976 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC148697. LOC150933 (Accession XM_097971) is another VGAM1976 host target gene. LOC150933 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC150933, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC150933 BINDING SITE, designated SEQ ID:41273, to the nucleotide sequence of VGAM1976 RNA, herein desig-

nated VGAM RNA, also designated SEQ ID:4687.

[69787] Another function of VGAM1976 is therefore inhibition of LOC150933 (Accession XM_097971). Accordingly, utilities of VGAM1976 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC150933. LOC152580 (Accession XM_098240) is another VGAM1976 host target gene. LOC152580 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC152580, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC152580 BINDING SITE, designated SEQ ID:41524, to the nucleotide sequence of VGAM1976 RNA, herein designated VGAM RNA, also designated SEQ ID:4687.

[69788] Another function of VGAM1976 is therefore inhibition of LOC152580 (Accession XM_098240). Accordingly, utilities of VGAM1976 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC152580. LOC152925 (Accession XM_087559) is another VGAM1976 host target gene. LOC152925 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC152925, cor-

responding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC152925 BINDING SITE, designated SEQ ID:39334, to the nucleotide sequence of VGAM1976 RNA, herein designated VGAM RNA, also designated SEQ ID:4687.

[69789] Another function of VGAM1976 is therefore inhibition of LOC152925 (Accession XM_087559). Accordingly, utilities of VGAM1976 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC152925. LOC219404 (Accession XM_167909) is another VGAM1976 host target gene. LOC219404 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC219404, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC219404 BINDING SITE, designated SEQ ID:44909, to the nucleotide sequence of VGAM1976 RNA, herein designated VGAM RNA, also designated SEQ ID:4687.

[69790] Another function of VGAM1976 is therefore inhibition of LOC219404 (Accession XM_167909). Accordingly, utilities of VGAM1976 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with LOC219404. LOC221738 (Accession XM_168097) is another VGAM1976 host target gene. LOC221738 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC221738, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC221738 BINDING SITE, designated SEQ ID:45027, to the nucleotide sequence of VGAM1976 RNA, herein designated VGAM RNA, also designated SEQ ID:4687.

[69791] Another function of VGAM1976 is therefore inhibition of LOC221738 (Accession XM_168097). Accordingly, utilities of VGAM1976 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC221738. LOC51068 (Accession NM_015938) is another VGAM1976 host target gene. LOC51068 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC51068, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC51068 BINDING SITE, designated SEQ ID:18060, to the

nucleotide sequence of VGAM1976 RNA, herein designated VGAM RNA, also designated SEQ ID:4687.

[69792] Another function of VGAM1976 is therefore inhibition of LOC51068 (Accession NM_015938). Accordingly, utilities of VGAM1976 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC51068. LOC93380 (Accession XM_051020) is another VGAM1976 host target gene. LOC93380 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC93380, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC93380 BINDING SITE, designated SEQ ID:35729, to the nucleotide sequence of VGAM1976 RNA, herein designated VGAM RNA, also designated SEQ ID:4687.

[69793] Another function of VGAM1976 is therefore inhibition of LOC93380 (Accession XM_051020). Accordingly, utilities of VGAM1976 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC93380. Fig. 1 further provides a conceptual description of a novel bioinformatically detected viral gene of the present invention, referred to here as Viral Genomic Ad-

dress Messenger 1977 (VGAM1977) viral gene, which modulates expression of respective host target genes thereof, the function and utility of which host target genes is known in the art.

[69794] VGAM1977 is a novel bioinformatically detected regulatory, non protein coding, viral micro RNA (miRNA) gene. The method by which VGAM1977 was detected is described hereinabove with reference to Figs. 1-8.

[69795] VGAM1977 gene, herein designated VGAM GENE, is a viral gene contained in the genome of Bovine Herpesvirus 4. VGAM1977 host target gene, herein designated VGAM HOST TARGET GENE, is a human gene contained in the human genome.

[69796] VGAM1977 gene encodes a VGAM1977 precursor RNA, herein designated VGAM PRECURSOR RNA. Similar to other miRNA genes, and unlike most ordinary genes, VGAM1977 precursor RNA does not encode a protein. A nucleotide sequence identical or highly similar to the nucleotide sequence of VGAM1977 precursor RNA is designated SEQ ID:1963, and is provided hereinbelow with reference to the sequence listing part. Nucleotide sequence SEQ ID:1963 is located at position 5340 relative to the genome of Bovine Herpesvirus 4.

[69797] VGAM1977 precursor RNA folds onto itself, forming VGAM1977 folded precursor RNA, herein designated VGAM FOLDED PRECURSOR RNA, which has a two-dimensional `hairpin structure`. As is well known in the art, this `hairpin structure`, is typical of RNA encoded by miRNA genes, and is due to the fact that the nucleotide sequence of the first half of the RNA encoded by a miRNA gene is an accurate or partial inversed-reversed sequence of the nucleotide sequence of the second half thereof.

[69798] An enzyme complex designated DICER COMPLEX, `dices` the VGAM1977 folded precursor RNA into VGAM1977 RNA, herein designated VGAM RNA, a single stranded ~22 nt long RNA segment. As is known in the art, `dicing` of a hairpin structured RNA precursor product into a short ~22nt RNA segment is catalyzed by an enzyme complex comprising an enzyme called Dicer together with other necessary proteins. A probable (over 48%) nucleotide sequence of VGAM1977 RNA is designated SEQ ID:4688, and is provided hereinbelow with reference to the sequence listing part.

[69799] VGAM1977 host target gene, herein designated VGAM HOST TARGET GENE, encodes a corresponding messenger RNA, VGAM1977 host target RNA, herein designated

VGAM HOST TARGET RNA. VGAM1977 host target RNA comprises three regions, as is typical of mRNA of a protein coding gene: a 5` untranslated region, a protein coding region and a 3` untranslated region, designated 5`UTR, PROTEIN CODING and 3`UTR respectively.

[69800] VGAM1977 RNA, herein designated VGAM RNA, binds complementarily to one or more host target binding sites located in untranslated regions of VGAM1977 host target RNA, herein designated VGAM HOST TARGET RNA. This complementary binding is due to the fact that the nucleotide sequence of VGAM1977 RNA is an accurate or a partial inversed-reversed sequence of the nucleotide sequence of each of the host target binding sites. As an illustration, Fig. 1 shows three such host target binding sites, designated BINDING SITE I, BINDING SITE II and BINDING SITE III respectively. It is appreciated that the number of host target binding sites shown in Fig. 1 is meant as an illustration only, and is not meant to be limiting - VGAM1977 RNA, herein designated VGAM RNA, may have a different number of host target binding sites in untranslated regions of a VGAM1977 host target RNA, herein designated VGAM HOST TARGET RNA. It is further appreciated that while Fig. 1 depicts host target binding

sites in the 3`UTR region, this is meant as an example only - these host target binding sites may be located in the 3`UTR region, the 5`UTR region, or in both 3`UTR and 5`UTR regions.

[69801] The complementary binding of VGAM1977 RNA, herein designated VGAM RNA, to host target binding sites on VGAM1977 host target RNA, herein designated VGAM HOST TARGET RNA, such as BINDING SITE I, BINDING SITE II and BINDING SITE III, inhibits translation of VGAM1977 host target RNA into VGAM1977 host target protein, herein designated VGAM HOST TARGET PROTEIN. VGAM host target protein is therefore outlined by a broken line.

[69802] It is appreciated that VGAM1977 host target gene, herein designated VGAM HOST TARGET GENE, in fact represents a plurality of VGAM1977 host target genes. The mRNA of each one of this plurality of VGAM1977 host target genes comprises one or more host target binding sites, each having a nucleotide sequence which is at least partly complementary to VGAM1977 RNA, herein designated VGAM RNA, and which when bound by VGAM1977 RNA causes inhibition of translation of respective one or more VGAM1977 host target proteins.

[69803] It is further appreciated by one skilled in the art that the

mode of translational inhibition illustrated by Fig. 1 with specific reference to translational inhibition exerted by VGAM1977 gene, herein designated VGAM GENE, on one or more VGAM1977 host target gene, herein designated VGAM HOST TARGET GENE, is in fact common to other known non-viral miRNA genes. As mentioned hereinabove with reference to the background section, although a specific complementary binding site has been demonstrated only for some of the known miRNA genes (primarily Lin-4 and Let-7), all other recently discovered miRNA genes are also believed by those skilled in the art to modulate expression of other genes by complementary binding, although specific complementary binding sites of these other miRNA genes have not yet been found (Ruvkun G., `Perspective: Glimpses of a tiny RNA world`, Science 294,779 (2001)).

[69804] It is yet further appreciated that a function of VGAM1977 is inhibition of expression of host target genes, as part of a novel viral mechanism of attacking a host. Accordingly, utilities of VGAM1977 include diagnosis, prevention and treatment of viral infection by Bovine Herpesvirus 4. Specific functions, and accordingly utilities, of VGAM1977 correlate with, and may be deduced from, the identity of

the host target genes which VGAM1977 binds and inhibits, and the function of these host target genes, as elaborated hereinbelow.

[69805] Nucleotide sequences of the VGAM1977 precursor RNA, herein designated VGAM PRECURSOR RNA, and of the `diced` VGAM1977 RNA, herein designated VGAM RNA, and a schematic representation of the secondary folding of VGAM1977 folded precursor RNA, herein designated VGAM FOLDED PRECURSOR RNA, of VGAM1977 are further described hereinbelow with reference to Table 1.

[69806] Nucleotide sequences of host target binding sites, such as BINDING SITE-I, BINDING SITE-II and BINDING SITE-III of Fig. 1, found on VGAM1977 host target RNA, and schematic representation of the complementarity of each of these host target binding sites to VGAM1977 RNA, herein designated VGAM RNA, are described hereinbelow with reference to Table 2.

[69807] As mentioned hereinabove with reference to Fig. 1, a function of VGAM1977 gene, herein designated VGAM is inhibition of expression of VGAM1977 target genes. It is appreciated that specific functions, and accordingly utilities, of VGAM1977 correlate with, and may be deduced from, the identity of the target genes which VGAM1977

binds and inhibits, and the function of these target genes, as elaborated hereinbelow.

[69808] Archain 1 (ARCN1, Accession NM_001655) is a VGAM1977 host target gene. ARCN1 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by ARCN1, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of ARCN1 BINDING SITE, designated SEQ ID:7363, to the nucleotide sequence of VGAM1977 RNA, herein designated VGAM RNA, also designated SEQ ID:4688.

[69809] A function of VGAM1977 is therefore inhibition of Archain 1 (ARCN1, Accession NM_001655), a gene which plays a fundamental role in eukaryotic cell biology. Accordingly, utilities of VGAM1977 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ARCN1. The function of ARCN1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM1226.FLJ12888 (Accession NM_024945) is another VGAM1977 host target gene. FLJ12888 BINDING SITE is HOST TARGET binding site

found in the 3` untranslated region of mRNA encoded by FLJ12888, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of FLJ12888 BINDING SITE, designated SEQ ID:24494, to the nucleotide sequence of VGAM1977 RNA, herein designated VGAM RNA, also designated SEQ ID:4688.

[69810] Another function of VGAM1977 is therefore inhibition of FLJ12888 (Accession NM_024945). Accordingly, utilities of VGAM1977 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ12888. Fig. 1 further provides a conceptual description of a novel bioinformatically detected viral gene of the present invention, referred to here as Viral Genomic Address Messenger 1978 (VGAM1978) viral gene, which modulates expression of respective host target genes thereof, the function and utility of which host target genes is known in the art.

[69811] VGAM1978 is a novel bioinformatically detected regulatory, non protein coding, viral micro RNA (miRNA) gene. The method by which VGAM1978 was detected is described hereinabove with reference to Figs. 1-8.

[69812] VGAM1978 gene, herein designated VGAM GENE, is a viral gene contained in the genome of Bovine Herpesvirus 4. VGAM1978 host target gene, herein designated VGAM HOST TARGET GENE, is a human gene contained in the human genome.

[69813] VGAM1978 gene encodes a VGAM1978 precursor RNA, herein designated VGAM PRECURSOR RNA. Similar to other miRNA genes, and unlike most ordinary genes, VGAM1978 precursor RNA does not encode a protein. A nucleotide sequence identical or highly similar to the nucleotide sequence of VGAM1978 precursor RNA is designated SEQ ID:1964, and is provided hereinbelow with reference to the sequence listing part. Nucleotide sequence SEQ ID:1964 is located at position 2128 relative to the genome of Bovine Herpesvirus 4.

[69814] VGAM1978 precursor RNA folds onto itself, forming VGAM1978 folded precursor RNA, herein designated VGAM FOLDED PRECURSOR RNA, which has a two-dimensional `hairpin structure`. As is well known in the art, this `hairpin structure`, is typical of RNA encoded by miRNA genes, and is due to the fact that the nucleotide sequence of the first half of the RNA encoded by a miRNA gene is an accurate or partial inversed-reversed sequence

of the nucleotide sequence of the second half thereof.

[69815] An enzyme complex designated DICER COMPLEX, `dices` the VGAM1978 folded precursor RNA into VGAM1978 RNA, herein designated VGAM RNA, a single stranded ~22 nt long RNA segment. As is known in the art, `dicing` of a hairpin structured RNA precursor product into a short ~22nt RNA segment is catalyzed by an enzyme complex comprising an enzyme called Dicer together with other necessary proteins. A probable (over 82%) nucleotide sequence of VGAM1978 RNA is designated SEQ ID:4689, and is provided hereinbelow with reference to the sequence listing part.

[69816] VGAM1978 host target gene, herein designated VGAM HOST TARGET GENE, encodes a corresponding messenger RNA, VGAM1978 host target RNA, herein designated VGAM HOST TARGET RNA. VGAM1978 host target RNA comprises three regions, as is typical of mRNA of a protein coding gene: a 5` untranslated region, a protein coding region and a 3` untranslated region, designated 5`UTR, PROTEIN CODING and 3`UTR respectively.

[69817] VGAM1978 RNA, herein designated VGAM RNA, binds complementarily to one or more host target binding sites located in untranslated regions of VGAM1978 host target

RNA, herein designated VGAM HOST TARGET RNA. This complementary binding is due to the fact that the nucleotide sequence of VGAM1978 RNA is an accurate or a partial inversed-reversed sequence of the nucleotide sequence of each of the host target binding sites. As an illustration, Fig. 1 shows three such host target binding sites, designated BINDING SITE I, BINDING SITE II and BINDING SITE III respectively. It is appreciated that the number of host target binding sites shown in Fig. 1 is meant as an illustration only, and is not meant to be limiting - VGAM1978 RNA, herein designated VGAM RNA, may have a different number of host target binding sites in untranslated regions of a VGAM1978 host target RNA, herein designated VGAM HOST TARGET RNA. It is further appreciated that while Fig. 1 depicts host target binding sites in the 3`UTR region, this is meant as an example only - these host target binding sites may be located in the 3`UTR region, the 5`UTR region, or in both 3`UTR and 5`UTR regions.

[69818] The complementary binding of VGAM1978 RNA, herein designated VGAM RNA, to host target binding sites on VGAM1978 host target RNA, herein designated VGAM HOST TARGET RNA, such as BINDING SITE I, BINDING SITE

II and BINDING SITE III, inhibits translation of VGAM1978 host target RNA into VGAM1978 host target protein, herein designated VGAM HOST TARGET PROTEIN. VGAM host target protein is therefore outlined by a broken line.

[69819] It is appreciated that VGAM1978 host target gene, herein designated VGAM HOST TARGET GENE, in fact represents a plurality of VGAM1978 host target genes. The mRNA of each one of this plurality of VGAM1978 host target genes comprises one or more host target binding sites, each having a nucleotide sequence which is at least partly complementary to VGAM1978 RNA, herein designated VGAM RNA, and which when bound by VGAM1978 RNA causes inhibition of translation of respective one or more VGAM1978 host target proteins.

[69820] It is further appreciated by one skilled in the art that the mode of translational inhibition illustrated by Fig. 1 with specific reference to translational inhibition exerted by VGAM1978 gene, herein designated VGAM GENE, on one or more VGAM1978 host target gene, herein designated VGAM HOST TARGET GENE, is in fact common to other known non-viral miRNA genes. As mentioned hereinabove with reference to the background section, although a specific complementary binding site has been demonstrated

only for some of the known miRNA genes (primarily Lin-4 and Let-7), all other recently discovered miRNA genes are also believed by those skilled in the art to modulate expression of other genes by complementary binding, although specific complementary binding sites of these other miRNA genes have not yet been found (Ruvkun G., `Perspective: Glimpses of a tiny RNA world`, Science 294,779 (2001)).

[69821] It is yet further appreciated that a function of VGAM1978 is inhibition of expression of host target genes, as part of a novel viral mechanism of attacking a host. Accordingly, utilities of VGAM1978 include diagnosis, prevention and treatment of viral infection by Bovine Herpesvirus 4. Specific functions, and accordingly utilities, of VGAM1978 correlate with, and may be deduced from, the identity of the host target genes which VGAM1978 binds and inhibits, and the function of these host target genes, as elaborated hereinbelow.

[69822] Nucleotide sequences of the VGAM1978 precursor RNA, herein designated VGAM PRECURSOR RNA, and of the `diced` VGAM1978 RNA, herein designated VGAM RNA, and a schematic representation of the secondary folding of VGAM1978 folded precursor RNA, herein designated

VGAM FOLDED PRECURSOR RNA, of VGAM1978 are further described hereinbelow with reference to Table 1.

[69823] Nucleotide sequences of host target binding sites, such as BINDING SITE-I, BINDING SITE-II and BINDING SITE-III of Fig. 1, found on VGAM1978 host target RNA, and schematic representation of the complementarity of each of these host target binding sites to VGAM1978 RNA, herein designated VGAM RNA, are described hereinbelow with reference to Table 2.

[69824] As mentioned hereinabove with reference to Fig. 1, a function of VGAM1978 gene, herein designated VGAM is inhibition of expression of VGAM1978 target genes. It is appreciated that specific functions, and accordingly utilities, of VGAM1978 correlate with, and may be deduced from, the identity of the target genes which VGAM1978 binds and inhibits, and the function of these target genes, as elaborated hereinbelow.

[69825] BLTR2 (Accession NM_019839) is a VGAM1978 host target gene. BLTR2 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by BLTR2, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide

sequences of BLTR2 BINDING SITE, designated SEQ ID:21245, to the nucleotide sequence of VGAM1978 RNA, herein designated VGAM RNA, also designated SEQ ID:4689.

[69826] A function of VGAM1978 is therefore inhibition of BLTR2 (Accession NM_019839). Accordingly, utilities of VGAM1978 include diagnosis, prevention and treatment of diseases and clinical conditions associated with BLTR2. CERD4 (Accession NM_012074) is another VGAM1978 host target gene. CERD4 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by CERD4, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of CERD4 BINDING SITE, designated SEQ ID:14354, to the nucleotide sequence of VGAM1978 RNA, herein designated VGAM RNA, also designated SEQ ID:4689.

[69827] Another function of VGAM1978 is therefore inhibition of CERD4 (Accession NM_012074). Accordingly, utilities of VGAM1978 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CERD4. Cytochrome P450, Subfamily I (dioxin-inducible),

Polypeptide 1 (glaucoma 3, primary infantile) (CYP1B1, Accession NM_000104) is another VGAM1978 host target gene. CYP1B1 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by CYP1B1, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of CYP1B1 BINDING SITE, designated SEQ ID:5567, to the nucleotide sequence of VGAM1978 RNA, herein designated VGAM RNA, also designated SEQ ID:4689.

[69828] Another function of VGAM1978 is therefore inhibition of Cytochrome P450, Subfamily I (dioxin-inducible), Polypeptide 1 (glaucoma 3, primary infantile) (CYP1B1, Accession NM_000104), a gene which participates in the metabolism of a molecule that is a participant in eye development. Accordingly, utilities of VGAM1978 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CYP1B1. The function of CYP1B1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM894.Gap Junction Protein, Alpha 1, 43kDa (connexin 43) (GJA1, Ac-

cession NM_000165) is another VGAM1978 host target gene. GJA1 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by GJA1, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of GJA1 BINDING SITE, designated SEQ ID:5678, to the nucleotide sequence of VGAM1978 RNA, herein designated VGAM RNA, also designated SEQ ID:4689.

[69829] Another function of VGAM1978 is therefore inhibition of Gap Junction Protein, Alpha 1, 43kDa (connexin 43) (GJA1, Accession NM_000165), a gene which may act in synchronizing heart contraction and embryonic development. Accordingly, utilities of VGAM1978 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GJA1. The function of GJA1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM341.5-hydroxytryptamine (serotonin) Receptor 2C (HTR2C, Accession NM_000868) is another VGAM1978 host target gene. HTR2C BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by HTR2C, corre-

sponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of HTR2C BINDING SITE, designated SEQ ID:6536, to the nucleotide sequence of VGAM1978 RNA, herein designated VGAM RNA, also designated SEQ ID:4689.

[69830] Another function of VGAM1978 is therefore inhibition of 5-hydroxytryptamine (serotonin) Receptor 2C (HTR2C, Accession NM_000868), a gene which activates phospholipase C and regulates intracellular calcium flux. Accordingly, utilities of VGAM1978 include diagnosis, prevention and treatment of diseases and clinical conditions associated with HTR2C. The function of HTR2C and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM1052.Platelet-activating Factor Acetylhydrolase, Isoform Ib, Gamma Subunit 29kDa (PAFAH1B3, Accession NM_002573) is another VGAM1978 host target gene. PAFAH1B3 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by PAFAH1B3, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complemen-

tarity of the nucleotide sequences of PAFAH1B3 BINDING SITE, designated SEQ ID:8433, to the nucleotide sequence of VGAM1978 RNA, herein designated VGAM RNA, also designated SEQ ID:4689.

[69831] Another function of VGAM1978 is therefore inhibition of Platelet-activating Factor Acetylhydrolase, Isoform Ib, Gamma Subunit 29kDa (PAFAH1B3, Accession NM_002573), a gene which plays a role during the development of brain. Accordingly, utilities of VGAM1978 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PAFAH1B3. The function of PAFAH1B3 has been established by previous studies. Platelet-activating factor acetylhydrolase (PAFAH) catalyzes the removal of the acetyl group at the sn-2 position of the glycerol backbone of platelet-activating factor (PAF), producing biologically inactive lyso-PAF. Isoform 1B of PAFAH consists of 3 subunits: alpha (PAFAH1B1; 601545), beta (PAFAH1B2; 602508), and gamma. The catalytic activity of the enzyme resides in the beta and gamma subunits, whereas the alpha subunit has regulatory activity. PAFAH1B1 has been identified as a causative gene of Miller-Dieker lissencephaly (OMIM Ref. No. 247200). By screening a human fetal liver cDNA library

with oligonucleotides based on the cDNA sequence of the bovine PAFAH-gamma subunit, Adachi et al. (1995) cloned a cDNA encoding PAFAH1B3. The deduced 231-amino acid human protein has 97.8% identity with the bovine PAFAH-gamma subunit. The authors found that the PAFAH1B3 gene spans approximately 5.6 kb and contains 5 exons. Southern blot analysis showed that PAFAH1B3 is a single-copy gene in the human genome. Northern blot analysis detected a 1.0-kb PAFAH1B3 transcript in several human adult and fetal tissues, with the highest expression in fetal brain. Adachi et al. (1995) expressed the PAFAH1B3 cDNA in E. coli and found that the resulting protein was catalytically active, demonstrating that trimer formation is not essential for PAFAH1B3 activity. Nothwang et al. (2001) reported a translocation t(1;19)(q21.3;q13.2) in a female with mental retardation, ataxia, and atrophy of the brain. Sequence analysis of the breakpoints revealed an Alu repeat-mediated mechanism of recombination that led to truncation of PAFAH1B3 and the kinase CLK2 (OMIM Ref. No. 602989). One expressed fusion gene encoded the first 136 amino acids of PAFAH1B3, followed by the complete CLK2 protein. Truncated PAFAH1B3 protein lost its potential to interact with

LIS1 (OMIM Ref. No. 601545), whereas CLK2 activity was conserved within the fusion protein. These data emphasized the importance of PAFAH1B in brain development and function.

[69832] Full details of the abovementioned studies are described in the following publications, the disclosure of which are hereby incorporated by reference:

[69833] Adachi, H.; Tsujimoto, M.; Hattori, M.; Arai, H.; Inoue, K. : cDNA cloning of human cytosolic platelet-activating factor acetylhydrolase gamma-subunit and its mRNA expression in human tissues. Biochem. Biophys. Res. Commun. 214: 180-187, 1995. ; and

[69834] Nothwang, H. G.; Kim, H. G.; Aoki, J.; Geisterfer, M.; Kubart, S.; Wegner, R. D.; van Moers, A.; Ashworth, L. K.; Haaf, T.; Bell, J.; Arai, H.; Tommerup, N.; Ropers, H. H.; Wirth, J. : F.

[69835] Further studies establishing the function and utilities of PAFAH1B3 are found in John Hopkins OMIM database record ID 603074, and in sited publications numbered 885 and 9036 listed in the bibliography section hereinbelow, which are also hereby incorporated by reference.Platelet-derived Growth Factor Receptor, Alpha Polypeptide (PDGFRA, Accession NM_006206) is another

VGAM1978 host target gene. PDGFRA BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by PDGFRA, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of PDGFRA BINDING SITE, designated SEQ ID:12887, to the nucleotide sequence of VGAM1978 RNA, herein designated VGAM RNA, also designated SEQ ID:4689.

[69836] Another function of VGAM1978 is therefore inhibition of Platelet-derived Growth Factor Receptor, Alpha Polypeptide (PDGFRA, Accession NM_006206), a gene which this receptor binds platelet-derived growth factor and has a tyrosine-protein kinase activity. Accordingly, utilities of VGAM1978 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PDGFRA. The function of PDGFRA and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM117.Protein Phosphatase 1, Catalytic Subunit, Beta Isoform (PPP1CB, Accession NM_002709) is another VGAM1978 host target gene. PPP1CB BINDING SITE is HOST TARGET binding site found in the 3` un-

translated region of mRNA encoded by PPP1CB, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of PPP1CB BINDING SITE, designated SEQ ID:8561, to the nucleotide sequence of VGAM1978 RNA, herein designated VGAM RNA, also designated SEQ ID:4689.

[69837] Another function of VGAM1978 is therefore inhibition of Protein Phosphatase 1, Catalytic Subunit, Beta Isoform (PPP1CB, Accession NM_002709), a gene which is the catalytic subunit of protein phosphatase 1. Accordingly, utilities of VGAM1978 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PPP1CB. The function of PPP1CB and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM46.TRIP15 (Accession NM_004236) is another VGAM1978 host target gene. TRIP15 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by TRIP15, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of

TRIP15 BINDING SITE, designated SEQ ID:10431, to the nucleotide sequence of VGAM1978 RNA, herein designated VGAM RNA, also designated SEQ ID:4689.

[69838] Another function of VGAM1978 is therefore inhibition of TRIP15 (Accession NM_004236), a gene which is a subunit of the COP9 signalosome complex. Accordingly, utilities of VGAM1978 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TRIP15. The function of TRIP15 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM452.HSPC065 (Accession NM_014157) is another VGAM1978 host target gene. HSPC065 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by HSPC065, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of HSPC065 BINDING SITE, designated SEQ ID:15457, to the nucleotide sequence of VGAM1978 RNA, herein designated VGAM RNA, also designated SEQ ID:4689.

[69839] Another function of VGAM1978 is therefore inhibition of HSPC065 (Accession NM_014157). Accordingly, utilities of

VGAM1978 include diagnosis, prevention and treatment of diseases and clinical conditions associated with HSPC065. KIAA0153 (Accession NM_015140) is another VGAM1978 host target gene. KIAA0153 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by KIAA0153, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of KIAA0153 BINDING SITE, designated SEQ ID:17500, to the nucleotide sequence of VGAM1978 RNA, herein designated VGAM RNA, also designated SEQ ID:4689.

[69840] Another function of VGAM1978 is therefore inhibition of KIAA0153 (Accession NM_015140). Accordingly, utilities of VGAM1978 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0153. MGC10870 (Accession NM_032301) is another VGAM1978 host target gene. MGC10870 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by MGC10870, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of

MGC10870 BINDING SITE, designated SEQ ID:26082, to the nucleotide sequence of VGAM1978 RNA, herein designated VGAM RNA, also designated SEQ ID:4689.

[69841] Another function of VGAM1978 is therefore inhibition of MGC10870 (Accession NM_032301). Accordingly, utilities of VGAM1978 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC10870. LOC144231 (Accession XM_096561) is another VGAM1978 host target gene. LOC144231 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by LOC144231, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC144231 BINDING SITE, designated SEQ ID:40396, to the nucleotide sequence of VGAM1978 RNA, herein designated VGAM RNA, also designated SEQ ID:4689.

[69842] Another function of VGAM1978 is therefore inhibition of LOC144231 (Accession XM_096561). Accordingly, utilities of VGAM1978 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC144231. LOC163231 (Accession XM_092094) is another VGAM1978 host target gene. LOC163231 BINDING

SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by LOC163231, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC163231 BINDING SITE, designated SEQ ID:40103, to the nucleotide sequence of VGAM1978 RNA, herein designated VGAM RNA, also designated SEQ ID:4689.

[69843] Another function of VGAM1978 is therefore inhibition of LOC163231 (Accession XM_092094). Accordingly, utilities of VGAM1978 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC163231. LOC205313 (Accession XM_119628) is another VGAM1978 host target gene. LOC205313 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by LOC205313, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC205313 BINDING SITE, designated SEQ ID:43595, to the nucleotide sequence of VGAM1978 RNA, herein designated VGAM RNA, also designated SEQ ID:4689.

[69844] Another function of VGAM1978 is therefore inhibition of

LOC205313 (Accession XM_119628). Accordingly, utilities of VGAM1978 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC205313. LOC58525 (Accession XM_086045) is another VGAM1978 host target gene. LOC58525 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC58525, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC58525 BINDING SITE, designated SEQ ID:38456, to the nucleotide sequence of VGAM1978 RNA, herein designated VGAM RNA, also designated SEQ ID:4689.

[69845] Another function of VGAM1978 is therefore inhibition of LOC58525 (Accession XM_086045). Accordingly, utilities of VGAM1978 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC58525. LOC91650 (Accession XM_039853) is another VGAM1978 host target gene. LOC91650 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by LOC91650, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the

complementarity of the nucleotide sequences of LOC91650 BINDING SITE, designated SEQ ID:33201, to the nucleotide sequence of VGAM1978 RNA, herein designated VGAM RNA, also designated SEQ ID:4689.

[69846] Another function of VGAM1978 is therefore inhibition of LOC91650 (Accession XM_039853). Accordingly, utilities of VGAM1978 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC91650. Fig. 1 further provides a conceptual description of a novel bioinformatically detected viral gene of the present invention, referred to here as Viral Genomic Address Messenger 1979 (VGAM1979) viral gene, which modulates expression of respective host target genes thereof, the function and utility of which host target genes is known in the art.

[69847] VGAM1979 is a novel bioinformatically detected regulatory, non protein coding, viral micro RNA (miRNA) gene. The method by which VGAM1979 was detected is described hereinabove with reference to Figs. 1-8.

[69848] VGAM1979 gene, herein designated VGAM GENE, is a viral gene contained in the genome of Bovine Herpesvirus 4. VGAM1979 host target gene, herein designated VGAM HOST TARGET GENE, is a human gene contained in the

human genome.

[69849] VGAM1979 gene encodes a VGAM1979 precursor RNA, herein designated VGAM PRECURSOR RNA. Similar to other miRNA genes, and unlike most ordinary genes, VGAM1979 precursor RNA does not encode a protein. A nucleotide sequence identical or highly similar to the nucleotide sequence of VGAM1979 precursor RNA is designated SEQ ID:1965, and is provided hereinbelow with reference to the sequence listing part. Nucleotide sequence SEQ ID:1965 is located at position 11708 relative to the genome of Bovine Herpesvirus 4.

[69850] VGAM1979 precursor RNA folds onto itself, forming VGAM1979 folded precursor RNA, herein designated VGAM FOLDED PRECURSOR RNA, which has a two-dimensional `hairpin structure`. As is well known in the art, this `hairpin structure`, is typical of RNA encoded by miRNA genes, and is due to the fact that the nucleotide sequence of the first half of the RNA encoded by a miRNA gene is an accurate or partial inversed-reversed sequence of the nucleotide sequence of the second half thereof.

[69851] An enzyme complex designated DICER COMPLEX, `dices` the VGAM1979 folded precursor RNA into VGAM1979 RNA, herein designated VGAM RNA, a single stranded ~22

nt long RNA segment. As is known in the art, `dicing` of a hairpin structured RNA precursor product into a short ~22nt RNA segment is catalyzed by an enzyme complex comprising an enzyme called Dicer together with other necessary proteins. A probable (over 50%) nucleotide sequence of VGAM1979 RNA is designated SEQ ID:4690, and is provided hereinbelow with reference to the sequence listing part.

[69852] VGAM1979 host target gene, herein designated VGAM HOST TARGET GENE, encodes a corresponding messenger RNA, VGAM1979 host target RNA, herein designated VGAM HOST TARGET RNA. VGAM1979 host target RNA comprises three regions, as is typical of mRNA of a protein coding gene: a 5` untranslated region, a protein coding region and a 3` untranslated region, designated 5`UTR, PROTEIN CODING and 3`UTR respectively.

[69853] VGAM1979 RNA, herein designated VGAM RNA, binds complementarily to one or more host target binding sites located in untranslated regions of VGAM1979 host target RNA, herein designated VGAM HOST TARGET RNA. This complementary binding is due to the fact that the nucleotide sequence of VGAM1979 RNA is an accurate or a partial inversed-reversed sequence of the nucleotide se-

quence of each of the host target binding sites. As an illustration, Fig. 1 shows three such host target binding sites, designated BINDING SITE I, BINDING SITE II and BINDING SITE III respectively. It is appreciated that the number of host target binding sites shown in Fig. 1 is meant as an illustration only, and is not meant to be limiting - VGAM1979 RNA, herein designated VGAM RNA, may have a different number of host target binding sites in untranslated regions of a VGAM1979 host target RNA, herein designated VGAM HOST TARGET RNA. It is further appreciated that while Fig. 1 depicts host target binding sites in the 3`UTR region, this is meant as an example only - these host target binding sites may be located in the 3`UTR region, the 5`UTR region, or in both 3`UTR and 5`UTR regions.

[69854] The complementary binding of VGAM1979 RNA, herein designated VGAM RNA, to host target binding sites on VGAM1979 host target RNA, herein designated VGAM HOST TARGET RNA, such as BINDING SITE I, BINDING SITE II and BINDING SITE III, inhibits translation of VGAM1979 host target RNA into VGAM1979 host target protein, herein designated VGAM HOST TARGET PROTEIN. VGAM host target protein is therefore outlined by a broken line.

[69855] It is appreciated that VGAM1979 host target gene, herein designated VGAM HOST TARGET GENE, in fact represents a plurality of VGAM1979 host target genes. The mRNA of each one of this plurality of VGAM1979 host target genes comprises one or more host target binding sites, each having a nucleotide sequence which is at least partly complementary to VGAM1979 RNA, herein designated VGAM RNA, and which when bound by VGAM1979 RNA causes inhibition of translation of respective one or more VGAM1979 host target proteins.

[69856] It is further appreciated by one skilled in the art that the mode of translational inhibition illustrated by Fig. 1 with specific reference to translational inhibition exerted by VGAM1979 gene, herein designated VGAM GENE, on one or more VGAM1979 host target gene, herein designated VGAM HOST TARGET GENE, is in fact common to other known non-viral miRNA genes. As mentioned hereinabove with reference to the background section, although a specific complementary binding site has been demonstrated only for some of the known miRNA genes (primarily Lin-4 and Let-7), all other recently discovered miRNA genes are also believed by those skilled in the art to modulate expression of other genes by complementary binding, al-

though specific complementary binding sites of these other miRNA genes have not yet been found (Ruvkun G., `Perspective: Glimpses of a tiny RNA world`, Science 294,779 (2001)).

[69857] It is yet further appreciated that a function of VGAM1979 is inhibition of expression of host target genes, as part of a novel viral mechanism of attacking a host. Accordingly, utilities of VGAM1979 include diagnosis, prevention and treatment of viral infection by Bovine Herpesvirus 4. Specific functions, and accordingly utilities, of VGAM1979 correlate with, and may be deduced from, the identity of the host target genes which VGAM1979 binds and inhibits, and the function of these host target genes, as elaborated hereinbelow.

[69858] Nucleotide sequences of the VGAM1979 precursor RNA, herein designated VGAM PRECURSOR RNA, and of the `diced` VGAM1979 RNA, herein designated VGAM RNA, and a schematic representation of the secondary folding of VGAM1979 folded precursor RNA, herein designated VGAM FOLDED PRECURSOR RNA, of VGAM1979 are further described hereinbelow with reference to Table 1.

[69859] Nucleotide sequences of host target binding sites, such as BINDING SITE-I, BINDING SITE-II and BINDING SITE-III of

Fig. 1, found on VGAM1979 host target RNA, and schematic representation of the complementarity of each of these host target binding sites to VGAM1979 RNA, herein designated VGAM RNA, are described hereinbelow with reference to Table 2.

[69860] As mentioned hereinabove with reference to Fig. 1, a function of VGAM1979 gene, herein designated VGAM is inhibition of expression of VGAM1979 target genes. It is appreciated that specific functions, and accordingly utilities, of VGAM1979 correlate with, and may be deduced from, the identity of the target genes which VGAM1979 binds and inhibits, and the function of these target genes, as elaborated hereinbelow.

[69861] Protein Phosphatase 2, Regulatory Subunit B (B56), Epsilon Isoform (PPP2R5E, Accession NM_006246) is a VGAM1979 host target gene. PPP2R5E BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by PPP2R5E, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of PPP2R5E BINDING SITE, designated SEQ ID:12921, to the nucleotide sequence of VGAM1979 RNA, herein designated VGAM RNA, also des-

ignated SEQ ID:4690.

[69862] A function of VGAM1979 is therefore inhibition of Protein Phosphatase 2, Regulatory Subunit B (B56), Epsilon Isoform (PPP2R5E, Accession NM_006246), a gene which is a regulatory subunit of protein phosphatase 2A. Accordingly, utilities of VGAM1979 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PPP2R5E. The function of PPP2R5E and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM302.Pyrroline-5-carboxylate Reductase 1 (PYCR1, Accession XM_046472) is another VGAM1979 host target gene. PYCR1 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by PYCR1, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of PYCR1 BINDING SITE, designated SEQ ID:34730, to the nucleotide sequence of VGAM1979 RNA, herein designated VGAM RNA, also designated SEQ ID:4690.

[69863] Another function of VGAM1979 is therefore inhibition of

Pyrroline-5-carboxylate Reductase 1 (PYCR1, Accession XM_046472), a gene which catalyzes the NAD(P)H-dependent conversion of pyrroline-5-carboxylate to proline. Accordingly, utilities of VGAM1979 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PYCR1. The function of PYCR1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM178.Tetratricopeptide Repeat Domain 3 (TTC3, Accession NM_003316) is another VGAM1979 host target gene. TTC3 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by TTC3, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of TTC3 BINDING SITE, designated SEQ ID:9314, to the nucleotide sequence of VGAM1979 RNA, herein designated VGAM RNA, also designated SEQ ID:4690.

[69864] Another function of VGAM1979 is therefore inhibition of Tetratricopeptide Repeat Domain 3 (TTC3, Accession NM_003316), a gene which contains tetratricopeptide repeat (TPR) motifs. Accordingly, utilities of VGAM1979 in-

clude diagnosis, prevention and treatment of diseases and clinical conditions associated with TTC3. The function of TTC3 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM699.CASPR3 (Accession NM_024879) is another VGAM1979 host target gene. CASPR3 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by CASPR3, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of CASPR3 BINDING SITE, designated SEQ ID:24316, to the nucleotide sequence of VGAM1979 RNA, herein designated VGAM RNA, also designated SEQ ID:4690.

[69865] Another function of VGAM1979 is therefore inhibition of CASPR3 (Accession NM_024879). Accordingly, utilities of VGAM1979 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CASPR3. Cell Adhesion Molecule with Homology to L1CAM (close homolog of L1) (CHL1, Accession NM_006614) is another VGAM1979 host target gene. CHL1 BINDING SITE is HOST TARGET binding site found in the 3` untranslated

region of mRNA encoded by CHL1, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of CHL1 BINDING SITE, designated SEQ ID:13397, to the nucleotide sequence of VGAM1979 RNA, herein designated VGAM RNA, also designated SEQ ID:4690.

[69866] Another function of VGAM1979 is therefore inhibition of Cell Adhesion Molecule with Homology to L1CAM (close homolog of L1) (CHL1, Accession NM_006614). Accordingly, utilities of VGAM1979 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CHL1. FLJ20060 (Accession NM_017645) is another VGAM1979 host target gene. FLJ20060 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by FLJ20060, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of FLJ20060 BINDING SITE, designated SEQ ID:19149, to the nucleotide sequence of VGAM1979 RNA, herein designated VGAM RNA, also designated SEQ ID:4690.

[69867] Another function of VGAM1979 is therefore inhibition of

FLJ20060 (Accession NM_017645). Accordingly, utilities of VGAM1979 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ20060. FLJ22569 (Accession NM_023925) is another VGAM1979 host target gene. FLJ22569 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by FLJ22569, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of FLJ22569 BINDING SITE, designated SEQ ID:23402, to the nucleotide sequence of VGAM1979 RNA, herein designated VGAM RNA, also designated SEQ ID:4690.

[69868] Another function of VGAM1979 is therefore inhibition of FLJ22569 (Accession NM_023925). Accordingly, utilities of VGAM1979 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ22569. KIAA0367 (Accession XM_041018) is another VGAM1979 host target gene. KIAA0367 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by KIAA0367, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the

complementarity of the nucleotide sequences of KIAA0367 BINDING SITE, designated SEQ ID:33426, to the nucleotide sequence of VGAM1979 RNA, herein designated VGAM RNA, also designated SEQ ID:4690.

[69869] Another function of VGAM1979 is therefore inhibition of KIAA0367 (Accession XM_041018). Accordingly, utilities of VGAM1979 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0367. MGC10200 (Accession NM_145060) is another VGAM1979 host target gene. MGC10200 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by MGC10200, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of MGC10200 BINDING SITE, designated SEQ ID:29695, to the nucleotide sequence of VGAM1979 RNA, herein designated VGAM RNA, also designated SEQ ID:4690.

[69870] Another function of VGAM1979 is therefore inhibition of MGC10200 (Accession NM_145060). Accordingly, utilities of VGAM1979 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC10200. TERF1 (TRF1)-interacting Nuclear Factor 2

(TINF2, Accession NM_012461) is another VGAM1979 host target gene. TINF2 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by TINF2, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of TINF2 BINDING SITE, designated SEQ ID:14835, to the nucleotide sequence of VGAM1979 RNA, herein designated VGAM RNA, also designated SEQ ID:4690.

[69871] Another function of VGAM1979 is therefore inhibition of TERF1 (TRF1)-interacting Nuclear Factor 2 (TINF2, Accession NM_012461). Accordingly, utilities of VGAM1979 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TINF2. LOC162333 (Accession XM_102591) is another VGAM1979 host target gene. LOC162333 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by LOC162333, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC162333 BINDING SITE, designated SEQ ID:42125, to the nucleotide sequence of

VGAM1979 RNA, herein designated VGAM RNA, also designated SEQ ID:4690.

[69872] Another function of VGAM1979 is therefore inhibition of LOC162333 (Accession XM_102591). Accordingly, utilities of VGAM1979 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC162333. Fig. 1 further provides a conceptual description of a novel bioinformatically detected viral gene of the present invention, referred to here as Viral Genomic Address Messenger 1980 (VGAM1980) viral gene, which modulates expression of respective host target genes thereof, the function and utility of which host target genes is known in the art.

[69873] VGAM1980 is a novel bioinformatically detected regulatory, non protein coding, viral micro RNA (miRNA) gene. The method by which VGAM1980 was detected is described hereinabove with reference to Figs. 1-8.

[69874] VGAM1980 gene, herein designated VGAM GENE, is a viral gene contained in the genome of Bovine Herpesvirus 4. VGAM1980 host target gene, herein designated VGAM HOST TARGET GENE, is a human gene contained in the human genome.

[69875] VGAM1980 gene encodes a VGAM1980 precursor RNA,

herein designated VGAM PRECURSOR RNA. Similar to other miRNA genes, and unlike most ordinary genes, VGAM1980 precursor RNA does not encode a protein. A nucleotide sequence identical or highly similar to the nucleotide sequence of VGAM1980 precursor RNA is designated SEQ ID:1966, and is provided hereinbelow with reference to the sequence listing part. Nucleotide sequence SEQ ID:1966 is located at position 9455 relative to the genome of Bovine Herpesvirus 4.

[69876] VGAM1980 precursor RNA folds onto itself, forming VGAM1980 folded precursor RNA, herein designated VGAM FOLDED PRECURSOR RNA, which has a two-dimensional `hairpin structure`. As is well known in the art, this `hairpin structure`, is typical of RNA encoded by miRNA genes, and is due to the fact that the nucleotide sequence of the first half of the RNA encoded by a miRNA gene is an accurate or partial inversed-reversed sequence of the nucleotide sequence of the second half thereof.

[69877] An enzyme complex designated DICER COMPLEX, `dices` the VGAM1980 folded precursor RNA into VGAM1980 RNA, herein designated VGAM RNA, a single stranded ~22 nt long RNA segment. As is known in the art, `dicing` of a hairpin structured RNA precursor product into a short

~22nt RNA segment is catalyzed by an enzyme complex comprising an enzyme called Dicer together with other necessary proteins. A probable (over 40%) nucleotide sequence of VGAM1980 RNA is designated SEQ ID:4691, and is provided hereinbelow with reference to the sequence listing part.

[69878] VGAM1980 host target gene, herein designated VGAM HOST TARGET GENE, encodes a corresponding messenger RNA, VGAM1980 host target RNA, herein designated VGAM HOST TARGET RNA. VGAM1980 host target RNA comprises three regions, as is typical of mRNA of a protein coding gene: a 5` untranslated region, a protein coding region and a 3` untranslated region, designated 5`UTR, PROTEIN CODING and 3`UTR respectively.

[69879] VGAM1980 RNA, herein designated VGAM RNA, binds complementarily to one or more host target binding sites located in untranslated regions of VGAM1980 host target RNA, herein designated VGAM HOST TARGET RNA. This complementary binding is due to the fact that the nucleotide sequence of VGAM1980 RNA is an accurate or a partial inversed-reversed sequence of the nucleotide sequence of each of the host target binding sites. As an illustration, Fig. 1 shows three such host target binding

sites, designated BINDING SITE I, BINDING SITE II and BINDING SITE III respectively. It is appreciated that the number of host target binding sites shown in Fig. 1 is meant as an illustration only, and is not meant to be limiting - VGAM1980 RNA, herein designated VGAM RNA, may have a different number of host target binding sites in untranslated regions of a VGAM1980 host target RNA, herein designated VGAM HOST TARGET RNA. It is further appreciated that while Fig. 1 depicts host target binding sites in the 3`UTR region, this is meant as an example only - these host target binding sites may be located in the 3`UTR region, the 5`UTR region, or in both 3`UTR and 5`UTR regions.

[69880] The complementary binding of VGAM1980 RNA, herein designated VGAM RNA, to host target binding sites on VGAM1980 host target RNA, herein designated VGAM HOST TARGET RNA, such as BINDING SITE I, BINDING SITE II and BINDING SITE III, inhibits translation of VGAM1980 host target RNA into VGAM1980 host target protein, herein designated VGAM HOST TARGET PROTEIN. VGAM host target protein is therefore outlined by a broken line.

[69881] It is appreciated that VGAM1980 host target gene, herein designated VGAM HOST TARGET GENE, in fact represents

a plurality of VGAM1980 host target genes. The mRNA of each one of this plurality of VGAM1980 host target genes comprises one or more host target binding sites, each having a nucleotide sequence which is at least partly complementary to VGAM1980 RNA, herein designated VGAM RNA, and which when bound by VGAM1980 RNA causes inhibition of translation of respective one or more VGAM1980 host target proteins.

[69882] It is further appreciated by one skilled in the art that the mode of translational inhibition illustrated by Fig. 1 with specific reference to translational inhibition exerted by VGAM1980 gene, herein designated VGAM GENE, on one or more VGAM1980 host target gene, herein designated VGAM HOST TARGET GENE, is in fact common to other known non-viral miRNA genes. As mentioned hereinabove with reference to the background section, although a specific complementary binding site has been demonstrated only for some of the known miRNA genes (primarily Lin-4 and Let-7), all other recently discovered miRNA genes are also believed by those skilled in the art to modulate expression of other genes by complementary binding, although specific complementary binding sites of these other miRNA genes have not yet been found (Ruvkun G.,

`Perspective: Glimpses of a tiny RNA world`, Science 294,779 (2001)).

[69883] It is yet further appreciated that a function of VGAM1980 is inhibition of expression of host target genes, as part of a novel viral mechanism of attacking a host. Accordingly, utilities of VGAM1980 include diagnosis, prevention and treatment of viral infection by Bovine Herpesvirus 4. Specific functions, and accordingly utilities, of VGAM1980 correlate with, and may be deduced from, the identity of the host target genes which VGAM1980 binds and inhibits, and the function of these host target genes, as elaborated hereinbelow.

[69884] Nucleotide sequences of the VGAM1980 precursor RNA, herein designated VGAM PRECURSOR RNA, and of the `diced` VGAM1980 RNA, herein designated VGAM RNA, and a schematic representation of the secondary folding of VGAM1980 folded precursor RNA, herein designated VGAM FOLDED PRECURSOR RNA, of VGAM1980 are further described hereinbelow with reference to Table 1.

[69885] Nucleotide sequences of host target binding sites, such as BINDING SITE-I, BINDING SITE-II and BINDING SITE-III of Fig. 1, found on VGAM1980 host target RNA, and schematic representation of the complementarity of each

of these host target binding sites to VGAM1980 RNA, herein designated VGAM RNA, are described hereinbelow with reference to Table 2.

[69886] As mentioned hereinabove with reference to Fig. 1, a function of VGAM1980 gene, herein designated VGAM is inhibition of expression of VGAM1980 target genes. It is appreciated that specific functions, and accordingly utilities, of VGAM1980 correlate with, and may be deduced from, the identity of the target genes which VGAM1980 binds and inhibits, and the function of these target genes, as elaborated hereinbelow.

[69887] Lipin 1 (LPIN1, Accession XM_041136) is a VGAM1980 host target gene. LPIN1 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LPIN1, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LPIN1 BINDING SITE, designated SEQ ID:33466, to the nucleotide sequence of VGAM1980 RNA, herein designated VGAM RNA, also designated SEQ ID:4691.

[69888] A function of VGAM1980 is therefore inhibition of Lipin 1 (LPIN1, Accession XM_041136), a gene which is involved

in adipocyte differenciation (by similarity). Accordingly, utilities of VGAM1980 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LPIN1. The function of LPIN1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM35.Presenilin 1 (Alzheimer disease 3) (PSEN1, Accession NM_000021) is another VGAM1980 host target gene. PSEN1 BINDING SITE1 and PSEN1 BINDING SITE2 are HOST TARGET binding sites found in untranslated regions of mRNA encoded by PSEN1, corresponding to HOST TARGET binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of PSEN1 BINDING SITE1 and PSEN1 BINDING SITE2, designated SEQ ID:5455 and SEQ ID:14233 respectively, to the nucleotide sequence of VGAM1980 RNA, herein designated VGAM RNA, also designated SEQ ID:4691.

[69889] Another function of VGAM1980 is therefore inhibition of Presenilin 1 (Alzheimer disease 3) (PSEN1, Accession NM_000021). Accordingly, utilities of VGAM1980 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PSEN1. KIAA1203

(Accession XM_049683) is another VGAM1980 host target gene. KIAA1203 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by KIAA1203, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of KIAA1203 BINDING SITE, designated SEQ ID:35465, to the nucleotide sequence of VGAM1980 RNA, herein designated VGAM RNA, also designated SEQ ID:4691.

[69890] Another function of VGAM1980 is therefore inhibition of KIAA1203 (Accession XM_049683). Accordingly, utilities of VGAM1980 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1203. PIPPIN (Accession XM_086825) is another VGAM1980 host target gene. PIPPIN BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by PIPPIN, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of PIPPIN BINDING SITE, designated SEQ ID:38908, to the nucleotide sequence of VGAM1980 RNA, herein designated VGAM RNA, also des-

ignated SEQ ID:4691.

[69891] Another function of VGAM1980 is therefore inhibition of PIPPIN (Accession XM_086825). Accordingly, utilities of VGAM1980 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PIPPIN. PRO0529 (Accession NM_014074) is another VGAM1980 host target gene. PRO0529 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by PRO0529, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of PRO0529 BINDING SITE, designated SEQ ID:15302, to the nucleotide sequence of VGAM1980 RNA, herein designated VGAM RNA, also designated SEQ ID:4691.

[69892] Another function of VGAM1980 is therefore inhibition of PRO0529 (Accession NM_014074). Accordingly, utilities of VGAM1980 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PRO0529. Fig. 1 further provides a conceptual description of a novel bioinformatically detected viral gene of the present invention, referred to here as Viral Genomic Address Messenger 1981 (VGAM1981) viral gene, which

modulates expression of respective host target genes thereof, the function and utility of which host target genes is known in the art.

[69893] VGAM1981 is a novel bioinformatically detected regulatory, non protein coding, viral micro RNA (miRNA) gene. The method by which VGAM1981 was detected is described hereinabove with reference to Figs. 1-8.

[69894] VGAM1981 gene, herein designated VGAM GENE, is a viral gene contained in the genome of Hendra Virus. VGAM1981 host target gene, herein designated VGAM HOST TARGET GENE, is a human gene contained in the human genome.

[69895] VGAM1981 gene encodes a VGAM1981 precursor RNA, herein designated VGAM PRECURSOR RNA. Similar to other miRNA genes, and unlike most ordinary genes, VGAM1981 precursor RNA does not encode a protein. A nucleotide sequence identical or highly similar to the nucleotide sequence of VGAM1981 precursor RNA is designated SEQ ID:1967, and is provided hereinbelow with reference to the sequence listing part. Nucleotide sequence SEQ ID:1967 is located at position 10871 relative to the genome of Hendra Virus.

[69896] VGAM1981 precursor RNA folds onto itself, forming

VGAM1981 folded precursor RNA, herein designated VGAM FOLDED PRECURSOR RNA, which has a two-dimensional `hairpin structure`. As is well known in the art, this `hairpin structure`, is typical of RNA encoded by miRNA genes, and is due to the fact that the nucleotide sequence of the first half of the RNA encoded by a miRNA gene is an accurate or partial inversed-reversed sequence of the nucleotide sequence of the second half thereof.

[69897] An enzyme complex designated DICER COMPLEX, `dices` the VGAM1981 folded precursor RNA into VGAM1981 RNA, herein designated VGAM RNA, a single stranded ~22 nt long RNA segment. As is known in the art, `dicing` of a hairpin structured RNA precursor product into a short ~22nt RNA segment is catalyzed by an enzyme complex comprising an enzyme called Dicer together with other necessary proteins. A probable (over 61%) nucleotide sequence of VGAM1981 RNA is designated SEQ ID:4692, and is provided hereinbelow with reference to the sequence listing part.

[69898] VGAM1981 host target gene, herein designated VGAM HOST TARGET GENE, encodes a corresponding messenger RNA, VGAM1981 host target RNA, herein designated VGAM HOST TARGET RNA. VGAM1981 host target RNA

comprises three regions, as is typical of mRNA of a protein coding gene: a 5` untranslated region, a protein coding region and a 3` untranslated region, designated 5`UTR, PROTEIN CODING and 3`UTR respectively.

[69899] VGAM1981 RNA, herein designated VGAM RNA, binds complementarily to one or more host target binding sites located in untranslated regions of VGAM1981 host target RNA, herein designated VGAM HOST TARGET RNA. This complementary binding is due to the fact that the nucleotide sequence of VGAM1981 RNA is an accurate or a partial inversed-reversed sequence of the nucleotide sequence of each of the host target binding sites. As an illustration, Fig. 1 shows three such host target binding sites, designated BINDING SITE I, BINDING SITE II and BINDING SITE III respectively. It is appreciated that the number of host target binding sites shown in Fig. 1 is meant as an illustration only, and is not meant to be limiting - VGAM1981 RNA, herein designated VGAM RNA, may have a different number of host target binding sites in untranslated regions of a VGAM1981 host target RNA, herein designated VGAM HOST TARGET RNA. It is further appreciated that while Fig. 1 depicts host target binding sites in the 3`UTR region, this is meant as an example

only - these host target binding sites may be located in the 3`UTR region, the 5`UTR region, or in both 3`UTR and 5`UTR regions.

[69900] The complementary binding of VGAM1981 RNA, herein designated VGAM RNA, to host target binding sites on VGAM1981 host target RNA, herein designated VGAM HOST TARGET RNA, such as BINDING SITE I, BINDING SITE II and BINDING SITE III, inhibits translation of VGAM1981 host target RNA into VGAM1981 host target protein, herein designated VGAM HOST TARGET PROTEIN. VGAM host target protein is therefore outlined by a broken line.

[69901] It is appreciated that VGAM1981 host target gene, herein designated VGAM HOST TARGET GENE, in fact represents a plurality of VGAM1981 host target genes. The mRNA of each one of this plurality of VGAM1981 host target genes comprises one or more host target binding sites, each having a nucleotide sequence which is at least partly complementary to VGAM1981 RNA, herein designated VGAM RNA, and which when bound by VGAM1981 RNA causes inhibition of translation of respective one or more VGAM1981 host target proteins.

[69902] It is further appreciated by one skilled in the art that the mode of translational inhibition illustrated by Fig. 1 with

specific reference to translational inhibition exerted by VGAM1981 gene, herein designated VGAM GENE, on one or more VGAM1981 host target gene, herein designated VGAM HOST TARGET GENE, is in fact common to other known non-viral miRNA genes. As mentioned hereinabove with reference to the background section, although a specific complementary binding site has been demonstrated only for some of the known miRNA genes (primarily Lin-4 and Let-7), all other recently discovered miRNA genes are also believed by those skilled in the art to modulate expression of other genes by complementary binding, although specific complementary binding sites of these other miRNA genes have not yet been found (Ruvkun G., `Perspective: Glimpses of a tiny RNA world`, Science 294,779 (2001)).

[69903] It is yet further appreciated that a function of VGAM1981 is inhibition of expression of host target genes, as part of a novel viral mechanism of attacking a host. Accordingly, utilities of VGAM1981 include diagnosis, prevention and treatment of viral infection by Hendra Virus. Specific functions, and accordingly utilities, of VGAM1981 correlate with, and may be deduced from, the identity of the host target genes which VGAM1981 binds and inhibits, and the

function of these host target genes, as elaborated herein-below.

[69904] Nucleotide sequences of the VGAM1981 precursor RNA, herein designated VGAM PRECURSOR RNA, and of the `diced` VGAM1981 RNA, herein designated VGAM RNA, and a schematic representation of the secondary folding of VGAM1981 folded precursor RNA, herein designated VGAM FOLDED PRECURSOR RNA, of VGAM1981 are further described hereinbelow with reference to Table 1.

[69905] Nucleotide sequences of host target binding sites, such as BINDING SITE-I, BINDING SITE-II and BINDING SITE-III of Fig. 1, found on VGAM1981 host target RNA, and schematic representation of the complementarity of each of these host target binding sites to VGAM1981 RNA, herein designated VGAM RNA, are described hereinbelow with reference to Table 2.

[69906] As mentioned hereinabove with reference to Fig. 1, a function of VGAM1981 gene, herein designated VGAM is inhibition of expression of VGAM1981 target genes. It is appreciated that specific functions, and accordingly utilities, of VGAM1981 correlate with, and may be deduced from, the identity of the target genes which VGAM1981 binds and inhibits, and the function of these target genes,

as elaborated hereinbelow.

[69907] Holocarboxylase Synthetase (biotin-[proprionyl-Coenzyme A-carboxylase (ATP-hydrolysing)] Ligase) (HLCS, Accession NM_000411) is a VGAM1981 host target gene. HLCS BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by HLCS, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of HLCS BINDING SITE, designated SEQ ID:5987, to the nucleotide sequence of VGAM1981 RNA, herein designated VGAM RNA, also designated SEQ ID:4692.

[69908] A function of VGAM1981 is therefore inhibition of Holocarboxylase Synthetase (biotin-[proprionyl-Coenzyme A-carboxylase (ATP-hydrolysing)] Ligase) (HLCS, Accession NM_000411). Accordingly, utilities of VGAM1981 include diagnosis, prevention and treatment of diseases and clinical conditions associated with HLCS. Ligase IV, DNA, ATP-dependent (LIG4, Accession NM_002312) is another VGAM1981 host target gene. LIG4 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by LIG4, corresponding to a HOST TAR-

GET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LIG4 BINDING SITE, designated SEQ ID:8107, to the nucleotide sequence of VGAM1981 RNA, herein designated VGAM RNA, also designated SEQ ID:4692.

[69909] Another function of VGAM1981 is therefore inhibition of Ligase IV, DNA, ATP-dependent (LIG4, Accession NM_002312), a gene which functions in DNA nonhomologous end-joining and V(D)J recombination. Accordingly, utilities of VGAM1981 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LIG4. The function of LIG4 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM258.Microtubule-associated Protein, RP/EB Family, Member 2 (MAPRE2, Accession NM_014268) is another VGAM1981 host target gene. MAPRE2 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by MAPRE2, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of

MAPRE2 BINDING SITE, designated SEQ ID:15543, to the nucleotide sequence of VGAM1981 RNA, herein designated VGAM RNA, also designated SEQ ID:4692.

[69910] Another function of VGAM1981 is therefore inhibition of Microtubule-associated Protein, RP/EB Family, Member 2 (MAPRE2, Accession NM_014268), a gene which The functional inactivation of the APC gene product is a key event in colorectal tumorigenesis. Accordingly, utilities of VGAM1981 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MAPRE2. The function of MAPRE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM178.Phospholipase A2, Group X (PLA2G10, Accession NM_003561) is another VGAM1981 host target gene. PLA2G10 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by PLA2G10, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of PLA2G10 BINDING SITE, designated SEQ ID:9617, to the nucleotide sequence of VGAM1981 RNA, herein designated VGAM RNA, also des-

ignated SEQ ID:4692.

[69911] Another function of VGAM1981 is therefore inhibition of Phospholipase A2, Group X (PLA2G10, Accession NM_003561). Accordingly, utilities of VGAM1981 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PLA2G10. Pleiomorphic Adenoma Gene 1 (PLAG1, Accession NM_002655) is another VGAM1981 host target gene. PLAG1 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by PLAG1, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of PLAG1 BINDING SITE, designated SEQ ID:8514, to the nucleotide sequence of VGAM1981 RNA, herein designated VGAM RNA, also designated SEQ ID:4692.

[69912] Another function of VGAM1981 is therefore inhibition of Pleiomorphic Adenoma Gene 1 (PLAG1, Accession NM_002655), a gene which contains a zinc finger domain. Accordingly, utilities of VGAM1981 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PLAG1. The function of PLAG1 and its association with various diseases and clinical condi-

tions, has been established by previous studies, as described hereinabove with reference to VGAM29.Staufen, RNA Binding Protein (Drosophila) (STAU, Accession NM_004602) is another VGAM1981 host target gene. STAU BINDING SITE1 through STAU BINDING SITE4 are HOST TARGET binding sites found in untranslated regions of mRNA encoded by STAU, corresponding to HOST TARGET binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of STAU BINDING SITE1 through STAU BINDING SITE4, designated SEQ ID:10939, SEQ ID:18924, SEQ ID:18912 and SEQ ID:18918 respectively, to the nucleotide sequence of VGAM1981 RNA, herein designated VGAM RNA, also designated SEQ ID:4692.

[69913] Another function of VGAM1981 is therefore inhibition of Staufen, RNA Binding Protein (Drosophila) (STAU, Accession NM_004602), a gene which may play a role in specific positioning of mrnas at given sites in the cell and in stimulating their translation at the site. Accordingly, utilities of VGAM1981 include diagnosis, prevention and treatment of diseases and clinical conditions associated with STAU. The function of STAU and its association with various dis-

eases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM916.FLJ13910 (Accession NM_022780) is another VGAM1981 host target gene. FLJ13910 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by FLJ13910, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of FLJ13910 BINDING SITE, designated SEQ ID:23053, to the nucleotide sequence of VGAM1981 RNA, herein designated VGAM RNA, also designated SEQ ID:4692.

[69914] Another function of VGAM1981 is therefore inhibition of FLJ13910 (Accession NM_022780). Accordingly, utilities of VGAM1981 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ13910. FLJ20086 (Accession NM_017661) is another VGAM1981 host target gene. FLJ20086 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by FLJ20086, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of FLJ20086

BINDING SITE, designated SEQ ID:19189, to the nucleotide sequence of VGAM1981 RNA, herein designated VGAM RNA, also designated SEQ ID:4692.

[69915] Another function of VGAM1981 is therefore inhibition of FLJ20086 (Accession NM_017661). Accordingly, utilities of VGAM1981 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ20086. KIAA0931 (Accession XM_041191) is another VGAM1981 host target gene. KIAA0931 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by KIAA0931, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of KIAA0931 BINDING SITE, designated SEQ ID:33480, to the nucleotide sequence of VGAM1981 RNA, herein designated VGAM RNA, also designated SEQ ID:4692.

[69916] Another function of VGAM1981 is therefore inhibition of KIAA0931 (Accession XM_041191). Accordingly, utilities of VGAM1981 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0931. KIAA0953 (Accession XM_039733) is another VGAM1981 host target gene. KIAA0953 BINDING SITE is

HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by KIAA0953, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of KIAA0953 BINDING SITE, designated SEQ ID:33166, to the nucleotide sequence of VGAM1981 RNA, herein designated VGAM RNA, also designated SEQ ID:4692.

[69917] Another function of VGAM1981 is therefore inhibition of KIAA0953 (Accession XM_039733). Accordingly, utilities of VGAM1981 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0953. KIAA1323 (Accession XM_032146) is another VGAM1981 host target gene. KIAA1323 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by KIAA1323, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of KIAA1323 BINDING SITE, designated SEQ ID:31560, to the nucleotide sequence of VGAM1981 RNA, herein designated VGAM RNA, also designated SEQ ID:4692.

[69918] Another function of VGAM1981 is therefore inhibition of

KIAA1323 (Accession XM_032146). Accordingly, utilities of VGAM1981 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1323. Retinoic Acid Induced 17 (RAI17, Accession XM_166091) is another VGAM1981 host target gene. RAI17 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by RAI17, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of RAI17 BINDING SITE, designated SEQ ID:43855, to the nucleotide sequence of VGAM1981 RNA, herein designated VGAM RNA, also designated SEQ ID:4692.

[69919] Another function of VGAM1981 is therefore inhibition of Retinoic Acid Induced 17 (RAI17, Accession XM_166091). Accordingly, utilities of VGAM1981 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RAI17. SEC24 Related Gene Family, Member B (S. cerevisiae) (SEC24B, Accession NM_006323) is another VGAM1981 host target gene. SEC24B BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by SEC24B, corresponding to a HOST TARGET binding site such as BINDING

SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of SEC24B BINDING SITE, designated SEQ ID:13015, to the nucleotide sequence of VGAM1981 RNA, herein designated VGAM RNA, also designated SEQ ID:4692.

[69920] Another function of VGAM1981 is therefore inhibition of SEC24 Related Gene Family, Member B (S. cerevisiae) (SEC24B, Accession NM_006323). Accordingly, utilities of VGAM1981 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SEC24B. Sialyltransferase 4A (beta-galactoside alpha-2,3-sialytransferase) (SIAT4A, Accession NM_003033) is another VGAM1981 host target gene. SIAT4A BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by SIAT4A, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of SIAT4A BINDING SITE, designated SEQ ID:8977, to the nucleotide sequence of VGAM1981 RNA, herein designated VGAM RNA, also designated SEQ ID:4692.

[69921] Another function of VGAM1981 is therefore inhibition of Sialyltransferase 4A (beta-galactoside alpha-

2,3-sialytransferase) (SIAT4A, Accession NM_003033). Accordingly, utilities of VGAM1981 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SIAT4A. Fig. 1 further provides a conceptual description of a novel bioinformatically detected viral gene of the present invention, referred to here as Viral Genomic Address Messenger 1982 (VGAM1982) viral gene, which modulates expression of respective host target genes thereof, the function and utility of which host target genes is known in the art.

[69922] VGAM1982 is a novel bioinformatically detected regulatory, non protein coding, viral micro RNA (miRNA) gene. The method by which VGAM1982 was detected is described hereinabove with reference to Figs. 1-8.

[69923] VGAM1982 gene, herein designated VGAM GENE, is a viral gene contained in the genome of Hendra Virus. VGAM1982 host target gene, herein designated VGAM HOST TARGET GENE, is a human gene contained in the human genome.

[69924] VGAM1982 gene encodes a VGAM1982 precursor RNA, herein designated VGAM PRECURSOR RNA. Similar to other miRNA genes, and unlike most ordinary genes, VGAM1982 precursor RNA does not encode a protein. A

nucleotide sequence identical or highly similar to the nucleotide sequence of VGAM1982 precursor RNA is designated SEQ ID:1968, and is provided hereinbelow with reference to the sequence listing part. Nucleotide sequence SEQ ID:1968 is located at position 3780 relative to the genome of Hendra Virus.

[69925] VGAM1982 precursor RNA folds onto itself, forming VGAM1982 folded precursor RNA, herein designated VGAM FOLDED PRECURSOR RNA, which has a two-dimensional `hairpin structure`. As is well known in the art, this `hairpin structure`, is typical of RNA encoded by miRNA genes, and is due to the fact that the nucleotide sequence of the first half of the RNA encoded by a miRNA gene is an accurate or partial inversed-reversed sequence of the nucleotide sequence of the second half thereof.

[69926] An enzyme complex designated DICER COMPLEX, `dices` the VGAM1982 folded precursor RNA into VGAM1982 RNA, herein designated VGAM RNA, a single stranded ~22 nt long RNA segment. As is known in the art, `dicing` of a hairpin structured RNA precursor product into a short ~22nt RNA segment is catalyzed by an enzyme complex comprising an enzyme called Dicer together with other necessary proteins. A probable (over 42%) nucleotide se-

quence of VGAM1982 RNA is designated SEQ ID:4693, and is provided hereinbelow with reference to the sequence listing part.

[69927] VGAM1982 host target gene, herein designated VGAM HOST TARGET GENE, encodes a corresponding messenger RNA, VGAM1982 host target RNA, herein designated VGAM HOST TARGET RNA. VGAM1982 host target RNA comprises three regions, as is typical of mRNA of a protein coding gene: a 5` untranslated region, a protein coding region and a 3` untranslated region, designated 5`UTR, PROTEIN CODING and 3`UTR respectively.

[69928] VGAM1982 RNA, herein designated VGAM RNA, binds complementarily to one or more host target binding sites located in untranslated regions of VGAM1982 host target RNA, herein designated VGAM HOST TARGET RNA. This complementary binding is due to the fact that the nucleotide sequence of VGAM1982 RNA is an accurate or a partial inversed-reversed sequence of the nucleotide sequence of each of the host target binding sites. As an illustration, Fig. 1 shows three such host target binding sites, designated BINDING SITE I, BINDING SITE II and BINDING SITE III respectively. It is appreciated that the number of host target binding sites shown in Fig. 1 is

meant as an illustration only, and is not meant to be limiting - VGAM1982 RNA, herein designated VGAM RNA, may have a different number of host target binding sites in untranslated regions of a VGAM1982 host target RNA, herein designated VGAM HOST TARGET RNA. It is further appreciated that while Fig. 1 depicts host target binding sites in the 3`UTR region, this is meant as an example only - these host target binding sites may be located in the 3`UTR region, the 5`UTR region, or in both 3`UTR and 5`UTR regions.

[69929] The complementary binding of VGAM1982 RNA, herein designated VGAM RNA, to host target binding sites on VGAM1982 host target RNA, herein designated VGAM HOST TARGET RNA, such as BINDING SITE I, BINDING SITE II and BINDING SITE III, inhibits translation of VGAM1982 host target RNA into VGAM1982 host target protein, herein designated VGAM HOST TARGET PROTEIN. VGAM host target protein is therefore outlined by a broken line.

[69930] It is appreciated that VGAM1982 host target gene, herein designated VGAM HOST TARGET GENE, in fact represents a plurality of VGAM1982 host target genes. The mRNA of each one of this plurality of VGAM1982 host target genes comprises one or more host target binding sites, each

having a nucleotide sequence which is at least partly complementary to VGAM1982 RNA, herein designated VGAM RNA, and which when bound by VGAM1982 RNA causes inhibition of translation of respective one or more VGAM1982 host target proteins.

[69931] It is further appreciated by one skilled in the art that the mode of translational inhibition illustrated by Fig. 1 with specific reference to translational inhibition exerted by VGAM1982 gene, herein designated VGAM GENE, on one or more VGAM1982 host target gene, herein designated VGAM HOST TARGET GENE, is in fact common to other known non-viral miRNA genes. As mentioned hereinabove with reference to the background section, although a specific complementary binding site has been demonstrated only for some of the known miRNA genes (primarily Lin-4 and Let-7), all other recently discovered miRNA genes are also believed by those skilled in the art to modulate expression of other genes by complementary binding, although specific complementary binding sites of these other miRNA genes have not yet been found (Ruvkun G., `Perspective: Glimpses of a tiny RNA world`, Science 294,779 (2001)).

[69932] It is yet further appreciated that a function of VGAM1982

is inhibition of expression of host target genes, as part of a novel viral mechanism of attacking a host. Accordingly, utilities of VGAM1982 include diagnosis, prevention and treatment of viral infection by Hendra Virus. Specific functions, and accordingly utilities, of VGAM1982 correlate with, and may be deduced from, the identity of the host target genes which VGAM1982 binds and inhibits, and the function of these host target genes, as elaborated hereinbelow.

[69933] Nucleotide sequences of the VGAM1982 precursor RNA, herein designated VGAM PRECURSOR RNA, and of the `diced` VGAM1982 RNA, herein designated VGAM RNA, and a schematic representation of the secondary folding of VGAM1982 folded precursor RNA, herein designated VGAM FOLDED PRECURSOR RNA, of VGAM1982 are further described hereinbelow with reference to Table 1.

[69934] Nucleotide sequences of host target binding sites, such as BINDING SITE-I, BINDING SITE-II and BINDING SITE-III of Fig. 1, found on VGAM1982 host target RNA, and schematic representation of the complementarity of each of these host target binding sites to VGAM1982 RNA, herein designated VGAM RNA, are described hereinbelow with reference to Table 2.

[69935] As mentioned hereinabove with reference to Fig. 1, a function of VGAM1982 gene, herein designated VGAM is inhibition of expression of VGAM1982 target genes. It is appreciated that specific functions, and accordingly utilities, of VGAM1982 correlate with, and may be deduced from, the identity of the target genes which VGAM1982 binds and inhibits, and the function of these target genes, as elaborated hereinbelow.

[69936] KIAA0553 (Accession XM_045981) is a VGAM1982 host target gene. KIAA0553 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by KIAA0553, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of KIAA0553 BINDING SITE, designated SEQ ID:34636, to the nucleotide sequence of VGAM1982 RNA, herein designated VGAM RNA, also designated SEQ ID:4693.

[69937] A function of VGAM1982 is therefore inhibition of KIAA0553 (Accession XM_045981). Accordingly, utilities of VGAM1982 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0553. MST4 (Accession NM_016542) is another

VGAM1982 host target gene. MST4 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by MST4, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of MST4 BINDING SITE, designated SEQ ID:18607, to the nucleotide sequence of VGAM1982 RNA, herein designated VGAM RNA, also designated SEQ ID:4693.

[69938] Another function of VGAM1982 is therefore inhibition of MST4 (Accession NM_016542). Accordingly, utilities of VGAM1982 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MST4. Fig. 1 further provides a conceptual description of a novel bioinformatically detected viral gene of the present invention, referred to here as Viral Genomic Address Messenger 1983 (VGAM1983) viral gene, which modulates expression of respective host target genes thereof, the function and utility of which host target genes is known in the art.

[69939] VGAM1983 is a novel bioinformatically detected regulatory, non protein coding, viral micro RNA (miRNA) gene. The method by which VGAM1983 was detected is described hereinabove with reference to Figs. 1-8.

[69940] VGAM1983 gene, herein designated VGAM GENE, is a viral gene contained in the genome of Hendra Virus. VGAM1983 host target gene, herein designated VGAM HOST TARGET GENE, is a human gene contained in the human genome.

[69941] VGAM1983 gene encodes a VGAM1983 precursor RNA, herein designated VGAM PRECURSOR RNA. Similar to other miRNA genes, and unlike most ordinary genes, VGAM1983 precursor RNA does not encode a protein. A nucleotide sequence identical or highly similar to the nucleotide sequence of VGAM1983 precursor RNA is designated SEQ ID:1969, and is provided hereinbelow with reference to the sequence listing part. Nucleotide sequence SEQ ID:1969 is located at position 5639 relative to the genome of Hendra Virus.

[69942] VGAM1983 precursor RNA folds onto itself, forming VGAM1983 folded precursor RNA, herein designated VGAM FOLDED PRECURSOR RNA, which has a two-dimensional `hairpin structure`. As is well known in the art, this `hairpin structure`, is typical of RNA encoded by miRNA genes, and is due to the fact that the nucleotide sequence of the first half of the RNA encoded by a miRNA gene is an accurate or partial inversed-reversed sequence

of the nucleotide sequence of the second half thereof.

[69943] An enzyme complex designated DICER COMPLEX, `dices` the VGAM1983 folded precursor RNA into VGAM1983 RNA, herein designated VGAM RNA, a single stranded ~22 nt long RNA segment. As is known in the art, `dicing` of a hairpin structured RNA precursor product into a short ~22nt RNA segment is catalyzed by an enzyme complex comprising an enzyme called Dicer together with other necessary proteins. A probable (over 70%) nucleotide sequence of VGAM1983 RNA is designated SEQ ID:4694, and is provided hereinbelow with reference to the sequence listing part.

[69944] VGAM1983 host target gene, herein designated VGAM HOST TARGET GENE, encodes a corresponding messenger RNA, VGAM1983 host target RNA, herein designated VGAM HOST TARGET RNA. VGAM1983 host target RNA comprises three regions, as is typical of mRNA of a protein coding gene: a 5` untranslated region, a protein coding region and a 3` untranslated region, designated 5`UTR, PROTEIN CODING and 3`UTR respectively.

[69945] VGAM1983 RNA, herein designated VGAM RNA, binds complementarily to one or more host target binding sites located in untranslated regions of VGAM1983 host target

RNA, herein designated VGAM HOST TARGET RNA. This complementary binding is due to the fact that the nucleotide sequence of VGAM1983 RNA is an accurate or a partial inversed-reversed sequence of the nucleotide sequence of each of the host target binding sites. As an illustration, Fig. 1 shows three such host target binding sites, designated BINDING SITE I, BINDING SITE II and BINDING SITE III respectively. It is appreciated that the number of host target binding sites shown in Fig. 1 is meant as an illustration only, and is not meant to be limiting - VGAM1983 RNA, herein designated VGAM RNA, may have a different number of host target binding sites in untranslated regions of a VGAM1983 host target RNA, herein designated VGAM HOST TARGET RNA. It is further appreciated that while Fig. 1 depicts host target binding sites in the 3`UTR region, this is meant as an example only - these host target binding sites may be located in the 3`UTR region, the 5`UTR region, or in both 3`UTR and 5`UTR regions.

[69946] The complementary binding of VGAM1983 RNA, herein designated VGAM RNA, to host target binding sites on VGAM1983 host target RNA, herein designated VGAM HOST TARGET RNA, such as BINDING SITE I, BINDING SITE

II and BINDING SITE III, inhibits translation of VGAM1983 host target RNA into VGAM1983 host target protein, herein designated VGAM HOST TARGET PROTEIN. VGAM host target protein is therefore outlined by a broken line.

[69947] It is appreciated that VGAM1983 host target gene, herein designated VGAM HOST TARGET GENE, in fact represents a plurality of VGAM1983 host target genes. The mRNA of each one of this plurality of VGAM1983 host target genes comprises one or more host target binding sites, each having a nucleotide sequence which is at least partly complementary to VGAM1983 RNA, herein designated VGAM RNA, and which when bound by VGAM1983 RNA causes inhibition of translation of respective one or more VGAM1983 host target proteins.

[69948] It is further appreciated by one skilled in the art that the mode of translational inhibition illustrated by Fig. 1 with specific reference to translational inhibition exerted by VGAM1983 gene, herein designated VGAM GENE, on one or more VGAM1983 host target gene, herein designated VGAM HOST TARGET GENE, is in fact common to other known non-viral miRNA genes. As mentioned hereinabove with reference to the background section, although a specific complementary binding site has been demonstrated

only for some of the known miRNA genes (primarily Lin-4 and Let-7), all other recently discovered miRNA genes are also believed by those skilled in the art to modulate expression of other genes by complementary binding, although specific complementary binding sites of these other miRNA genes have not yet been found (Ruvkun G., `Perspective: Glimpses of a tiny RNA world`, Science 294,779 (2001)).

[69949] It is yet further appreciated that a function of VGAM1983 is inhibition of expression of host target genes, as part of a novel viral mechanism of attacking a host. Accordingly, utilities of VGAM1983 include diagnosis, prevention and treatment of viral infection by Hendra Virus. Specific functions, and accordingly utilities, of VGAM1983 correlate with, and may be deduced from, the identity of the host target genes which VGAM1983 binds and inhibits, and the function of these host target genes, as elaborated hereinbelow.

[69950] Nucleotide sequences of the VGAM1983 precursor RNA, herein designated VGAM PRECURSOR RNA, and of the `diced` VGAM1983 RNA, herein designated VGAM RNA, and a schematic representation of the secondary folding of VGAM1983 folded precursor RNA, herein designated

VGAM FOLDED PRECURSOR RNA, of VGAM1983 are further described hereinbelow with reference to Table 1.

[69951] Nucleotide sequences of host target binding sites, such as BINDING SITE-I, BINDING SITE-II and BINDING SITE-III of Fig. 1, found on VGAM1983 host target RNA, and schematic representation of the complementarity of each of these host target binding sites to VGAM1983 RNA, herein designated VGAM RNA, are described hereinbelow with reference to Table 2.

[69952] As mentioned hereinabove with reference to Fig. 1, a function of VGAM1983 gene, herein designated VGAM is inhibition of expression of VGAM1983 target genes. It is appreciated that specific functions, and accordingly utilities, of VGAM1983 correlate with, and may be deduced from, the identity of the target genes which VGAM1983 binds and inhibits, and the function of these target genes, as elaborated hereinbelow.

[69953] Arginine Vasopressin Receptor 2 (nephrogenic diabetes insipidus) (AVPR2, Accession NM_000054) is a VGAM1983 host target gene. AVPR2 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by AVPR2, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or

BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of AVPR2 BINDING SITE, designated SEQ ID:5511, to the nucleotide sequence of VGAM1983 RNA, herein designated VGAM RNA, also designated SEQ ID:4694.

[69954] A function of VGAM1983 is therefore inhibition of Arginine Vasopressin Receptor 2 (nephrogenic diabetes insipidus) (AVPR2, Accession NM_000054). Accordingly, utilities of VGAM1983 include diagnosis, prevention and treatment of diseases and clinical conditions associated with AVPR2. High Mobility Group AT-hook 2 (HMGA2, Accession NM_003483) is another VGAM1983 host target gene. HMGA2 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by HMGA2, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of HMGA2 BINDING SITE, designated SEQ ID:9563, to the nucleotide sequence of VGAM1983 RNA, herein designated VGAM RNA, also designated SEQ ID:4694.

[69955] Another function of VGAM1983 is therefore inhibition of High Mobility Group AT-hook 2 (HMGA2, Accession

NM_003483), a gene which may affect transcription and cell differentiation; shares common DNA-binding motif with other HMG HMG I/Y family members. Accordingly, utilities of VGAM1983 include diagnosis, prevention and treatment of diseases and clinical conditions associated with HMGA2. The function of HMGA2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM552.Myotubularin Related Protein 2 (MTMR2, Accession NM_016156) is another VGAM1983 host target gene. MTMR2 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by MTMR2, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of MTMR2 BINDING SITE, designated SEQ ID:18244, to the nucleotide sequence of VGAM1983 RNA, herein designated VGAM RNA, also designated SEQ ID:4694.

[69956] Another function of VGAM1983 is therefore inhibition of Myotubularin Related Protein 2 (MTMR2, Accession NM_016156). Accordingly, utilities of VGAM1983 include diagnosis, prevention and treatment of diseases and clini-

cal conditions associated with MTMR2. Vascular Cell Adhesion Molecule 1 (VCAM1, Accession NM_080682) is another VGAM1983 host target gene. VCAM1 BINDING SITE1 and VCAM1 BINDING SITE2 are HOST TARGET binding sites found in untranslated regions of mRNA encoded by VCAM1, corresponding to HOST TARGET binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of VCAM1 BINDING SITE1 and VCAM1 BINDING SITE2, designated SEQ ID:27984 and SEQ ID:6738 respectively, to the nucleotide sequence of VGAM1983 RNA, herein designated VGAM RNA, also designated SEQ ID:4694.

[69957] Another function of VGAM1983 is therefore inhibition of Vascular Cell Adhesion Molecule 1 (VCAM1, Accession NM_080682). Accordingly, utilities of VGAM1983 include diagnosis, prevention and treatment of diseases and clinical conditions associated with VCAM1. SPEC1 (Accession NM_020239) is another VGAM1983 host target gene. SPEC1 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by SPEC1, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2

illustrates the complementarity of the nucleotide sequences of SPEC1 BINDING SITE, designated SEQ ID:21514, to the nucleotide sequence of VGAM1983 RNA, herein designated VGAM RNA, also designated SEQ ID:4694.

[69958] Another function of VGAM1983 is therefore inhibition of SPEC1 (Accession NM_020239). Accordingly, utilities of VGAM1983 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SPEC1. LOC89932 (Accession XM_027341) is another VGAM1983 host target gene. LOC89932 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by LOC89932, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC89932 BINDING SITE, designated SEQ ID:30492, to the nucleotide sequence of VGAM1983 RNA, herein designated VGAM RNA, also designated SEQ ID:4694.

[69959] Another function of VGAM1983 is therefore inhibition of LOC89932 (Accession XM_027341). Accordingly, utilities of VGAM1983 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

LOC89932. Fig. 1 further provides a conceptual description of a novel bioinformatically detected viral gene of the present invention, referred to here as Viral Genomic Address Messenger 1984 (VGAM1984) viral gene, which modulates expression of respective host target genes thereof, the function and utility of which host target genes is known in the art.

[69960] VGAM1984 is a novel bioinformatically detected regulatory, non protein coding, viral micro RNA (miRNA) gene. The method by which VGAM1984 was detected is described hereinabove with reference to Figs. 1-8.

[69961] VGAM1984 gene, herein designated VGAM GENE, is a viral gene contained in the genome of Hendra Virus.
VGAM1984 host target gene, herein designated VGAM HOST TARGET GENE, is a human gene contained in the human genome.

[69962] VGAM1984 gene encodes a VGAM1984 precursor RNA, herein designated VGAM PRECURSOR RNA. Similar to other miRNA genes, and unlike most ordinary genes, VGAM1984 precursor RNA does not encode a protein. A nucleotide sequence identical or highly similar to the nucleotide sequence of VGAM1984 precursor RNA is designated SEQ ID:1970, and is provided hereinbelow with ref-

erence to the sequence listing part. Nucleotide sequence SEQ ID:1970 is located at position 7867 relative to the genome of Hendra Virus.

[69963] VGAM1984 precursor RNA folds onto itself, forming VGAM1984 folded precursor RNA, herein designated VGAM FOLDED PRECURSOR RNA, which has a two-dimensional `hairpin structure`. As is well known in the art, this `hairpin structure`, is typical of RNA encoded by miRNA genes, and is due to the fact that the nucleotide sequence of the first half of the RNA encoded by a miRNA gene is an accurate or partial inversed-reversed sequence of the nucleotide sequence of the second half thereof.

[69964] An enzyme complex designated DICER COMPLEX, `dices` the VGAM1984 folded precursor RNA into VGAM1984 RNA, herein designated VGAM RNA, a single stranded ~22 nt long RNA segment. As is known in the art, `dicing` of a hairpin structured RNA precursor product into a short ~22nt RNA segment is catalyzed by an enzyme complex comprising an enzyme called Dicer together with other necessary proteins. A probable (over 41%) nucleotide sequence of VGAM1984 RNA is designated SEQ ID:4695, and is provided hereinbelow with reference to the sequence listing part.

[69965] VGAM1984 host target gene, herein designated VGAM HOST TARGET GENE, encodes a corresponding messenger RNA, VGAM1984 host target RNA, herein designated VGAM HOST TARGET RNA. VGAM1984 host target RNA comprises three regions, as is typical of mRNA of a protein coding gene: a 5` untranslated region, a protein coding region and a 3` untranslated region, designated 5`UTR, PROTEIN CODING and 3`UTR respectively.

[69966] VGAM1984 RNA, herein designated VGAM RNA, binds complementarily to one or more host target binding sites located in untranslated regions of VGAM1984 host target RNA, herein designated VGAM HOST TARGET RNA. This complementary binding is due to the fact that the nucleotide sequence of VGAM1984 RNA is an accurate or a partial inversed-reversed sequence of the nucleotide sequence of each of the host target binding sites. As an illustration, Fig. 1 shows three such host target binding sites, designated BINDING SITE I, BINDING SITE II and BINDING SITE III respectively. It is appreciated that the number of host target binding sites shown in Fig. 1 is meant as an illustration only, and is not meant to be limiting - VGAM1984 RNA, herein designated VGAM RNA, may have a different number of host target binding sites in

untranslated regions of a VGAM1984 host target RNA, herein designated VGAM HOST TARGET RNA. It is further appreciated that while Fig. 1 depicts host target binding sites in the 3`UTR region, this is meant as an example only - these host target binding sites may be located in the 3`UTR region, the 5`UTR region, or in both 3`UTR and 5`UTR regions.

[69967] The complementary binding of VGAM1984 RNA, herein designated VGAM RNA, to host target binding sites on VGAM1984 host target RNA, herein designated VGAM HOST TARGET RNA, such as BINDING SITE I, BINDING SITE II and BINDING SITE III, inhibits translation of VGAM1984 host target RNA into VGAM1984 host target protein, herein designated VGAM HOST TARGET PROTEIN. VGAM host target protein is therefore outlined by a broken line.

[69968] It is appreciated that VGAM1984 host target gene, herein designated VGAM HOST TARGET GENE, in fact represents a plurality of VGAM1984 host target genes. The mRNA of each one of this plurality of VGAM1984 host target genes comprises one or more host target binding sites, each having a nucleotide sequence which is at least partly complementary to VGAM1984 RNA, herein designated VGAM RNA, and which when bound by VGAM1984 RNA causes

inhibition of translation of respective one or more VGAM1984 host target proteins.

[69969] It is further appreciated by one skilled in the art that the mode of translational inhibition illustrated by Fig. 1 with specific reference to translational inhibition exerted by VGAM1984 gene, herein designated VGAM GENE, on one or more VGAM1984 host target gene, herein designated VGAM HOST TARGET GENE, is in fact common to other known non-viral miRNA genes. As mentioned hereinabove with reference to the background section, although a specific complementary binding site has been demonstrated only for some of the known miRNA genes (primarily Lin-4 and Let-7), all other recently discovered miRNA genes are also believed by those skilled in the art to modulate expression of other genes by complementary binding, although specific complementary binding sites of these other miRNA genes have not yet been found (Ruvkun G., `Perspective: Glimpses of a tiny RNA world`, Science 294,779 (2001)).

[69970] It is yet further appreciated that a function of VGAM1984 is inhibition of expression of host target genes, as part of a novel viral mechanism of attacking a host. Accordingly, utilities of VGAM1984 include diagnosis, prevention and

treatment of viral infection by Hendra Virus. Specific functions, and accordingly utilities, of VGAM1984 correlate with, and may be deduced from, the identity of the host target genes which VGAM1984 binds and inhibits, and the function of these host target genes, as elaborated hereinbelow.

[69971] Nucleotide sequences of the VGAM1984 precursor RNA, herein designated VGAM PRECURSOR RNA, and of the `diced` VGAM1984 RNA, herein designated VGAM RNA, and a schematic representation of the secondary folding of VGAM1984 folded precursor RNA, herein designated VGAM FOLDED PRECURSOR RNA, of VGAM1984 are further described hereinbelow with reference to Table 1.

[69972] Nucleotide sequences of host target binding sites, such as BINDING SITE-I, BINDING SITE-II and BINDING SITE-III of Fig. 1, found on VGAM1984 host target RNA, and schematic representation of the complementarity of each of these host target binding sites to VGAM1984 RNA, herein designated VGAM RNA, are described hereinbelow with reference to Table 2.

[69973] As mentioned hereinabove with reference to Fig. 1, a function of VGAM1984 gene, herein designated VGAM is inhibition of expression of VGAM1984 target genes. It is

appreciated that specific functions, and accordingly utilities, of VGAM1984 correlate with, and may be deduced from, the identity of the target genes which VGAM1984 binds and inhibits, and the function of these target genes, as elaborated hereinbelow.

[69974] Secretogranin III (SCG3, Accession NM_013243) is a VGAM1984 host target gene. SCG3 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by SCG3, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of SCG3 BINDING SITE, designated SEQ ID:14904, to the nucleotide sequence of VGAM1984 RNA, herein designated VGAM RNA, also designated SEQ ID:4695.

[69975] A function of VGAM1984 is therefore inhibition of Secretogranin III (SCG3, Accession NM_013243). Accordingly, utilities of VGAM1984 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SCG3. FLJ20086 (Accession NM_017661) is another VGAM1984 host target gene. FLJ20086 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by FLJ20086, corresponding to a

HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of FLJ20086 BINDING SITE, designated SEQ ID:19192, to the nucleotide sequence of VGAM1984 RNA, herein designated VGAM RNA, also designated SEQ ID:4695.

[69976] Another function of VGAM1984 is therefore inhibition of FLJ20086 (Accession NM_017661). Accordingly, utilities of VGAM1984 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ20086. Junctional Adhesion Molecule 1 (JAM1, Accession NM_144501) is another VGAM1984 host target gene. JAM1 BINDING SITE1 through JAM1 BINDING SITE5 are HOST TARGET binding sites found in untranslated regions of mRNA encoded by JAM1, corresponding to HOST TARGET binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of JAM1 BINDING SITE1 through JAM1 BINDING SITE5, designated SEQ ID:29321, SEQ ID:29328, SEQ ID:18861, SEQ ID:29337 and SEQ ID:29348 respectively, to the nucleotide sequence of VGAM1984 RNA, herein designated VGAM RNA, also designated SEQ ID:4695.

[69977] Another function of VGAM1984 is therefore inhibition of Junctional Adhesion Molecule 1 (JAM1, Accession NM_144501). Accordingly, utilities of VGAM1984 include diagnosis, prevention and treatment of diseases and clinical conditions associated with JAM1. Yes-associated Protein 1, 65kDa (YAP1, Accession NM_006106) is another VGAM1984 host target gene. YAP1 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by YAP1, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of YAP1 BINDING SITE, designated SEQ ID:12750, to the nucleotide sequence of VGAM1984 RNA, herein designated VGAM RNA, also designated SEQ ID:4695.

[69978] Another function of VGAM1984 is therefore inhibition of Yes-associated Protein 1, 65kDa (YAP1, Accession NM_006106). Accordingly, utilities of VGAM1984 include diagnosis, prevention and treatment of diseases and clinical conditions associated with YAP1. Fig. 1 further provides a conceptual description of a novel bioinformatically detected viral gene of the present invention, referred to here as Viral Genomic Address Messenger 1985

(VGAM1985) viral gene, which modulates expression of respective host target genes thereof, the function and utility of which host target genes is known in the art.

[69979] VGAM1985 is a novel bioinformatically detected regulatory, non protein coding, viral micro RNA (miRNA) gene. The method by which VGAM1985 was detected is described hereinabove with reference to Figs. 1-8.

[69980] VGAM1985 gene, herein designated VGAM GENE, is a viral gene contained in the genome of Hendra Virus. VGAM1985 host target gene, herein designated VGAM HOST TARGET GENE, is a human gene contained in the human genome.

[69981] VGAM1985 gene encodes a VGAM1985 precursor RNA, herein designated VGAM PRECURSOR RNA. Similar to other miRNA genes, and unlike most ordinary genes, VGAM1985 precursor RNA does not encode a protein. A nucleotide sequence identical or highly similar to the nucleotide sequence of VGAM1985 precursor RNA is designated SEQ ID:1971, and is provided hereinbelow with reference to the sequence listing part. Nucleotide sequence SEQ ID:1971 is located at position 3920 relative to the genome of Hendra Virus.

[69982] VGAM1985 precursor RNA folds onto itself, forming

VGAM1985 folded precursor RNA, herein designated VGAM FOLDED PRECURSOR RNA, which has a two-dimensional `hairpin structure`. As is well known in the art, this `hairpin structure`, is typical of RNA encoded by miRNA genes, and is due to the fact that the nucleotide sequence of the first half of the RNA encoded by a miRNA gene is an accurate or partial inversed-reversed sequence of the nucleotide sequence of the second half thereof.

[69983] An enzyme complex designated DICER COMPLEX, `dices` the VGAM1985 folded precursor RNA into VGAM1985 RNA, herein designated VGAM RNA, a single stranded ~22 nt long RNA segment. As is known in the art, `dicing` of a hairpin structured RNA precursor product into a short ~22nt RNA segment is catalyzed by an enzyme complex comprising an enzyme called Dicer together with other necessary proteins. A probable (over 41%) nucleotide sequence of VGAM1985 RNA is designated SEQ ID:4696, and is provided hereinbelow with reference to the sequence listing part.

[69984] VGAM1985 host target gene, herein designated VGAM HOST TARGET GENE, encodes a corresponding messenger RNA, VGAM1985 host target RNA, herein designated VGAM HOST TARGET RNA. VGAM1985 host target RNA

comprises three regions, as is typical of mRNA of a protein coding gene: a 5` untranslated region, a protein coding region and a 3` untranslated region, designated 5`UTR, PROTEIN CODING and 3`UTR respectively.

[69985] VGAM1985 RNA, herein designated VGAM RNA, binds complementarily to one or more host target binding sites located in untranslated regions of VGAM1985 host target RNA, herein designated VGAM HOST TARGET RNA. This complementary binding is due to the fact that the nucleotide sequence of VGAM1985 RNA is an accurate or a partial inversed-reversed sequence of the nucleotide sequence of each of the host target binding sites. As an illustration, Fig. 1 shows three such host target binding sites, designated BINDING SITE I, BINDING SITE II and BINDING SITE III respectively. It is appreciated that the number of host target binding sites shown in Fig. 1 is meant as an illustration only, and is not meant to be limiting - VGAM1985 RNA, herein designated VGAM RNA, may have a different number of host target binding sites in untranslated regions of a VGAM1985 host target RNA, herein designated VGAM HOST TARGET RNA. It is further appreciated that while Fig. 1 depicts host target binding sites in the 3`UTR region, this is meant as an example

only - these host target binding sites may be located in the 3`UTR region, the 5`UTR region, or in both 3`UTR and 5`UTR regions.

[69986] The complementary binding of VGAM1985 RNA, herein designated VGAM RNA, to host target binding sites on VGAM1985 host target RNA, herein designated VGAM HOST TARGET RNA, such as BINDING SITE I, BINDING SITE II and BINDING SITE III, inhibits translation of VGAM1985 host target RNA into VGAM1985 host target protein, herein designated VGAM HOST TARGET PROTEIN. VGAM host target protein is therefore outlined by a broken line.

[69987] It is appreciated that VGAM1985 host target gene, herein designated VGAM HOST TARGET GENE, in fact represents a plurality of VGAM1985 host target genes. The mRNA of each one of this plurality of VGAM1985 host target genes comprises one or more host target binding sites, each having a nucleotide sequence which is at least partly complementary to VGAM1985 RNA, herein designated VGAM RNA, and which when bound by VGAM1985 RNA causes inhibition of translation of respective one or more VGAM1985 host target proteins.

[69988] It is further appreciated by one skilled in the art that the mode of translational inhibition illustrated by Fig. 1 with

specific reference to translational inhibition exerted by VGAM1985 gene, herein designated VGAM GENE, on one or more VGAM1985 host target gene, herein designated VGAM HOST TARGET GENE, is in fact common to other known non-viral miRNA genes. As mentioned hereinabove with reference to the background section, although a specific complementary binding site has been demonstrated only for some of the known miRNA genes (primarily Lin-4 and Let-7), all other recently discovered miRNA genes are also believed by those skilled in the art to modulate expression of other genes by complementary binding, although specific complementary binding sites of these other miRNA genes have not yet been found (Ruvkun G., `Perspective: Glimpses of a tiny RNA world`, Science 294,779 (2001)).

[69989] It is yet further appreciated that a function of VGAM1985 is inhibition of expression of host target genes, as part of a novel viral mechanism of attacking a host. Accordingly, utilities of VGAM1985 include diagnosis, prevention and treatment of viral infection by Hendra Virus. Specific functions, and accordingly utilities, of VGAM1985 correlate with, and may be deduced from, the identity of the host target genes which VGAM1985 binds and inhibits, and the

function of these host target genes, as elaborated herein-below.

[69990] Nucleotide sequences of the VGAM1985 precursor RNA, herein designated VGAM PRECURSOR RNA, and of the `diced` VGAM1985 RNA, herein designated VGAM RNA, and a schematic representation of the secondary folding of VGAM1985 folded precursor RNA, herein designated VGAM FOLDED PRECURSOR RNA, of VGAM1985 are further described hereinbelow with reference to Table 1.

[69991] Nucleotide sequences of host target binding sites, such as BINDING SITE-I, BINDING SITE-II and BINDING SITE-III of Fig. 1, found on VGAM1985 host target RNA, and schematic representation of the complementarity of each of these host target binding sites to VGAM1985 RNA, herein designated VGAM RNA, are described hereinbelow with reference to Table 2.

[69992] As mentioned hereinabove with reference to Fig. 1, a function of VGAM1985 gene, herein designated VGAM is inhibition of expression of VGAM1985 target genes. It is appreciated that specific functions, and accordingly utilities, of VGAM1985 correlate with, and may be deduced from, the identity of the target genes which VGAM1985 binds and inhibits, and the function of these target genes,

as elaborated hereinbelow.

[69993] Cyclin-dependent Kinase Inhibitor 2A (melanoma, p16, inhibits CDK4) (CDKN2A, Accession NM_058197) is a VGAM1985 host target gene. CDKN2A BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by CDKN2A, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of CDKN2A BINDING SITE, designated SEQ ID:27757, to the nucleotide sequence of VGAM1985 RNA, herein designated VGAM RNA, also designated SEQ ID:4696.

[69994] A function of VGAM1985 is therefore inhibition of Cyclin-dependent Kinase Inhibitor 2A (melanoma, p16, inhibits CDK4) (CDKN2A, Accession NM_058197). Accordingly, utilities of VGAM1985 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CDKN2A. Cysteine Knot Superfamily 1, BMP Antagonist 1 (CKTSF1B1, Accession NM_013372) is another VGAM1985 host target gene. CKTSF1B1 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by CKTSF1B1, corresponding to a HOST TARGET binding site such as BINDING SITE I,

BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of CK-TSF1B1 BINDING SITE, designated SEQ ID:15023, to the nucleotide sequence of VGAM1985 RNA, herein designated VGAM RNA, also designated SEQ ID:4696.

[69995] Another function of VGAM1985 is therefore inhibition of Cysteine Knot Superfamily 1, BMP Antagonist 1 (CKTSF1B1, Accession NM_013372), a gene which blocks signaling of bone morphogenetic protein (BMP) . Accordingly, utilities of VGAM1985 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CKTSF1B1. The function of CKTSF1B1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM28.HLA Class II Region Expressed Gene KE4 (HKE4, Accession NM_006979) is another VGAM1985 host target gene. HKE4 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by HKE4, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of HKE4 BINDING SITE, designated SEQ ID:13841, to the nucleotide se-

quence of VGAM1985 RNA, herein designated VGAM RNA, also designated SEQ ID:4696.

[69996] Another function of VGAM1985 is therefore inhibition of HLA Class II Region Expressed Gene KE4 (HKE4, Accession NM_006979), a gene which Contains histidine-rich charge clusters. Accordingly, utilities of VGAM1985 include diagnosis, prevention and treatment of diseases and clinical conditions associated with HKE4. The function of HKE4 has been established by previous studies. Among the many non-HLA genes that have been identified in the region of the major histocompatibility complex (OMIM Ref. No. 6p21.3) in mouse and human are the genes symbolized Ke4 and Ke6 in the mouse. Ando et al. (1996) stated that the function of these genes is unknown, although Ke6 may be involved in the manifestation of polycystic kidney disease (PKD; 173900) because of its aberrant expression in 2 different murine models of PKD (Aziz et al., 1993; Aziz et al., 1994). Ando et al. (1996) isolated cDNA clones corresponding to the human Ke4 and Ke6 (OMIM Ref. No. 601417) genes (designated HKE4 and HKE6 by them) and located at the centromeric end of the HLA region on human 6p21.3. The predicted amino acid sequences of HKE4 and HKE6 exhibited 81.5 and 85.6% identity to the mouse

homologs, respectively. Ando et al. (1996) speculated that HKE4 may encode a membrane protein with histidine-rich charge clusters. Kikuti et al. (1997) examined YAC clone Y42, which contains the MHC class II region of chromosome 6q21.3. This region has a relatively high gene density. They identified the following human genes (in order from centromere toward telomere): HSET (OMIM Ref. No. 603763)--HKE1.5--HKE2--HKE3--RING1--(OMIM Ref. No. 602045)--HKE6 (OMIM Ref. No. 601417)--HKE4--RXRB (OMIM Ref. No. 180246)--COL11A2 (OMIM Ref. No. 120290)--DPB2.

[69997] Full details of the abovementioned studies are described in the following publications, the disclosure of which are hereby incorporated by reference:

[69998] Ando, A.; Kikuti, Y. Y.; Shigenari, A.; Kawata, H.; Okamoto, N.; Shiina, T.; Chen, L.; Ikemura, T.; Abe, K.; Kimura, M.; Inoko, H. : cDNA cloning of the human homologues of the mouse Ke4 and Ke6 genes at the centromeric end of the human MHC region. Genomics 35: 600-602, 1996. ; and

[69999] Kikuti, Y. Y.; Tamiya, G.; Ando, A.; Chen, L.; Kimura, M.; Ferreira, E.; Tsuji, K.; Trowsdale, J.; Inoko, H. : Physical mapping 220 kb centromeric of the human MHC and DNA sequence analy.

[70000] Further studies establishing the function and utilities of HKE4 are found in John Hopkins OMIM database record ID 601416, and in sited publications numbered 9390-9393 listed in the bibliography section hereinbelow, which are also hereby incorporated by reference.LFG (Accession XM_084780) is another VGAM1985 host target gene. LFG BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LFG, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LFG BINDING SITE, designated SEQ ID:37695, to the nucleotide sequence of VGAM1985 RNA, herein designated VGAM RNA, also designated SEQ ID:4696.

[70001] Another function of VGAM1985 is therefore inhibition of LFG (Accession XM_084780). Accordingly, utilities of VGAM1985 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LFG. Polycystic Kidney Disease 1 (autosomal dominant) (PKD1, Accession NM_000296) is another VGAM1985 host target gene. PKD1 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by PKD1, corresponding to a HOST TARGET binding site such

as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of PKD1 BINDING SITE, designated SEQ ID:5840, to the nucleotide sequence of VGAM1985 RNA, herein designated VGAM RNA, also designated SEQ ID:4696.

[70002] Another function of VGAM1985 is therefore inhibition of Polycystic Kidney Disease 1 (autosomal dominant) (PKD1, Accession NM_000296). Accordingly, utilities of VGAM1985 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PKD1. RAB27A, Member RAS Oncogene Family (RAB27A, Accession NM_004580) is another VGAM1985 host target gene. RAB27A BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by RAB27A, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of RAB27A BINDING SITE, designated SEQ ID:10927, to the nucleotide sequence of VGAM1985 RNA, herein designated VGAM RNA, also designated SEQ ID:4696.

[70003] Another function of VGAM1985 is therefore inhibition of RAB27A, Member RAS Oncogene Family (RAB27A, Acces-

sion NM_004580). Accordingly, utilities of VGAM1985 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RAB27A. RB1-inducible Coiled-coil 1 (RB1CC1, Accession NM_014781) is another VGAM1985 host target gene. RB1CC1 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by RB1CC1, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of RB1CC1 BINDING SITE, designated SEQ ID:16633, to the nucleotide sequence of VGAM1985 RNA, herein designated VGAM RNA, also designated SEQ ID:4696.

[70004] Another function of VGAM1985 is therefore inhibition of RB1-inducible Coiled-coil 1 (RB1CC1, Accession NM_014781), a gene which is likely to participate in nuclear architecture by connecting chromatin with the nuclear matrix or envelope. Accordingly, utilities of VGAM1985 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RB1CC1. The function of RB1CC1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with

reference to VGAM18.Adaptor-related Protein Complex 3, Mu 2 Subunit (AP3M2, Accession NM_006803) is another VGAM1985 host target gene. AP3M2 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by AP3M2, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of AP3M2 BINDING SITE, designated SEQ ID:13676, to the nucleotide sequence of VGAM1985 RNA, herein designated VGAM RNA, also designated SEQ ID:4696.

[70005] Another function of VGAM1985 is therefore inhibition of Adaptor-related Protein Complex 3, Mu 2 Subunit (AP3M2, Accession NM_006803). Accordingly, utilities of VGAM1985 include diagnosis, prevention and treatment of diseases and clinical conditions associated with AP3M2. Chromosome 17 Open Reading Frame 26 (C17orf26, Accession NM_139177) is another VGAM1985 host target gene. C17orf26 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by C17orf26, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nu-

cleotide sequences of C17orf26 BINDING SITE, designated SEQ ID:29186, to the nucleotide sequence of VGAM1985 RNA, herein designated VGAM RNA, also designated SEQ ID:4696.

[70006] Another function of VGAM1985 is therefore inhibition of Chromosome 17 Open Reading Frame 26 (C17orf26, Accession NM_139177). Accordingly, utilities of VGAM1985 include diagnosis, prevention and treatment of diseases and clinical conditions associated with C17orf26. FLJ20584 (Accession NM_017891) is another VGAM1985 host target gene. FLJ20584 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by FLJ20584, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of FLJ20584 BINDING SITE, designated SEQ ID:19563, to the nucleotide sequence of VGAM1985 RNA, herein designated VGAM RNA, also designated SEQ ID:4696.

[70007] Another function of VGAM1985 is therefore inhibition of FLJ20584 (Accession NM_017891). Accordingly, utilities of VGAM1985 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

FLJ20584. TRIAD3 (Accession XM_170517) is another VGAM1985 host target gene. TRIAD3 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by TRIAD3, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of TRIAD3 BINDING SITE, designated SEQ ID:45348, to the nucleotide sequence of VGAM1985 RNA, herein designated VGAM RNA, also designated SEQ ID:4696.

[70008] Another function of VGAM1985 is therefore inhibition of TRIAD3 (Accession XM_170517). Accordingly, utilities of VGAM1985 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TRIAD3. LOC126267 (Accession XM_065012) is another VGAM1985 host target gene. LOC126267 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by LOC126267, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC126267 BINDING SITE, designated SEQ ID:37271, to the nucleotide sequence of VGAM1985 RNA, herein desig-

nated VGAM RNA, also designated SEQ ID:4696.

[70009] Another function of VGAM1985 is therefore inhibition of LOC126267 (Accession XM_065012). Accordingly, utilities of VGAM1985 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC126267. LOC147229 (Accession XM_085742) is another VGAM1985 host target gene. LOC147229 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by LOC147229, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC147229 BINDING SITE, designated SEQ ID:38320, to the nucleotide sequence of VGAM1985 RNA, herein designated VGAM RNA, also designated SEQ ID:4696.

[70010] Another function of VGAM1985 is therefore inhibition of LOC147229 (Accession XM_085742). Accordingly, utilities of VGAM1985 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC147229. LOC163081 (Accession XM_091987) is another VGAM1985 host target gene. LOC163081 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by LOC163081, cor-

responding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC163081 BINDING SITE, designated SEQ ID:40087, to the nucleotide sequence of VGAM1985 RNA, herein designated VGAM RNA, also designated SEQ ID:4696.

[70011] Another function of VGAM1985 is therefore inhibition of LOC163081 (Accession XM_091987). Accordingly, utilities of VGAM1985 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC163081. LOC166424 (Accession XM_105867) is another VGAM1985 host target gene. LOC166424 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by LOC166424, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC166424 BINDING SITE, designated SEQ ID:42194, to the nucleotide sequence of VGAM1985 RNA, herein designated VGAM RNA, also designated SEQ ID:4696.

[70012] Another function of VGAM1985 is therefore inhibition of LOC166424 (Accession XM_105867). Accordingly, utilities of VGAM1985 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with LOC166424. LOC255242 (Accession XM_171095) is another VGAM1985 host target gene. LOC255242 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by LOC255242, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC255242 BINDING SITE, designated SEQ ID:45905, to the nucleotide sequence of VGAM1985 RNA, herein designated VGAM RNA, also designated SEQ ID:4696.

[70013] Another function of VGAM1985 is therefore inhibition of LOC255242 (Accession XM_171095). Accordingly, utilities of VGAM1985 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC255242. Fig. 1 further provides a conceptual description of a novel bioinformatically detected viral gene of the present invention, referred to here as Viral Genomic Address Messenger 1986 (VGAM1986) viral gene, which modulates expression of respective host target genes thereof, the function and utility of which host target genes is known in the art.

[70014] VGAM1986 is a novel bioinformatically detected regula-

tory, non protein coding, viral micro RNA (miRNA) gene. The method by which VGAM1986 was detected is described hereinabove with reference to Figs. 1-8.

[70015] VGAM1986 gene, herein designated VGAM GENE, is a viral gene contained in the genome of Hendra Virus. VGAM1986 host target gene, herein designated VGAM HOST TARGET GENE, is a human gene contained in the human genome.

[70016] VGAM1986 gene encodes a VGAM1986 precursor RNA, herein designated VGAM PRECURSOR RNA. Similar to other miRNA genes, and unlike most ordinary genes, VGAM1986 precursor RNA does not encode a protein. A nucleotide sequence identical or highly similar to the nucleotide sequence of VGAM1986 precursor RNA is designated SEQ ID:1972, and is provided hereinbelow with reference to the sequence listing part. Nucleotide sequence SEQ ID:1972 is located at position 4500 relative to the genome of Hendra Virus.

[70017] VGAM1986 precursor RNA folds onto itself, forming VGAM1986 folded precursor RNA, herein designated VGAM FOLDED PRECURSOR RNA, which has a two-dimensional `hairpin structure`. As is well known in the art, this `hairpin structure`, is typical of RNA encoded by

miRNA genes, and is due to the fact that the nucleotide sequence of the first half of the RNA encoded by a miRNA gene is an accurate or partial inversed-reversed sequence of the nucleotide sequence of the second half thereof.

[70018] An enzyme complex designated DICER COMPLEX, `dices` the VGAM1986 folded precursor RNA into VGAM1986 RNA, herein designated VGAM RNA, a single stranded ~22 nt long RNA segment. As is known in the art, `dicing` of a hairpin structured RNA precursor product into a short ~22nt RNA segment is catalyzed by an enzyme complex comprising an enzyme called Dicer together with other necessary proteins. A probable (over 46%) nucleotide sequence of VGAM1986 RNA is designated SEQ ID:4697, and is provided hereinbelow with reference to the sequence listing part.

[70019] VGAM1986 host target gene, herein designated VGAM HOST TARGET GENE, encodes a corresponding messenger RNA, VGAM1986 host target RNA, herein designated VGAM HOST TARGET RNA. VGAM1986 host target RNA comprises three regions, as is typical of mRNA of a protein coding gene: a 5` untranslated region, a protein coding region and a 3` untranslated region, designated 5`UTR, PROTEIN CODING and 3`UTR respectively.

[70020] VGAM1986 RNA, herein designated VGAM RNA, binds complementarily to one or more host target binding sites located in untranslated regions of VGAM1986 host target RNA, herein designated VGAM HOST TARGET RNA. This complementary binding is due to the fact that the nucleotide sequence of VGAM1986 RNA is an accurate or a partial inversed-reversed sequence of the nucleotide sequence of each of the host target binding sites. As an illustration, Fig. 1 shows three such host target binding sites, designated BINDING SITE I, BINDING SITE II and BINDING SITE III respectively. It is appreciated that the number of host target binding sites shown in Fig. 1 is meant as an illustration only, and is not meant to be limiting - VGAM1986 RNA, herein designated VGAM RNA, may have a different number of host target binding sites in untranslated regions of a VGAM1986 host target RNA, herein designated VGAM HOST TARGET RNA. It is further appreciated that while Fig. 1 depicts host target binding sites in the 3`UTR region, this is meant as an example only - these host target binding sites may be located in the 3`UTR region, the 5`UTR region, or in both 3`UTR and 5`UTR regions.

[70021] The complementary binding of VGAM1986 RNA, herein

designated VGAM RNA, to host target binding sites on VGAM1986 host target RNA, herein designated VGAM HOST TARGET RNA, such as BINDING SITE I, BINDING SITE II and BINDING SITE III, inhibits translation of VGAM1986 host target RNA into VGAM1986 host target protein, herein designated VGAM HOST TARGET PROTEIN. VGAM host target protein is therefore outlined by a broken line.

[70022] It is appreciated that VGAM1986 host target gene, herein designated VGAM HOST TARGET GENE, in fact represents a plurality of VGAM1986 host target genes. The mRNA of each one of this plurality of VGAM1986 host target genes comprises one or more host target binding sites, each having a nucleotide sequence which is at least partly complementary to VGAM1986 RNA, herein designated VGAM RNA, and which when bound by VGAM1986 RNA causes inhibition of translation of respective one or more VGAM1986 host target proteins.

[70023] It is further appreciated by one skilled in the art that the mode of translational inhibition illustrated by Fig. 1 with specific reference to translational inhibition exerted by VGAM1986 gene, herein designated VGAM GENE, on one or more VGAM1986 host target gene, herein designated VGAM HOST TARGET GENE, is in fact common to other

known non-viral miRNA genes. As mentioned hereinabove with reference to the background section, although a specific complementary binding site has been demonstrated only for some of the known miRNA genes (primarily Lin-4 and Let-7), all other recently discovered miRNA genes are also believed by those skilled in the art to modulate expression of other genes by complementary binding, although specific complementary binding sites of these other miRNA genes have not yet been found (Ruvkun G., `Perspective: Glimpses of a tiny RNA world`, Science 294,779 (2001)).

[70024] It is yet further appreciated that a function of VGAM1986 is inhibition of expression of host target genes, as part of a novel viral mechanism of attacking a host. Accordingly, utilities of VGAM1986 include diagnosis, prevention and treatment of viral infection by Hendra Virus. Specific functions, and accordingly utilities, of VGAM1986 correlate with, and may be deduced from, the identity of the host target genes which VGAM1986 binds and inhibits, and the function of these host target genes, as elaborated hereinbelow.

[70025] Nucleotide sequences of the VGAM1986 precursor RNA, herein designated VGAM PRECURSOR RNA, and of the

`diced` VGAM1986 RNA, herein designated VGAM RNA, and a schematic representation of the secondary folding of VGAM1986 folded precursor RNA, herein designated VGAM FOLDED PRECURSOR RNA, of VGAM1986 are further described hereinbelow with reference to Table 1.

[70026] Nucleotide sequences of host target binding sites, such as BINDING SITE-I, BINDING SITE-II and BINDING SITE-III of Fig. 1, found on VGAM1986 host target RNA, and schematic representation of the complementarity of each of these host target binding sites to VGAM1986 RNA, herein designated VGAM RNA, are described hereinbelow with reference to Table 2.

[70027] As mentioned hereinabove with reference to Fig. 1, a function of VGAM1986 gene, herein designated VGAM is inhibition of expression of VGAM1986 target genes. It is appreciated that specific functions, and accordingly utilities, of VGAM1986 correlate with, and may be deduced from, the identity of the target genes which VGAM1986 binds and inhibits, and the function of these target genes, as elaborated hereinbelow.

[70028] X-ray Repair Complementing Defective Repair In Chinese Hamster Cells 3 (XRCC3, Accession NM_005432) is a VGAM1986 host target gene. XRCC3 BINDING SITE is HOST

TARGET binding site found in the 3` untranslated region of mRNA encoded by XRCC3, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of XRCC3 BINDING SITE, designated SEQ ID:11905, to the nucleotide sequence of VGAM1986 RNA, herein designated VGAM RNA, also designated SEQ ID:4697.

[70029] A function of VGAM1986 is therefore inhibition of X-ray Repair Complementing Defective Repair In Chinese Hamster Cells 3 (XRCC3, Accession NM_005432), a gene which is required for meiotic recombination, synaptonemal complex formation and cell cycle progression. Accordingly, utilities of VGAM1986 include diagnosis, prevention and treatment of diseases and clinical conditions associated with XRCC3. The function of XRCC3 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM1290.HEMK (Accession NM_016173) is another VGAM1986 host target gene. HEMK BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by HEMK, corresponding to a HOST TARGET binding site such as

BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of HEMK BINDING SITE, designated SEQ ID:18264, to the nucleotide sequence of VGAM1986 RNA, herein designated VGAM RNA, also designated SEQ ID:4697.

[70030] Another function of VGAM1986 is therefore inhibition of HEMK (Accession NM_016173). Accordingly, utilities of VGAM1986 include diagnosis, prevention and treatment of diseases and clinical conditions associated with HEMK. Lectin, Galactoside-binding, Soluble, 8 (galectin 8) (LGALS8, Accession NM_006499) is another VGAM1986 host target gene. LGALS8 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LGALS8, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LGALS8 BINDING SITE, designated SEQ ID:13243, to the nucleotide sequence of VGAM1986 RNA, herein designated VGAM RNA, also designated SEQ ID:4697.

[70031] Another function of VGAM1986 is therefore inhibition of Lectin, Galactoside-binding, Soluble, 8 (galectin 8) (LGALS8, Accession NM_006499). Accordingly, utilities of

VGAM1986 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LGALS8. Protein Phosphatase 1, Regulatory (inhibitor) Subunit 3B (PPP1R3B, Accession NM_024607) is another VGAM1986 host target gene. PPP1R3B BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by PPP1R3B, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of PPP1R3B BINDING SITE, designated SEQ ID:23857, to the nucleotide sequence of VGAM1986 RNA, herein designated VGAM RNA, also designated SEQ ID:4697.

[70032] Another function of VGAM1986 is therefore inhibition of Protein Phosphatase 1, Regulatory (inhibitor) Subunit 3B (PPP1R3B, Accession NM_024607). Accordingly, utilities of VGAM1986 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PPP1R3B. SCAN Domain Containing 2 (SCAND2, Accession NM_033640) is another VGAM1986 host target gene. SCAND2 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by SCAND2, corresponding to a HOST TARGET binding site

such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of SCAND2 BINDING SITE, designated SEQ ID:27355, to the nucleotide sequence of VGAM1986 RNA, herein designated VGAM RNA, also designated SEQ ID:4697.

[70033] Another function of VGAM1986 is therefore inhibition of SCAN Domain Containing 2 (SCAND2, Accession NM_033640). Accordingly, utilities of VGAM1986 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SCAND2. LOC113763 (Accession NM_138434) is another VGAM1986 host target gene. LOC113763 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC113763, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC113763 BINDING SITE, designated SEQ ID:28800, to the nucleotide sequence of VGAM1986 RNA, herein designated VGAM RNA, also designated SEQ ID:4697.

[70034] Another function of VGAM1986 is therefore inhibition of LOC113763 (Accession NM_138434). Accordingly, utilities

of VGAM1986 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC113763. LOC137964 (Accession XM_059933) is another VGAM1986 host target gene. LOC137964 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC137964, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC137964 BINDING SITE, designated SEQ ID:37110, to the nucleotide sequence of VGAM1986 RNA, herein designated VGAM RNA, also designated SEQ ID:4697.

[70035] Another function of VGAM1986 is therefore inhibition of LOC137964 (Accession XM_059933). Accordingly, utilities of VGAM1986 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC137964. LOC150577 (Accession XM_097918) is another VGAM1986 host target gene. LOC150577 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC150577, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences

of LOC150577 BINDING SITE, designated SEQ ID:41216, to the nucleotide sequence of VGAM1986 RNA, herein designated VGAM RNA, also designated SEQ ID:4697.

[70036] Another function of VGAM1986 is therefore inhibition of LOC150577 (Accession XM_097918). Accordingly, utilities of VGAM1986 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC150577. LOC199863 (Accession XM_117147) is another VGAM1986 host target gene. LOC199863 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC199863, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC199863 BINDING SITE, designated SEQ ID:43254, to the nucleotide sequence of VGAM1986 RNA, herein designated VGAM RNA, also designated SEQ ID:4697.

[70037] Another function of VGAM1986 is therefore inhibition of LOC199863 (Accession XM_117147). Accordingly, utilities of VGAM1986 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC199863. LOC253897 (Accession XM_171187) is another VGAM1986 host target gene. LOC253897 BINDING

SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC253897, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC253897 BINDING SITE, designated SEQ ID:45967, to the nucleotide sequence of VGAM1986 RNA, herein designated VGAM RNA, also designated SEQ ID:4697.

[70038] Another function of VGAM1986 is therefore inhibition of LOC253897 (Accession XM_171187). Accordingly, utilities of VGAM1986 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC253897. Fig. 1 further provides a conceptual description of a novel bioinformatically detected viral gene of the present invention, referred to here as Viral Genomic Address Messenger 1987 (VGAM1987) viral gene, which modulates expression of respective host target genes thereof, the function and utility of which host target genes is known in the art.

[70039] VGAM1987 is a novel bioinformatically detected regulatory, non protein coding, viral micro RNA (miRNA) gene. The method by which VGAM1987 was detected is described hereinabove with reference to Figs. 1-8.

[70040] VGAM1987 gene, herein designated VGAM GENE, is a viral gene contained in the genome of Hendra Virus. VGAM1987 host target gene, herein designated VGAM HOST TARGET GENE, is a human gene contained in the human genome.

[70041] VGAM1987 gene encodes a VGAM1987 precursor RNA, herein designated VGAM PRECURSOR RNA. Similar to other miRNA genes, and unlike most ordinary genes, VGAM1987 precursor RNA does not encode a protein. A nucleotide sequence identical or highly similar to the nucleotide sequence of VGAM1987 precursor RNA is designated SEQ ID:1973, and is provided hereinbelow with reference to the sequence listing part. Nucleotide sequence SEQ ID:1973 is located at position 11388 relative to the genome of Hendra Virus.

[70042] VGAM1987 precursor RNA folds onto itself, forming VGAM1987 folded precursor RNA, herein designated VGAM FOLDED PRECURSOR RNA, which has a two-dimensional `hairpin structure`. As is well known in the art, this `hairpin structure`, is typical of RNA encoded by miRNA genes, and is due to the fact that the nucleotide sequence of the first half of the RNA encoded by a miRNA gene is an accurate or partial inversed-reversed sequence

of the nucleotide sequence of the second half thereof.

[70043] An enzyme complex designated DICER COMPLEX, `dices` the VGAM1987 folded precursor RNA into VGAM1987 RNA, herein designated VGAM RNA, a single stranded ~22 nt long RNA segment. As is known in the art, `dicing` of a hairpin structured RNA precursor product into a short ~22nt RNA segment is catalyzed by an enzyme complex comprising an enzyme called Dicer together with other necessary proteins. A probable (over 72%) nucleotide sequence of VGAM1987 RNA is designated SEQ ID:4698, and is provided hereinbelow with reference to the sequence listing part.

[70044] VGAM1987 host target gene, herein designated VGAM HOST TARGET GENE, encodes a corresponding messenger RNA, VGAM1987 host target RNA, herein designated VGAM HOST TARGET RNA. VGAM1987 host target RNA comprises three regions, as is typical of mRNA of a protein coding gene: a 5` untranslated region, a protein coding region and a 3` untranslated region, designated 5`UTR, PROTEIN CODING and 3`UTR respectively.

[70045] VGAM1987 RNA, herein designated VGAM RNA, binds complementarily to one or more host target binding sites located in untranslated regions of VGAM1987 host target

RNA, herein designated VGAM HOST TARGET RNA. This complementary binding is due to the fact that the nucleotide sequence of VGAM1987 RNA is an accurate or a partial inversed-reversed sequence of the nucleotide sequence of each of the host target binding sites. As an illustration, Fig. 1 shows three such host target binding sites, designated BINDING SITE I, BINDING SITE II and BINDING SITE III respectively. It is appreciated that the number of host target binding sites shown in Fig. 1 is meant as an illustration only, and is not meant to be limiting - VGAM1987 RNA, herein designated VGAM RNA, may have a different number of host target binding sites in untranslated regions of a VGAM1987 host target RNA, herein designated VGAM HOST TARGET RNA. It is further appreciated that while Fig. 1 depicts host target binding sites in the 3`UTR region, this is meant as an example only - these host target binding sites may be located in the 3`UTR region, the 5`UTR region, or in both 3`UTR and 5`UTR regions.

[70046] The complementary binding of VGAM1987 RNA, herein designated VGAM RNA, to host target binding sites on VGAM1987 host target RNA, herein designated VGAM HOST TARGET RNA, such as BINDING SITE I, BINDING SITE

II and BINDING SITE III, inhibits translation of VGAM1987 host target RNA into VGAM1987 host target protein, herein designated VGAM HOST TARGET PROTEIN. VGAM host target protein is therefore outlined by a broken line.

[70047] It is appreciated that VGAM1987 host target gene, herein designated VGAM HOST TARGET GENE, in fact represents a plurality of VGAM1987 host target genes. The mRNA of each one of this plurality of VGAM1987 host target genes comprises one or more host target binding sites, each having a nucleotide sequence which is at least partly complementary to VGAM1987 RNA, herein designated VGAM RNA, and which when bound by VGAM1987 RNA causes inhibition of translation of respective one or more VGAM1987 host target proteins.

[70048] It is further appreciated by one skilled in the art that the mode of translational inhibition illustrated by Fig. 1 with specific reference to translational inhibition exerted by VGAM1987 gene, herein designated VGAM GENE, on one or more VGAM1987 host target gene, herein designated VGAM HOST TARGET GENE, is in fact common to other known non-viral miRNA genes. As mentioned hereinabove with reference to the background section, although a specific complementary binding site has been demonstrated

only for some of the known miRNA genes (primarily Lin-4 and Let-7), all other recently discovered miRNA genes are also believed by those skilled in the art to modulate expression of other genes by complementary binding, although specific complementary binding sites of these other miRNA genes have not yet been found (Ruvkun G., `Perspective: Glimpses of a tiny RNA world`, Science 294,779 (2001)).

[70049] It is yet further appreciated that a function of VGAM1987 is inhibition of expression of host target genes, as part of a novel viral mechanism of attacking a host. Accordingly, utilities of VGAM1987 include diagnosis, prevention and treatment of viral infection by Hendra Virus. Specific functions, and accordingly utilities, of VGAM1987 correlate with, and may be deduced from, the identity of the host target genes which VGAM1987 binds and inhibits, and the function of these host target genes, as elaborated hereinbelow.

[70050] Nucleotide sequences of the VGAM1987 precursor RNA, herein designated VGAM PRECURSOR RNA, and of the `diced` VGAM1987 RNA, herein designated VGAM RNA, and a schematic representation of the secondary folding of VGAM1987 folded precursor RNA, herein designated

VGAM FOLDED PRECURSOR RNA, of VGAM1987 are further described hereinbelow with reference to Table 1.

[70051] Nucleotide sequences of host target binding sites, such as BINDING SITE-I, BINDING SITE-II and BINDING SITE-III of Fig. 1, found on VGAM1987 host target RNA, and schematic representation of the complementarity of each of these host target binding sites to VGAM1987 RNA, herein designated VGAM RNA, are described hereinbelow with reference to Table 2.

[70052] As mentioned hereinabove with reference to Fig. 1, a function of VGAM1987 gene, herein designated VGAM is inhibition of expression of VGAM1987 target genes. It is appreciated that specific functions, and accordingly utilities, of VGAM1987 correlate with, and may be deduced from, the identity of the target genes which VGAM1987 binds and inhibits, and the function of these target genes, as elaborated hereinbelow.

[70053] KIAA1467 (Accession XM_049605) is a VGAM1987 host target gene. KIAA1467 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by KIAA1467, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity

of the nucleotide sequences of KIAA1467 BINDING SITE, designated SEQ ID:35455, to the nucleotide sequence of VGAM1987 RNA, herein designated VGAM RNA, also designated SEQ ID:4698.

[70054] A function of VGAM1987 is therefore inhibition of KIAA1467 (Accession XM_049605). Accordingly, utilities of VGAM1987 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1467. MGC11061 (Accession NM_032312) is another VGAM1987 host target gene. MGC11061 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by MGC11061, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of MGC11061 BINDING SITE, designated SEQ ID:26116, to the nucleotide sequence of VGAM1987 RNA, herein designated VGAM RNA, also designated SEQ ID:4698.

[70055] Another function of VGAM1987 is therefore inhibition of MGC11061 (Accession NM_032312). Accordingly, utilities of VGAM1987 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC11061. Synaptosomal-associated Protein, 91kDa Ho-

molog (mouse) (SNAP91, Accession NM_014841) is another VGAM1987 host target gene. SNAP91 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by SNAP91, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of SNAP91 BINDING SITE, designated SEQ ID:16869, to the nucleotide sequence of VGAM1987 RNA, herein designated VGAM RNA, also designated SEQ ID:4698.

[70056] Another function of VGAM1987 is therefore inhibition of Synaptosomal-associated Protein, 91kDa Homolog (mouse) (SNAP91, Accession NM_014841). Accordingly, utilities of VGAM1987 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SNAP91. LOC120406 (Accession XM_061976) is another VGAM1987 host target gene. LOC120406 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC120406, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC120406 BINDING SITE, designated SEQ ID:37220, to

the nucleotide sequence of VGAM1987 RNA, herein designated VGAM RNA, also designated SEQ ID:4698.

[70057] Another function of VGAM1987 is therefore inhibition of LOC120406 (Accession XM_061976). Accordingly, utilities of VGAM1987 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC120406. LOC93349 (Accession NM_138402) is another VGAM1987 host target gene. LOC93349 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC93349, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC93349 BINDING SITE, designated SEQ ID:28769, to the nucleotide sequence of VGAM1987 RNA, herein designated VGAM RNA, also designated SEQ ID:4698.

[70058] Another function of VGAM1987 is therefore inhibition of LOC93349 (Accession NM_138402). Accordingly, utilities of VGAM1987 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC93349. Fig. 1 further provides a conceptual description of a novel bioinformatically detected viral gene of the present invention, referred to here as Viral Genomic Ad-

dress Messenger 1988 (VGAM1988) viral gene, which modulates expression of respective host target genes thereof, the function and utility of which host target genes is known in the art.

[70059] VGAM1988 is a novel bioinformatically detected regulatory, non protein coding, viral micro RNA (miRNA) gene. The method by which VGAM1988 was detected is described hereinabove with reference to Figs. 1-8.

[70060] VGAM1988 gene, herein designated VGAM GENE, is a viral gene contained in the genome of Hendra Virus. VGAM1988 host target gene, herein designated VGAM HOST TARGET GENE, is a human gene contained in the human genome.

[70061] VGAM1988 gene encodes a VGAM1988 precursor RNA, herein designated VGAM PRECURSOR RNA. Similar to other miRNA genes, and unlike most ordinary genes, VGAM1988 precursor RNA does not encode a protein. A nucleotide sequence identical or highly similar to the nucleotide sequence of VGAM1988 precursor RNA is designated SEQ ID:1974, and is provided hereinbelow with reference to the sequence listing part. Nucleotide sequence SEQ ID:1974 is located at position 15383 relative to the genome of Hendra Virus.

[70062] VGAM1988 precursor RNA folds onto itself, forming VGAM1988 folded precursor RNA, herein designated VGAM FOLDED PRECURSOR RNA, which has a two-dimensional `hairpin structure`. As is well known in the art, this `hairpin structure`, is typical of RNA encoded by miRNA genes, and is due to the fact that the nucleotide sequence of the first half of the RNA encoded by a miRNA gene is an accurate or partial inversed-reversed sequence of the nucleotide sequence of the second half thereof.

[70063] An enzyme complex designated DICER COMPLEX, `dices` the VGAM1988 folded precursor RNA into VGAM1988 RNA, herein designated VGAM RNA, a single stranded ~22 nt long RNA segment. As is known in the art, `dicing` of a hairpin structured RNA precursor product into a short ~22nt RNA segment is catalyzed by an enzyme complex comprising an enzyme called Dicer together with other necessary proteins. A probable (over 61%) nucleotide sequence of VGAM1988 RNA is designated SEQ ID:4699, and is provided hereinbelow with reference to the sequence listing part.

[70064] VGAM1988 host target gene, herein designated VGAM HOST TARGET GENE, encodes a corresponding messenger RNA, VGAM1988 host target RNA, herein designated

VGAM HOST TARGET RNA. VGAM1988 host target RNA comprises three regions, as is typical of mRNA of a protein coding gene: a 5` untranslated region, a protein coding region and a 3` untranslated region, designated 5`UTR, PROTEIN CODING and 3`UTR respectively.

[70065] VGAM1988 RNA, herein designated VGAM RNA, binds complementarily to one or more host target binding sites located in untranslated regions of VGAM1988 host target RNA, herein designated VGAM HOST TARGET RNA. This complementary binding is due to the fact that the nucleotide sequence of VGAM1988 RNA is an accurate or a partial inversed-reversed sequence of the nucleotide sequence of each of the host target binding sites. As an illustration, Fig. 1 shows three such host target binding sites, designated BINDING SITE I, BINDING SITE II and BINDING SITE III respectively. It is appreciated that the number of host target binding sites shown in Fig. 1 is meant as an illustration only, and is not meant to be limiting - VGAM1988 RNA, herein designated VGAM RNA, may have a different number of host target binding sites in untranslated regions of a VGAM1988 host target RNA, herein designated VGAM HOST TARGET RNA. It is further appreciated that while Fig. 1 depicts host target binding

sites in the 3`UTR region, this is meant as an example only - these host target binding sites may be located in the 3`UTR region, the 5`UTR region, or in both 3`UTR and 5`UTR regions.

[70066] The complementary binding of VGAM1988 RNA, herein designated VGAM RNA, to host target binding sites on VGAM1988 host target RNA, herein designated VGAM HOST TARGET RNA, such as BINDING SITE I, BINDING SITE II and BINDING SITE III, inhibits translation of VGAM1988 host target RNA into VGAM1988 host target protein, herein designated VGAM HOST TARGET PROTEIN. VGAM host target protein is therefore outlined by a broken line.

[70067] It is appreciated that VGAM1988 host target gene, herein designated VGAM HOST TARGET GENE, in fact represents a plurality of VGAM1988 host target genes. The mRNA of each one of this plurality of VGAM1988 host target genes comprises one or more host target binding sites, each having a nucleotide sequence which is at least partly complementary to VGAM1988 RNA, herein designated VGAM RNA, and which when bound by VGAM1988 RNA causes inhibition of translation of respective one or more VGAM1988 host target proteins.

[70068] It is further appreciated by one skilled in the art that the

mode of translational inhibition illustrated by Fig. 1 with specific reference to translational inhibition exerted by VGAM1988 gene, herein designated VGAM GENE, on one or more VGAM1988 host target gene, herein designated VGAM HOST TARGET GENE, is in fact common to other known non-viral miRNA genes. As mentioned hereinabove with reference to the background section, although a specific complementary binding site has been demonstrated only for some of the known miRNA genes (primarily Lin-4 and Let-7), all other recently discovered miRNA genes are also believed by those skilled in the art to modulate expression of other genes by complementary binding, although specific complementary binding sites of these other miRNA genes have not yet been found (Ruvkun G., `Perspective: Glimpses of a tiny RNA world`, Science 294,779 (2001)).

[70069] It is yet further appreciated that a function of VGAM1988 is inhibition of expression of host target genes, as part of a novel viral mechanism of attacking a host. Accordingly, utilities of VGAM1988 include diagnosis, prevention and treatment of viral infection by Hendra Virus. Specific functions, and accordingly utilities, of VGAM1988 correlate with, and may be deduced from, the identity of the host

target genes which VGAM1988 binds and inhibits, and the function of these host target genes, as elaborated herein-below.

[70070] Nucleotide sequences of the VGAM1988 precursor RNA, herein designated VGAM PRECURSOR RNA, and of the `diced` VGAM1988 RNA, herein designated VGAM RNA, and a schematic representation of the secondary folding of VGAM1988 folded precursor RNA, herein designated VGAM FOLDED PRECURSOR RNA, of VGAM1988 are further described hereinbelow with reference to Table 1.

[70071] Nucleotide sequences of host target binding sites, such as BINDING SITE-I, BINDING SITE-II and BINDING SITE-III of Fig. 1, found on VGAM1988 host target RNA, and schematic representation of the complementarity of each of these host target binding sites to VGAM1988 RNA, herein designated VGAM RNA, are described hereinbelow with reference to Table 2.

[70072] As mentioned hereinabove with reference to Fig. 1, a function of VGAM1988 gene, herein designated VGAM is inhibition of expression of VGAM1988 target genes. It is appreciated that specific functions, and accordingly utilities, of VGAM1988 correlate with, and may be deduced from, the identity of the target genes which VGAM1988

binds and inhibits, and the function of these target genes, as elaborated hereinbelow.

[70073] Adenomatosis Polyposis Coli (APC, Accession NM_000038) is a VGAM1988 host target gene. APC BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by APC, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of APC BINDING SITE, designated SEQ ID:5481, to the nucleotide sequence of VGAM1988 RNA, herein designated VGAM RNA, also designated SEQ ID:4699.

[70074] A function of VGAM1988 is therefore inhibition of Adenomatosis Polyposis Coli (APC, Accession NM_000038). Accordingly, utilities of VGAM1988 include diagnosis, prevention and treatment of diseases and clinical conditions associated with APC. Protein Kinase (cAMP-dependent, catalytic) Inhibitor Beta (PKIB, Accession NM_032471) is another VGAM1988 host target gene. PKIB BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by PKIB, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the com-

plementarity of the nucleotide sequences of PKIB BINDING SITE, designated SEQ ID:26229, to the nucleotide sequence of VGAM1988 RNA, herein designated VGAM RNA, also designated SEQ ID:4699.

[70075] Another function of VGAM1988 is therefore inhibition of Protein Kinase (cAMP-dependent, catalytic) Inhibitor Beta (PKIB, Accession NM_032471). Accordingly, utilities of VGAM1988 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PKIB. Sodium Channel, Nonvoltage-gated 1, Gamma (SCNN1G, Accession NM_001039) is another VGAM1988 host target gene. SCNN1G BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by SCNN1G, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of SCNN1G BINDING SITE, designated SEQ ID:6704, to the nucleotide sequence of VGAM1988 RNA, herein designated VGAM RNA, also designated SEQ ID:4699.

[70076] Another function of VGAM1988 is therefore inhibition of Sodium Channel, Nonvoltage-gated 1, Gamma (SCNN1G, Accession NM_001039). Accordingly, utilities of

VGAM1988 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SCNN1G. Transcription Factor 1, Hepatic; LF-B1, Hepatic Nuclear Factor (HNF1), Albumin Proximal Factor (TCF1, Accession NM_000545) is another VGAM1988 host target gene. TCF1 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by TCF1, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of TCF1 BINDING SITE, designated SEQ ID:6147, to the nucleotide sequence of VGAM1988 RNA, herein designated VGAM RNA, also designated SEQ ID:4699.

[70077] Another function of VGAM1988 is therefore inhibition of Transcription Factor 1, Hepatic; LF-B1, Hepatic Nuclear Factor (HNF1), Albumin Proximal Factor (TCF1, Accession NM_000545), a gene which is required for the expression of several liver specific genes. binds to the inverted palindrome 5'-gttaatnattaac-3'. Accordingly, utilities of VGAM1988 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TCF1. The function of TCF1 and its association with various diseases and clinical conditions, has been established by

previous studies, as described hereinabove with reference to VGAM1189.BLOV1 (Accession XM_083866) is another VGAM1988 host target gene. BLOV1 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by BLOV1, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of BLOV1 BINDING SITE, designated SEQ ID:37520, to the nucleotide sequence of VGAM1988 RNA, herein designated VGAM RNA, also designated SEQ ID:4699.

[70078] Another function of VGAM1988 is therefore inhibition of BLOV1 (Accession XM_083866). Accordingly, utilities of VGAM1988 include diagnosis, prevention and treatment of diseases and clinical conditions associated with BLOV1. FLJ00058 (Accession XM_086123) is another VGAM1988 host target gene. FLJ00058 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by FLJ00058, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of FLJ00058 BINDING SITE, designated SEQ ID:38508, to the nucleotide sequence of

VGAM1988 RNA, herein designated VGAM RNA, also designated SEQ ID:4699.

[70079] Another function of VGAM1988 is therefore inhibition of FLJ00058 (Accession XM_086123). Accordingly, utilities of VGAM1988 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ00058. FLJ10276 (Accession NM_018045) is another VGAM1988 host target gene. FLJ10276 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by FLJ10276, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of FLJ10276 BINDING SITE, designated SEQ ID:19790, to the nucleotide sequence of VGAM1988 RNA, herein designated VGAM RNA, also designated SEQ ID:4699.

[70080] Another function of VGAM1988 is therefore inhibition of FLJ10276 (Accession NM_018045). Accordingly, utilities of VGAM1988 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ10276. FLJ10803 (Accession NM_018224) is another VGAM1988 host target gene. FLJ10803 BINDING SITE is HOST TARGET binding site found in the 3` untranslated

region of mRNA encoded by FLJ10803, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of FLJ10803 BINDING SITE, designated SEQ ID:20153, to the nucleotide sequence of VGAM1988 RNA, herein designated VGAM RNA, also designated SEQ ID:4699.

[70081] Another function of VGAM1988 is therefore inhibition of FLJ10803 (Accession NM_018224). Accordingly, utilities of VGAM1988 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ10803. FLJ11142 (Accession NM_018338) is another VGAM1988 host target gene. FLJ11142 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by FLJ11142, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of FLJ11142 BINDING SITE, designated SEQ ID:20343, to the nucleotide sequence of VGAM1988 RNA, herein designated VGAM RNA, also designated SEQ ID:4699.

[70082] Another function of VGAM1988 is therefore inhibition of FLJ11142 (Accession NM_018338). Accordingly, utilities of

VGAM1988 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ11142. KIAA0997 (Accession NM_014950) is another VGAM1988 host target gene. KIAA0997 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by KIAA0997, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of KIAA0997 BINDING SITE, designated SEQ ID:17280, to the nucleotide sequence of VGAM1988 RNA, herein designated VGAM RNA, also designated SEQ ID:4699.

[70083] Another function of VGAM1988 is therefore inhibition of KIAA0997 (Accession NM_014950). Accordingly, utilities of VGAM1988 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0997. KIAA1069 (Accession XM_042635) is another VGAM1988 host target gene. KIAA1069 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by KIAA1069, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of

KIAA1069 BINDING SITE, designated SEQ ID:33723, to the nucleotide sequence of VGAM1988 RNA, herein designated VGAM RNA, also designated SEQ ID:4699.

[70084] Another function of VGAM1988 is therefore inhibition of KIAA1069 (Accession XM_042635). Accordingly, utilities of VGAM1988 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1069. NUDEL (Accession NM_030808) is another VGAM1988 host target gene. NUDEL BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by NUDEL, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of NUDEL BINDING SITE, designated SEQ ID:25122, to the nucleotide sequence of VGAM1988 RNA, herein designated VGAM RNA, also designated SEQ ID:4699.

[70085] Another function of VGAM1988 is therefore inhibition of NUDEL (Accession NM_030808). Accordingly, utilities of VGAM1988 include diagnosis, prevention and treatment of diseases and clinical conditions associated with NUDEL. LOC151178 (Accession XM_087117) is another VGAM1988 host target gene. LOC151178 BINDING SITE is

HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by LOC151178, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC151178 BINDING SITE, designated SEQ ID:39071, to the nucleotide sequence of VGAM1988 RNA, herein designated VGAM RNA, also designated SEQ ID:4699.

[70086] Another function of VGAM1988 is therefore inhibition of LOC151178 (Accession XM_087117). Accordingly, utilities of VGAM1988 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC151178. LOC199786 (Accession XM_114021) is another VGAM1988 host target gene. LOC199786 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC199786, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC199786 BINDING SITE, designated SEQ ID:42618, to the nucleotide sequence of VGAM1988 RNA, herein designated VGAM RNA, also designated SEQ ID:4699.

[70087] Another function of VGAM1988 is therefore inhibition of

LOC199786 (Accession XM_114021). Accordingly, utilities of VGAM1988 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC199786. LOC255975 (Accession XM_171083) is another VGAM1988 host target gene. LOC255975 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by LOC255975, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC255975 BINDING SITE, designated SEQ ID:45890, to the nucleotide sequence of VGAM1988 RNA, herein designated VGAM RNA, also designated SEQ ID:4699.

[70088] Another function of VGAM1988 is therefore inhibition of LOC255975 (Accession XM_171083). Accordingly, utilities of VGAM1988 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC255975. Fig. 1 further provides a conceptual description of a novel bioinformatically detected viral gene of the present invention, referred to here as Viral Genomic Address Messenger 1989 (VGAM1989) viral gene, which modulates expression of respective host target genes thereof, the function and utility of which host target genes

is known in the art.

[70089] VGAM1989 is a novel bioinformatically detected regulatory, non protein coding, viral micro RNA (miRNA) gene. The method by which VGAM1989 was detected is described hereinabove with reference to Figs. 1-8.

[70090] VGAM1989 gene, herein designated VGAM GENE, is a viral gene contained in the genome of Hendra Virus. VGAM1989 host target gene, herein designated VGAM HOST TARGET GENE, is a human gene contained in the human genome.

[70091] VGAM1989 gene encodes a VGAM1989 precursor RNA, herein designated VGAM PRECURSOR RNA. Similar to other miRNA genes, and unlike most ordinary genes, VGAM1989 precursor RNA does not encode a protein. A nucleotide sequence identical or highly similar to the nucleotide sequence of VGAM1989 precursor RNA is designated SEQ ID:1975, and is provided hereinbelow with reference to the sequence listing part. Nucleotide sequence SEQ ID:1975 is located at position 1467 relative to the genome of Hendra Virus.

[70092] VGAM1989 precursor RNA folds onto itself, forming VGAM1989 folded precursor RNA, herein designated VGAM FOLDED PRECURSOR RNA, which has a two-

dimensional `hairpin structure`. As is well known in the art, this `hairpin structure`, is typical of RNA encoded by miRNA genes, and is due to the fact that the nucleotide sequence of the first half of the RNA encoded by a miRNA gene is an accurate or partial inversed-reversed sequence of the nucleotide sequence of the second half thereof.

[70093] An enzyme complex designated DICER COMPLEX, `dices` the VGAM1989 folded precursor RNA into VGAM1989 RNA, herein designated VGAM RNA, a single stranded ~22 nt long RNA segment. As is known in the art, `dicing` of a hairpin structured RNA precursor product into a short ~22nt RNA segment is catalyzed by an enzyme complex comprising an enzyme called Dicer together with other necessary proteins. A probable (over 47%) nucleotide sequence of VGAM1989 RNA is designated SEQ ID:4700, and is provided hereinbelow with reference to the sequence listing part.

[70094] VGAM1989 host target gene, herein designated VGAM HOST TARGET GENE, encodes a corresponding messenger RNA, VGAM1989 host target RNA, herein designated VGAM HOST TARGET RNA. VGAM1989 host target RNA comprises three regions, as is typical of mRNA of a protein coding gene: a 5` untranslated region, a protein cod-

ing region and a 3` untranslated region, designated 5`UTR, PROTEIN CODING and 3`UTR respectively.

[70095] VGAM1989 RNA, herein designated VGAM RNA, binds complementarily to one or more host target binding sites located in untranslated regions of VGAM1989 host target RNA, herein designated VGAM HOST TARGET RNA. This complementary binding is due to the fact that the nucleotide sequence of VGAM1989 RNA is an accurate or a partial inversed-reversed sequence of the nucleotide sequence of each of the host target binding sites. As an illustration, Fig. 1 shows three such host target binding sites, designated BINDING SITE I, BINDING SITE II and BINDING SITE III respectively. It is appreciated that the number of host target binding sites shown in Fig. 1 is meant as an illustration only, and is not meant to be limiting - VGAM1989 RNA, herein designated VGAM RNA, may have a different number of host target binding sites in untranslated regions of a VGAM1989 host target RNA, herein designated VGAM HOST TARGET RNA. It is further appreciated that while Fig. 1 depicts host target binding sites in the 3`UTR region, this is meant as an example only - these host target binding sites may be located in the 3`UTR region, the 5`UTR region, or in both 3`UTR

and 5`UTR regions.

[70096] The complementary binding of VGAM1989 RNA, herein designated VGAM RNA, to host target binding sites on VGAM1989 host target RNA, herein designated VGAM HOST TARGET RNA, such as BINDING SITE I, BINDING SITE II and BINDING SITE III, inhibits translation of VGAM1989 host target RNA into VGAM1989 host target protein, herein designated VGAM HOST TARGET PROTEIN. VGAM host target protein is therefore outlined by a broken line.

[70097] It is appreciated that VGAM1989 host target gene, herein designated VGAM HOST TARGET GENE, in fact represents a plurality of VGAM1989 host target genes. The mRNA of each one of this plurality of VGAM1989 host target genes comprises one or more host target binding sites, each having a nucleotide sequence which is at least partly complementary to VGAM1989 RNA, herein designated VGAM RNA, and which when bound by VGAM1989 RNA causes inhibition of translation of respective one or more VGAM1989 host target proteins.

[70098] It is further appreciated by one skilled in the art that the mode of translational inhibition illustrated by Fig. 1 with specific reference to translational inhibition exerted by VGAM1989 gene, herein designated VGAM GENE, on one

or more VGAM1989 host target gene, herein designated VGAM HOST TARGET GENE, is in fact common to other known non-viral miRNA genes. As mentioned hereinabove with reference to the background section, although a specific complementary binding site has been demonstrated only for some of the known miRNA genes (primarily Lin-4 and Let-7), all other recently discovered miRNA genes are also believed by those skilled in the art to modulate expression of other genes by complementary binding, although specific complementary binding sites of these other miRNA genes have not yet been found (Ruvkun G., `Perspective: Glimpses of a tiny RNA world`, Science 294,779 (2001)).

[70099] It is yet further appreciated that a function of VGAM1989 is inhibition of expression of host target genes, as part of a novel viral mechanism of attacking a host. Accordingly, utilities of VGAM1989 include diagnosis, prevention and treatment of viral infection by Hendra Virus. Specific functions, and accordingly utilities, of VGAM1989 correlate with, and may be deduced from, the identity of the host target genes which VGAM1989 binds and inhibits, and the function of these host target genes, as elaborated hereinbelow.

[70100] Nucleotide sequences of the VGAM1989 precursor RNA, herein designated VGAM PRECURSOR RNA, and of the `diced` VGAM1989 RNA, herein designated VGAM RNA, and a schematic representation of the secondary folding of VGAM1989 folded precursor RNA, herein designated VGAM FOLDED PRECURSOR RNA, of VGAM1989 are further described hereinbelow with reference to Table 1.

[70101] Nucleotide sequences of host target binding sites, such as BINDING SITE-I, BINDING SITE-II and BINDING SITE-III of Fig. 1, found on VGAM1989 host target RNA, and schematic representation of the complementarity of each of these host target binding sites to VGAM1989 RNA, herein designated VGAM RNA, are described hereinbelow with reference to Table 2.

[70102] As mentioned hereinabove with reference to Fig. 1, a function of VGAM1989 gene, herein designated VGAM is inhibition of expression of VGAM1989 target genes. It is appreciated that specific functions, and accordingly utilities, of VGAM1989 correlate with, and may be deduced from, the identity of the target genes which VGAM1989 binds and inhibits, and the function of these target genes, as elaborated hereinbelow.

[70103] Diptheria Toxin Resistance Protein Required For Diph-

thamide Biosynthesis-like 1 (S. cerevisiae) (DPH2L1, Accession NM_001383) is a VGAM1989 host target gene. DPH2L1 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by DPH2L1, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of DPH2L1 BINDING SITE, designated SEQ ID:7053, to the nucleotide sequence of VGAM1989 RNA, herein designated VGAM RNA, also designated SEQ ID:4700.

[70104] A function of VGAM1989 is therefore inhibition of Diphtheria Toxin Resistance Protein Required For Diphthamide Biosynthesis-like 1 (S. cerevisiae) (DPH2L1, Accession NM_001383), a gene which may be involved in regulating global protein synthesis; has similarity to S. cerevisiae Dph2p. Accordingly, utilities of VGAM1989 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DPH2L1. The function of DPH2L1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM608.RNA (guanine-7-) Methyltransferase (RNMT,

Accession NM_003799) is another VGAM1989 host target gene. RNMT BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by RNMT, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of RNMT BINDING SITE, designated SEQ ID:9882, to the nucleotide sequence of VGAM1989 RNA, herein designated VGAM RNA, also designated SEQ ID:4700.

[70105] Another function of VGAM1989 is therefore inhibition of RNA (guanine-7-) Methyltransferase (RNMT, Accession NM_003799), a gene which catalyzes the methylation of GpppN- at the guanine N7 position. Accordingly, utilities of VGAM1989 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RNMT. The function of RNMT and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM178.Transcription Factor 19 (SC1) (TCF19, Accession XM_175167) is another VGAM1989 host target gene. TCF19 BINDING SITE1 and TCF19 BINDING SITE2 are HOST TARGET binding sites found in untranslated regions of mRNA encoded by TCF19, corresponding to HOST TAR-

GET binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of TCF19 BINDING SITE1 and TCF19 BINDING SITE2, designated SEQ ID:46658 and SEQ ID:46707 respectively, to the nucleotide sequence of VGAM1989 RNA, herein designated VGAM RNA, also designated SEQ ID:4700.

[70106] Another function of VGAM1989 is therefore inhibition of Transcription Factor 19 (SC1) (TCF19, Accession XM_175167), a gene which plays an important role in the transcription of genes required for the later stages of cell cycle progression. Accordingly, utilities of VGAM1989 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TCF19. The function of TCF19 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM299.FLJ20374 (Accession NM_017793) is another VGAM1989 host target gene. FLJ20374 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by FLJ20374, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the com-

plementarity of the nucleotide sequences of FLJ20374 BINDING SITE, designated SEQ ID:19429, to the nucleotide sequence of VGAM1989 RNA, herein designated VGAM RNA, also designated SEQ ID:4700.

[70107] Another function of VGAM1989 is therefore inhibition of FLJ20374 (Accession NM_017793). Accordingly, utilities of VGAM1989 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ20374. FLJ25415 (Accession NM_144708) is another VGAM1989 host target gene. FLJ25415 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by FLJ25415, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of FLJ25415 BINDING SITE, designated SEQ ID:29533, to the nucleotide sequence of VGAM1989 RNA, herein designated VGAM RNA, also designated SEQ ID:4700.

[70108] Another function of VGAM1989 is therefore inhibition of FLJ25415 (Accession NM_144708). Accordingly, utilities of VGAM1989 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ25415. KIAA0798 (Accession NM_014650) is another

VGAM1989 host target gene. KIAA0798 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by KIAA0798, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of KIAA0798 BINDING SITE, designated SEQ ID:16068, to the nucleotide sequence of VGAM1989 RNA, herein designated VGAM RNA, also designated SEQ ID:4700.

[70109] Another function of VGAM1989 is therefore inhibition of KIAA0798 (Accession NM_014650). Accordingly, utilities of VGAM1989 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0798. KIAA1281 (Accession XM_114432) is another VGAM1989 host target gene. KIAA1281 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by KIAA1281, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of KIAA1281 BINDING SITE, designated SEQ ID:42961, to the nucleotide sequence of VGAM1989 RNA, herein designated VGAM RNA, also designated SEQ ID:4700.

[70110] Another function of VGAM1989 is therefore inhibition of KIAA1281 (Accession XM_114432). Accordingly, utilities of VGAM1989 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1281. MACMARCKS (Accession NM_023009) is another VGAM1989 host target gene. MACMARCKS BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by MACMARCKS, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of MACMARCKS BINDING SITE, designated SEQ ID:23273, to the nucleotide sequence of VGAM1989 RNA, herein designated VGAM RNA, also designated SEQ ID:4700.

[70111] Another function of VGAM1989 is therefore inhibition of MACMARCKS (Accession NM_023009). Accordingly, utilities of VGAM1989 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MACMARCKS. MGC10812 (Accession NM_031425) is another VGAM1989 host target gene. MGC10812 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by MGC10812, corresponding to a HOST TARGET binding site such as BINDING

SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of MGC10812 BINDING SITE, designated SEQ ID:25412, to the nucleotide sequence of VGAM1989 RNA, herein designated VGAM RNA, also designated SEQ ID:4700.

[70112] Another function of VGAM1989 is therefore inhibition of MGC10812 (Accession NM_031425). Accordingly, utilities of VGAM1989 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC10812. MGC2628 (Accession NM_024076) is another VGAM1989 host target gene. MGC2628 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by MGC2628, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of MGC2628 BINDING SITE, designated SEQ ID:23509, to the nucleotide sequence of VGAM1989 RNA, herein designated VGAM RNA, also designated SEQ ID:4700.

[70113] Another function of VGAM1989 is therefore inhibition of MGC2628 (Accession NM_024076). Accordingly, utilities of VGAM1989 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

MGC2628. Synaptophysin-like Protein (SYPL, Accession XM_167511) is another VGAM1989 host target gene. SYPL BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by SYPL, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of SYPL BINDING SITE, designated SEQ ID:44645, to the nucleotide sequence of VGAM1989 RNA, herein designated VGAM RNA, also designated SEQ ID:4700.

[70114] Another function of VGAM1989 is therefore inhibition of Synaptophysin-like Protein (SYPL, Accession XM_167511). Accordingly, utilities of VGAM1989 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SYPL. LOC143310 (Accession XM_084485) is another VGAM1989 host target gene. LOC143310 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by LOC143310, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC143310 BINDING SITE, designated SEQ ID:37605, to the nucleotide sequence of

VGAM1989 RNA, herein designated VGAM RNA, also designated SEQ ID:4700.

[70115] Another function of VGAM1989 is therefore inhibition of LOC143310 (Accession XM_084485). Accordingly, utilities of VGAM1989 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC143310. LOC169577 (Accession XM_095785) is another VGAM1989 host target gene. LOC169577 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by LOC169577, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC169577 BINDING SITE, designated SEQ ID:40283, to the nucleotide sequence of VGAM1989 RNA, herein designated VGAM RNA, also designated SEQ ID:4700.

[70116] Another function of VGAM1989 is therefore inhibition of LOC169577 (Accession XM_095785). Accordingly, utilities of VGAM1989 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC169577. LOC219920 (Accession XM_167787) is another VGAM1989 host target gene. LOC219920 BINDING SITE is HOST TARGET binding site found in the 5` un-

translated region of mRNA encoded by LOC219920, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC219920 BINDING SITE, designated SEQ ID:44803, to the nucleotide sequence of VGAM1989 RNA, herein designated VGAM RNA, also designated SEQ ID:4700.

[70117] Another function of VGAM1989 is therefore inhibition of LOC219920 (Accession XM_167787). Accordingly, utilities of VGAM1989 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC219920. Fig. 1 further provides a conceptual description of a novel bioinformatically detected viral gene of the present invention, referred to here as Viral Genomic Address Messenger 1990 (VGAM1990) viral gene, which modulates expression of respective host target genes thereof, the function and utility of which host target genes is known in the art.

[70118] VGAM1990 is a novel bioinformatically detected regulatory, non protein coding, viral micro RNA (miRNA) gene. The method by which VGAM1990 was detected is described hereinabove with reference to Figs. 1-8.

[70119] VGAM1990 gene, herein designated VGAM GENE, is a viral

gene contained in the genome of Nipah Virus. VGAM1990 host target gene, herein designated VGAM HOST TARGET GENE, is a human gene contained in the human genome.

[70120] VGAM1990 gene encodes a VGAM1990 precursor RNA, herein designated VGAM PRECURSOR RNA. Similar to other miRNA genes, and unlike most ordinary genes, VGAM1990 precursor RNA does not encode a protein. A nucleotide sequence identical or highly similar to the nucleotide sequence of VGAM1990 precursor RNA is designated SEQ ID:1976, and is provided hereinbelow with reference to the sequence listing part. Nucleotide sequence SEQ ID:1976 is located at position 7327 relative to the genome of Nipah Virus.

[70121] VGAM1990 precursor RNA folds onto itself, forming VGAM1990 folded precursor RNA, herein designated VGAM FOLDED PRECURSOR RNA, which has a two-dimensional `hairpin structure`. As is well known in the art, this `hairpin structure`, is typical of RNA encoded by miRNA genes, and is due to the fact that the nucleotide sequence of the first half of the RNA encoded by a miRNA gene is an accurate or partial inversed-reversed sequence of the nucleotide sequence of the second half thereof.

[70122] An enzyme complex designated DICER COMPLEX, `dices`

the VGAM1990 folded precursor RNA into VGAM1990 RNA, herein designated VGAM RNA, a single stranded ~22 nt long RNA segment. As is known in the art, `dicing` of a hairpin structured RNA precursor product into a short ~22nt RNA segment is catalyzed by an enzyme complex comprising an enzyme called Dicer together with other necessary proteins. A probable (over 42%) nucleotide sequence of VGAM1990 RNA is designated SEQ ID:4701, and is provided hereinbelow with reference to the sequence listing part.

[70123] VGAM1990 host target gene, herein designated VGAM HOST TARGET GENE, encodes a corresponding messenger RNA, VGAM1990 host target RNA, herein designated VGAM HOST TARGET RNA. VGAM1990 host target RNA comprises three regions, as is typical of mRNA of a protein coding gene: a 5` untranslated region, a protein coding region and a 3` untranslated region, designated 5`UTR, PROTEIN CODING and 3`UTR respectively.

[70124] VGAM1990 RNA, herein designated VGAM RNA, binds complementarily to one or more host target binding sites located in untranslated regions of VGAM1990 host target RNA, herein designated VGAM HOST TARGET RNA. This complementary binding is due to the fact that the nu-

cleotide sequence of VGAM1990 RNA is an accurate or a partial inversed-reversed sequence of the nucleotide sequence of each of the host target binding sites. As an illustration, Fig. 1 shows three such host target binding sites, designated BINDING SITE I, BINDING SITE II and BINDING SITE III respectively. It is appreciated that the number of host target binding sites shown in Fig. 1 is meant as an illustration only, and is not meant to be limiting - VGAM1990 RNA, herein designated VGAM RNA, may have a different number of host target binding sites in untranslated regions of a VGAM1990 host target RNA, herein designated VGAM HOST TARGET RNA. It is further appreciated that while Fig. 1 depicts host target binding sites in the 3`UTR region, this is meant as an example only - these host target binding sites may be located in the 3`UTR region, the 5`UTR region, or in both 3`UTR and 5`UTR regions.

[70125] The complementary binding of VGAM1990 RNA, herein designated VGAM RNA, to host target binding sites on VGAM1990 host target RNA, herein designated VGAM HOST TARGET RNA, such as BINDING SITE I, BINDING SITE II and BINDING SITE III, inhibits translation of VGAM1990 host target RNA into VGAM1990 host target protein,

herein designated VGAM HOST TARGET PROTEIN. VGAM host target protein is therefore outlined by a broken line.

[70126] It is appreciated that VGAM1990 host target gene, herein designated VGAM HOST TARGET GENE, in fact represents a plurality of VGAM1990 host target genes. The mRNA of each one of this plurality of VGAM1990 host target genes comprises one or more host target binding sites, each having a nucleotide sequence which is at least partly complementary to VGAM1990 RNA, herein designated VGAM RNA, and which when bound by VGAM1990 RNA causes inhibition of translation of respective one or more VGAM1990 host target proteins.

[70127] It is further appreciated by one skilled in the art that the mode of translational inhibition illustrated by Fig. 1 with specific reference to translational inhibition exerted by VGAM1990 gene, herein designated VGAM GENE, on one or more VGAM1990 host target gene, herein designated VGAM HOST TARGET GENE, is in fact common to other known non-viral miRNA genes. As mentioned hereinabove with reference to the background section, although a specific complementary binding site has been demonstrated only for some of the known miRNA genes (primarily Lin-4 and Let-7), all other recently discovered miRNA genes are

also believed by those skilled in the art to modulate expression of other genes by complementary binding, although specific complementary binding sites of these other miRNA genes have not yet been found (Ruvkun G., `Perspective: Glimpses of a tiny RNA world`, Science 294,779 (2001)).

[70128] It is yet further appreciated that a function of VGAM1990 is inhibition of expression of host target genes, as part of a novel viral mechanism of attacking a host. Accordingly, utilities of VGAM1990 include diagnosis, prevention and treatment of viral infection by Nipah Virus. Specific functions, and accordingly utilities, of VGAM1990 correlate with, and may be deduced from, the identity of the host target genes which VGAM1990 binds and inhibits, and the function of these host target genes, as elaborated hereinbelow.

[70129] Nucleotide sequences of the VGAM1990 precursor RNA, herein designated VGAM PRECURSOR RNA, and of the `diced` VGAM1990 RNA, herein designated VGAM RNA, and a schematic representation of the secondary folding of VGAM1990 folded precursor RNA, herein designated VGAM FOLDED PRECURSOR RNA, of VGAM1990 are further described hereinbelow with reference to Table 1.

[70130] Nucleotide sequences of host target binding sites, such as BINDING SITE-I, BINDING SITE-II and BINDING SITE-III of Fig. 1, found on VGAM1990 host target RNA, and schematic representation of the complementarity of each of these host target binding sites to VGAM1990 RNA, herein designated VGAM RNA, are described hereinbelow with reference to Table 2.

[70131] As mentioned hereinabove with reference to Fig. 1, a function of VGAM1990 gene, herein designated VGAM is inhibition of expression of VGAM1990 target genes. It is appreciated that specific functions, and accordingly utilities, of VGAM1990 correlate with, and may be deduced from, the identity of the target genes which VGAM1990 binds and inhibits, and the function of these target genes, as elaborated hereinbelow.

[70132] Tumor Necrosis Factor Receptor Superfamily, Member 6 (TNFRSF6, Accession NM_000043) is a VGAM1990 host target gene. TNFRSF6 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by TNFRSF6, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of TNFRSF6 BINDING SITE,

designated SEQ ID:5484, to the nucleotide sequence of VGAM1990 RNA, herein designated VGAM RNA, also designated SEQ ID:4701.

[70133] A function of VGAM1990 is therefore inhibition of Tumor Necrosis Factor Receptor Superfamily, Member 6 (TNFRSF6, Accession NM_000043). Accordingly, utilities of VGAM1990 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TNFRSF6. Preimplantation Protein 3 (PREI3, Accession XM_038960) is another VGAM1990 host target gene. PREI3 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by PREI3, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of PREI3 BINDING SITE, designated SEQ ID:32965, to the nucleotide sequence of VGAM1990 RNA, herein designated VGAM RNA, also designated SEQ ID:4701.

[70134] Another function of VGAM1990 is therefore inhibition of Preimplantation Protein 3 (PREI3, Accession XM_038960). Accordingly, utilities of VGAM1990 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PREI3. Ubiquitin Specific Protease 25

(USP25, Accession NM_013396) is another VGAM1990 host target gene. USP25 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by USP25, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of USP25 BINDING SITE, designated SEQ ID:15046, to the nucleotide sequence of VGAM1990 RNA, herein designated VGAM RNA, also designated SEQ ID:4701.

[70135] Another function of VGAM1990 is therefore inhibition of Ubiquitin Specific Protease 25 (USP25, Accession NM_013396). Accordingly, utilities of VGAM1990 include diagnosis, prevention and treatment of diseases and clinical conditions associated with USP25. LOC146092 (Accession XM_096927) is another VGAM1990 host target gene. LOC146092 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by LOC146092, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC146092 BINDING SITE, designated SEQ ID:40652, to the nucleotide sequence of

VGAM1990 RNA, herein designated VGAM RNA, also designated SEQ ID:4701.

[70136] Another function of VGAM1990 is therefore inhibition of LOC146092 (Accession XM_096927). Accordingly, utilities of VGAM1990 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC146092. LOC92181 (Accession XM_043394) is another VGAM1990 host target gene. LOC92181 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC92181, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC92181 BINDING SITE, designated SEQ ID:33941, to the nucleotide sequence of VGAM1990 RNA, herein designated VGAM RNA, also designated SEQ ID:4701.

[70137] Another function of VGAM1990 is therefore inhibition of LOC92181 (Accession XM_043394). Accordingly, utilities of VGAM1990 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC92181. Fig. 1 further provides a conceptual description of a novel bioinformatically detected viral gene of the present invention, referred to here as Viral Genomic Ad-

dress Messenger 1991 (VGAM1991) viral gene, which modulates expression of respective host target genes thereof, the function and utility of which host target genes is known in the art.

[70138] VGAM1991 is a novel bioinformatically detected regulatory, non protein coding, viral micro RNA (miRNA) gene. The method by which VGAM1991 was detected is described hereinabove with reference to Figs. 1-8.

[70139] VGAM1991 gene, herein designated VGAM GENE, is a viral gene contained in the genome of Nipah Virus. VGAM1991 host target gene, herein designated VGAM HOST TARGET GENE, is a human gene contained in the human genome.

[70140] VGAM1991 gene encodes a VGAM1991 precursor RNA, herein designated VGAM PRECURSOR RNA. Similar to other miRNA genes, and unlike most ordinary genes, VGAM1991 precursor RNA does not encode a protein. A nucleotide sequence identical or highly similar to the nucleotide sequence of VGAM1991 precursor RNA is designated SEQ ID:1977, and is provided hereinbelow with reference to the sequence listing part. Nucleotide sequence SEQ ID:1977 is located at position 2776 relative to the genome of Nipah Virus.

[70141] VGAM1991 precursor RNA folds onto itself, forming

VGAM1991 folded precursor RNA, herein designated VGAM FOLDED PRECURSOR RNA, which has a two-dimensional `hairpin structure`. As is well known in the art, this `hairpin structure`, is typical of RNA encoded by miRNA genes, and is due to the fact that the nucleotide sequence of the first half of the RNA encoded by a miRNA gene is an accurate or partial inversed-reversed sequence of the nucleotide sequence of the second half thereof.

[70142] An enzyme complex designated DICER COMPLEX, `dices` the VGAM1991 folded precursor RNA into VGAM1991 RNA, herein designated VGAM RNA, a single stranded ~22 nt long RNA segment. As is known in the art, `dicing` of a hairpin structured RNA precursor product into a short ~22nt RNA segment is catalyzed by an enzyme complex comprising an enzyme called Dicer together with other necessary proteins. A probable (over 43%) nucleotide sequence of VGAM1991 RNA is designated SEQ ID:4702, and is provided hereinbelow with reference to the sequence listing part.

[70143] VGAM1991 host target gene, herein designated VGAM HOST TARGET GENE, encodes a corresponding messenger RNA, VGAM1991 host target RNA, herein designated VGAM HOST TARGET RNA. VGAM1991 host target RNA

comprises three regions, as is typical of mRNA of a protein coding gene: a 5` untranslated region, a protein coding region and a 3` untranslated region, designated 5`UTR, PROTEIN CODING and 3`UTR respectively.

[70144] VGAM1991 RNA, herein designated VGAM RNA, binds complementarily to one or more host target binding sites located in untranslated regions of VGAM1991 host target RNA, herein designated VGAM HOST TARGET RNA. This complementary binding is due to the fact that the nucleotide sequence of VGAM1991 RNA is an accurate or a partial inversed-reversed sequence of the nucleotide sequence of each of the host target binding sites. As an illustration, Fig. 1 shows three such host target binding sites, designated BINDING SITE I, BINDING SITE II and BINDING SITE III respectively. It is appreciated that the number of host target binding sites shown in Fig. 1 is meant as an illustration only, and is not meant to be limiting - VGAM1991 RNA, herein designated VGAM RNA, may have a different number of host target binding sites in untranslated regions of a VGAM1991 host target RNA, herein designated VGAM HOST TARGET RNA. It is further appreciated that while Fig. 1 depicts host target binding sites in the 3`UTR region, this is meant as an example

only - these host target binding sites may be located in the 3`UTR region, the 5`UTR region, or in both 3`UTR and 5`UTR regions.

[70145] The complementary binding of VGAM1991 RNA, herein designated VGAM RNA, to host target binding sites on VGAM1991 host target RNA, herein designated VGAM HOST TARGET RNA, such as BINDING SITE I, BINDING SITE II and BINDING SITE III, inhibits translation of VGAM1991 host target RNA into VGAM1991 host target protein, herein designated VGAM HOST TARGET PROTEIN. VGAM host target protein is therefore outlined by a broken line.

[70146] It is appreciated that VGAM1991 host target gene, herein designated VGAM HOST TARGET GENE, in fact represents a plurality of VGAM1991 host target genes. The mRNA of each one of this plurality of VGAM1991 host target genes comprises one or more host target binding sites, each having a nucleotide sequence which is at least partly complementary to VGAM1991 RNA, herein designated VGAM RNA, and which when bound by VGAM1991 RNA causes inhibition of translation of respective one or more VGAM1991 host target proteins.

[70147] It is further appreciated by one skilled in the art that the mode of translational inhibition illustrated by Fig. 1 with

specific reference to translational inhibition exerted by VGAM1991 gene, herein designated VGAM GENE, on one or more VGAM1991 host target gene, herein designated VGAM HOST TARGET GENE, is in fact common to other known non-viral miRNA genes. As mentioned hereinabove with reference to the background section, although a specific complementary binding site has been demonstrated only for some of the known miRNA genes (primarily Lin-4 and Let-7), all other recently discovered miRNA genes are also believed by those skilled in the art to modulate expression of other genes by complementary binding, although specific complementary binding sites of these other miRNA genes have not yet been found (Ruvkun G., `Perspective: Glimpses of a tiny RNA world`, Science 294,779 (2001)).

[70148] It is yet further appreciated that a function of VGAM1991 is inhibition of expression of host target genes, as part of a novel viral mechanism of attacking a host. Accordingly, utilities of VGAM1991 include diagnosis, prevention and treatment of viral infection by Nipah Virus. Specific functions, and accordingly utilities, of VGAM1991 correlate with, and may be deduced from, the identity of the host target genes which VGAM1991 binds and inhibits, and the

function of these host target genes, as elaborated herein-below.

[70149] Nucleotide sequences of the VGAM1991 precursor RNA, herein designated VGAM PRECURSOR RNA, and of the `diced` VGAM1991 RNA, herein designated VGAM RNA, and a schematic representation of the secondary folding of VGAM1991 folded precursor RNA, herein designated VGAM FOLDED PRECURSOR RNA, of VGAM1991 are further described hereinbelow with reference to Table 1.

[70150] Nucleotide sequences of host target binding sites, such as BINDING SITE-I, BINDING SITE-II and BINDING SITE-III of Fig. 1, found on VGAM1991 host target RNA, and schematic representation of the complementarity of each of these host target binding sites to VGAM1991 RNA, herein designated VGAM RNA, are described hereinbelow with reference to Table 2.

[70151] As mentioned hereinabove with reference to Fig. 1, a function of VGAM1991 gene, herein designated VGAM is inhibition of expression of VGAM1991 target genes. It is appreciated that specific functions, and accordingly utilities, of VGAM1991 correlate with, and may be deduced from, the identity of the target genes which VGAM1991 binds and inhibits, and the function of these target genes,

as elaborated hereinbelow.

[70152] Methyltransferase-like 1 (METTL1, Accession NM_023032) is a VGAM1991 host target gene. METTL1 BINDING SITE1 and METTL1 BINDING SITE2 are HOST TARGET binding sites found in untranslated regions of mRNA encoded by METTL1, corresponding to HOST TARGET binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of METTL1 BINDING SITE1 and METTL1 BINDING SITE2, designated SEQ ID:23306 and SEQ ID:23311 respectively, to the nucleotide sequence of VGAM1991 RNA, herein designated VGAM RNA, also designated SEQ ID:4702.

[70153] A function of VGAM1991 is therefore inhibition of Methyltransferase-like 1 (METTL1, Accession NM_023032). Accordingly, utilities of VGAM1991 include diagnosis, prevention and treatment of diseases and clinical conditions associated with METTL1. Solute Carrier Family 21 (organic anion transporter), Member 3 (SLC21A3, Accession NM_134431) is another VGAM1991 host target gene. SLC21A3 BINDING SITE1 and SLC21A3 BINDING SITE2 are HOST TARGET binding sites found in untranslated regions of mRNA encoded by SLC21A3, corresponding to HOST

TARGET binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of SLC21A3 BINDING SITE1 and SLC21A3 BINDING SITE2, designated SEQ ID:28673 and SEQ ID:18250 respectively, to the nucleotide sequence of VGAM1991 RNA, herein designated VGAM RNA, also designated SEQ ID:4702.

[70154] Another function of VGAM1991 is therefore inhibition of Solute Carrier Family 21 (organic anion transporter), Member 3 (SLC21A3, Accession NM_134431), a gene which mediates the na(+)-independent transport of organic anions such as bsp and conjugated (taurocholate) and unconjugated (cholate) bile acids. Accordingly, utilities of VGAM1991 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SLC21A3. The function of SLC21A3 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM1965.Chromosome 5 Open Reading Frame 4 (C5orf4, Accession NM_032385) is another VGAM1991 host target gene. C5orf4 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by C5orf4, corre-

sponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of C5orf4 BINDING SITE, designated SEQ ID:26181, to the nucleotide sequence of VGAM1991 RNA, herein designated VGAM RNA, also designated SEQ ID:4702.

[70155] Another function of VGAM1991 is therefore inhibition of Chromosome 5 Open Reading Frame 4 (C5orf4, Accession NM_032385). Accordingly, utilities of VGAM1991 include diagnosis, prevention and treatment of diseases and clinical conditions associated with C5orf4. DJ122O8.2 (Accession NM_020466) is another VGAM1991 host target gene. DJ122O8.2 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by DJ122O8.2, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of DJ122O8.2 BINDING SITE, designated SEQ ID:21702, to the nucleotide sequence of VGAM1991 RNA, herein designated VGAM RNA, also designated SEQ ID:4702.

[70156] Another function of VGAM1991 is therefore inhibition of DJ122O8.2 (Accession NM_020466). Accordingly, utilities

of VGAM1991 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DJ122O8.2. DKFZp547I224 (Accession NM_020221) is another VGAM1991 host target gene. DKFZp547I224 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by DKFZp547I224, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of DKFZp547I224 BINDING SITE, designated SEQ ID:21479, to the nucleotide sequence of VGAM1991 RNA, herein designated VGAM RNA, also designated SEQ ID:4702.

[70157] Another function of VGAM1991 is therefore inhibition of DKFZp547I224 (Accession NM_020221). Accordingly, utilities of VGAM1991 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZp547I224. FLJ10759 (Accession NM_018207) is another VGAM1991 host target gene. FLJ10759 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by FLJ10759, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illus-

trates the complementarity of the nucleotide sequences of FLJ10759 BINDING SITE, designated SEQ ID:20100, to the nucleotide sequence of VGAM1991 RNA, herein designated VGAM RNA, also designated SEQ ID:4702.

[70158] Another function of VGAM1991 is therefore inhibition of FLJ10759 (Accession NM_018207). Accordingly, utilities of VGAM1991 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ10759. FLJ21432 (Accession NM_024551) is another VGAM1991 host target gene. FLJ21432 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by FLJ21432, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of FLJ21432 BINDING SITE, designated SEQ ID:23764, to the nucleotide sequence of VGAM1991 RNA, herein designated VGAM RNA, also designated SEQ ID:4702.

[70159] Another function of VGAM1991 is therefore inhibition of FLJ21432 (Accession NM_024551). Accordingly, utilities of VGAM1991 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ21432. KIAA1034 (Accession XM_031223) is another

VGAM1991 host target gene. KIAA1034 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by KIAA1034, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of KIAA1034 BINDING SITE, designated SEQ ID:31311, to the nucleotide sequence of VGAM1991 RNA, herein designated VGAM RNA, also designated SEQ ID:4702.

[70160] Another function of VGAM1991 is therefore inhibition of KIAA1034 (Accession XM_031223). Accordingly, utilities of VGAM1991 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1034. MGC3020 (Accession NM_024048) is another VGAM1991 host target gene. MGC3020 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by MGC3020, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of MGC3020 BINDING SITE, designated SEQ ID:23481, to the nucleotide sequence of VGAM1991 RNA, herein designated VGAM RNA, also designated SEQ ID:4702.

[70161] Another function of VGAM1991 is therefore inhibition of MGC3020 (Accession NM_024048). Accordingly, utilities of VGAM1991 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC3020. PRO2435 (Accession NM_018527) is another VGAM1991 host target gene. PRO2435 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by PRO2435, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of PRO2435 BINDING SITE, designated SEQ ID:20599, to the nucleotide sequence of VGAM1991 RNA, herein designated VGAM RNA, also designated SEQ ID:4702.

[70162] Another function of VGAM1991 is therefore inhibition of PRO2435 (Accession NM_018527). Accordingly, utilities of VGAM1991 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PRO2435. LOC143310 (Accession XM_084485) is another VGAM1991 host target gene. LOC143310 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by LOC143310, corresponding to a HOST TARGET binding site such as BINDING SITE I,

BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC143310 BINDING SITE, designated SEQ ID:37604, to the nucleotide sequence of VGAM1991 RNA, herein designated VGAM RNA, also designated SEQ ID:4702.

[70163] Another function of VGAM1991 is therefore inhibition of LOC143310 (Accession XM_084485). Accordingly, utilities of VGAM1991 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC143310. LOC143465 (Accession XM_096430) is another VGAM1991 host target gene. LOC143465 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by LOC143465, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC143465 BINDING SITE, designated SEQ ID:40360, to the nucleotide sequence of VGAM1991 RNA, herein designated VGAM RNA, also designated SEQ ID:4702.

[70164] Another function of VGAM1991 is therefore inhibition of LOC143465 (Accession XM_096430). Accordingly, utilities of VGAM1991 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

LOC143465. LOC154877 (Accession XM_098626) is another VGAM1991 host target gene. LOC154877 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC154877, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC154877 BINDING SITE, designated SEQ ID:41738, to the nucleotide sequence of VGAM1991 RNA, herein designated VGAM RNA, also designated SEQ ID:4702.

[70165] Another function of VGAM1991 is therefore inhibition of LOC154877 (Accession XM_098626). Accordingly, utilities of VGAM1991 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC154877. LOC196527 (Accession XM_113743) is another VGAM1991 host target gene. LOC196527 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC196527, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC196527 BINDING SITE, designated SEQ ID:42398, to the nucleotide sequence of VGAM1991 RNA, herein desig-

nated VGAM RNA, also designated SEQ ID:4702.

[70166] Another function of VGAM1991 is therefore inhibition of LOC196527 (Accession XM_113743). Accordingly, utilities of VGAM1991 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC196527. LOC221738 (Accession XM_168097) is another VGAM1991 host target gene. LOC221738 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by LOC221738, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC221738 BINDING SITE, designated SEQ ID:45026, to the nucleotide sequence of VGAM1991 RNA, herein designated VGAM RNA, also designated SEQ ID:4702.

[70167] Another function of VGAM1991 is therefore inhibition of LOC221738 (Accession XM_168097). Accordingly, utilities of VGAM1991 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC221738. Fig. 1 further provides a conceptual description of a novel bioinformatically detected viral gene of the present invention, referred to here as Viral Genomic Address Messenger 1992 (VGAM1992) viral gene, which

modulates expression of respective host target genes thereof, the function and utility of which host target genes is known in the art.

[70168] VGAM1992 is a novel bioinformatically detected regulatory, non protein coding, viral micro RNA (miRNA) gene. The method by which VGAM1992 was detected is described hereinabove with reference to Figs. 1-8.

[70169] VGAM1992 gene, herein designated VGAM GENE, is a viral gene contained in the genome of Nipah Virus. VGAM1992 host target gene, herein designated VGAM HOST TARGET GENE, is a human gene contained in the human genome.

[70170] VGAM1992 gene encodes a VGAM1992 precursor RNA, herein designated VGAM PRECURSOR RNA. Similar to other miRNA genes, and unlike most ordinary genes, VGAM1992 precursor RNA does not encode a protein. A nucleotide sequence identical or highly similar to the nucleotide sequence of VGAM1992 precursor RNA is designated SEQ ID:1978, and is provided hereinbelow with reference to the sequence listing part. Nucleotide sequence SEQ ID:1978 is located at position 12009 relative to the genome of Nipah Virus.

[70171] VGAM1992 precursor RNA folds onto itself, forming VGAM1992 folded precursor RNA, herein designated

VGAM FOLDED PRECURSOR RNA, which has a two-dimensional `hairpin structure`. As is well known in the art, this `hairpin structure`, is typical of RNA encoded by miRNA genes, and is due to the fact that the nucleotide sequence of the first half of the RNA encoded by a miRNA gene is an accurate or partial inversed-reversed sequence of the nucleotide sequence of the second half thereof.

[70172] An enzyme complex designated DICER COMPLEX, `dices` the VGAM1992 folded precursor RNA into VGAM1992 RNA, herein designated VGAM RNA, a single stranded ~22 nt long RNA segment. As is known in the art, `dicing` of a hairpin structured RNA precursor product into a short ~22nt RNA segment is catalyzed by an enzyme complex comprising an enzyme called Dicer together with other necessary proteins. A probable (over 54%) nucleotide sequence of VGAM1992 RNA is designated SEQ ID:4703, and is provided hereinbelow with reference to the sequence listing part.

[70173] VGAM1992 host target gene, herein designated VGAM HOST TARGET GENE, encodes a corresponding messenger RNA, VGAM1992 host target RNA, herein designated VGAM HOST TARGET RNA. VGAM1992 host target RNA comprises three regions, as is typical of mRNA of a pro-

tein coding gene: a 5` untranslated region, a protein coding region and a 3` untranslated region, designated 5`UTR, PROTEIN CODING and 3`UTR respectively.

[70174] VGAM1992 RNA, herein designated VGAM RNA, binds complementarily to one or more host target binding sites located in untranslated regions of VGAM1992 host target RNA, herein designated VGAM HOST TARGET RNA. This complementary binding is due to the fact that the nucleotide sequence of VGAM1992 RNA is an accurate or a partial inversed-reversed sequence of the nucleotide sequence of each of the host target binding sites. As an illustration, Fig. 1 shows three such host target binding sites, designated BINDING SITE I, BINDING SITE II and BINDING SITE III respectively. It is appreciated that the number of host target binding sites shown in Fig. 1 is meant as an illustration only, and is not meant to be limiting - VGAM1992 RNA, herein designated VGAM RNA, may have a different number of host target binding sites in untranslated regions of a VGAM1992 host target RNA, herein designated VGAM HOST TARGET RNA. It is further appreciated that while Fig. 1 depicts host target binding sites in the 3`UTR region, this is meant as an example only - these host target binding sites may be located in

the 3`UTR region, the 5`UTR region, or in both 3`UTR and 5`UTR regions.

[70175] The complementary binding of VGAM1992 RNA, herein designated VGAM RNA, to host target binding sites on VGAM1992 host target RNA, herein designated VGAM HOST TARGET RNA, such as BINDING SITE I, BINDING SITE II and BINDING SITE III, inhibits translation of VGAM1992 host target RNA into VGAM1992 host target protein, herein designated VGAM HOST TARGET PROTEIN. VGAM host target protein is therefore outlined by a broken line.

[70176] It is appreciated that VGAM1992 host target gene, herein designated VGAM HOST TARGET GENE, in fact represents a plurality of VGAM1992 host target genes. The mRNA of each one of this plurality of VGAM1992 host target genes comprises one or more host target binding sites, each having a nucleotide sequence which is at least partly complementary to VGAM1992 RNA, herein designated VGAM RNA, and which when bound by VGAM1992 RNA causes inhibition of translation of respective one or more VGAM1992 host target proteins.

[70177] It is further appreciated by one skilled in the art that the mode of translational inhibition illustrated by Fig. 1 with specific reference to translational inhibition exerted by

VGAM1992 gene, herein designated VGAM GENE, on one or more VGAM1992 host target gene, herein designated VGAM HOST TARGET GENE, is in fact common to other known non-viral miRNA genes. As mentioned hereinabove with reference to the background section, although a specific complementary binding site has been demonstrated only for some of the known miRNA genes (primarily Lin-4 and Let-7), all other recently discovered miRNA genes are also believed by those skilled in the art to modulate expression of other genes by complementary binding, although specific complementary binding sites of these other miRNA genes have not yet been found (Ruvkun G., `Perspective: Glimpses of a tiny RNA world`, Science 294,779 (2001)).

[70178] It is yet further appreciated that a function of VGAM1992 is inhibition of expression of host target genes, as part of a novel viral mechanism of attacking a host. Accordingly, utilities of VGAM1992 include diagnosis, prevention and treatment of viral infection by Nipah Virus. Specific functions, and accordingly utilities, of VGAM1992 correlate with, and may be deduced from, the identity of the host target genes which VGAM1992 binds and inhibits, and the function of these host target genes, as elaborated herein-

below.

[70179] Nucleotide sequences of the VGAM1992 precursor RNA, herein designated VGAM PRECURSOR RNA, and of the `diced` VGAM1992 RNA, herein designated VGAM RNA, and a schematic representation of the secondary folding of VGAM1992 folded precursor RNA, herein designated VGAM FOLDED PRECURSOR RNA, of VGAM1992 are further described hereinbelow with reference to Table 1.

[70180] Nucleotide sequences of host target binding sites, such as BINDING SITE-I, BINDING SITE-II and BINDING SITE-III of Fig. 1, found on VGAM1992 host target RNA, and schematic representation of the complementarity of each of these host target binding sites to VGAM1992 RNA, herein designated VGAM RNA, are described hereinbelow with reference to Table 2.

[70181] As mentioned hereinabove with reference to Fig. 1, a function of VGAM1992 gene, herein designated VGAM is inhibition of expression of VGAM1992 target genes. It is appreciated that specific functions, and accordingly utilities, of VGAM1992 correlate with, and may be deduced from, the identity of the target genes which VGAM1992 binds and inhibits, and the function of these target genes, as elaborated hereinbelow.

[70182] Transcription Elongation Factor A (SII), 1 (TCEA1, Accession XM_087370) is a VGAM1992 host target gene. TCEA1 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by TCEA1, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of TCEA1 BINDING SITE, designated SEQ ID:39201, to the nucleotide sequence of VGAM1992 RNA, herein designated VGAM RNA, also designated SEQ ID:4703.

[70183] A function of VGAM1992 is therefore inhibition of Transcription Elongation Factor A (SII), 1 (TCEA1, Accession XM_087370), a gene which helps RNA polymerase II to transcribe past blockages. Accordingly, utilities of VGAM1992 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TCEA1. The function of TCEA1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM211.LOC203084 (Accession XM_113540) is another VGAM1992 host target gene. LOC203084 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC203084, cor-

responding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC203084 BINDING SITE, designated SEQ ID:42279, to the nucleotide sequence of VGAM1992 RNA, herein designated VGAM RNA, also designated SEQ ID:4703.

[70184] Another function of VGAM1992 is therefore inhibition of LOC203084 (Accession XM_113540). Accordingly, utilities of VGAM1992 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC203084. Fig. 1 further provides a conceptual description of a novel bioinformatically detected viral gene of the present invention, referred to here as Viral Genomic Address Messenger 1993 (VGAM1993) viral gene, which modulates expression of respective host target genes thereof, the function and utility of which host target genes is known in the art.

[70185] VGAM1993 is a novel bioinformatically detected regulatory, non protein coding, viral micro RNA (miRNA) gene. The method by which VGAM1993 was detected is described hereinabove with reference to Figs. 1-8.

[70186] VGAM1993 gene, herein designated VGAM GENE, is a viral gene contained in the genome of Nipah Virus. VGAM1993

host target gene, herein designated VGAM HOST TARGET GENE, is a human gene contained in the human genome.

[70187] VGAM1993 gene encodes a VGAM1993 precursor RNA, herein designated VGAM PRECURSOR RNA. Similar to other miRNA genes, and unlike most ordinary genes, VGAM1993 precursor RNA does not encode a protein. A nucleotide sequence identical or highly similar to the nucleotide sequence of VGAM1993 precursor RNA is designated SEQ ID:1979, and is provided hereinbelow with reference to the sequence listing part. Nucleotide sequence SEQ ID:1979 is located at position 17946 relative to the genome of Nipah Virus.

[70188] VGAM1993 precursor RNA folds onto itself, forming VGAM1993 folded precursor RNA, herein designated VGAM FOLDED PRECURSOR RNA, which has a two-dimensional `hairpin structure`. As is well known in the art, this `hairpin structure`, is typical of RNA encoded by miRNA genes, and is due to the fact that the nucleotide sequence of the first half of the RNA encoded by a miRNA gene is an accurate or partial inversed-reversed sequence of the nucleotide sequence of the second half thereof.

[70189] An enzyme complex designated DICER COMPLEX, `dices` the VGAM1993 folded precursor RNA into VGAM1993

RNA, herein designated VGAM RNA, a single stranded ~22 nt long RNA segment. As is known in the art, `dicing` of a hairpin structured RNA precursor product into a short ~22nt RNA segment is catalyzed by an enzyme complex comprising an enzyme called Dicer together with other necessary proteins. A probable (over 60%) nucleotide sequence of VGAM1993 RNA is designated SEQ ID:4704, and is provided hereinbelow with reference to the sequence listing part.

[70190] VGAM1993 host target gene, herein designated VGAM HOST TARGET GENE, encodes a corresponding messenger RNA, VGAM1993 host target RNA, herein designated VGAM HOST TARGET RNA. VGAM1993 host target RNA comprises three regions, as is typical of mRNA of a protein coding gene: a 5` untranslated region, a protein coding region and a 3` untranslated region, designated 5`UTR, PROTEIN CODING and 3`UTR respectively.

[70191] VGAM1993 RNA, herein designated VGAM RNA, binds complementarily to one or more host target binding sites located in untranslated regions of VGAM1993 host target RNA, herein designated VGAM HOST TARGET RNA. This complementary binding is due to the fact that the nucleotide sequence of VGAM1993 RNA is an accurate or a

partial inversed-reversed sequence of the nucleotide sequence of each of the host target binding sites. As an illustration, Fig. 1 shows three such host target binding sites, designated BINDING SITE I, BINDING SITE II and BINDING SITE III respectively. It is appreciated that the number of host target binding sites shown in Fig. 1 is meant as an illustration only, and is not meant to be limiting - VGAM1993 RNA, herein designated VGAM RNA, may have a different number of host target binding sites in untranslated regions of a VGAM1993 host target RNA, herein designated VGAM HOST TARGET RNA. It is further appreciated that while Fig. 1 depicts host target binding sites in the 3`UTR region, this is meant as an example only - these host target binding sites may be located in the 3`UTR region, the 5`UTR region, or in both 3`UTR and 5`UTR regions.

[70192] The complementary binding of VGAM1993 RNA, herein designated VGAM RNA, to host target binding sites on VGAM1993 host target RNA, herein designated VGAM HOST TARGET RNA, such as BINDING SITE I, BINDING SITE II and BINDING SITE III, inhibits translation of VGAM1993 host target RNA into VGAM1993 host target protein, herein designated VGAM HOST TARGET PROTEIN. VGAM

host target protein is therefore outlined by a broken line.

[70193] It is appreciated that VGAM1993 host target gene, herein designated VGAM HOST TARGET GENE, in fact represents a plurality of VGAM1993 host target genes. The mRNA of each one of this plurality of VGAM1993 host target genes comprises one or more host target binding sites, each having a nucleotide sequence which is at least partly complementary to VGAM1993 RNA, herein designated VGAM RNA, and which when bound by VGAM1993 RNA causes inhibition of translation of respective one or more VGAM1993 host target proteins.

[70194] It is further appreciated by one skilled in the art that the mode of translational inhibition illustrated by Fig. 1 with specific reference to translational inhibition exerted by VGAM1993 gene, herein designated VGAM GENE, on one or more VGAM1993 host target gene, herein designated VGAM HOST TARGET GENE, is in fact common to other known non-viral miRNA genes. As mentioned hereinabove with reference to the background section, although a specific complementary binding site has been demonstrated only for some of the known miRNA genes (primarily Lin-4 and Let-7), all other recently discovered miRNA genes are also believed by those skilled in the art to modulate ex-

pression of other genes by complementary binding, although specific complementary binding sites of these other miRNA genes have not yet been found (Ruvkun G., `Perspective: Glimpses of a tiny RNA world`, Science 294,779 (2001)).

[70195] It is yet further appreciated that a function of VGAM1993 is inhibition of expression of host target genes, as part of a novel viral mechanism of attacking a host. Accordingly, utilities of VGAM1993 include diagnosis, prevention and treatment of viral infection by Nipah Virus. Specific functions, and accordingly utilities, of VGAM1993 correlate with, and may be deduced from, the identity of the host target genes which VGAM1993 binds and inhibits, and the function of these host target genes, as elaborated hereinbelow.

[70196] Nucleotide sequences of the VGAM1993 precursor RNA, herein designated VGAM PRECURSOR RNA, and of the `diced` VGAM1993 RNA, herein designated VGAM RNA, and a schematic representation of the secondary folding of VGAM1993 folded precursor RNA, herein designated VGAM FOLDED PRECURSOR RNA, of VGAM1993 are further described hereinbelow with reference to Table 1.

[70197] Nucleotide sequences of host target binding sites, such as

BINDING SITE-I, BINDING SITE-II and BINDING SITE-III of Fig. 1, found on VGAM1993 host target RNA, and schematic representation of the complementarity of each of these host target binding sites to VGAM1993 RNA, herein designated VGAM RNA, are described hereinbelow with reference to Table 2.

[70198] As mentioned hereinabove with reference to Fig. 1, a function of VGAM1993 gene, herein designated VGAM is inhibition of expression of VGAM1993 target genes. It is appreciated that specific functions, and accordingly utilities, of VGAM1993 correlate with, and may be deduced from, the identity of the target genes which VGAM1993 binds and inhibits, and the function of these target genes, as elaborated hereinbelow.

[70199] ZNF333 (Accession NM_032433) is a VGAM1993 host target gene. ZNF333 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by ZNF333, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of ZNF333 BINDING SITE, designated SEQ ID:26202, to the nucleotide sequence of VGAM1993 RNA, herein designated VGAM RNA, also designated SEQ

ID:4704.

[70200] A function of VGAM1993 is therefore inhibition of ZNF333 (Accession NM_032433). Accordingly, utilities of VGAM1993 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ZNF333. Fig. 1 further provides a conceptual description of a novel bioinformatically detected viral gene of the present invention, referred to here as Viral Genomic Address Messenger 1994 (VGAM1994) viral gene, which modulates expression of respective host target genes thereof, the function and utility of which host target genes is known in the art.

[70201] VGAM1994 is a novel bioinformatically detected regulatory, non protein coding, viral micro RNA (miRNA) gene. The method by which VGAM1994 was detected is described hereinabove with reference to Figs. 1-8.

[70202] VGAM1994 gene, herein designated VGAM GENE, is a viral gene contained in the genome of Nipah Virus. VGAM1994 host target gene, herein designated VGAM HOST TARGET GENE, is a human gene contained in the human genome.

[70203] VGAM1994 gene encodes a VGAM1994 precursor RNA, herein designated VGAM PRECURSOR RNA. Similar to other miRNA genes, and unlike most ordinary genes,

VGAM1994 precursor RNA does not encode a protein. A nucleotide sequence identical or highly similar to the nucleotide sequence of VGAM1994 precursor RNA is designated SEQ ID:1980, and is provided hereinbelow with reference to the sequence listing part. Nucleotide sequence SEQ ID:1980 is located at position 17237 relative to the genome of Nipah Virus.

[70204] VGAM1994 precursor RNA folds onto itself, forming VGAM1994 folded precursor RNA, herein designated VGAM FOLDED PRECURSOR RNA, which has a two-dimensional `hairpin structure`. As is well known in the art, this `hairpin structure`, is typical of RNA encoded by miRNA genes, and is due to the fact that the nucleotide sequence of the first half of the RNA encoded by a miRNA gene is an accurate or partial inversed-reversed sequence of the nucleotide sequence of the second half thereof.

[70205] An enzyme complex designated DICER COMPLEX, `dices` the VGAM1994 folded precursor RNA into VGAM1994 RNA, herein designated VGAM RNA, a single stranded ~22 nt long RNA segment. As is known in the art, `dicing` of a hairpin structured RNA precursor product into a short ~22nt RNA segment is catalyzed by an enzyme complex comprising an enzyme called Dicer together with other

necessary proteins. A probable (over 67%) nucleotide sequence of VGAM1994 RNA is designated SEQ ID:4705, and is provided hereinbelow with reference to the sequence listing part.

[70206] VGAM1994 host target gene, herein designated VGAM HOST TARGET GENE, encodes a corresponding messenger RNA, VGAM1994 host target RNA, herein designated VGAM HOST TARGET RNA. VGAM1994 host target RNA comprises three regions, as is typical of mRNA of a protein coding gene: a 5` untranslated region, a protein coding region and a 3` untranslated region, designated 5`UTR, PROTEIN CODING and 3`UTR respectively.

[70207] VGAM1994 RNA, herein designated VGAM RNA, binds complementarily to one or more host target binding sites located in untranslated regions of VGAM1994 host target RNA, herein designated VGAM HOST TARGET RNA. This complementary binding is due to the fact that the nucleotide sequence of VGAM1994 RNA is an accurate or a partial inversed-reversed sequence of the nucleotide sequence of each of the host target binding sites. As an illustration, Fig. 1 shows three such host target binding sites, designated BINDING SITE I, BINDING SITE II and BINDING SITE III respectively. It is appreciated that the

number of host target binding sites shown in Fig. 1 is meant as an illustration only, and is not meant to be limiting - VGAM1994 RNA, herein designated VGAM RNA, may have a different number of host target binding sites in untranslated regions of a VGAM1994 host target RNA, herein designated VGAM HOST TARGET RNA. It is further appreciated that while Fig. 1 depicts host target binding sites in the 3`UTR region, this is meant as an example only - these host target binding sites may be located in the 3`UTR region, the 5`UTR region, or in both 3`UTR and 5`UTR regions.

[70208] The complementary binding of VGAM1994 RNA, herein designated VGAM RNA, to host target binding sites on VGAM1994 host target RNA, herein designated VGAM HOST TARGET RNA, such as BINDING SITE I, BINDING SITE II and BINDING SITE III, inhibits translation of VGAM1994 host target RNA into VGAM1994 host target protein, herein designated VGAM HOST TARGET PROTEIN. VGAM host target protein is therefore outlined by a broken line.

[70209] It is appreciated that VGAM1994 host target gene, herein designated VGAM HOST TARGET GENE, in fact represents a plurality of VGAM1994 host target genes. The mRNA of each one of this plurality of VGAM1994 host target genes

comprises one or more host target binding sites, each having a nucleotide sequence which is at least partly complementary to VGAM1994 RNA, herein designated VGAM RNA, and which when bound by VGAM1994 RNA causes inhibition of translation of respective one or more VGAM1994 host target proteins.

[70210] It is further appreciated by one skilled in the art that the mode of translational inhibition illustrated by Fig. 1 with specific reference to translational inhibition exerted by VGAM1994 gene, herein designated VGAM GENE, on one or more VGAM1994 host target gene, herein designated VGAM HOST TARGET GENE, is in fact common to other known non-viral miRNA genes. As mentioned hereinabove with reference to the background section, although a specific complementary binding site has been demonstrated only for some of the known miRNA genes (primarily Lin-4 and Let-7), all other recently discovered miRNA genes are also believed by those skilled in the art to modulate expression of other genes by complementary binding, although specific complementary binding sites of these other miRNA genes have not yet been found (Ruvkun G., `Perspective: Glimpses of a tiny RNA world`, Science 294,779 (2001)).

[70211] It is yet further appreciated that a function of VGAM1994 is inhibition of expression of host target genes, as part of a novel viral mechanism of attacking a host. Accordingly, utilities of VGAM1994 include diagnosis, prevention and treatment of viral infection by Nipah Virus. Specific functions, and accordingly utilities, of VGAM1994 correlate with, and may be deduced from, the identity of the host target genes which VGAM1994 binds and inhibits, and the function of these host target genes, as elaborated hereinbelow.

[70212] Nucleotide sequences of the VGAM1994 precursor RNA, herein designated VGAM PRECURSOR RNA, and of the `diced` VGAM1994 RNA, herein designated VGAM RNA, and a schematic representation of the secondary folding of VGAM1994 folded precursor RNA, herein designated VGAM FOLDED PRECURSOR RNA, of VGAM1994 are further described hereinbelow with reference to Table 1.

[70213] Nucleotide sequences of host target binding sites, such as BINDING SITE-I, BINDING SITE-II and BINDING SITE-III of Fig. 1, found on VGAM1994 host target RNA, and schematic representation of the complementarity of each of these host target binding sites to VGAM1994 RNA, herein designated VGAM RNA, are described hereinbelow

with reference to Table 2.

[70214] As mentioned hereinabove with reference to Fig. 1, a function of VGAM1994 gene, herein designated VGAM is inhibition of expression of VGAM1994 target genes. It is appreciated that specific functions, and accordingly utilities, of VGAM1994 correlate with, and may be deduced from, the identity of the target genes which VGAM1994 binds and inhibits, and the function of these target genes, as elaborated hereinbelow.

[70215] Heat Shock 70kDa Protein 5 (glucose-regulated protein, 78kDa) (HSPA5, Accession NM_005347) is a VGAM1994 host target gene. HSPA5 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by HSPA5, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of HSPA5 BINDING SITE, designated SEQ ID:11821, to the nucleotide sequence of VGAM1994 RNA, herein designated VGAM RNA, also designated SEQ ID:4705.

[70216] A function of VGAM1994 is therefore inhibition of Heat Shock 70kDa Protein 5 (glucose-regulated protein, 78kDa) (HSPA5, Accession NM_005347), a gene which is involved

in the folding and assembly of proteins in the endoplasmic reticulum (ER). Accordingly, utilities of VGAM1994 include diagnosis, prevention and treatment of diseases and clinical conditions associated with HSPA5. The function of HSPA5 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM1782.Calsenilin, Presenilin Binding Protein, EF Hand Transcription Factor (CSEN, Accession NM_013434) is another VGAM1994 host target gene. CSEN BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by CSEN, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of CSEN BINDING SITE, designated SEQ ID:15092, to the nucleotide sequence of VGAM1994 RNA, herein designated VGAM RNA, also designated SEQ ID:4705.

[70217] Another function of VGAM1994 is therefore inhibition of Calsenilin, Presenilin Binding Protein, EF Hand Transcription Factor (CSEN, Accession NM_013434). Accordingly, utilities of VGAM1994 include diagnosis, prevention and treatment of diseases and clinical conditions associated

with CSEN. KIAA1509 (Accession XM_029353) is another VGAM1994 host target gene. KIAA1509 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by KIAA1509, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of KIAA1509 BINDING SITE, designated SEQ ID:30872, to the nucleotide sequence of VGAM1994 RNA, herein designated VGAM RNA, also designated SEQ ID:4705.

[70218] Another function of VGAM1994 is therefore inhibition of KIAA1509 (Accession XM_029353). Accordingly, utilities of VGAM1994 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1509. LOC148760 (Accession XM_097514) is another VGAM1994 host target gene. LOC148760 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC148760, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC148760 BINDING SITE, designated SEQ ID:40897, to the nucleotide sequence of VGAM1994 RNA, herein desig-

nated VGAM RNA, also designated SEQ ID:4705.

[70219] Another function of VGAM1994 is therefore inhibition of LOC148760 (Accession XM_097514). Accordingly, utilities of VGAM1994 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC148760. LOC168667 (Accession XM_166592) is another VGAM1994 host target gene. LOC168667 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC168667, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC168667 BINDING SITE, designated SEQ ID:44566, to the nucleotide sequence of VGAM1994 RNA, herein designated VGAM RNA, also designated SEQ ID:4705.

[70220] Another function of VGAM1994 is therefore inhibition of LOC168667 (Accession XM_166592). Accordingly, utilities of VGAM1994 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC168667. LOC253842 (Accession XM_173230) is another VGAM1994 host target gene. LOC253842 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC253842, cor-

responding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC253842 BINDING SITE, designated SEQ ID:46503, to the nucleotide sequence of VGAM1994 RNA, herein designated VGAM RNA, also designated SEQ ID:4705.

[70221] Another function of VGAM1994 is therefore inhibition of LOC253842 (Accession XM_173230). Accordingly, utilities of VGAM1994 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC253842. Fig. 1 further provides a conceptual description of a novel bioinformatically detected viral gene of the present invention, referred to here as Viral Genomic Address Messenger 1995 (VGAM1995) viral gene, which modulates expression of respective host target genes thereof, the function and utility of which host target genes is known in the art.

[70222] VGAM1995 is a novel bioinformatically detected regulatory, non protein coding, viral micro RNA (miRNA) gene. The method by which VGAM1995 was detected is described hereinabove with reference to Figs. 1-8.

[70223] VGAM1995 gene, herein designated VGAM GENE, is a viral gene contained in the genome of Nipah Virus. VGAM1995

host target gene, herein designated VGAM HOST TARGET GENE, is a human gene contained in the human genome.

[70224] VGAM1995 gene encodes a VGAM1995 precursor RNA, herein designated VGAM PRECURSOR RNA. Similar to other miRNA genes, and unlike most ordinary genes, VGAM1995 precursor RNA does not encode a protein. A nucleotide sequence identical or highly similar to the nucleotide sequence of VGAM1995 precursor RNA is designated SEQ ID:1981, and is provided hereinbelow with reference to the sequence listing part. Nucleotide sequence SEQ ID:1981 is located at position 9693 relative to the genome of Nipah Virus.

[70225] VGAM1995 precursor RNA folds onto itself, forming VGAM1995 folded precursor RNA, herein designated VGAM FOLDED PRECURSOR RNA, which has a two-dimensional `hairpin structure`. As is well known in the art, this `hairpin structure`, is typical of RNA encoded by miRNA genes, and is due to the fact that the nucleotide sequence of the first half of the RNA encoded by a miRNA gene is an accurate or partial inversed-reversed sequence of the nucleotide sequence of the second half thereof.

[70226] An enzyme complex designated DICER COMPLEX, `dices` the VGAM1995 folded precursor RNA into VGAM1995

RNA, herein designated VGAM RNA, a single stranded ~22 nt long RNA segment. As is known in the art, `dicing` of a hairpin structured RNA precursor product into a short ~22nt RNA segment is catalyzed by an enzyme complex comprising an enzyme called Dicer together with other necessary proteins. A probable (over 43%) nucleotide sequence of VGAM1995 RNA is designated SEQ ID:4706, and is provided hereinbelow with reference to the sequence listing part.

[70227] VGAM1995 host target gene, herein designated VGAM HOST TARGET GENE, encodes a corresponding messenger RNA, VGAM1995 host target RNA, herein designated VGAM HOST TARGET RNA. VGAM1995 host target RNA comprises three regions, as is typical of mRNA of a protein coding gene: a 5` untranslated region, a protein coding region and a 3` untranslated region, designated 5`UTR, PROTEIN CODING and 3`UTR respectively.

[70228] VGAM1995 RNA, herein designated VGAM RNA, binds complementarily to one or more host target binding sites located in untranslated regions of VGAM1995 host target RNA, herein designated VGAM HOST TARGET RNA. This complementary binding is due to the fact that the nucleotide sequence of VGAM1995 RNA is an accurate or a

partial inversed-reversed sequence of the nucleotide sequence of each of the host target binding sites. As an illustration, Fig. 1 shows three such host target binding sites, designated BINDING SITE I, BINDING SITE II and BINDING SITE III respectively. It is appreciated that the number of host target binding sites shown in Fig. 1 is meant as an illustration only, and is not meant to be limiting - VGAM1995 RNA, herein designated VGAM RNA, may have a different number of host target binding sites in untranslated regions of a VGAM1995 host target RNA, herein designated VGAM HOST TARGET RNA. It is further appreciated that while Fig. 1 depicts host target binding sites in the 3`UTR region, this is meant as an example only - these host target binding sites may be located in the 3`UTR region, the 5`UTR region, or in both 3`UTR and 5`UTR regions.

[70229] The complementary binding of VGAM1995 RNA, herein designated VGAM RNA, to host target binding sites on VGAM1995 host target RNA, herein designated VGAM HOST TARGET RNA, such as BINDING SITE I, BINDING SITE II and BINDING SITE III, inhibits translation of VGAM1995 host target RNA into VGAM1995 host target protein, herein designated VGAM HOST TARGET PROTEIN. VGAM

host target protein is therefore outlined by a broken line.

[70230] It is appreciated that VGAM1995 host target gene, herein designated VGAM HOST TARGET GENE, in fact represents a plurality of VGAM1995 host target genes. The mRNA of each one of this plurality of VGAM1995 host target genes comprises one or more host target binding sites, each having a nucleotide sequence which is at least partly complementary to VGAM1995 RNA, herein designated VGAM RNA, and which when bound by VGAM1995 RNA causes inhibition of translation of respective one or more VGAM1995 host target proteins.

[70231] It is further appreciated by one skilled in the art that the mode of translational inhibition illustrated by Fig. 1 with specific reference to translational inhibition exerted by VGAM1995 gene, herein designated VGAM GENE, on one or more VGAM1995 host target gene, herein designated VGAM HOST TARGET GENE, is in fact common to other known non-viral miRNA genes. As mentioned hereinabove with reference to the background section, although a specific complementary binding site has been demonstrated only for some of the known miRNA genes (primarily Lin-4 and Let-7), all other recently discovered miRNA genes are also believed by those skilled in the art to modulate ex-

pression of other genes by complementary binding, although specific complementary binding sites of these other miRNA genes have not yet been found (Ruvkun G., `Perspective: Glimpses of a tiny RNA world`, Science 294,779 (2001)).

[70232] It is yet further appreciated that a function of VGAM1995 is inhibition of expression of host target genes, as part of a novel viral mechanism of attacking a host. Accordingly, utilities of VGAM1995 include diagnosis, prevention and treatment of viral infection by Nipah Virus. Specific functions, and accordingly utilities, of VGAM1995 correlate with, and may be deduced from, the identity of the host target genes which VGAM1995 binds and inhibits, and the function of these host target genes, as elaborated hereinbelow.

[70233] Nucleotide sequences of the VGAM1995 precursor RNA, herein designated VGAM PRECURSOR RNA, and of the `diced` VGAM1995 RNA, herein designated VGAM RNA, and a schematic representation of the secondary folding of VGAM1995 folded precursor RNA, herein designated VGAM FOLDED PRECURSOR RNA, of VGAM1995 are further described hereinbelow with reference to Table 1.

[70234] Nucleotide sequences of host target binding sites, such as

BINDING SITE-I, BINDING SITE-II and BINDING SITE-III of Fig. 1, found on VGAM1995 host target RNA, and schematic representation of the complementarity of each of these host target binding sites to VGAM1995 RNA, herein designated VGAM RNA, are described hereinbelow with reference to Table 2.

[70235] As mentioned hereinabove with reference to Fig. 1, a function of VGAM1995 gene, herein designated VGAM is inhibition of expression of VGAM1995 target genes. It is appreciated that specific functions, and accordingly utilities, of VGAM1995 correlate with, and may be deduced from, the identity of the target genes which VGAM1995 binds and inhibits, and the function of these target genes, as elaborated hereinbelow.

[70236] Ankyrin 1, Erythrocytic (ANK1, Accession XM_016774) is a VGAM1995 host target gene. ANK1 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by ANK1, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of ANK1 BINDING SITE, designated SEQ ID:30279, to the nucleotide sequence of VGAM1995 RNA, herein designated VGAM RNA, also des-

ignated SEQ ID:4706.

[70237] A function of VGAM1995 is therefore inhibition of Ankyrin 1, Erythrocytic (ANK1, Accession XM_016774). Accordingly, utilities of VGAM1995 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ANK1. APM1 (Accession NM_004797) is another VGAM1995 host target gene. APM1 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by APM1, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of APM1 BINDING SITE, designated SEQ ID:11211, to the nucleotide sequence of VGAM1995 RNA, herein designated VGAM RNA, also designated SEQ ID:4706.

[70238] Another function of VGAM1995 is therefore inhibition of APM1 (Accession NM_004797). Accordingly, utilities of VGAM1995 include diagnosis, prevention and treatment of diseases and clinical conditions associated with APM1. Collagen, Type I, Alpha 2 (COL1A2, Accession NM_000089) is another VGAM1995 host target gene. COL1A2 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by

COL1A2, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of COL1A2 BINDING SITE, designated SEQ ID:5541, to the nucleotide sequence of VGAM1995 RNA, herein designated VGAM RNA, also designated SEQ ID:4706.

[70239] Another function of VGAM1995 is therefore inhibition of Collagen, Type I, Alpha 2 (COL1A2, Accession NM_000089). Accordingly, utilities of VGAM1995 include diagnosis, prevention and treatment of diseases and clinical conditions associated with COL1A2. Coagulation Factor VII (serum prothrombin conversion accelerator) (F7, Accession NM_000131) is another VGAM1995 host target gene. F7 BINDING SITE1 and F7 BINDING SITE2 are HOST TARGET binding sites found in untranslated regions of mRNA encoded by F7, corresponding to HOST TARGET binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of F7 BINDING SITE1 and F7 BINDING SITE2, designated SEQ ID:5607 and SEQ ID:21236 respectively, to the nucleotide sequence of VGAM1995 RNA, herein designated VGAM RNA, also designated SEQ

ID:4706.

[70240] Another function of VGAM1995 is therefore inhibition of Coagulation Factor VII (serum prothrombin conversion accelerator) (F7, Accession NM_000131). Accordingly, utilities of VGAM1995 include diagnosis, prevention and treatment of diseases and clinical conditions associated with F7. Potassium Inwardly-rectifying Channel, Subfamily J, Member 8 (KCNJ8, Accession NM_004982) is another VGAM1995 host target gene. KCNJ8 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by KCNJ8, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of KCNJ8 BINDING SITE, designated SEQ ID:11429, to the nucleotide sequence of VGAM1995 RNA, herein designated VGAM RNA, also designated SEQ ID:4706.

[70241] Another function of VGAM1995 is therefore inhibition of Potassium Inwardly-rectifying Channel, Subfamily J, Member 8 (KCNJ8, Accession NM_004982), a gene which is a potassium inwardly-rectifying channel. Accordingly, utilities of VGAM1995 include diagnosis, prevention and treatment of diseases and clinical conditions associated

with KCNJ8. The function of KCNJ8 has been established by previous studies. Inagaki et al. (1995) isolated a cDNA from a rat pancreatic islet cell library that encodes a member of the inward rectifier potassium channel family. The predicted 424-amino acid protein, which they designated uKATP-1, has 2 transmembrane domains and shares 43 to 46% identity with other inward rectifier potassium channels, including ROMK1 (OMIM Ref. No. 600359), IRK1 (OMIM Ref. No. 600681), GIRK1 (OMIM Ref. No. 601534), and cKATP-1 (OMIM Ref. No. 600734). When the protein was expressed in Xenopus oocytes, a weak rectifier activity was demonstrated that was blocked with Ba(+2) and activated by diazoxide. Northern blots showed that the mRNA is widely expressed in various tissues of the rat. Inagaki et al. (1995) cloned the human gene, designated KCNJ8. The predicted human protein is 98% identical to that of the rat. Animal model experiments lend further support to the function of KCNJ8. ANIMAL MODEL Miki et al. (2002) found that mice lacking the Kir6.1 gene had a high rate of sudden death associated with spontaneous ST elevation followed by atrioventricular block, as seen on the electrocardiogram. The potassium channel opener pinacidil did not induce potassium channels in

vascular smooth muscle cells of Kir6.1 null mice, and there was no vasodilation response to pinacidil. Administration of methylergometrine, a vasoconstrictive agent, elicited ST elevation followed by cardiac death in Kir6.1 null mice but not in wildtype mice, indicating a phenotype characterized by hypercontractility of coronary arteries and resembling Prinzmetal (or variant) angina in humans (Prinzmetal et al., 1959). Prinzmetal angina occurs exclusively at rest and is associated with elevation of ST segments on EKG during the attack. Although the attack disappears spontaneously in most cases, it can lead to myocardial infarction, severe AV block, life-threatening ventricular tachycardia, and sudden death if the coronary vasospasm is prolonged (MacAlpin, 1993). The elevated ST segments on EKG during the attack are diagnostic, as is induction of coronary spasm by ergot alkaloids or acetylcholine. Vasospastic angina is more common in Japanese than in Caucasians (Beltrame et al., 1999; Pristipino et al., 2000). Miki et al. (2002) concluded that the Kir6.1-containing potassium channel is critical in the regulation of vascular tone, especially in the coronary arteries, and its disruption may cause Prinzmetal angina. They suggested that it will be important to learn whether ge-

netic differences in the KIR6.1 gene are associated with Prinzmetal angina in various populations

[70242] It is appreciated that the abovementioned animal model for KCNJ8 is acknowledged by those skilled in the art as a scientifically valid animal model, as can be further appreciated from the publications sited hereinbelow.

[70243] Full details of the abovementioned studies are described in the following publications, the disclosure of which are hereby incorporated by reference:

[70244] Miki, T.; Suzuki, M.; Shibasaki, T.; Uemura, H.; Sato, T.; Yamaguchi, K.; Koseki, H.; Iwanaga, T.; Nakaya, H.; Seino, S. : Mouse model of Prinzmetal angina by disruption of the inward rectifier Kir6.1. Nature Med. 8: 466-472, 2002. ; and

[70245] Inagaki, N.; Inazawa, J.; Seino, S. : cDNA sequence, gene structure, and chromosomal localization of the human ATP-sensitive potassium channel, uK(ATP)-1, gene (KCNJ8). Genomics 30: 102.

[70246] Further studies establishing the function and utilities of KCNJ8 are found in John Hopkins OMIM database record ID 600935, and in sited publications numbered 6865-686 and 7024-7026 listed in the bibliography section hereinbelow, which are also hereby incorporated by refer-

ence.5'-nucleotidase, Cytosolic II (NT5C2, Accession NM_012229) is another VGAM1995 host target gene. NT5C2 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by NT5C2, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of NT5C2 BINDING SITE, designated SEQ ID:14525, to the nucleotide sequence of VGAM1995 RNA, herein designated VGAM RNA, also designated SEQ ID:4706.

[70247] Another function of VGAM1995 is therefore inhibition of 5'-nucleotidase, Cytosolic II (NT5C2, Accession NM_012229). Accordingly, utilities of VGAM1995 include diagnosis, prevention and treatment of diseases and clinical conditions associated with NT5C2.

p21(CDKN1A)-activated Kinase 4 (PAK4, Accession NM_005884) is another VGAM1995 host target gene. PAK4 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by PAK4, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide se-

quences of PAK4 BINDING SITE, designated SEQ ID:12507, to the nucleotide sequence of VGAM1995 RNA, herein designated VGAM RNA, also designated SEQ ID:4706.

[70248] Another function of VGAM1995 is therefore inhibition of p21(CDKN1A)-activated Kinase 4 (PAK4, Accession NM_005884). Accordingly, utilities of VGAM1995 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PAK4. Pumilio Homolog 2 (Drosophila) (PUM2, Accession NM_015317) is another VGAM1995 host target gene. PUM2 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by PUM2, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of PUM2 BINDING SITE, designated SEQ ID:17633, to the nucleotide sequence of VGAM1995 RNA, herein designated VGAM RNA, also designated SEQ ID:4706.

[70249] Another function of VGAM1995 is therefore inhibition of Pumilio Homolog 2 (Drosophila) (PUM2, Accession NM_015317). Accordingly, utilities of VGAM1995 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PUM2. Retinaldehyde Bind-

ing Protein 1 (RLBP1, Accession NM_000326) is another VGAM1995 host target gene. RLBP1 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by RLBP1, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of RLBP1 BINDING SITE, designated SEQ ID:5869, to the nucleotide sequence of VGAM1995 RNA, herein designated VGAM RNA, also designated SEQ ID:4706.

[70250] Another function of VGAM1995 is therefore inhibition of Retinaldehyde Binding Protein 1 (RLBP1, Accession NM_000326). Accordingly, utilities of VGAM1995 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RLBP1. TIC (Accession NM_012455) is another VGAM1995 host target gene. TIC BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by TIC, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of TIC BINDING SITE, designated SEQ ID:14828, to the nucleotide sequence of VGAM1995 RNA, herein designated

VGAM RNA, also designated SEQ ID:4706.

[70251] Another function of VGAM1995 is therefore inhibition of TIC (Accession NM_012455). Accordingly, utilities of VGAM1995 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TIC. Ubiquitin Specific Protease 9, Y Chromosome (fat facets-like Drosophila) (USP9Y, Accession XM_034147) is another VGAM1995 host target gene. USP9Y BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by USP9Y, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of USP9Y BINDING SITE, designated SEQ ID:32017, to the nucleotide sequence of VGAM1995 RNA, herein designated VGAM RNA, also designated SEQ ID:4706.

[70252] Another function of VGAM1995 is therefore inhibition of Ubiquitin Specific Protease 9, Y Chromosome (fat facets-like Drosophila) (USP9Y, Accession XM_034147), a gene which removes ubiquitin from ubiquitin-conjugated proteins and has a role in spermatogenesis. Accordingly, utilities of VGAM1995 include diagnosis, prevention and treatment of diseases and clinical conditions associated

with USP9Y. The function of USP9Y and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM894.Chromosome 20 Open Reading Frame 54 (C20orf54, Accession NM_033409) is another VGAM1995 host target gene. C20orf54 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by C20orf54, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of C20orf54 BINDING SITE, designated SEQ ID:27229, to the nucleotide sequence of VGAM1995 RNA, herein designated VGAM RNA, also designated SEQ ID:4706.

[70253] Another function of VGAM1995 is therefore inhibition of Chromosome 20 Open Reading Frame 54 (C20orf54, Accession NM_033409). Accordingly, utilities of VGAM1995 include diagnosis, prevention and treatment of diseases and clinical conditions associated with C20orf54. CDT1 (Accession XM_085327) is another VGAM1995 host target gene. CDT1 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by CDT1, corresponding to a HOST TARGET binding site such

as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of CDT1 BINDING SITE, designated SEQ ID:38069, to the nucleotide sequence of VGAM1995 RNA, herein designated VGAM RNA, also designated SEQ ID:4706.

[70254] Another function of VGAM1995 is therefore inhibition of CDT1 (Accession XM_085327). Accordingly, utilities of VGAM1995 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CDT1. Cytosolic Ovarian Carcinoma Antigen 1 (COVA1, Accession XM_055323) is another VGAM1995 host target gene. COVA1 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by COVA1, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of COVA1 BINDING SITE, designated SEQ ID:36266, to the nucleotide sequence of VGAM1995 RNA, herein designated VGAM RNA, also designated SEQ ID:4706.

[70255] Another function of VGAM1995 is therefore inhibition of Cytosolic Ovarian Carcinoma Antigen 1 (COVA1, Accession XM_055323). Accordingly, utilities of VGAM1995 include

diagnosis, prevention and treatment of diseases and clinical conditions associated with COVA1. CSR1 (Accession NM_016240) is another VGAM1995 host target gene. CSR1 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by CSR1, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of CSR1 BINDING SITE, designated SEQ ID:18361, to the nucleotide sequence of VGAM1995 RNA, herein designated VGAM RNA, also designated SEQ ID:4706.

[70256] Another function of VGAM1995 is therefore inhibition of CSR1 (Accession NM_016240). Accordingly, utilities of VGAM1995 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CSR1. Deiodinase, Iodothyronine, Type II (DIO2, Accession NM_013989) is another VGAM1995 host target gene. DIO2 BINDING SITE1 and DIO2 BINDING SITE2 are HOST TARGET binding sites found in untranslated regions of mRNA encoded by DIO2, corresponding to HOST TARGET binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of DIO2 BINDING SITE1 and

DIO2 BINDING SITE2, designated SEQ ID:15164 and SEQ ID:6454 respectively, to the nucleotide sequence of VGAM1995 RNA, herein designated VGAM RNA, also designated SEQ ID:4706.

[70257] Another function of VGAM1995 is therefore inhibition of Deiodinase, Iodothyronine, Type II (DIO2, Accession NM_013989). Accordingly, utilities of VGAM1995 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DIO2. Docking Protein 4 (DOK4, Accession NM_018110) is another VGAM1995 host target gene. DOK4 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by DOK4, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of DOK4 BINDING SITE, designated SEQ ID:19883, to the nucleotide sequence of VGAM1995 RNA, herein designated VGAM RNA, also designated SEQ ID:4706.

[70258] Another function of VGAM1995 is therefore inhibition of Docking Protein 4 (DOK4, Accession NM_018110). Accordingly, utilities of VGAM1995 include diagnosis, prevention and treatment of diseases and clinical conditions

associated with DOK4. FLJ10079 (Accession XM_012540) is another VGAM1995 host target gene. FLJ10079 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by FLJ10079, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of FLJ10079 BINDING SITE, designated SEQ ID:30215, to the nucleotide sequence of VGAM1995 RNA, herein designated VGAM RNA, also designated SEQ ID:4706.

[70259] Another function of VGAM1995 is therefore inhibition of FLJ10079 (Accession XM_012540). Accordingly, utilities of VGAM1995 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ10079. FLJ10300 (Accession NM_018051) is another VGAM1995 host target gene. FLJ10300 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by FLJ10300, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of FLJ10300 BINDING SITE, designated SEQ ID:19810, to the nucleotide sequence of VGAM1995 RNA, herein designated VGAM

RNA, also designated SEQ ID:4706.

[70260] Another function of VGAM1995 is therefore inhibition of FLJ10300 (Accession NM_018051). Accordingly, utilities of VGAM1995 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ10300. FLJ10904 (Accession NM_018268) is another VGAM1995 host target gene. FLJ10904 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by FLJ10904, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of FLJ10904 BINDING SITE, designated SEQ ID:20240, to the nucleotide sequence of VGAM1995 RNA, herein designated VGAM RNA, also designated SEQ ID:4706.

[70261] Another function of VGAM1995 is therefore inhibition of FLJ10904 (Accession NM_018268). Accordingly, utilities of VGAM1995 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ10904. FLJ10986 (Accession NM_018291) is another VGAM1995 host target gene. FLJ10986 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by FLJ10986, corresponding to a

HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of FLJ10986 BINDING SITE, designated SEQ ID:20281, to the nucleotide sequence of VGAM1995 RNA, herein designated VGAM RNA, also designated SEQ ID:4706.

[70262] Another function of VGAM1995 is therefore inhibition of FLJ10986 (Accession NM_018291). Accordingly, utilities of VGAM1995 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ10986. FLJ12969 (Accession NM_022838) is another VGAM1995 host target gene. FLJ12969 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by FLJ12969, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of FLJ12969 BINDING SITE, designated SEQ ID:23125, to the nucleotide sequence of VGAM1995 RNA, herein designated VGAM RNA, also designated SEQ ID:4706.

[70263] Another function of VGAM1995 is therefore inhibition of FLJ12969 (Accession NM_022838). Accordingly, utilities of VGAM1995 include diagnosis, prevention and treatment

of diseases and clinical conditions associated with FLJ12969. FLJ32356 (Accession NM_144671) is another VGAM1995 host target gene. FLJ32356 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by FLJ32356, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of FLJ32356 BINDING SITE, designated SEQ ID:29493, to the nucleotide sequence of VGAM1995 RNA, herein designated VGAM RNA, also designated SEQ ID:4706.

[70264] Another function of VGAM1995 is therefore inhibition of FLJ32356 (Accession NM_144671). Accordingly, utilities of VGAM1995 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ32356. Integrin, Alpha 10 (ITGA10, Accession XM_002097) is another VGAM1995 host target gene. ITGA10 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by ITGA10, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of ITGA10 BINDING SITE, designated SEQ

ID:29864, to the nucleotide sequence of VGAM1995 RNA, herein designated VGAM RNA, also designated SEQ ID:4706.

[70265] Another function of VGAM1995 is therefore inhibition of Integrin, Alpha 10 (ITGA10, Accession XM_002097). Accordingly, utilities of VGAM1995 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ITGA10. KIAA0318 (Accession XM_044334) is another VGAM1995 host target gene. KIAA0318 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by KIAA0318, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of KIAA0318 BINDING SITE, designated SEQ ID:34189, to the nucleotide sequence of VGAM1995 RNA, herein designated VGAM RNA, also designated SEQ ID:4706.

[70266] Another function of VGAM1995 is therefore inhibition of KIAA0318 (Accession XM_044334). Accordingly, utilities of VGAM1995 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0318. KIAA0416 (Accession NM_015564) is another

VGAM1995 host target gene. KIAA0416 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by KIAA0416, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of KIAA0416 BINDING SITE, designated SEQ ID:17830, to the nucleotide sequence of VGAM1995 RNA, herein designated VGAM RNA, also designated SEQ ID:4706.

[70267] Another function of VGAM1995 is therefore inhibition of KIAA0416 (Accession NM_015564). Accordingly, utilities of VGAM1995 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0416. KIAA0426 (Accession NM_014724) is another VGAM1995 host target gene. KIAA0426 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by KIAA0426, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of KIAA0426 BINDING SITE, designated SEQ ID:16314, to the nucleotide sequence of VGAM1995 RNA, herein designated VGAM RNA, also designated SEQ ID:4706.

[70268] Another function of VGAM1995 is therefore inhibition of KIAA0426 (Accession NM_014724). Accordingly, utilities of VGAM1995 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0426. KIAA0459 (Accession XM_027862) is another VGAM1995 host target gene. KIAA0459 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by KIAA0459, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of KIAA0459 BINDING SITE, designated SEQ ID:30581, to the nucleotide sequence of VGAM1995 RNA, herein designated VGAM RNA, also designated SEQ ID:4706.

[70269] Another function of VGAM1995 is therefore inhibition of KIAA0459 (Accession XM_027862). Accordingly, utilities of VGAM1995 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0459. KIAA0711 (Accession NM_014867) is another VGAM1995 host target gene. KIAA0711 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by KIAA0711, corresponding to a HOST TARGET binding site such as BINDING SITE I,

BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of KIAA0711 BINDING SITE, designated SEQ ID:16960, to the nucleotide sequence of VGAM1995 RNA, herein designated VGAM RNA, also designated SEQ ID:4706.

[70270] Another function of VGAM1995 is therefore inhibition of KIAA0711 (Accession NM_014867). Accordingly, utilities of VGAM1995 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0711. KIAA1199 (Accession XM_051860) is another VGAM1995 host target gene. KIAA1199 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by KIAA1199, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of KIAA1199 BINDING SITE, designated SEQ ID:35901, to the nucleotide sequence of VGAM1995 RNA, herein designated VGAM RNA, also designated SEQ ID:4706.

[70271] Another function of VGAM1995 is therefore inhibition of KIAA1199 (Accession XM_051860). Accordingly, utilities of VGAM1995 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

KIAA1199. KIAA1950 (Accession XM_166532) is another VGAM1995 host target gene. KIAA1950 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by KIAA1950, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of KIAA1950 BINDING SITE, designated SEQ ID:44489, to the nucleotide sequence of VGAM1995 RNA, herein designated VGAM RNA, also designated SEQ ID:4706.

[70272] Another function of VGAM1995 is therefore inhibition of KIAA1950 (Accession XM_166532). Accordingly, utilities of VGAM1995 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1950. LSR7 (Accession NM_018559) is another VGAM1995 host target gene. LSR7 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by LSR7, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LSR7 BINDING SITE, designated SEQ ID:20642, to the nucleotide sequence of VGAM1995 RNA, herein designated VGAM RNA, also des-

ignated SEQ ID:4706.

[70273] Another function of VGAM1995 is therefore inhibition of LSR7 (Accession NM_018559). Accordingly, utilities of VGAM1995 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LSR7. Mitogen-activated Protein Kinase 8 Interacting Protein 3 (MAPK8IP3, Accession NM_033392) is another VGAM1995 host target gene. MAPK8IP3 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by MAPK8IP3, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of MAPK8IP3 BINDING SITE, designated SEQ ID:27221, to the nucleotide sequence of VGAM1995 RNA, herein designated VGAM RNA, also designated SEQ ID:4706.

[70274] Another function of VGAM1995 is therefore inhibition of Mitogen-activated Protein Kinase 8 Interacting Protein 3 (MAPK8IP3, Accession NM_033392). Accordingly, utilities of VGAM1995 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MAPK8IP3. Phosphodiesterase 8A (PDE8A, Accession XM_031443) is another VGAM1995 host target gene.

PDE8A BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by PDE8A, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of PDE8A BINDING SITE, designated SEQ ID:31380, to the nucleotide sequence of VGAM1995 RNA, herein designated VGAM RNA, also designated SEQ ID:4706.

[70275] Another function of VGAM1995 is therefore inhibition of Phosphodiesterase 8A (PDE8A, Accession XM_031443). Accordingly, utilities of VGAM1995 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PDE8A. PDZ Domain Containing 2 (PDZD2, Accession XM_087705) is another VGAM1995 host target gene. PDZD2 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by PDZD2, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of PDZD2 BINDING SITE, designated SEQ ID:39393, to the nucleotide sequence of VGAM1995 RNA, herein designated VGAM RNA, also des-

ignated SEQ ID:4706.

[70276] Another function of VGAM1995 is therefore inhibition of PDZ Domain Containing 2 (PDZD2, Accession XM_087705). Accordingly, utilities of VGAM1995 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PDZD2. Paternally Expressed 10 (PEG10, Accession NM_015068) is another VGAM1995 host target gene. PEG10 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by PEG10, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of PEG10 BINDING SITE, designated SEQ ID:17433, to the nucleotide sequence of VGAM1995 RNA, herein designated VGAM RNA, also designated SEQ ID:4706.

[70277] Another function of VGAM1995 is therefore inhibition of Paternally Expressed 10 (PEG10, Accession NM_015068). Accordingly, utilities of VGAM1995 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PEG10. PRO0233 (Accession NM_014121) is another VGAM1995 host target gene. PRO0233 BINDING SITE is HOST TARGET binding site

found in the 3` untranslated region of mRNA encoded by PRO0233, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of PRO0233 BINDING SITE, designated SEQ ID:15374, to the nucleotide sequence of VGAM1995 RNA, herein designated VGAM RNA, also designated SEQ ID:4706.

[70278] Another function of VGAM1995 is therefore inhibition of PRO0233 (Accession NM_014121). Accordingly, utilities of VGAM1995 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PRO0233. SEC24 Related Gene Family, Member C (S. cerevisiae) (SEC24C, Accession NM_004922) is another VGAM1995 host target gene. SEC24C BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by SEC24C, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of SEC24C BINDING SITE, designated SEQ ID:11357, to the nucleotide sequence of VGAM1995 RNA, herein designated VGAM RNA, also designated SEQ ID:4706.

[70279] Another function of VGAM1995 is therefore inhibition of SEC24 Related Gene Family, Member C (S. cerevisiae) (SEC24C, Accession NM_004922). Accordingly, utilities of VGAM1995 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SEC24C. SMC1 Structural Maintenance of Chromosomes 1-like 1 (yeast) (SMC1L1, Accession XM_050403) is another VGAM1995 host target gene. SMC1L1 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by SMC1L1, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of SMC1L1 BINDING SITE, designated SEQ ID:35620, to the nucleotide sequence of VGAM1995 RNA, herein designated VGAM RNA, also designated SEQ ID:4706.

[70280] Another function of VGAM1995 is therefore inhibition of SMC1 Structural Maintenance of Chromosomes 1-like 1 (yeast) (SMC1L1, Accession XM_050403). Accordingly, utilities of VGAM1995 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SMC1L1. Ubiquitin Specific Protease 24 (USP24, Accession XM_165973) is another VGAM1995 host target

gene. USP24 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by USP24, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of USP24 BINDING SITE, designated SEQ ID:43813, to the nucleotide sequence of VGAM1995 RNA, herein designated VGAM RNA, also designated SEQ ID:4706.

[70281] Another function of VGAM1995 is therefore inhibition of Ubiquitin Specific Protease 24 (USP24, Accession XM_165973). Accordingly, utilities of VGAM1995 include diagnosis, prevention and treatment of diseases and clinical conditions associated with USP24. WD Repeat Domain 9 (WDR9, Accession NM_018963) is another VGAM1995 host target gene. WDR9 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by WDR9, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of WDR9 BINDING SITE, designated SEQ ID:21033, to the nucleotide sequence of VGAM1995 RNA, herein designated VGAM RNA, also des-

ignated SEQ ID:4706.

[70282] Another function of VGAM1995 is therefore inhibition of WD Repeat Domain 9 (WDR9, Accession NM_018963). Accordingly, utilities of VGAM1995 include diagnosis, prevention and treatment of diseases and clinical conditions associated with WDR9. LOC124470 (Accession XM_064152) is another VGAM1995 host target gene. LOC124470 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC124470, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC124470 BINDING SITE, designated SEQ ID:37256, to the nucleotide sequence of VGAM1995 RNA, herein designated VGAM RNA, also designated SEQ ID:4706.

[70283] Another function of VGAM1995 is therefore inhibition of LOC124470 (Accession XM_064152). Accordingly, utilities of VGAM1995 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC124470. LOC146489 (Accession XM_047734) is another VGAM1995 host target gene. LOC146489 BINDING SITE is HOST TARGET binding site found in the 5` un-

translated region of mRNA encoded by LOC146489, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC146489 BINDING SITE, designated SEQ ID:35038, to the nucleotide sequence of VGAM1995 RNA, herein designated VGAM RNA, also designated SEQ ID:4706.

[70284] Another function of VGAM1995 is therefore inhibition of LOC146489 (Accession XM_047734). Accordingly, utilities of VGAM1995 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC146489. LOC147650 (Accession XM_085824) is another VGAM1995 host target gene. LOC147650 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by LOC147650, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC147650 BINDING SITE, designated SEQ ID:38348, to the nucleotide sequence of VGAM1995 RNA, herein designated VGAM RNA, also designated SEQ ID:4706.

[70285] Another function of VGAM1995 is therefore inhibition of LOC147650 (Accession XM_085824). Accordingly, utilities

of VGAM1995 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC147650. LOC162333 (Accession XM_102591) is another VGAM1995 host target gene. LOC162333 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by LOC162333, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC162333 BINDING SITE, designated SEQ ID:42123, to the nucleotide sequence of VGAM1995 RNA, herein designated VGAM RNA, also designated SEQ ID:4706.

[70286] Another function of VGAM1995 is therefore inhibition of LOC162333 (Accession XM_102591). Accordingly, utilities of VGAM1995 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC162333. LOC167040 (Accession XM_106497) is another VGAM1995 host target gene. LOC167040 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by LOC167040, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences

of LOC167040 BINDING SITE, designated SEQ ID:42201, to the nucleotide sequence of VGAM1995 RNA, herein designated VGAM RNA, also designated SEQ ID:4706.

[70287] Another function of VGAM1995 is therefore inhibition of LOC167040 (Accession XM_106497). Accordingly, utilities of VGAM1995 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC167040. LOC201283 (Accession XM_017132) is another VGAM1995 host target gene. LOC201283 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC201283, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC201283 BINDING SITE, designated SEQ ID:30302, to the nucleotide sequence of VGAM1995 RNA, herein designated VGAM RNA, also designated SEQ ID:4706.

[70288] Another function of VGAM1995 is therefore inhibition of LOC201283 (Accession XM_017132). Accordingly, utilities of VGAM1995 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC201283. LOC202460 (Accession XM_114493) is another VGAM1995 host target gene. LOC202460 BINDING

SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by LOC202460, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC202460 BINDING SITE, designated SEQ ID:42983, to the nucleotide sequence of VGAM1995 RNA, herein designated VGAM RNA, also designated SEQ ID:4706.

[70289] Another function of VGAM1995 is therefore inhibition of LOC202460 (Accession XM_114493). Accordingly, utilities of VGAM1995 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC202460. LOC206327 (Accession XM_121168) is another VGAM1995 host target gene. LOC206327 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by LOC206327, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC206327 BINDING SITE, designated SEQ ID:43613, to the nucleotide sequence of VGAM1995 RNA, herein designated VGAM RNA, also designated SEQ ID:4706.

[70290] Another function of VGAM1995 is therefore inhibition of

LOC206327 (Accession XM_121168). Accordingly, utilities of VGAM1995 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC206327. LOC221474 (Accession XM_166464) is another VGAM1995 host target gene. LOC221474 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by LOC221474, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC221474 BINDING SITE, designated SEQ ID:44383, to the nucleotide sequence of VGAM1995 RNA, herein designated VGAM RNA, also designated SEQ ID:4706.

[70291] Another function of VGAM1995 is therefore inhibition of LOC221474 (Accession XM_166464). Accordingly, utilities of VGAM1995 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC221474. LOC51170 (Accession NM_016245) is another VGAM1995 host target gene. LOC51170 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC51170, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illus-

trates the complementarity of the nucleotide sequences of LOC51170 BINDING SITE, designated SEQ ID:18363, to the nucleotide sequence of VGAM1995 RNA, herein designated VGAM RNA, also designated SEQ ID:4706.

[70292] Another function of VGAM1995 is therefore inhibition of LOC51170 (Accession NM_016245). Accordingly, utilities of VGAM1995 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC51170. LOC90333 (Accession XM_030958) is another VGAM1995 host target gene. LOC90333 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC90333, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC90333 BINDING SITE, designated SEQ ID:31227, to the nucleotide sequence of VGAM1995 RNA, herein designated VGAM RNA, also designated SEQ ID:4706.

[70293] Another function of VGAM1995 is therefore inhibition of LOC90333 (Accession XM_030958). Accordingly, utilities of VGAM1995 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC90333. LOC92568 (Accession XM_045852) is another

VGAM1995 host target gene. LOC92568 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by LOC92568, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC92568 BINDING SITE, designated SEQ ID:34574, to the nucleotide sequence of VGAM1995 RNA, herein designated VGAM RNA, also designated SEQ ID:4706.

[70294] Another function of VGAM1995 is therefore inhibition of LOC92568 (Accession XM_045852). Accordingly, utilities of VGAM1995 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC92568. Fig. 1 further provides a conceptual description of a novel bioinformatically detected viral gene of the present invention, referred to here as Viral Genomic Address Messenger 1996 (VGAM1996) viral gene, which modulates expression of respective host target genes thereof, the function and utility of which host target genes is known in the art.

[70295] VGAM1996 is a novel bioinformatically detected regulatory, non protein coding, viral micro RNA (miRNA) gene. The method by which VGAM1996 was detected is de-

scribed hereinabove with reference to Figs. 1-8.

[70296] VGAM1996 gene, herein designated VGAM GENE, is a viral gene contained in the genome of Nipah Virus. VGAM1996 host target gene, herein designated VGAM HOST TARGET GENE, is a human gene contained in the human genome.

[70297] VGAM1996 gene encodes a VGAM1996 precursor RNA, herein designated VGAM PRECURSOR RNA. Similar to other miRNA genes, and unlike most ordinary genes, VGAM1996 precursor RNA does not encode a protein. A nucleotide sequence identical or highly similar to the nucleotide sequence of VGAM1996 precursor RNA is designated SEQ ID:1982, and is provided hereinbelow with reference to the sequence listing part. Nucleotide sequence SEQ ID:1982 is located at position 8558 relative to the genome of Nipah Virus.

[70298] VGAM1996 precursor RNA folds onto itself, forming VGAM1996 folded precursor RNA, herein designated VGAM FOLDED PRECURSOR RNA, which has a two-dimensional `hairpin structure`. As is well known in the art, this `hairpin structure`, is typical of RNA encoded by miRNA genes, and is due to the fact that the nucleotide sequence of the first half of the RNA encoded by a miRNA gene is an accurate or partial inversed-reversed sequence

of the nucleotide sequence of the second half thereof.

[70299] An enzyme complex designated DICER COMPLEX, `dices` the VGAM1996 folded precursor RNA into VGAM1996 RNA, herein designated VGAM RNA, a single stranded ~22 nt long RNA segment. As is known in the art, `dicing` of a hairpin structured RNA precursor product into a short ~22nt RNA segment is catalyzed by an enzyme complex comprising an enzyme called Dicer together with other necessary proteins. A probable (over 80%) nucleotide sequence of VGAM1996 RNA is designated SEQ ID:4707, and is provided hereinbelow with reference to the sequence listing part.

[70300] VGAM1996 host target gene, herein designated VGAM HOST TARGET GENE, encodes a corresponding messenger RNA, VGAM1996 host target RNA, herein designated VGAM HOST TARGET RNA. VGAM1996 host target RNA comprises three regions, as is typical of mRNA of a protein coding gene: a 5` untranslated region, a protein coding region and a 3` untranslated region, designated 5`UTR, PROTEIN CODING and 3`UTR respectively.

[70301] VGAM1996 RNA, herein designated VGAM RNA, binds complementarily to one or more host target binding sites located in untranslated regions of VGAM1996 host target

RNA, herein designated VGAM HOST TARGET RNA. This complementary binding is due to the fact that the nucleotide sequence of VGAM1996 RNA is an accurate or a partial inversed-reversed sequence of the nucleotide sequence of each of the host target binding sites. As an illustration, Fig. 1 shows three such host target binding sites, designated BINDING SITE I, BINDING SITE II and BINDING SITE III respectively. It is appreciated that the number of host target binding sites shown in Fig. 1 is meant as an illustration only, and is not meant to be limiting - VGAM1996 RNA, herein designated VGAM RNA, may have a different number of host target binding sites in untranslated regions of a VGAM1996 host target RNA, herein designated VGAM HOST TARGET RNA. It is further appreciated that while Fig. 1 depicts host target binding sites in the 3`UTR region, this is meant as an example only - these host target binding sites may be located in the 3`UTR region, the 5`UTR region, or in both 3`UTR and 5`UTR regions.

[70302] The complementary binding of VGAM1996 RNA, herein designated VGAM RNA, to host target binding sites on VGAM1996 host target RNA, herein designated VGAM HOST TARGET RNA, such as BINDING SITE I, BINDING SITE

II and BINDING SITE III, inhibits translation of VGAM1996 host target RNA into VGAM1996 host target protein, herein designated VGAM HOST TARGET PROTEIN. VGAM host target protein is therefore outlined by a broken line.

[70303] It is appreciated that VGAM1996 host target gene, herein designated VGAM HOST TARGET GENE, in fact represents a plurality of VGAM1996 host target genes. The mRNA of each one of this plurality of VGAM1996 host target genes comprises one or more host target binding sites, each having a nucleotide sequence which is at least partly complementary to VGAM1996 RNA, herein designated VGAM RNA, and which when bound by VGAM1996 RNA causes inhibition of translation of respective one or more VGAM1996 host target proteins.

[70304] It is further appreciated by one skilled in the art that the mode of translational inhibition illustrated by Fig. 1 with specific reference to translational inhibition exerted by VGAM1996 gene, herein designated VGAM GENE, on one or more VGAM1996 host target gene, herein designated VGAM HOST TARGET GENE, is in fact common to other known non-viral miRNA genes. As mentioned hereinabove with reference to the background section, although a specific complementary binding site has been demonstrated

only for some of the known miRNA genes (primarily Lin-4 and Let-7), all other recently discovered miRNA genes are also believed by those skilled in the art to modulate expression of other genes by complementary binding, although specific complementary binding sites of these other miRNA genes have not yet been found (Ruvkun G., `Perspective: Glimpses of a tiny RNA world`, Science 294,779 (2001)).

[70305] It is yet further appreciated that a function of VGAM1996 is inhibition of expression of host target genes, as part of a novel viral mechanism of attacking a host. Accordingly, utilities of VGAM1996 include diagnosis, prevention and treatment of viral infection by Nipah Virus. Specific functions, and accordingly utilities, of VGAM1996 correlate with, and may be deduced from, the identity of the host target genes which VGAM1996 binds and inhibits, and the function of these host target genes, as elaborated hereinbelow.

[70306] Nucleotide sequences of the VGAM1996 precursor RNA, herein designated VGAM PRECURSOR RNA, and of the `diced` VGAM1996 RNA, herein designated VGAM RNA, and a schematic representation of the secondary folding of VGAM1996 folded precursor RNA, herein designated

VGAM FOLDED PRECURSOR RNA, of VGAM1996 are further described hereinbelow with reference to Table 1.

[70307] Nucleotide sequences of host target binding sites, such as BINDING SITE-I, BINDING SITE-II and BINDING SITE-III of Fig. 1, found on VGAM1996 host target RNA, and schematic representation of the complementarity of each of these host target binding sites to VGAM1996 RNA, herein designated VGAM RNA, are described hereinbelow with reference to Table 2.

[70308] As mentioned hereinabove with reference to Fig. 1, a function of VGAM1996 gene, herein designated VGAM is inhibition of expression of VGAM1996 target genes. It is appreciated that specific functions, and accordingly utilities, of VGAM1996 correlate with, and may be deduced from, the identity of the target genes which VGAM1996 binds and inhibits, and the function of these target genes, as elaborated hereinbelow.

[70309] AXL Receptor Tyrosine Kinase (AXL, Accession NM_001699) is a VGAM1996 host target gene. AXL BINDING SITE1 and AXL BINDING SITE2 are HOST TARGET binding sites found in untranslated regions of mRNA encoded by AXL, corresponding to HOST TARGET binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III.

Table 2 illustrates the complementarity of the nucleotide sequences of AXL BINDING SITE1 and AXL BINDING SITE2, designated SEQ ID:7417 and SEQ ID:22438 respectively, to the nucleotide sequence of VGAM1996 RNA, herein designated VGAM RNA, also designated SEQ ID:4707.

[70310] A function of VGAM1996 is therefore inhibition of AXL Receptor Tyrosine Kinase (AXL, Accession NM_001699). Accordingly, utilities of VGAM1996 include diagnosis, prevention and treatment of diseases and clinical conditions associated with AXL. Kynurenine 3-monooxygenase (kynurenine 3-hydroxylase) (KMO, Accession NM_003679) is another VGAM1996 host target gene. KMO BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by KMO, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of KMO BINDING SITE, designated SEQ ID:9778, to the nucleotide sequence of VGAM1996 RNA, herein designated VGAM RNA, also designated SEQ ID:4707.

[70311] Another function of VGAM1996 is therefore inhibition of Kynurenine 3-monooxygenase (kynurenine 3-hydroxylase) (KMO, Accession NM_003679), a gene

which may play a role in encephalic photoreception. Accordingly, utilities of VGAM1996 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KMO. The function of KMO and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM162.G-rich RNA Sequence Binding Factor 1 (GRSF1, Accession NM_002092) is another VGAM1996 host target gene. GRSF1 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by GRSF1, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of GRSF1 BINDING SITE, designated SEQ ID:7880, to the nucleotide sequence of VGAM1996 RNA, herein designated VGAM RNA, also designated SEQ ID:4707.

[70312] Another function of VGAM1996 is therefore inhibition of G-rich RNA Sequence Binding Factor 1 (GRSF1, Accession NM_002092). Accordingly, utilities of VGAM1996 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GRSF1. KIAA1467 (Accession XM_049605) is another VGAM1996 host target

gene. KIAA1467 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by KIAA1467, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of KIAA1467 BINDING SITE, designated SEQ ID:35450, to the nucleotide sequence of VGAM1996 RNA, herein designated VGAM RNA, also designated SEQ ID:4707.

[70313] Another function of VGAM1996 is therefore inhibition of KIAA1467 (Accession XM_049605). Accordingly, utilities of VGAM1996 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1467. RYK Receptor-like Tyrosine Kinase (RYK, Accession XM_093692) is another VGAM1996 host target gene. RYK BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by RYK, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of RYK BINDING SITE, designated SEQ ID:40202, to the nucleotide sequence of VGAM1996 RNA, herein designated VGAM RNA, also designated SEQ ID:4707.

[70314] Another function of VGAM1996 is therefore inhibition of RYK Receptor-like Tyrosine Kinase (RYK, Accession XM_093692). Accordingly, utilities of VGAM1996 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RYK. Solute Carrier Family 19, Member 3 (SLC19A3, Accession NM_025243) is another VGAM1996 host target gene. SLC19A3 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by SLC19A3, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of SLC19A3 BINDING SITE, designated SEQ ID:24925, to the nucleotide sequence of VGAM1996 RNA, herein designated VGAM RNA, also designated SEQ ID:4707.

[70315] Another function of VGAM1996 is therefore inhibition of Solute Carrier Family 19, Member 3 (SLC19A3, Accession NM_025243). Accordingly, utilities of VGAM1996 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SLC19A3. LOC256277 (Accession XM_170644) is another VGAM1996 host target gene. LOC256277 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded

by LOC256277, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC256277 BINDING SITE, designated SEQ ID:45423, to the nucleotide sequence of VGAM1996 RNA, herein designated VGAM RNA, also designated SEQ ID:4707.

[70316] Another function of VGAM1996 is therefore inhibition of LOC256277 (Accession XM_170644). Accordingly, utilities of VGAM1996 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC256277. Fig. 1 further provides a conceptual description of a novel bioinformatically detected viral gene of the present invention, referred to here as Viral Genomic Address Messenger 1997 (VGAM1997) viral gene, which modulates expression of respective host target genes thereof, the function and utility of which host target genes is known in the art.

[70317] VGAM1997 is a novel bioinformatically detected regulatory, non protein coding, viral micro RNA (miRNA) gene. The method by which VGAM1997 was detected is described hereinabove with reference to Figs. 1-8.

[70318] VGAM1997 gene, herein designated VGAM GENE, is a viral

gene contained in the genome of Nipah Virus. VGAM1997 host target gene, herein designated VGAM HOST TARGET GENE, is a human gene contained in the human genome.

[70319] VGAM1997 gene encodes a VGAM1997 precursor RNA, herein designated VGAM PRECURSOR RNA. Similar to other miRNA genes, and unlike most ordinary genes, VGAM1997 precursor RNA does not encode a protein. A nucleotide sequence identical or highly similar to the nucleotide sequence of VGAM1997 precursor RNA is designated SEQ ID:1983, and is provided hereinbelow with reference to the sequence listing part. Nucleotide sequence SEQ ID:1983 is located at position 1708 relative to the genome of Nipah Virus.

[70320] VGAM1997 precursor RNA folds onto itself, forming VGAM1997 folded precursor RNA, herein designated VGAM FOLDED PRECURSOR RNA, which has a two-dimensional `hairpin structure`. As is well known in the art, this `hairpin structure`, is typical of RNA encoded by miRNA genes, and is due to the fact that the nucleotide sequence of the first half of the RNA encoded by a miRNA gene is an accurate or partial inversed-reversed sequence of the nucleotide sequence of the second half thereof.

[70321] An enzyme complex designated DICER COMPLEX, `dices`

the VGAM1997 folded precursor RNA into VGAM1997 RNA, herein designated VGAM RNA, a single stranded ~22 nt long RNA segment. As is known in the art, `dicing` of a hairpin structured RNA precursor product into a short ~22nt RNA segment is catalyzed by an enzyme complex comprising an enzyme called Dicer together with other necessary proteins. A probable (over 51%) nucleotide sequence of VGAM1997 RNA is designated SEQ ID:4708, and is provided hereinbelow with reference to the sequence listing part.

[70322] VGAM1997 host target gene, herein designated VGAM HOST TARGET GENE, encodes a corresponding messenger RNA, VGAM1997 host target RNA, herein designated VGAM HOST TARGET RNA. VGAM1997 host target RNA comprises three regions, as is typical of mRNA of a protein coding gene: a 5` untranslated region, a protein coding region and a 3` untranslated region, designated 5`UTR, PROTEIN CODING and 3`UTR respectively.

[70323] VGAM1997 RNA, herein designated VGAM RNA, binds complementarily to one or more host target binding sites located in untranslated regions of VGAM1997 host target RNA, herein designated VGAM HOST TARGET RNA. This complementary binding is due to the fact that the nu-

cleotide sequence of VGAM1997 RNA is an accurate or a partial inversed-reversed sequence of the nucleotide sequence of each of the host target binding sites. As an illustration, Fig. 1 shows three such host target binding sites, designated BINDING SITE I, BINDING SITE II and BINDING SITE III respectively. It is appreciated that the number of host target binding sites shown in Fig. 1 is meant as an illustration only, and is not meant to be limiting - VGAM1997 RNA, herein designated VGAM RNA, may have a different number of host target binding sites in untranslated regions of a VGAM1997 host target RNA, herein designated VGAM HOST TARGET RNA. It is further appreciated that while Fig. 1 depicts host target binding sites in the 3`UTR region, this is meant as an example only - these host target binding sites may be located in the 3`UTR region, the 5`UTR region, or in both 3`UTR and 5`UTR regions.

[70324] The complementary binding of VGAM1997 RNA, herein designated VGAM RNA, to host target binding sites on VGAM1997 host target RNA, herein designated VGAM HOST TARGET RNA, such as BINDING SITE I, BINDING SITE II and BINDING SITE III, inhibits translation of VGAM1997 host target RNA into VGAM1997 host target protein,

herein designated VGAM HOST TARGET PROTEIN. VGAM host target protein is therefore outlined by a broken line.

[70325] It is appreciated that VGAM1997 host target gene, herein designated VGAM HOST TARGET GENE, in fact represents a plurality of VGAM1997 host target genes. The mRNA of each one of this plurality of VGAM1997 host target genes comprises one or more host target binding sites, each having a nucleotide sequence which is at least partly complementary to VGAM1997 RNA, herein designated VGAM RNA, and which when bound by VGAM1997 RNA causes inhibition of translation of respective one or more VGAM1997 host target proteins.

[70326] It is further appreciated by one skilled in the art that the mode of translational inhibition illustrated by Fig. 1 with specific reference to translational inhibition exerted by VGAM1997 gene, herein designated VGAM GENE, on one or more VGAM1997 host target gene, herein designated VGAM HOST TARGET GENE, is in fact common to other known non-viral miRNA genes. As mentioned hereinabove with reference to the background section, although a specific complementary binding site has been demonstrated only for some of the known miRNA genes (primarily Lin-4 and Let-7), all other recently discovered miRNA genes are

also believed by those skilled in the art to modulate expression of other genes by complementary binding, although specific complementary binding sites of these other miRNA genes have not yet been found (Ruvkun G., `Perspective: Glimpses of a tiny RNA world`, Science 294,779 (2001)).

[70327] It is yet further appreciated that a function of VGAM1997 is inhibition of expression of host target genes, as part of a novel viral mechanism of attacking a host. Accordingly, utilities of VGAM1997 include diagnosis, prevention and treatment of viral infection by Nipah Virus. Specific functions, and accordingly utilities, of VGAM1997 correlate with, and may be deduced from, the identity of the host target genes which VGAM1997 binds and inhibits, and the function of these host target genes, as elaborated hereinbelow.

[70328] Nucleotide sequences of the VGAM1997 precursor RNA, herein designated VGAM PRECURSOR RNA, and of the `diced` VGAM1997 RNA, herein designated VGAM RNA, and a schematic representation of the secondary folding of VGAM1997 folded precursor RNA, herein designated VGAM FOLDED PRECURSOR RNA, of VGAM1997 are further described hereinbelow with reference to Table 1.

[70329] Nucleotide sequences of host target binding sites, such as BINDING SITE-I, BINDING SITE-II and BINDING SITE-III of Fig. 1, found on VGAM1997 host target RNA, and schematic representation of the complementarity of each of these host target binding sites to VGAM1997 RNA, herein designated VGAM RNA, are described hereinbelow

with reference to Table 2.

[70330] As mentioned hereinabove with reference to Fig. 1, a function of VGAM1997 gene, herein designated VGAM is inhibition of expression of VGAM1997 target genes. It is appreciated that specific functions, and accordingly utilities, of VGAM1997 correlate with, and may be deduced from, the identity of the target genes which VGAM1997 binds and inhibits, and the function of these target genes, as elaborated hereinbelow.

[70331] FLJ14547 (Accession NM_032804) is a VGAM1997 host target gene. FLJ14547 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by FLJ14547, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of FLJ14547 BINDING SITE, designated SEQ ID:26562, to the nucleotide sequence of VGAM1997 RNA, herein designated VGAM RNA, also designated SEQ ID:4708.

[70332] A function of VGAM1997 is therefore inhibition of FLJ14547 (Accession NM_032804). Accordingly, utilities of VGAM1997 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

FLJ14547. SMBP (Accession XM_050993) is another VGAM1997 host target gene. SMBP BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by SMBP, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of SMBP BINDING SITE, designated SEQ ID:35705, to the nucleotide sequence of VGAM1997 RNA, herein designated VGAM RNA, also designated SEQ ID:4708.

[70333] Another function of VGAM1997 is therefore inhibition of SMBP (Accession XM_050993). Accordingly, utilities of VGAM1997 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SMBP. Fig. 1 further provides a conceptual description of a novel bioinformatically detected viral gene of the present invention, referred to here as Viral Genomic Address Messenger 1998 (VGAM1998) viral gene, which modulates expression of respective host target genes thereof, the function and utility of which host target genes is known in the art.

[70334] VGAM1998 is a novel bioinformatically detected regulatory, non protein coding, viral micro RNA (miRNA) gene. The method by which VGAM1998 was detected is de-

scribed hereinabove with reference to Figs. 1-8.

[70335] VGAM1998 gene, herein designated VGAM GENE, is a viral gene contained in the genome of Nipah Virus. VGAM1998 host target gene, herein designated VGAM HOST TARGET GENE, is a human gene contained in the human genome.

[70336] VGAM1998 gene encodes a VGAM1998 precursor RNA, herein designated VGAM PRECURSOR RNA. Similar to other miRNA genes, and unlike most ordinary genes, VGAM1998 precursor RNA does not encode a protein. A nucleotide sequence identical or highly similar to the nucleotide sequence of VGAM1998 precursor RNA is designated SEQ ID:1984, and is provided hereinbelow with reference to the sequence listing part. Nucleotide sequence SEQ ID:1984 is located at position 15895 relative to the genome of Nipah Virus.

[70337] VGAM1998 precursor RNA folds onto itself, forming VGAM1998 folded precursor RNA, herein designated VGAM FOLDED PRECURSOR RNA, which has a two-dimensional `hairpin structure`. As is well known in the art, this `hairpin structure`, is typical of RNA encoded by miRNA genes, and is due to the fact that the nucleotide sequence of the first half of the RNA encoded by a miRNA gene is an accurate or partial inversed-reversed sequence

of the nucleotide sequence of the second half thereof.

[70338] An enzyme complex designated DICER COMPLEX, `dices` the VGAM1998 folded precursor RNA into VGAM1998 RNA, herein designated VGAM RNA, a single stranded ~22 nt long RNA segment. As is known in the art, `dicing` of a hairpin structured RNA precursor product into a short ~22nt RNA segment is catalyzed by an enzyme complex comprising an enzyme called Dicer together with other necessary proteins. A probable (over 43%) nucleotide sequence of VGAM1998 RNA is designated SEQ ID:4709, and is provided hereinbelow with reference to the sequence listing part.

[70339] VGAM1998 host target gene, herein designated VGAM HOST TARGET GENE, encodes a corresponding messenger RNA, VGAM1998 host target RNA, herein designated VGAM HOST TARGET RNA. VGAM1998 host target RNA comprises three regions, as is typical of mRNA of a protein coding gene: a 5` untranslated region, a protein coding region and a 3` untranslated region, designated 5`UTR, PROTEIN CODING and 3`UTR respectively.

[70340] VGAM1998 RNA, herein designated VGAM RNA, binds complementarily to one or more host target binding sites located in untranslated regions of VGAM1998 host target

RNA, herein designated VGAM HOST TARGET RNA. This complementary binding is due to the fact that the nucleotide sequence of VGAM1998 RNA is an accurate or a partial inversed-reversed sequence of the nucleotide sequence of each of the host target binding sites. As an illustration, Fig. 1 shows three such host target binding sites, designated BINDING SITE I, BINDING SITE II and BINDING SITE III respectively. It is appreciated that the number of host target binding sites shown in Fig. 1 is meant as an illustration only, and is not meant to be limiting - VGAM1998 RNA, herein designated VGAM RNA, may have a different number of host target binding sites in untranslated regions of a VGAM1998 host target RNA, herein designated VGAM HOST TARGET RNA. It is further appreciated that while Fig. 1 depicts host target binding sites in the 3`UTR region, this is meant as an example only - these host target binding sites may be located in the 3`UTR region, the 5`UTR region, or in both 3`UTR and 5`UTR regions.

[70341] The complementary binding of VGAM1998 RNA, herein designated VGAM RNA, to host target binding sites on VGAM1998 host target RNA, herein designated VGAM HOST TARGET RNA, such as BINDING SITE I, BINDING SITE

II and BINDING SITE III, inhibits translation of VGAM1998 host target RNA into VGAM1998 host target protein, herein designated VGAM HOST TARGET PROTEIN. VGAM host target protein is therefore outlined by a broken line.

[70342] It is appreciated that VGAM1998 host target gene, herein designated VGAM HOST TARGET GENE, in fact represents a plurality of VGAM1998 host target genes. The mRNA of each one of this plurality of VGAM1998 host target genes comprises one or more host target binding sites, each having a nucleotide sequence which is at least partly complementary to VGAM1998 RNA, herein designated VGAM RNA, and which when bound by VGAM1998 RNA causes inhibition of translation of respective one or more VGAM1998 host target proteins.

[70343] It is further appreciated by one skilled in the art that the mode of translational inhibition illustrated by Fig. 1 with specific reference to translational inhibition exerted by VGAM1998 gene, herein designated VGAM GENE, on one or more VGAM1998 host target gene, herein designated VGAM HOST TARGET GENE, is in fact common to other known non-viral miRNA genes. As mentioned hereinabove with reference to the background section, although a specific complementary binding site has been demonstrated

only for some of the known miRNA genes (primarily Lin-4 and Let-7), all other recently discovered miRNA genes are also believed by those skilled in the art to modulate expression of other genes by complementary binding, although specific complementary binding sites of these other miRNA genes have not yet been found (Ruvkun G., `Perspective: Glimpses of a tiny RNA world`, Science 294,779 (2001)).

[70344] It is yet further appreciated that a function of VGAM1998 is inhibition of expression of host target genes, as part of a novel viral mechanism of attacking a host. Accordingly, utilities of VGAM1998 include diagnosis, prevention and treatment of viral infection by Nipah Virus. Specific functions, and accordingly utilities, of VGAM1998 correlate with, and may be deduced from, the identity of the host target genes which VGAM1998 binds and inhibits, and the function of these host target genes, as elaborated hereinbelow.

[70345] Nucleotide sequences of the VGAM1998 precursor RNA, herein designated VGAM PRECURSOR RNA, and of the `diced` VGAM1998 RNA, herein designated VGAM RNA, and a schematic representation of the secondary folding of VGAM1998 folded precursor RNA, herein designated

VGAM FOLDED PRECURSOR RNA, of VGAM1998 are further described hereinbelow with reference to Table 1.

[70346] Nucleotide sequences of host target binding sites, such as BINDING SITE-I, BINDING SITE-II and BINDING SITE-III of Fig. 1, found on VGAM1998 host target RNA, and schematic representation of the complementarity of each of these host target binding sites to VGAM1998 RNA, herein designated VGAM RNA, are described hereinbelow with reference to Table 2.

[70347] As mentioned hereinabove with reference to Fig. 1, a function of VGAM1998 gene, herein designated VGAM is inhibition of expression of VGAM1998 target genes. It is appreciated that specific functions, and accordingly utilities, of VGAM1998 correlate with, and may be deduced from, the identity of the target genes which VGAM1998 binds and inhibits, and the function of these target genes, as elaborated hereinbelow.

[70348] Angiopoietin 1 (ANGPT1, Accession NM_139290) is a VGAM1998 host target gene. ANGPT1 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by ANGPT1, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the com-

plementarity of the nucleotide sequences of ANGPT1 BINDING SITE, designated SEQ ID:29291, to the nucleotide sequence of VGAM1998 RNA, herein designated VGAM RNA, also designated SEQ ID:4709.

[70349] A function of VGAM1998 is therefore inhibition of Angiopoietin 1 (ANGPT1, Accession NM_139290), a gene which binds and activates tie2 receptor by inducing its tyrosine phosphorylation. Accordingly, utilities of VGAM1998 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ANGPT1. The function of ANGPT1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM291.B-cell Linker (BLNK, Accession NM_013314) is another VGAM1998 host target gene. BLNK BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by BLNK, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of BLNK BINDING SITE, designated SEQ ID:14963, to the nucleotide sequence of VGAM1998 RNA, herein designated VGAM RNA, also designated SEQ ID:4709.

[70350] Another function of VGAM1998 is therefore inhibition of B-cell Linker (BLNK, Accession NM_013314), a gene which is a component of the BCR transducer complex, promotes B-cell development. Accordingly, utilities of VGAM1998 include diagnosis, prevention and treatment of diseases and clinical conditions associated with BLNK. The function of BLNK has been established by previous studies. In evaluating patients with absent B cells, Minegishi et al. (1999) identified a male with a homozygous splice defect in the gene encoding the cytoplasmic adaptor protein BLNK (604515.0001). Although this patient had normal numbers of pro-B cells, he had no pre-B cells or mature B cells, indicating that BLNK plays a critical role in orchestrating the pro-B cell to pre-B cell transition. The immune system and overall growth and development were otherwise normal in this patient, suggesting that BLNK function is highly specific. The patient had developed recurrent otitis at 8 months of age; after 2 episodes of pneumonia, he was evaluated for immunodeficiency at 16 months of age. At that time, he had no detectable serum IgG, IgM, or IgA, and he had less than 1% B cells in the peripheral circulation. He was started on gammaglobulin replacement, and between 2 and 20 years of age he did well except for

chronic otitis and sinusitis, hepatitis C acquired from intravenous gammaglobulin, and an episode of protein-losing enteropathy in adolescence. Animal model experiments lend further support to the function of BLNK. Pappu et al. (1999) generated mice deficient in BLNK by targeted disruption. B-cell development in BLNK -/- mice was blocked at the transition from B220+CD43+ progenitor B to B220+CD43- precursor B cells. Only a small percentage of IgM M++, but not mature IgM(lo)IgD(hi), B cells were detected in the periphery. Pappu et al. (1999) concluded that BLNK is an essential component of the B-cell receptor signaling pathways and is required to promote B-cell development.

[70351] It is appreciated that the abovementioned animal model for BLNK is acknowledged by those skilled in the art as a scientifically valid animal model, as can be further appreciated from the publications sited hereinbelow.

[70352] Full details of the abovementioned studies are described in the following publications, the disclosure of which are hereby incorporated by reference:

[70353] Minegishi, Y.; Rohrer, J.; Coustan-Smith, E.; Lederman, H. M.; Pappu, R.; Campana, D.; Chan, A. C.; Conley, M. E. : An essential role for BLNK in human B cell development. Sci-

ence 286: 1954-1957, 1999. ; and

[70354] Pappu, R.; Cheng, A. M.; Li, B.; Gong, Q.; Chiu, C.; Griffin, N.; White, M.; Sleckman, B. P.; Chan, A. C. : Requirement for B cell linker protein (BLNK) in B cell development. Science.

[70355] Further studies establishing the function and utilities of BLNK are found in John Hopkins OMIM database record ID 604515, and in sited publications numbered 5446-544 and 4787-4788 listed in the bibliography section herein-below, which are also hereby incorporated by reference.Coagulation Factor VIII, Procoagulant Component (hemophilia A) (F8, Accession NM_000132) is another VGAM1998 host target gene. F8 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by F8, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of F8 BINDING SITE, designated SEQ ID:5619, to the nucleotide sequence of VGAM1998 RNA, herein designated VGAM RNA, also designated SEQ ID:4709.

[70356] Another function of VGAM1998 is therefore inhibition of Coagulation Factor VIII, Procoagulant Component

(hemophilia A) (F8, Accession NM_000132). Accordingly, utilities of VGAM1998 include diagnosis, prevention and treatment of diseases and clinical conditions associated with F8. F-box and Leucine-rich Repeat Protein 7 (FBXL7, Accession NM_012304) is another VGAM1998 host target gene. FBXL7 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by FBXL7, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of FBXL7 BINDING SITE, designated SEQ ID:14673, to the nucleotide sequence of VGAM1998 RNA, herein designated VGAM RNA, also designated SEQ ID:4709.

[70357] Another function of VGAM1998 is therefore inhibition of F-box and Leucine-rich Repeat Protein 7 (FBXL7, Accession NM_012304), a gene which may be involved in in phosphorylation-dependent ubiquitination. Accordingly, utilities of VGAM1998 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FBXL7. The function of FBXL7 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with

reference to VGAM1924.Leucine-rich Repeat-containing 2 (LRRC2, Accession NM_024512) is another VGAM1998 host target gene. LRRC2 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LRRC2, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LRRC2 BINDING SITE, designated SEQ ID:23705, to the nucleotide sequence of VGAM1998 RNA, herein designated VGAM RNA, also designated SEQ ID:4709.

[70358] Another function of VGAM1998 is therefore inhibition of Leucine-rich Repeat-containing 2 (LRRC2, Accession NM_024512). Accordingly, utilities of VGAM1998 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LRRC2. Nucleolar Protein 3 (apoptosis repressor with CARD domain) (NOL3, Accession NM_003946) is another VGAM1998 host target gene. NOL3 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by NOL3, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide se-

quences of NOL3 BINDING SITE, designated SEQ ID:10063, to the nucleotide sequence of VGAM1998 RNA, herein designated VGAM RNA, also designated SEQ ID:4709.

[70359] Another function of VGAM1998 is therefore inhibition of Nucleolar Protein 3 (apoptosis repressor with CARD domain) (NOL3, Accession NM_003946), a gene which inhibits CASP2 and CASP8 and interacts with splicing factors. Accordingly, utilities of VGAM1998 include diagnosis, prevention and treatment of diseases and clinical conditions associated with NOL3. The function of NOL3 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM554.Serine (or cysteine) Proteinase Inhibitor, Clade A (alpha-1 antiproteinase, antitrypsin), Member 5 (SERPINA5, Accession NM_000624) is another VGAM1998 host target gene. SERPINA5 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by SERPINA5, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of SERPINA5 BINDING SITE, designated SEQ ID:6240, to the nucleotide sequence of VGAM1998 RNA,

herein designated VGAM RNA, also designated SEQ ID:4709.

[70360] Another function of VGAM1998 is therefore inhibition of Serine (or cysteine) Proteinase Inhibitor, Clade A (alpha-1 antiproteinase, antitrypsin), Member 5 (SERPINA5, Accession NM_000624), a gene which inhibits activated protein c as well as plasminogen activators. Accordingly, utilities of VGAM1998 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SERPINA5. The function of SERPINA5 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM1233.DKFZP434N178 (Accession XM_050278) is another VGAM1998 host target gene. DKFZP434N178 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by DKFZP434N178, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of DKFZP434N178 BINDING SITE, designated SEQ ID:35597, to the nucleotide sequence of VGAM1998 RNA, herein designated VGAM RNA, also designated SEQ ID:4709.

[70361] Another function of VGAM1998 is therefore inhibition of DKFZP434N178 (Accession XM_050278). Accordingly, utilities of VGAM1998 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZP434N178. FLJ10458 (Accession NM_018096) is another VGAM1998 host target gene. FLJ10458 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by FLJ10458, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of FLJ10458 BINDING SITE, designated SEQ ID:19866, to the nucleotide sequence of VGAM1998 RNA, herein designated VGAM RNA, also designated SEQ ID:4709.

[70362] Another function of VGAM1998 is therefore inhibition of FLJ10458 (Accession NM_018096). Accordingly, utilities of VGAM1998 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ10458. KIAA0326 (Accession XM_034819) is another VGAM1998 host target gene. KIAA0326 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by KIAA0326, corresponding to a HOST TARGET binding site such as BINDING SITE I,

BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of KIAA0326 BINDING SITE, designated SEQ ID:32157, to the nucleotide sequence of VGAM1998 RNA, herein designated VGAM RNA, also designated SEQ ID:4709.

[70363] Another function of VGAM1998 is therefore inhibition of KIAA0326 (Accession XM_034819). Accordingly, utilities of VGAM1998 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0326. KIAA0420 (Accession XM_032693) is another VGAM1998 host target gene. KIAA0420 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by KIAA0420, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of KIAA0420 BINDING SITE, designated SEQ ID:31730, to the nucleotide sequence of VGAM1998 RNA, herein designated VGAM RNA, also designated SEQ ID:4709.

[70364] Another function of VGAM1998 is therefore inhibition of KIAA0420 (Accession XM_032693). Accordingly, utilities of VGAM1998 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

KIAA0420. KIAA0494 (Accession NM_014774) is another VGAM1998 host target gene. KIAA0494 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by KIAA0494, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of KIAA0494 BINDING SITE, designated SEQ ID:16589, to the nucleotide sequence of VGAM1998 RNA, herein designated VGAM RNA, also designated SEQ ID:4709.

[70365] Another function of VGAM1998 is therefore inhibition of KIAA0494 (Accession NM_014774). Accordingly, utilities of VGAM1998 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0494. KIAA0552 (Accession NM_014731) is another VGAM1998 host target gene. KIAA0552 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by KIAA0552, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of KIAA0552 BINDING SITE, designated SEQ ID:16346, to the nucleotide sequence of VGAM1998 RNA, herein desig-

nated VGAM RNA, also designated SEQ ID:4709.

[70366] Another function of VGAM1998 is therefore inhibition of KIAA0552 (Accession NM_014731). Accordingly, utilities of VGAM1998 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0552. KIAA0970 (Accession NM_014923) is another VGAM1998 host target gene. KIAA0970 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by KIAA0970, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of KIAA0970 BINDING SITE, designated SEQ ID:17204, to the nucleotide sequence of VGAM1998 RNA, herein designated VGAM RNA, also designated SEQ ID:4709.

[70367] Another function of VGAM1998 is therefore inhibition of KIAA0970 (Accession NM_014923). Accordingly, utilities of VGAM1998 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0970. LOC145453 (Accession XM_085120) is another VGAM1998 host target gene. LOC145453 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC145453, corresponding

to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC145453 BINDING SITE, designated SEQ ID:37838, to the nucleotide sequence of VGAM1998 RNA, herein designated VGAM RNA, also designated SEQ ID:4709.

[70368] Another function of VGAM1998 is therefore inhibition of LOC145453 (Accession XM_085120). Accordingly, utilities of VGAM1998 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC145453. LOC155064 (Accession XM_088128) is another VGAM1998 host target gene. LOC155064 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC155064, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC155064 BINDING SITE, designated SEQ ID:39532, to the nucleotide sequence of VGAM1998 RNA, herein designated VGAM RNA, also designated SEQ ID:4709.

[70369] Another function of VGAM1998 is therefore inhibition of LOC155064 (Accession XM_088128). Accordingly, utilities of VGAM1998 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with LOC155064. LOC221738 (Accession XM_168097) is another VGAM1998 host target gene. LOC221738 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC221738, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC221738 BINDING SITE, designated SEQ ID:45030, to the nucleotide sequence of VGAM1998 RNA, herein designated VGAM RNA, also designated SEQ ID:4709.

[70370] Another function of VGAM1998 is therefore inhibition of LOC221738 (Accession XM_168097). Accordingly, utilities of VGAM1998 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC221738. LOC257354 (Accession XM_170810) is another VGAM1998 host target gene. LOC257354 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC257354, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC257354 BINDING SITE, designated SEQ ID:45583, to

the nucleotide sequence of VGAM1998 RNA, herein designated VGAM RNA, also designated SEQ ID:4709.

[70371] Another function of VGAM1998 is therefore inhibition of LOC257354 (Accession XM_170810). Accordingly, utilities of VGAM1998 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC257354. LOC51236 (Accession NM_016458) is another VGAM1998 host target gene. LOC51236 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC51236, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC51236 BINDING SITE, designated SEQ ID:18574, to the nucleotide sequence of VGAM1998 RNA, herein designated VGAM RNA, also designated SEQ ID:4709.

[70372] Another function of VGAM1998 is therefore inhibition of LOC51236 (Accession NM_016458). Accordingly, utilities of VGAM1998 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC51236. LOC90268 (Accession XM_030424) is another VGAM1998 host target gene. LOC90268 BINDING SITE is HOST TARGET binding site found in the 3` untranslated

region of mRNA encoded by LOC90268, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC90268 BINDING SITE, designated SEQ ID:31042, to the nucleotide sequence of VGAM1998 RNA, herein designated VGAM RNA, also designated SEQ ID:4709.

[70373] Another function of VGAM1998 is therefore inhibition of LOC90268 (Accession XM_030424). Accordingly, utilities of VGAM1998 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC90268. Fig. 1 further provides a conceptual description of a novel bioinformatically detected viral gene of the present invention, referred to here as Viral Genomic Address Messenger 1999 (VGAM1999) viral gene, which modulates expression of respective host target genes thereof, the function and utility of which host target genes is known in the art.

[70374] VGAM1999 is a novel bioinformatically detected regulatory, non protein coding, viral micro RNA (miRNA) gene. The method by which VGAM1999 was detected is described hereinabove with reference to Figs. 1-8.

[70375] VGAM1999 gene, herein designated VGAM GENE, is a viral

gene contained in the genome of Nipah Virus. VGAM1999 host target gene, herein designated VGAM HOST TARGET GENE, is a human gene contained in the human genome.

[70376] VGAM1999 gene encodes a VGAM1999 precursor RNA, herein designated VGAM PRECURSOR RNA. Similar to other miRNA genes, and unlike most ordinary genes, VGAM1999 precursor RNA does not encode a protein. A nucleotide sequence identical or highly similar to the nucleotide sequence of VGAM1999 precursor RNA is designated SEQ ID:1985, and is provided hereinbelow with reference to the sequence listing part. Nucleotide sequence SEQ ID:1985 is located at position 11709 relative to the genome of Nipah Virus.

[70377] VGAM1999 precursor RNA folds onto itself, forming VGAM1999 folded precursor RNA, herein designated VGAM FOLDED PRECURSOR RNA, which has a two-dimensional `hairpin structure`. As is well known in the art, this `hairpin structure`, is typical of RNA encoded by miRNA genes, and is due to the fact that the nucleotide sequence of the first half of the RNA encoded by a miRNA gene is an accurate or partial inversed-reversed sequence of the nucleotide sequence of the second half thereof.

[70378] An enzyme complex designated DICER COMPLEX, `dices`

the VGAM1999 folded precursor RNA into VGAM1999 RNA, herein designated VGAM RNA, a single stranded ~22 nt long RNA segment. As is known in the art, `dicing` of a hairpin structured RNA precursor product into a short ~22nt RNA segment is catalyzed by an enzyme complex comprising an enzyme called Dicer together with other necessary proteins. A probable (over 51%) nucleotide sequence of VGAM1999 RNA is designated SEQ ID:4710, and is provided hereinbelow with reference to the sequence listing part.

[70379] VGAM1999 host target gene, herein designated VGAM HOST TARGET GENE, encodes a corresponding messenger RNA, VGAM1999 host target RNA, herein designated VGAM HOST TARGET RNA. VGAM1999 host target RNA comprises three regions, as is typical of mRNA of a protein coding gene: a 5` untranslated region, a protein coding region and a 3` untranslated region, designated 5`UTR, PROTEIN CODING and 3`UTR respectively.

[70380] VGAM1999 RNA, herein designated VGAM RNA, binds complementarily to one or more host target binding sites located in untranslated regions of VGAM1999 host target RNA, herein designated VGAM HOST TARGET RNA. This complementary binding is due to the fact that the nu-

cleotide sequence of VGAM1999 RNA is an accurate or a partial inversed-reversed sequence of the nucleotide sequence of each of the host target binding sites. As an illustration, Fig. 1 shows three such host target binding sites, designated BINDING SITE I, BINDING SITE II and BINDING SITE III respectively. It is appreciated that the number of host target binding sites shown in Fig. 1 is meant as an illustration only, and is not meant to be limiting - VGAM1999 RNA, herein designated VGAM RNA, may have a different number of host target binding sites in untranslated regions of a VGAM1999 host target RNA, herein designated VGAM HOST TARGET RNA. It is further appreciated that while Fig. 1 depicts host target binding sites in the 3`UTR region, this is meant as an example only - these host target binding sites may be located in the 3`UTR region, the 5`UTR region, or in both 3`UTR and 5`UTR regions.

[70381] The complementary binding of VGAM1999 RNA, herein designated VGAM RNA, to host target binding sites on VGAM1999 host target RNA, herein designated VGAM HOST TARGET RNA, such as BINDING SITE I, BINDING SITE II and BINDING SITE III, inhibits translation of VGAM1999 host target RNA into VGAM1999 host target protein,

herein designated VGAM HOST TARGET PROTEIN. VGAM host target protein is therefore outlined by a broken line.

[70382] It is appreciated that VGAM1999 host target gene, herein designated VGAM HOST TARGET GENE, in fact represents a plurality of VGAM1999 host target genes. The mRNA of each one of this plurality of VGAM1999 host target genes comprises one or more host target binding sites, each having a nucleotide sequence which is at least partly complementary to VGAM1999 RNA, herein designated VGAM RNA, and which when bound by VGAM1999 RNA causes inhibition of translation of respective one or more VGAM1999 host target proteins.

[70383] It is further appreciated by one skilled in the art that the mode of translational inhibition illustrated by Fig. 1 with specific reference to translational inhibition exerted by VGAM1999 gene, herein designated VGAM GENE, on one or more VGAM1999 host target gene, herein designated VGAM HOST TARGET GENE, is in fact common to other known non-viral miRNA genes. As mentioned hereinabove with reference to the background section, although a specific complementary binding site has been demonstrated only for some of the known miRNA genes (primarily Lin-4 and Let-7), all other recently discovered miRNA genes are

also believed by those skilled in the art to modulate expression of other genes by complementary binding, although specific complementary binding sites of these other miRNA genes have not yet been found (Ruvkun G., `Perspective: Glimpses of a tiny RNA world`, Science 294,779 (2001)).

[70384] It is yet further appreciated that a function of VGAM1999 is inhibition of expression of host target genes, as part of a novel viral mechanism of attacking a host. Accordingly, utilities of VGAM1999 include diagnosis, prevention and treatment of viral infection by Nipah Virus. Specific functions, and accordingly utilities, of VGAM1999 correlate with, and may be deduced from, the identity of the host target genes which VGAM1999 binds and inhibits, and the function of these host target genes, as elaborated hereinbelow.

[70385] Nucleotide sequences of the VGAM1999 precursor RNA, herein designated VGAM PRECURSOR RNA, and of the `diced` VGAM1999 RNA, herein designated VGAM RNA, and a schematic representation of the secondary folding of VGAM1999 folded precursor RNA, herein designated VGAM FOLDED PRECURSOR RNA, of VGAM1999 are further described hereinbelow with reference to Table 1.

[70386] Nucleotide sequences of host target binding sites, such as BINDING SITE-I, BINDING SITE-II and BINDING SITE-III of Fig. 1, found on VGAM1999 host target RNA, and schematic representation of the complementarity of each of these host target binding sites to VGAM1999 RNA, herein designated VGAM RNA, are described hereinbelow with reference to Table 2.

[70387] As mentioned hereinabove with reference to Fig. 1, a function of VGAM1999 gene, herein designated VGAM is inhibition of expression of VGAM1999 target genes. It is appreciated that specific functions, and accordingly utilities, of VGAM1999 correlate with, and may be deduced from, the identity of the target genes which VGAM1999 binds and inhibits, and the function of these target genes, as elaborated hereinbelow.

[70388] Fer (fps/fes related) Tyrosine Kinase (phosphoprotein NCP94) (FER, Accession NM_005246) is a VGAM1999 host target gene. FER BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by FER, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of FER BINDING SITE, designated SEQ ID:11754,

to the nucleotide sequence of VGAM1999 RNA, herein designated VGAM RNA, also designated SEQ ID:4710.

[70389] A function of VGAM1999 is therefore inhibition of Fer (fps/fes related) Tyrosine Kinase (phosphoprotein NCP94) (FER, Accession NM_005246), a gene which Non-receptor protein tyrosine kinase; member of the Src family. Accordingly, utilities of VGAM1999 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FER. The function of FER and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM224.FLJ13385 (Accession NM_024853) is another VGAM1999 host target gene. FLJ13385 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by FLJ13385, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of FLJ13385 BINDING SITE, designated SEQ ID:24283, to the nucleotide sequence of VGAM1999 RNA, herein designated VGAM RNA, also designated SEQ ID:4710.

[70390] Another function of VGAM1999 is therefore inhibition of

FLJ13385 (Accession NM_024853). Accordingly, utilities of VGAM1999 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ13385. KIAA0555 (Accession NM_014790) is another VGAM1999 host target gene. KIAA0555 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by KIAA0555, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of KIAA0555 BINDING SITE, designated SEQ ID:16677, to the nucleotide sequence of VGAM1999 RNA, herein designated VGAM RNA, also designated SEQ ID:4710.

[70391] Another function of VGAM1999 is therefore inhibition of KIAA0555 (Accession NM_014790). Accordingly, utilities of VGAM1999 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0555. PDZ Domain Containing 2 (PDZD2, Accession XM_087705) is another VGAM1999 host target gene. PDZD2 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by PDZD2, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III.

Table 2 illustrates the complementarity of the nucleotide sequences of PDZD2 BINDING SITE, designated SEQ ID:39385, to the nucleotide sequence of VGAM1999 RNA, herein designated VGAM RNA, also designated SEQ ID:4710.

[70392] Another function of VGAM1999 is therefore inhibition of PDZ Domain Containing 2 (PDZD2, Accession XM_087705). Accordingly, utilities of VGAM1999 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PDZD2. LOC203411 (Accession XM_117547) is another VGAM1999 host target gene. LOC203411 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC203411, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC203411 BINDING SITE, designated SEQ ID:43563, to the nucleotide sequence of VGAM1999 RNA, herein designated VGAM RNA, also designated SEQ ID:4710.

[70393] Another function of VGAM1999 is therefore inhibition of LOC203411 (Accession XM_117547). Accordingly, utilities of VGAM1999 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with LOC203411. LOC54499 (Accession XM_047479) is another VGAM1999 host target gene. LOC54499 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC54499, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC54499 BINDING SITE, designated SEQ ID:34966, to the nucleotide sequence of VGAM1999 RNA, herein designated VGAM RNA, also designated SEQ ID:4710.

[70394] Another function of VGAM1999 is therefore inhibition of LOC54499 (Accession XM_047479). Accordingly, utilities of VGAM1999 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC54499. Fig. 1 further provides a conceptual description of a novel bioinformatically detected viral gene of the present invention, referred to here as Viral Genomic Address Messenger 2000 (VGAM2000) viral gene, which modulates expression of respective host target genes thereof, the function and utility of which host target genes is known in the art.

[70395] VGAM2000 is a novel bioinformatically detected regula-

tory, non protein coding, viral micro RNA (miRNA) gene. The method by which VGAM2000 was detected is described hereinabove with reference to Figs. 1-8.

[70396] VGAM2000 gene, herein designated VGAM GENE, is a viral gene contained in the genome of Nipah Virus. VGAM2000 host target gene, herein designated VGAM HOST TARGET GENE, is a human gene contained in the human genome.

[70397] VGAM2000 gene encodes a VGAM2000 precursor RNA, herein designated VGAM PRECURSOR RNA. Similar to other miRNA genes, and unlike most ordinary genes, VGAM2000 precursor RNA does not encode a protein. A nucleotide sequence identical or highly similar to the nucleotide sequence of VGAM2000 precursor RNA is designated SEQ ID:1986, and is provided hereinbelow with reference to the sequence listing part. Nucleotide sequence SEQ ID:1986 is located at position 10918 relative to the genome of Nipah Virus.

[70398] VGAM2000 precursor RNA folds onto itself, forming VGAM2000 folded precursor RNA, herein designated VGAM FOLDED PRECURSOR RNA, which has a two-dimensional `hairpin structure`. As is well known in the art, this `hairpin structure`, is typical of RNA encoded by miRNA genes, and is due to the fact that the nucleotide

sequence of the first half of the RNA encoded by a miRNA gene is an accurate or partial inversed-reversed sequence of the nucleotide sequence of the second half thereof.

[70399] An enzyme complex designated DICER COMPLEX, `dices` the VGAM2000 folded precursor RNA into VGAM2000 RNA, herein designated VGAM RNA, a single stranded ~22 nt long RNA segment. As is known in the art, `dicing` of a hairpin structured RNA precursor product into a short ~22nt RNA segment is catalyzed by an enzyme complex comprising an enzyme called Dicer together with other necessary proteins. A probable (over 80%) nucleotide sequence of VGAM2000 RNA is designated SEQ ID:4711, and is provided hereinbelow with reference to the sequence listing part.

[70400] VGAM2000 host target gene, herein designated VGAM HOST TARGET GENE, encodes a corresponding messenger RNA, VGAM2000 host target RNA, herein designated VGAM HOST TARGET RNA. VGAM2000 host target RNA comprises three regions, as is typical of mRNA of a protein coding gene: a 5` untranslated region, a protein coding region and a 3` untranslated region, designated 5`UTR, PROTEIN CODING and 3`UTR respectively.

[70401] VGAM2000 RNA, herein designated VGAM RNA, binds

complementarily to one or more host target binding sites located in untranslated regions of VGAM2000 host target RNA, herein designated VGAM HOST TARGET RNA. This complementary binding is due to the fact that the nucleotide sequence of VGAM2000 RNA is an accurate or a partial inversed-reversed sequence of the nucleotide sequence of each of the host target binding sites. As an illustration, Fig. 1 shows three such host target binding sites, designated BINDING SITE I, BINDING SITE II and BINDING SITE III respectively. It is appreciated that the number of host target binding sites shown in Fig. 1 is meant as an illustration only, and is not meant to be limiting - VGAM2000 RNA, herein designated VGAM RNA, may have a different number of host target binding sites in untranslated regions of a VGAM2000 host target RNA, herein designated VGAM HOST TARGET RNA. It is further appreciated that while Fig. 1 depicts host target binding sites in the 3`UTR region, this is meant as an example only - these host target binding sites may be located in the 3`UTR region, the 5`UTR region, or in both 3`UTR and 5`UTR regions.

[70402] The complementary binding of VGAM2000 RNA, herein designated VGAM RNA, to host target binding sites on

VGAM2000 host target RNA, herein designated VGAM HOST TARGET RNA, such as BINDING SITE I, BINDING SITE II and BINDING SITE III, inhibits translation of VGAM2000 host target RNA into VGAM2000 host target protein, herein designated VGAM HOST TARGET PROTEIN. VGAM host target protein is therefore outlined by a broken line.

[70403] It is appreciated that VGAM2000 host target gene, herein designated VGAM HOST TARGET GENE, in fact represents a plurality of VGAM2000 host target genes. The mRNA of each one of this plurality of VGAM2000 host target genes comprises one or more host target binding sites, each having a nucleotide sequence which is at least partly complementary to VGAM2000 RNA, herein designated VGAM RNA, and which when bound by VGAM2000 RNA causes inhibition of translation of respective one or more VGAM2000 host target proteins.

[70404] It is further appreciated by one skilled in the art that the mode of translational inhibition illustrated by Fig. 1 with specific reference to translational inhibition exerted by VGAM2000 gene, herein designated VGAM GENE, on one or more VGAM2000 host target gene, herein designated VGAM HOST TARGET GENE, is in fact common to other known non-viral miRNA genes. As mentioned hereinabove

with reference to the background section, although a specific complementary binding site has been demonstrated only for some of the known miRNA genes (primarily Lin-4 and Let-7), all other recently discovered miRNA genes are also believed by those skilled in the art to modulate expression of other genes by complementary binding, although specific complementary binding sites of these other miRNA genes have not yet been found (Ruvkun G., `Perspective: Glimpses of a tiny RNA world`, Science 294,779 (2001)).

[70405] It is yet further appreciated that a function of VGAM2000 is inhibition of expression of host target genes, as part of a novel viral mechanism of attacking a host. Accordingly, utilities of VGAM2000 include diagnosis, prevention and treatment of viral infection by Nipah Virus. Specific functions, and accordingly utilities, of VGAM2000 correlate with, and may be deduced from, the identity of the host target genes which VGAM2000 binds and inhibits, and the function of these host target genes, as elaborated hereinbelow.

[70406] Nucleotide sequences of the VGAM2000 precursor RNA, herein designated VGAM PRECURSOR RNA, and of the `diced` VGAM2000 RNA, herein designated VGAM RNA,

and a schematic representation of the secondary folding of VGAM2000 folded precursor RNA, herein designated VGAM FOLDED PRECURSOR RNA, of VGAM2000 are further described hereinbelow with reference to Table 1.

[70407] Nucleotide sequences of host target binding sites, such as BINDING SITE-I, BINDING SITE-II and BINDING SITE-III of Fig. 1, found on VGAM2000 host target RNA, and schematic representation of the complementarity of each of these host target binding sites to VGAM2000 RNA, herein designated VGAM RNA, are described hereinbelow with reference to Table 2.

[70408] As mentioned hereinabove with reference to Fig. 1, a function of VGAM2000 gene, herein designated VGAM is inhibition of expression of VGAM2000 target genes. It is appreciated that specific functions, and accordingly utilities, of VGAM2000 correlate with, and may be deduced from, the identity of the target genes which VGAM2000 binds and inhibits, and the function of these target genes, as elaborated hereinbelow.

[70409] Cytochrome P450, Subfamily IVF, Polypeptide 3 (leukotriene B4 omega hydroxylase) (CYP4F3, Accession NM_000896) is a VGAM2000 host target gene. CYP4F3 BINDING SITE is HOST TARGET binding site found in the

3` untranslated region of mRNA encoded by CYP4F3, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of CYP4F3 BINDING SITE, designated SEQ ID:6590, to the nucleotide sequence of VGAM2000 RNA, herein designated VGAM RNA, also designated SEQ ID:4711.

[70410] A function of VGAM2000 is therefore inhibition of Cytochrome P450, Subfamily IVF, Polypeptide 3 (leukotriene B4 omega hydroxylase) (CYP4F3, Accession NM_000896), a gene which converts leukotriene B4 into the less active 20-hydroxy-leukotriene B4. Accordingly, utilities of VGAM2000 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CYP4F3. The function of CYP4F3 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM186.MHC Class II Transactivator (MHC2TA, Accession NM_000246) is another VGAM2000 host target gene. MHC2TA BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by MHC2TA, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or

BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of MHC2TA BINDING SITE, designated SEQ ID:5782, to the nucleotide sequence of VGAM2000 RNA, herein designated VGAM RNA, also designated SEQ ID:4711.

[70411] Another function of VGAM2000 is therefore inhibition of MHC Class II Transactivator (MHC2TA, Accession NM_000246). Accordingly, utilities of VGAM2000 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MHC2TA. Kruppel-like Factor 3 (basic) (KLF3, Accession NM_016531) is another VGAM2000 host target gene. KLF3 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by KLF3, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of KLF3 BINDING SITE, designated SEQ ID:18595, to the nucleotide sequence of VGAM2000 RNA, herein designated VGAM RNA, also designated SEQ ID:4711.

[70412] Another function of VGAM2000 is therefore inhibition of Kruppel-like Factor 3 (basic) (KLF3, Accession NM_016531). Accordingly, utilities of VGAM2000 include

diagnosis, prevention and treatment of diseases and clinical conditions associated with KLF3. LOC201626 (Accession XM_114349) is another VGAM2000 host target gene. LOC201626 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC201626, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC201626 BINDING SITE, designated SEQ ID:42890, to the nucleotide sequence of VGAM2000 RNA, herein designated VGAM RNA, also designated SEQ ID:4711.

[70413] Another function of VGAM2000 is therefore inhibition of LOC201626 (Accession XM_114349). Accordingly, utilities of VGAM2000 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC201626. Fig. 1 further provides a conceptual description of a novel bioinformatically detected viral gene of the present invention, referred to here as Viral Genomic Address Messenger 2001 (VGAM2001) viral gene, which modulates expression of respective host target genes thereof, the function and utility of which host target genes is known in the art.

[70414] VGAM2001 is a novel bioinformatically detected regulatory, non protein coding, viral micro RNA (miRNA) gene. The method by which VGAM2001 was detected is described hereinabove with reference to Figs. 1-8.

[70415] VGAM2001 gene, herein designated VGAM GENE, is a viral gene contained in the genome of Nipah Virus. VGAM2001 host target gene, herein designated VGAM HOST TARGET GENE, is a human gene contained in the human genome.

[70416] VGAM2001 gene encodes a VGAM2001 precursor RNA, herein designated VGAM PRECURSOR RNA. Similar to other miRNA genes, and unlike most ordinary genes, VGAM2001 precursor RNA does not encode a protein. A nucleotide sequence identical or highly similar to the nucleotide sequence of VGAM2001 precursor RNA is designated SEQ ID:1987, and is provided hereinbelow with reference to the sequence listing part. Nucleotide sequence SEQ ID:1987 is located at position 2273 relative to the genome of Nipah Virus.

[70417] VGAM2001 precursor RNA folds onto itself, forming VGAM2001 folded precursor RNA, herein designated VGAM FOLDED PRECURSOR RNA, which has a two-dimensional `hairpin structure`. As is well known in the art, this `hairpin structure`, is typical of RNA encoded by

miRNA genes, and is due to the fact that the nucleotide sequence of the first half of the RNA encoded by a miRNA gene is an accurate or partial inversed-reversed sequence of the nucleotide sequence of the second half thereof.

[70418] An enzyme complex designated DICER COMPLEX, `dices` the VGAM2001 folded precursor RNA into VGAM2001 RNA, herein designated VGAM RNA, a single stranded ~22 nt long RNA segment. As is known in the art, `dicing` of a hairpin structured RNA precursor product into a short ~22nt RNA segment is catalyzed by an enzyme complex comprising an enzyme called Dicer together with other necessary proteins. A probable (over 76%) nucleotide sequence of VGAM2001 RNA is designated SEQ ID:4712, and is provided hereinbelow with reference to the sequence listing part.

[70419] VGAM2001 host target gene, herein designated VGAM HOST TARGET GENE, encodes a corresponding messenger RNA, VGAM2001 host target RNA, herein designated VGAM HOST TARGET RNA. VGAM2001 host target RNA comprises three regions, as is typical of mRNA of a protein coding gene: a 5` untranslated region, a protein coding region and a 3` untranslated region, designated 5`UTR, PROTEIN CODING and 3`UTR respectively.

[70420] VGAM2001 RNA, herein designated VGAM RNA, binds complementarily to one or more host target binding sites located in untranslated regions of VGAM2001 host target RNA, herein designated VGAM HOST TARGET RNA. This complementary binding is due to the fact that the nucleotide sequence of VGAM2001 RNA is an accurate or a partial inversed-reversed sequence of the nucleotide sequence of each of the host target binding sites. As an illustration, Fig. 1 shows three such host target binding sites, designated BINDING SITE I, BINDING SITE II and BINDING SITE III respectively. It is appreciated that the number of host target binding sites shown in Fig. 1 is meant as an illustration only, and is not meant to be limiting - VGAM2001 RNA, herein designated VGAM RNA, may have a different number of host target binding sites in untranslated regions of a VGAM2001 host target RNA, herein designated VGAM HOST TARGET RNA. It is further appreciated that while Fig. 1 depicts host target binding sites in the 3`UTR region, this is meant as an example only - these host target binding sites may be located in the 3`UTR region, the 5`UTR region, or in both 3`UTR and 5`UTR regions.

[70421] The complementary binding of VGAM2001 RNA, herein

designated VGAM RNA, to host target binding sites on VGAM2001 host target RNA, herein designated VGAM HOST TARGET RNA, such as BINDING SITE I, BINDING SITE II and BINDING SITE III, inhibits translation of VGAM2001 host target RNA into VGAM2001 host target protein, herein designated VGAM HOST TARGET PROTEIN. VGAM host target protein is therefore outlined by a broken line.

[70422] It is appreciated that VGAM2001 host target gene, herein designated VGAM HOST TARGET GENE, in fact represents a plurality of VGAM2001 host target genes. The mRNA of each one of this plurality of VGAM2001 host target genes comprises one or more host target binding sites, each having a nucleotide sequence which is at least partly complementary to VGAM2001 RNA, herein designated VGAM RNA, and which when bound by VGAM2001 RNA causes inhibition of translation of respective one or more VGAM2001 host target proteins.

[70423] It is further appreciated by one skilled in the art that the mode of translational inhibition illustrated by Fig. 1 with specific reference to translational inhibition exerted by VGAM2001 gene, herein designated VGAM GENE, on one or more VGAM2001 host target gene, herein designated VGAM HOST TARGET GENE, is in fact common to other

known non-viral miRNA genes. As mentioned hereinabove with reference to the background section, although a specific complementary binding site has been demonstrated only for some of the known miRNA genes (primarily Lin-4 and Let-7), all other recently discovered miRNA genes are also believed by those skilled in the art to modulate expression of other genes by complementary binding, although specific complementary binding sites of these other miRNA genes have not yet been found (Ruvkun G., `Perspective: Glimpses of a tiny RNA world`, Science 294,779 (2001)).

[70424] It is yet further appreciated that a function of VGAM2001 is inhibition of expression of host target genes, as part of a novel viral mechanism of attacking a host. Accordingly, utilities of VGAM2001 include diagnosis, prevention and treatment of viral infection by Nipah Virus. Specific functions, and accordingly utilities, of VGAM2001 correlate with, and may be deduced from, the identity of the host target genes which VGAM2001 binds and inhibits, and the function of these host target genes, as elaborated hereinbelow.

[70425] Nucleotide sequences of the VGAM2001 precursor RNA, herein designated VGAM PRECURSOR RNA, and of the

`diced` VGAM2001 RNA, herein designated VGAM RNA, and a schematic representation of the secondary folding of VGAM2001 folded precursor RNA, herein designated VGAM FOLDED PRECURSOR RNA, of VGAM2001 are further described hereinbelow with reference to Table 1.

[70426] Nucleotide sequences of host target binding sites, such as BINDING SITE-I, BINDING SITE-II and BINDING SITE-III of Fig. 1, found on VGAM2001 host target RNA, and schematic representation of the complementarity of each of these host target binding sites to VGAM2001 RNA, herein designated VGAM RNA, are described hereinbelow with reference to Table 2.

[70427] As mentioned hereinabove with reference to Fig. 1, a function of VGAM2001 gene, herein designated VGAM is inhibition of expression of VGAM2001 target genes. It is appreciated that specific functions, and accordingly utilities, of VGAM2001 correlate with, and may be deduced from, the identity of the target genes which VGAM2001 binds and inhibits, and the function of these target genes, as elaborated hereinbelow.

[70428] Ring Finger Protein 12 (RNF12, Accession NM_016120) is a VGAM2001 host target gene. RNF12 BINDING SITE is HOST TARGET binding site found in the 5` untranslated

region of mRNA encoded by RNF12, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of RNF12 BINDING SITE, designated SEQ ID:18202, to the nucleotide sequence of VGAM2001 RNA, herein designated VGAM RNA, also designated SEQ ID:4712.

[70429] A function of VGAM2001 is therefore inhibition of Ring Finger Protein 12 (RNF12, Accession NM_016120), a gene which acts as a negative coregulator for LIM homeodomain transcription factors. Accordingly, utilities of VGAM2001 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RNF12. The function of RNF12 has been established by previous studies. RNF12 encodes a RING H2 zinc finger protein, RLIM, that acts as a negative coregulator for LIM homeodomain transcription factors. Scanlan et al. (1999) isolated a human RNF12 cDNA by screening antigens recognized by autologous antibodies in patients with renal cell carcinoma. Using PCR, Ostendorff et al. (2000) amplified an RNF12 cDNA encoding a deduced 624-amino acid protein that shares 89% and 85% sequence identity with the mouse and chick Rlim proteins, respectively. Northern blot

analysis detected wide expression of mouse Rnf12. Ostendorff et al. (2002) examined RLIM as a mediator of cofactor exchange on DNA-bound transcription factors. SDS-PAGE and mutation analysis showed the RLIM, dependent on the RING finger, is ubiquitinated in the presence of UBCH5 (OMIM Ref. No. 602961). RLIM, however, is unable to ubiquitinate LHX1 (OMIM Ref. No. 601999), LXH3 (OMIM Ref. No. 600577), or ISL1 (OMIM Ref. No. 600366) transcription factors. RLIM efficiently ubiquitinates LMO2 (OMIM Ref. No. 180385) and LMO4 (OMIM Ref. No. 603129), but only in the absence of LIM interaction domain of CLIM1 (OMIM Ref. No. 603450) or CLIM2 (OMIM Ref. No. 603451). The CLIM proteins themselves are specifically polyubiquitinated in the presence of RLIM in the presence or absence of LMO2 or LHX3. Western blot analysis and fluorescence microscopy showed that proteosomal degradation of CLIM depends on the presence of the RLIM RING finger and that RLIM and CLIM levels are reciprocally correlated. Analysis of mutated or truncated forms of RLIM demonstrated that the interaction domain is restricted to a basic evolutionarily conserved and centrally located region of approximately 100 amino acids. A combined EMSA and in vitro ubiquitination analysis, as

well as chromatin immunoprecipitation analysis, indicated that RLIM, dependent on the presence of the RING finger, is able to ubiquitinate CLIM cofactors associated with DNA-bound LHX3. Ostendorff et al. (2002) proposed a model of cofactor exchange which depends on the nuclear concentrations of these components and the availability of other LIM-domain interaction partners

[70430] Full details of the abovementioned studies are described in the following publications, the disclosure of which are hereby incorporated by reference:

[70431] Ostendorff, H. P.; Peirano, R. I.; Peters, M. A.; Schluter, A.; Bossenz, M.; Scheffner, M.; Bach, I. : Ubiquitination-dependent cofactor exchange on LIM homeodomain transcription factors. Nature 416: 99-103, 2002. ; and

[70433] Further studies establishing the function and utilities of RNF12 are found in John Hopkins OMIM database record ID 300379, and in sited publications numbered 986-98 and 9448 listed in the bibliography section hereinbelow, which are also hereby incorporated by refer-

ence.KIAA0680 (Accession NM_014721) is another VGAM2001 host target gene. KIAA0680 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by KIAA0680, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of KIAA0680 BINDING SITE, designated SEQ ID:16286, to the nucleotide sequence of VGAM2001 RNA, herein designated VGAM RNA, also designated SEQ ID:4712.

[70434] Another function of VGAM2001 is therefore inhibition of KIAA0680 (Accession NM_014721). Accordingly, utilities of VGAM2001 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0680. Fig. 1 further provides a conceptual description of a novel bioinformatically detected viral gene of the present invention, referred to here as Viral Genomic Address Messenger 2002 (VGAM2002) viral gene, which modulates expression of respective host target genes thereof, the function and utility of which host target genes is known in the art.

[70435] VGAM2002 is a novel bioinformatically detected regulatory, non protein coding, viral micro RNA (miRNA) gene.

The method by which VGAM2002 was detected is described hereinabove with reference to Figs. 1-8.

[70436] VGAM2002 gene, herein designated VGAM GENE, is a viral gene contained in the genome of Nipah Virus. VGAM2002 host target gene, herein designated VGAM HOST TARGET GENE, is a human gene contained in the human genome.

[70437] VGAM2002 gene encodes a VGAM2002 precursor RNA, herein designated VGAM PRECURSOR RNA. Similar to other miRNA genes, and unlike most ordinary genes, VGAM2002 precursor RNA does not encode a protein. A nucleotide sequence identical or highly similar to the nucleotide sequence of VGAM2002 precursor RNA is designated SEQ ID:1988, and is provided hereinbelow with reference to the sequence listing part. Nucleotide sequence SEQ ID:1988 is located at position 1516 relative to the genome of Nipah Virus.

[70438] VGAM2002 precursor RNA folds onto itself, forming VGAM2002 folded precursor RNA, herein designated VGAM FOLDED PRECURSOR RNA, which has a two-dimensional `hairpin structure`. As is well known in the art, this `hairpin structure`, is typical of RNA encoded by miRNA genes, and is due to the fact that the nucleotide sequence of the first half of the RNA encoded by a miRNA

gene is an accurate or partial inversed-reversed sequence of the nucleotide sequence of the second half thereof.

[70439] An enzyme complex designated DICER COMPLEX, `dices` the VGAM2002 folded precursor RNA into VGAM2002 RNA, herein designated VGAM RNA, a single stranded ~22 nt long RNA segment. As is known in the art, `dicing` of a hairpin structured RNA precursor product into a short ~22nt RNA segment is catalyzed by an enzyme complex comprising an enzyme called Dicer together with other necessary proteins. A probable (over 63%) nucleotide sequence of VGAM2002 RNA is designated SEQ ID:4713, and is provided hereinbelow with reference to the sequence listing part.

[70440] VGAM2002 host target gene, herein designated VGAM HOST TARGET GENE, encodes a corresponding messenger RNA, VGAM2002 host target RNA, herein designated VGAM HOST TARGET RNA. VGAM2002 host target RNA comprises three regions, as is typical of mRNA of a protein coding gene: a 5` untranslated region, a protein coding region and a 3` untranslated region, designated 5`UTR, PROTEIN CODING and 3`UTR respectively.

[70441] VGAM2002 RNA, herein designated VGAM RNA, binds complementarily to one or more host target binding sites

located in untranslated regions of VGAM2002 host target RNA, herein designated VGAM HOST TARGET RNA. This complementary binding is due to the fact that the nucleotide sequence of VGAM2002 RNA is an accurate or a partial inversed-reversed sequence of the nucleotide sequence of each of the host target binding sites. As an illustration, Fig. 1 shows three such host target binding sites, designated BINDING SITE I, BINDING SITE II and BINDING SITE III respectively. It is appreciated that the number of host target binding sites shown in Fig. 1 is meant as an illustration only, and is not meant to be limiting - VGAM2002 RNA, herein designated VGAM RNA, may have a different number of host target binding sites in untranslated regions of a VGAM2002 host target RNA, herein designated VGAM HOST TARGET RNA. It is further appreciated that while Fig. 1 depicts host target binding sites in the 3`UTR region, this is meant as an example only - these host target binding sites may be located in the 3`UTR region, the 5`UTR region, or in both 3`UTR and 5`UTR regions.

[70442] The complementary binding of VGAM2002 RNA, herein designated VGAM RNA, to host target binding sites on VGAM2002 host target RNA, herein designated VGAM

HOST TARGET RNA, such as BINDING SITE I, BINDING SITE II and BINDING SITE III, inhibits translation of VGAM2002 host target RNA into VGAM2002 host target protein, herein designated VGAM HOST TARGET PROTEIN. VGAM host target protein is therefore outlined by a broken line.

[70443] It is appreciated that VGAM2002 host target gene, herein designated VGAM HOST TARGET GENE, in fact represents a plurality of VGAM2002 host target genes. The mRNA of each one of this plurality of VGAM2002 host target genes comprises one or more host target binding sites, each having a nucleotide sequence which is at least partly complementary to VGAM2002 RNA, herein designated VGAM RNA, and which when bound by VGAM2002 RNA causes inhibition of translation of respective one or more VGAM2002 host target proteins.

[70444] It is further appreciated by one skilled in the art that the mode of translational inhibition illustrated by Fig. 1 with specific reference to translational inhibition exerted by VGAM2002 gene, herein designated VGAM GENE, on one or more VGAM2002 host target gene, herein designated VGAM HOST TARGET GENE, is in fact common to other known non-viral miRNA genes. As mentioned hereinabove with reference to the background section, although a spe-

cific complementary binding site has been demonstrated only for some of the known miRNA genes (primarily Lin-4 and Let-7), all other recently discovered miRNA genes are also believed by those skilled in the art to modulate expression of other genes by complementary binding, although specific complementary binding sites of these other miRNA genes have not yet been found (Ruvkun G., `Perspective: Glimpses of a tiny RNA world`, Science 294,779 (2001)).

[70445] It is yet further appreciated that a function of VGAM2002 is inhibition of expression of host target genes, as part of a novel viral mechanism of attacking a host. Accordingly, utilities of VGAM2002 include diagnosis, prevention and treatment of viral infection by Nipah Virus. Specific functions, and accordingly utilities, of VGAM2002 correlate with, and may be deduced from, the identity of the host target genes which VGAM2002 binds and inhibits, and the function of these host target genes, as elaborated hereinbelow.

[70446] Nucleotide sequences of the VGAM2002 precursor RNA, herein designated VGAM PRECURSOR RNA, and of the `diced` VGAM2002 RNA, herein designated VGAM RNA, and a schematic representation of the secondary folding

of VGAM2002 folded precursor RNA, herein designated VGAM FOLDED PRECURSOR RNA, of VGAM2002 are further described hereinbelow with reference to Table 1.

[70447] Nucleotide sequences of host target binding sites, such as BINDING SITE-I, BINDING SITE-II and BINDING SITE-III of Fig. 1, found on VGAM2002 host target RNA, and schematic representation of the complementarity of each of these host target binding sites to VGAM2002 RNA, herein designated VGAM RNA, are described hereinbelow with reference to Table 2.

[70448] As mentioned hereinabove with reference to Fig. 1, a function of VGAM2002 gene, herein designated VGAM is inhibition of expression of VGAM2002 target genes. It is appreciated that specific functions, and accordingly utilities, of VGAM2002 correlate with, and may be deduced from, the identity of the target genes which VGAM2002 binds and inhibits, and the function of these target genes, as elaborated hereinbelow.

[70449] Fibroblast Growth Factor 2 (basic) (FGF2, Accession NM_002006) is a VGAM2002 host target gene. FGF2 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by FGF2, corresponding to a HOST TARGET binding site such as BINDING

SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of FGF2 BINDING SITE, designated SEQ ID:7731, to the nucleotide sequence of VGAM2002 RNA, herein designated VGAM RNA, also designated SEQ ID:4713.

[70450] A function of VGAM2002 is therefore inhibition of Fibroblast Growth Factor 2 (basic) (FGF2, Accession NM_002006), a gene which probably involved in nervous system development and function. Accordingly, utilities of VGAM2002 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FGF2. The function of FGF2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM51.Follistatin-like 3 (secreted glycoprotein) (FSTL3, Accession NM_005860) is another VGAM2002 host target gene. FSTL3 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by FSTL3, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of FSTL3 BINDING SITE, designated SEQ ID:12471, to the nucleotide sequence of

VGAM2002 RNA, herein designated VGAM RNA, also designated SEQ ID:4713.

[70451] Another function of VGAM2002 is therefore inhibition of Follistatin-like 3 (secreted glycoprotein) (FSTL3, Accession NM_005860), a gene which is a member of the follistatin-module-protein family. Accordingly, utilities of VGAM2002 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FSTL3. The function of FSTL3 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM200.Prostaglandin-endoperoxide Synthase 2 (prostaglandin G/H synthase and cyclooxygenase) (PTGS2, Accession NM_000963) is another VGAM2002 host target gene. PTGS2 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by PTGS2, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of PTGS2 BINDING SITE, designated SEQ ID:6685, to the nucleotide sequence of VGAM2002 RNA, herein designated VGAM RNA, also designated SEQ ID:4713.

[70452] Another function of VGAM2002 is therefore inhibition of Prostaglandin-endoperoxide Synthase 2 (prostaglandin G/H synthase and cyclooxygenase) (PTGS2, Accession NM_000963), a gene which may have a role as a major mediator of inflammation and/or a role for prostanoid signaling in activity-dependent plasticity. Accordingly, utilities of VGAM2002 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PTGS2. The function of PTGS2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM292.X-ray Repair Complementing Defective Repair In Chinese Hamster Cells 2 (XRCC2, Accession NM_005431) is another VGAM2002 host target gene. XRCC2 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by XRCC2, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of XRCC2 BINDING SITE, designated SEQ ID:11904, to the nucleotide sequence of VGAM2002 RNA, herein designated VGAM RNA, also designated SEQ ID:4713.

[70453] Another function of VGAM2002 is therefore inhibition of X-ray Repair Complementing Defective Repair In Chinese Hamster Cells 2 (XRCC2, Accession NM_005431), a gene which involves in the homologous recombination repair (hrr) pathway of double-stranded dna. Accordingly, utilities of VGAM2002 include diagnosis, prevention and treatment of diseases and clinical conditions associated with XRCC2. The function of XRCC2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM241.FLJ20445 (Accession NM_017824) is another VGAM2002 host target gene. FLJ20445 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by FLJ20445, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of FLJ20445 BINDING SITE, designated SEQ ID:19475, to the nucleotide sequence of VGAM2002 RNA, herein designated VGAM RNA, also designated SEQ ID:4713.

[70454] Another function of VGAM2002 is therefore inhibition of FLJ20445 (Accession NM_017824). Accordingly, utilities of

VGAM2002 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ20445. KIAA1328 (Accession XM_029429) is another VGAM2002 host target gene. KIAA1328 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by KIAA1328, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of KIAA1328 BINDING SITE, designated SEQ ID:30888, to the nucleotide sequence of VGAM2002 RNA, herein designated VGAM RNA, also designated SEQ ID:4713.

[70455] Another function of VGAM2002 is therefore inhibition of KIAA1328 (Accession XM_029429). Accordingly, utilities of VGAM2002 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1328. KIAA1361 (Accession XM_030845) is another VGAM2002 host target gene. KIAA1361 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by KIAA1361, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of

KIAA1361 BINDING SITE, designated SEQ ID:31170, to the nucleotide sequence of VGAM2002 RNA, herein designated VGAM RNA, also designated SEQ ID:4713.

[70456] Another function of VGAM2002 is therefore inhibition of KIAA1361 (Accession XM_030845). Accordingly, utilities of VGAM2002 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1361. Rab11-FIP2 (Accession NM_014904) is another VGAM2002 host target gene. Rab11-FIP2 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by Rab11-FIP2, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of Rab11-FIP2 BINDING SITE, designated SEQ ID:17094, to the nucleotide sequence of VGAM2002 RNA, herein designated VGAM RNA, also designated SEQ ID:4713.

[70457] Another function of VGAM2002 is therefore inhibition of Rab11-FIP2 (Accession NM_014904). Accordingly, utilities of VGAM2002 include diagnosis, prevention and treatment of diseases and clinical conditions associated with Rab11-FIP2. LOC146136 (Accession XM_053737) is another VGAM2002 host target gene. LOC146136 BINDING

SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by LOC146136, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC146136 BINDING SITE, designated SEQ ID:36110, to the nucleotide sequence of VGAM2002 RNA, herein designated VGAM RNA, also designated SEQ ID:4713.

[70458] Another function of VGAM2002 is therefore inhibition of LOC146136 (Accession XM_053737). Accordingly, utilities of VGAM2002 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC146136. LOC150577 (Accession XM_097918) is another VGAM2002 host target gene. LOC150577 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by LOC150577, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC150577 BINDING SITE, designated SEQ ID:41223, to the nucleotide sequence of VGAM2002 RNA, herein designated VGAM RNA, also designated SEQ ID:4713.

[70459] Another function of VGAM2002 is therefore inhibition of

LOC150577 (Accession XM_097918). Accordingly, utilities of VGAM2002 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC150577. LOC220565 (Accession XM_165417) is another VGAM2002 host target gene. LOC220565 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC220565, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC220565 BINDING SITE, designated SEQ ID:43629, to the nucleotide sequence of VGAM2002 RNA, herein designated VGAM RNA, also designated SEQ ID:4713.

[70460] Another function of VGAM2002 is therefore inhibition of LOC220565 (Accession XM_165417). Accordingly, utilities of VGAM2002 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC220565. Fig. 1 further provides a conceptual description of a novel bioinformatically detected viral gene of the present invention, referred to here as Viral Genomic Address Messenger 2003 (VGAM2003) viral gene, which modulates expression of respective host target genes thereof, the function and utility of which host target genes

is known in the art.

[70461] VGAM2003 is a novel bioinformatically detected regulatory, non protein coding, viral micro RNA (miRNA) gene. The method by which VGAM2003 was detected is described hereinabove with reference to Figs. 1-8.

[70462] VGAM2003 gene, herein designated VGAM GENE, is a viral gene contained in the genome of Nipah Virus. VGAM2003 host target gene, herein designated VGAM HOST TARGET GENE, is a human gene contained in the human genome.

[70463] VGAM2003 gene encodes a VGAM2003 precursor RNA, herein designated VGAM PRECURSOR RNA. Similar to other miRNA genes, and unlike most ordinary genes, VGAM2003 precursor RNA does not encode a protein. A nucleotide sequence identical or highly similar to the nucleotide sequence of VGAM2003 precursor RNA is designated SEQ ID:1989, and is provided hereinbelow with reference to the sequence listing part. Nucleotide sequence SEQ ID:1989 is located at position 5319 relative to the genome of Nipah Virus.

[70464] VGAM2003 precursor RNA folds onto itself, forming VGAM2003 folded precursor RNA, herein designated VGAM FOLDED PRECURSOR RNA, which has a two-dimensional `hairpin structure`. As is well known in the

art, this `hairpin structure`, is typical of RNA encoded by miRNA genes, and is due to the fact that the nucleotide sequence of the first half of the RNA encoded by a miRNA gene is an accurate or partial inversed-reversed sequence of the nucleotide sequence of the second half thereof.

[70465] An enzyme complex designated DICER COMPLEX, `dices` the VGAM2003 folded precursor RNA into VGAM2003 RNA, herein designated VGAM RNA, a single stranded ~22 nt long RNA segment. As is known in the art, `dicing` of a hairpin structured RNA precursor product into a short ~22nt RNA segment is catalyzed by an enzyme complex comprising an enzyme called Dicer together with other necessary proteins. A probable (over 43%) nucleotide sequence of VGAM2003 RNA is designated SEQ ID:4714, and is provided hereinbelow with reference to the sequence listing part.

[70466] VGAM2003 host target gene, herein designated VGAM HOST TARGET GENE, encodes a corresponding messenger RNA, VGAM2003 host target RNA, herein designated VGAM HOST TARGET RNA. VGAM2003 host target RNA comprises three regions, as is typical of mRNA of a protein coding gene: a 5` untranslated region, a protein coding region and a 3` untranslated region, designated

5`UTR, PROTEIN CODING and 3`UTR respectively.

[70467] VGAM2003 RNA, herein designated VGAM RNA, binds complementarily to one or more host target binding sites located in untranslated regions of VGAM2003 host target RNA, herein designated VGAM HOST TARGET RNA. This complementary binding is due to the fact that the nucleotide sequence of VGAM2003 RNA is an accurate or a partial inversed-reversed sequence of the nucleotide sequence of each of the host target binding sites. As an illustration, Fig. 1 shows three such host target binding sites, designated BINDING SITE I, BINDING SITE II and BINDING SITE III respectively. It is appreciated that the number of host target binding sites shown in Fig. 1 is meant as an illustration only, and is not meant to be limiting - VGAM2003 RNA, herein designated VGAM RNA, may have a different number of host target binding sites in untranslated regions of a VGAM2003 host target RNA, herein designated VGAM HOST TARGET RNA. It is further appreciated that while Fig. 1 depicts host target binding sites in the 3`UTR region, this is meant as an example only - these host target binding sites may be located in the 3`UTR region, the 5`UTR region, or in both 3`UTR and 5`UTR regions.

[70468] The complementary binding of VGAM2003 RNA, herein designated VGAM RNA, to host target binding sites on VGAM2003 host target RNA, herein designated VGAM HOST TARGET RNA, such as BINDING SITE I, BINDING SITE II and BINDING SITE III, inhibits translation of VGAM2003 host target RNA into VGAM2003 host target protein, herein designated VGAM HOST TARGET PROTEIN. VGAM host target protein is therefore outlined by a broken line.

[70469] It is appreciated that VGAM2003 host target gene, herein designated VGAM HOST TARGET GENE, in fact represents a plurality of VGAM2003 host target genes. The mRNA of each one of this plurality of VGAM2003 host target genes comprises one or more host target binding sites, each having a nucleotide sequence which is at least partly complementary to VGAM2003 RNA, herein designated VGAM RNA, and which when bound by VGAM2003 RNA causes inhibition of translation of respective one or more VGAM2003 host target proteins.

[70470] It is further appreciated by one skilled in the art that the mode of translational inhibition illustrated by Fig. 1 with specific reference to translational inhibition exerted by VGAM2003 gene, herein designated VGAM GENE, on one or more VGAM2003 host target gene, herein designated

VGAM HOST TARGET GENE, is in fact common to other known non-viral miRNA genes. As mentioned hereinabove with reference to the background section, although a specific complementary binding site has been demonstrated only for some of the known miRNA genes (primarily Lin-4 and Let-7), all other recently discovered miRNA genes are also believed by those skilled in the art to modulate expression of other genes by complementary binding, although specific complementary binding sites of these other miRNA genes have not yet been found (Ruvkun G., `Perspective: Glimpses of a tiny RNA world`, Science 294,779 (2001)).

[70471] It is yet further appreciated that a function of VGAM2003 is inhibition of expression of host target genes, as part of a novel viral mechanism of attacking a host. Accordingly, utilities of VGAM2003 include diagnosis, prevention and treatment of viral infection by Nipah Virus. Specific functions, and accordingly utilities, of VGAM2003 correlate with, and may be deduced from, the identity of the host target genes which VGAM2003 binds and inhibits, and the function of these host target genes, as elaborated hereinbelow.

[70472] Nucleotide sequences of the VGAM2003 precursor RNA,

herein designated VGAM PRECURSOR RNA, and of the `diced` VGAM2003 RNA, herein designated VGAM RNA, and a schematic representation of the secondary folding of VGAM2003 folded precursor RNA, herein designated VGAM FOLDED PRECURSOR RNA, of VGAM2003 are further described hereinbelow with reference to Table 1.

[70473] Nucleotide sequences of host target binding sites, such as BINDING SITE-I, BINDING SITE-II and BINDING SITE-III of Fig. 1, found on VGAM2003 host target RNA, and schematic representation of the complementarity of each of these host target binding sites to VGAM2003 RNA, herein designated VGAM RNA, are described hereinbelow with reference to Table 2.

[70474] As mentioned hereinabove with reference to Fig. 1, a function of VGAM2003 gene, herein designated VGAM is inhibition of expression of VGAM2003 target genes. It is appreciated that specific functions, and accordingly utilities, of VGAM2003 correlate with, and may be deduced from, the identity of the target genes which VGAM2003 binds and inhibits, and the function of these target genes, as elaborated hereinbelow.

[70475] Ankyrin 3, Node of Ranvier (ankyrin G) (ANK3, Accession NM_020987) is a VGAM2003 host target gene. ANK3

BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by ANK3, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of ANK3 BINDING SITE, designated SEQ ID:21983, to the nucleotide sequence of VGAM2003 RNA, herein designated VGAM RNA, also designated SEQ ID:4714.

[70476] A function of VGAM2003 is therefore inhibition of Ankyrin 3, Node of Ranvier (ankyrin G) (ANK3, Accession NM_020987), a gene which plays key roles in activities such as cell motility, activation, proliferation. Accordingly, utilities of VGAM2003 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ANK3. The function of ANK3 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM1527.Adaptor-related Protein Complex 2, Beta 1 Subunit (AP2B1, Accession NM_001282) is another VGAM2003 host target gene. AP2B1 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by AP2B1, corresponding to a HOST TARGET binding site such as BINDING SITE I, BIND-

ING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of AP2B1 BINDING SITE, designated SEQ ID:6956, to the nucleotide sequence of VGAM2003 RNA, herein designated VGAM RNA, also designated SEQ ID:4714.

[70477] Another function of VGAM2003 is therefore inhibition of Adaptor-related Protein Complex 2, Beta 1 Subunit (AP2B1, Accession NM_001282), a gene which links clathrin to receptors in coated vesicles. Accordingly, utilities of VGAM2003 include diagnosis, prevention and treatment of diseases and clinical conditions associated with AP2B1. The function of AP2B1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM1126.Beta-1,3-glucuronyltransferase 1 (glucuronosyltransferase P) (B3GAT1, Accession NM_054025) is another VGAM2003 host target gene. B3GAT1 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by B3GAT1, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide

sequences of B3GAT1 BINDING SITE, designated SEQ ID:27632, to the nucleotide sequence of VGAM2003 RNA, herein designated VGAM RNA, also designated SEQ ID:4714.

[70478] Another function of VGAM2003 is therefore inhibition of Beta-1,3-glucuronyltransferase 1 (glucuronosyltransferase P) (B3GAT1, Accession NM_054025). Accordingly, utilities of VGAM2003 include diagnosis, prevention and treatment of diseases and clinical conditions associated with B3GAT1. Developmentally Regulated GTP Binding Protein 2 (DRG2, Accession NM_001388) is another VGAM2003 host target gene. DRG2 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by DRG2, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of DRG2 BINDING SITE, designated SEQ ID:7076, to the nucleotide sequence of VGAM2003 RNA, herein designated VGAM RNA, also designated SEQ ID:4714.

[70479] Another function of VGAM2003 is therefore inhibition of Developmentally Regulated GTP Binding Protein 2 (DRG2, Accession NM_001388), a gene which may play a role in

cell proliferation, differentiation and death. Accordingly, utilities of VGAM2003 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DRG2. The function of DRG2 has been established by previous studies. Using a subtractive hybridization strategy, Schenker et al. (1994) identified embryonic lung fibroblast cDNAs whose expression was selectively repressed in SV40-transformed cells. One cDNA encoded a predicted 364-amino acid protein that was designated DRG2. DRG2 contains the 5 sequence motifs that are conserved in all GTP-binding proteins. Northern blot analysis detected DRG2 expression as a major 2-kb and a minor 1.5-kb transcript in various tissues. The shorter mRNA appeared to result from use of an alternative polyadenylation site. By fluorescence in situ hybridization, Schenker and Trueb (1997) mapped the DRG2 gene to 17p13-p12. Vlangos et al. (2000) mapped the DRG2 gene to 17p11.2 within the Smith-Magenis syndrome critical region by somatic cell hybrid analysis.

[70480] Full details of the abovementioned studies are described in the following publications, the disclosure of which are hereby incorporated by reference:

[70481] Schenker, T.; Lach, C.; Kessler, B.; Calderara, S.; Trueb, B. :

A novel GTP-binding protein which is selectively repressed in SV40 transformed fibroblasts. J. Biol. Chem. 269: 25447-25453, 1994. ; and

[70482] Vlangos, C. N.; Das, P.; Patel, P. I.; Elsea, S. H. : Assignment of developmentally regulated GTP-binding protein (DRG2) to human chromosome band 17p11.2 with somatic cell hybrids and l.

[70483] Further studies establishing the function and utilities of DRG2 are found in John Hopkins OMIM database record ID 602986, and in sited publications numbered 122 and 8846 listed in the bibliography section hereinbelow, which are also hereby incorporated by reference.GM2 Ganglioside Activator Protein (GM2A, Accession XM_041978) is another VGAM2003 host target gene. GM2A BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by GM2A, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of GM2A BINDING SITE, designated SEQ ID:33661, to the nucleotide sequence of VGAM2003 RNA, herein designated VGAM RNA, also designated SEQ ID:4714.

[70484] Another function of VGAM2003 is therefore inhibition of

GM2 Ganglioside Activator Protein (GM2A, Accession XM_041978). Accordingly, utilities of VGAM2003 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GM2A. GRAF (Accession NM_015071) is another VGAM2003 host target gene. GRAF BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by GRAF, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of GRAF BINDING SITE, designated SEQ ID:17443, to the nucleotide sequence of VGAM2003 RNA, herein designated VGAM RNA, also designated SEQ ID:4714.

[70485] Another function of VGAM2003 is therefore inhibition of GRAF (Accession NM_015071), a gene which ia a GTPase activating protein for p21-rac. Accordingly, utilities of VGAM2003 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GRAF. The function of GRAF and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM430.MAX Gene Associated (MGA, Accession XM_031689) is another VGAM2003 host target gene. MGA

BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by MGA, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of MGA BINDING SITE, designated SEQ ID:31454, to the nucleotide sequence of VGAM2003 RNA, herein designated VGAM RNA, also designated SEQ ID:4714.

[70486] Another function of VGAM2003 is therefore inhibition of MAX Gene Associated (MGA, Accession XM_031689), a gene which plays a role in the final steps of digestion of starch. Accordingly, utilities of VGAM2003 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGA. The function of MGA has been established by previous studies. Maltase-glucoamylase (MGA; EC 3.2.1.20) is a brush border membrane enzyme that plays a role in the final steps of digestion of starch. Naim et al. (1988) showed that it is synthesized as a single-chain polypeptide precursor, acquires N- and O-linked carbohydrates, and does not undergo intracellular or extracellular proteolytic cleavage. Nichols et al. (1998) purified and partially sequenced the human maltase-glucoamylase protein. By RT-PCR using degener-

ate oligonucleotides based on the MGA protein sequence, they isolated human small intestine MGA cDNAs. The deduced 1,857-amino acid MGA protein has a putative type II membrane anchor, 2 WIDMNE catalytic sites, which are characteristic of carbohydrate hydrolases such as sucrase-isomaltase (SI; 222900), and 2 glycosyl hydrolase family 31 signature 2 sequences. MGA also has 19 potential N-glycosylation sites and 253 potential O-glycosylation sites. The MGA protein shares 59% sequence identity with SI. RT-PCR detected MGA expression in human small intestine, granulocyte, and kidney but not in salivary gland or pancreas.

[70487] Full details of the abovementioned studies are described in the following publications, the disclosure of which are hereby incorporated by reference:

[70488] Naim, H. Y.; Sterchi, E. E.; Lentze, M. J. : Structure, biosynthesis, and glycosylation of human small intestinal maltase-glucoamylase. J. Biol. Chem. 263: 19709-19717, 1988. ; and

[70489] Nichols, B. L.; Eldering, J.; Avery, S.; Hahn, D.; Quaroni, A.; Sterchi, E. : Human small intestinal maltase-glucoamylase cDNA cloning: homology to sucrase-isomaltase. J. Biol. Chem. 273: 3.

[70490] Further studies establishing the function and utilities of MGA are found in John Hopkins OMIM database record ID 154360, and in sited publications numbered 12706-12708 listed in the bibliography section hereinbelow, which are also hereby incorporated by reference.Neuroligin 2 (NLGN2, Accession XM_113932) is another VGAM2003 host target gene. NLGN2 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by NLGN2, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of NLGN2 BINDING SITE, designated SEQ ID:42550, to the nucleotide sequence of VGAM2003 RNA, herein designated VGAM RNA, also designated SEQ ID:4714.

[70491] Another function of VGAM2003 is therefore inhibition of Neuroligin 2 (NLGN2, Accession XM_113932), a gene which rapidly hydrolyzes choline released into the synapse. Accordingly, utilities of VGAM2003 include diagnosis, prevention and treatment of diseases and clinical conditions associated with NLGN2. The function of NLGN2 and its association with various diseases and clinical conditions, has been established by previous studies, as de-

scribed hereinabove with reference to VGAM178.Nebulin-related Anchoring Protein (NRAP, Accession NM_006175) is another VGAM2003 host target gene. NRAP BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by NRAP, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of NRAP BINDING SITE, designated SEQ ID:12834, to the nucleotide sequence of VGAM2003 RNA, herein designated VGAM RNA, also designated SEQ ID:4714.

[70492] Another function of VGAM2003 is therefore inhibition of Nebulin-related Anchoring Protein (NRAP, Accession NM_006175), a gene which performs an anchoring function to link the terminal actin filaments of myofibrils to protein complexes located beneath the sarcolemma. Accordingly, utilities of VGAM2003 include diagnosis, prevention and treatment of diseases and clinical conditions associated with NRAP. The function of NRAP and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM649.Ret Proto-oncogene (multiple endocrine neoplasia and medullary thyroid car-

cinoma 1, Hirschsprung disease) (RET, Accession NM_020630) is another VGAM2003 host target gene. RET BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by RET, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of RET BINDING SITE, designated SEQ ID:21785, to the nucleotide sequence of VGAM2003 RNA, herein designated VGAM RNA, also designated SEQ ID:4714.

[70493] Another function of VGAM2003 is therefore inhibition of Ret Proto-oncogene (multiple endocrine neoplasia and medullary thyroid carcinoma 1, Hirschsprung disease) (RET, Accession NM_020630), a gene which transduces signals for cell growth and differentiation. Accordingly, utilities of VGAM2003 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RET. The function of RET and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM381.Tumor Necrosis Factor (ligand) Superfamily, Member 11 (TNFSF11, Accession NM_033012) is another VGAM2003 host target gene. TNFSF11 BINDING

SITE1 and TNFSF11 BINDING SITE2 are HOST TARGET binding sites found in untranslated regions of mRNA encoded by TNFSF11, corresponding to HOST TARGET binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of TNFSF11 BINDING SITE1 and TNFSF11 BINDING SITE2, designated SEQ ID:26898 and SEQ ID:9801 respectively, to the nucleotide sequence of VGAM2003 RNA, herein designated VGAM RNA, also designated SEQ ID:4714.

[70494] Another function of VGAM2003 is therefore inhibition of Tumor Necrosis Factor (ligand) Superfamily, Member 11 (TNFSF11, Accession NM_033012), a gene which may be an important regulator of interactions between t cells and dendritic cells and may play a may play a role in the regulation of the t cell-dependent immune response. may also play an important role in enhanced bone-resorption in humoral hypercalcemia of malignancy. Accordingly, utilities of VGAM2003 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TNFSF11. The function of TNFSF11 has been established by previous studies. Croucher et al. (2001) demonstrated that myeloma cells express the critical osteoclas-

togenic factor RANKL. Injection of myeloma cells into a C57BL strain of mice resulted in development of bone disease characterized by a significant decrease in cancellous bone volume in the tibial and femoral metaphyses, an increase in osteoclast formation, and radiologic evidence of osteolytic bone lesions. Treatment of mice with established myeloma with recombinant OPG protein, the soluble decoy receptor for RANKL, prevented the development of lytic bone lesions. OPG treatment was associated with preservation of cancellous bone volume and inhibition of osteoclast formation. OPG also promoted an increase in femoral, tibial, and vertebral BMD. The data suggested that the RANKL/RANK/OPG system may play a critical role in the development of osteolytic bone disease in multiple myeloma and that targeting this system may have therapeutic potential. Takayanagi et al. (2002) demonstrated that RANKL induces the IFN-beta (OMIM Ref. No. 147640) gene in osteoclast precursor cells, and that IFN-beta inhibits the differentiation of osteoclasts by interfering with the RANKL-induced expression of c-Fos (OMIM Ref. No. 164810), an essential transcription factor for the formation of osteoclasts. This IFN-beta gene induction mechanism is distinct from that induced by virus, and is depen-

dent on c-Fos itself. Thus an autoregulatory mechanism operates--the RANKL-induced c-Fos induces its own inhibitor. The importance of this regulatory mechanism for bone homeostasis is emphasized by the observation that mice deficient in IFN-beta signaling exhibit severe osteopenia accompanied by enhanced osteoclastogenesis.

[70495] Full details of the abovementioned studies are described in the following publications, the disclosure of which are hereby incorporated by reference:

[70496] Croucher, P. I.; Shipman, C. M.; Lippitt, J.; Perry, M.; Asosingh, K.; Hijzen, A.; Brabbs, A. C.; van Beek, E. J. R.; Holen, I.; Skerry, T. M.; Dunstan, C. R.; Russell, G. [70498] Further studies establishing the function and utilities of TNFSF11 are found in John Hopkins OMIM database record ID 602642, and in sited publications numbered 2390-2396, 1147 and 8538 listed in the bibliography section hereinbelow, which are also hereby incorporated

by reference.Chromosome 20 Open Reading Frame 142 (C20orf142, Accession XM_059257) is another VGAM2003 host target gene. C20orf142 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by C20orf142, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of C20orf142 BINDING SITE, designated SEQ ID:36931, to the nucleotide sequence of VGAM2003 RNA, herein designated VGAM RNA, also designated SEQ ID:4714.

[70499] Another function of VGAM2003 is therefore inhibition of Chromosome 20 Open Reading Frame 142 (C20orf142, Accession XM_059257). Accordingly, utilities of VGAM2003 include diagnosis, prevention and treatment of diseases and clinical conditions associated with C20orf142. DKFZP564O0423 (Accession XM_166254) is another VGAM2003 host target gene. DKFZP564O0423 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by DKFZP564O0423, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nu-

cleotide sequences of DKFZP564O0423 BINDING SITE, designated SEQ ID:44068, to the nucleotide sequence of VGAM2003 RNA, herein designated VGAM RNA, also designated SEQ ID:4714.

[70500] Another function of VGAM2003 is therefore inhibition of DKFZP564O0423 (Accession XM_166254). Accordingly, utilities of VGAM2003 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZP564O0423. FLJ20232 (Accession NM_019008) is another VGAM2003 host target gene. FLJ20232 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by FLJ20232, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of FLJ20232 BINDING SITE, designated SEQ ID:21088, to the nucleotide sequence of VGAM2003 RNA, herein designated VGAM RNA, also designated SEQ ID:4714.

[70501] Another function of VGAM2003 is therefore inhibition of FLJ20232 (Accession NM_019008). Accordingly, utilities of VGAM2003 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ20232. FLJ20686 (Accession NM_017925) is another

VGAM2003 host target gene. FLJ20686 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by FLJ20686, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of FLJ20686 BINDING SITE, designated SEQ ID:19594, to the nucleotide sequence of VGAM2003 RNA, herein designated VGAM RNA, also designated SEQ ID:4714.

[70502] Another function of VGAM2003 is therefore inhibition of FLJ20686 (Accession NM_017925). Accordingly, utilities of VGAM2003 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ20686. FLJ22501 (Accession NM_024747) is another VGAM2003 host target gene. FLJ22501 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by FLJ22501, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of FLJ22501 BINDING SITE, designated SEQ ID:24082, to the nucleotide sequence of VGAM2003 RNA, herein designated VGAM RNA, also designated SEQ ID:4714.

[70503] Another function of VGAM2003 is therefore inhibition of FLJ22501 (Accession NM_024747). Accordingly, utilities of VGAM2003 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ22501. FLJ23120 (Accession XM_097961) is another VGAM2003 host target gene. FLJ23120 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by FLJ23120, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of FLJ23120 BINDING SITE, designated SEQ ID:41265, to the nucleotide sequence of VGAM2003 RNA, herein designated VGAM RNA, also designated SEQ ID:4714.

[70504] Another function of VGAM2003 is therefore inhibition of FLJ23120 (Accession XM_097961). Accordingly, utilities of VGAM2003 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ23120. FLJ23309 (Accession NM_024896) is another VGAM2003 host target gene. FLJ23309 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by FLJ23309, corresponding to a HOST TARGET binding site such as BINDING SITE I, BIND-

ING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of FLJ23309 BINDING SITE, designated SEQ ID:24379, to the nucleotide sequence of VGAM2003 RNA, herein designated VGAM RNA, also designated SEQ ID:4714.

[70505] Another function of VGAM2003 is therefore inhibition of FLJ23309 (Accession NM_024896). Accordingly, utilities of VGAM2003 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ23309. FLJ25438 (Accession NM_144696) is another VGAM2003 host target gene. FLJ25438 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by FLJ25438, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of FLJ25438 BINDING SITE, designated SEQ ID:29521, to the nucleotide sequence of VGAM2003 RNA, herein designated VGAM RNA, also designated SEQ ID:4714.

[70506] Another function of VGAM2003 is therefore inhibition of FLJ25438 (Accession NM_144696). Accordingly, utilities of VGAM2003 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

FLJ25438. Kruppel-like Factor 5 (intestinal) (KLF5, Accession NM_001730) is another VGAM2003 host target gene. KLF5 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by KLF5, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of KLF5 BINDING SITE, designated SEQ ID:7464, to the nucleotide sequence of VGAM2003 RNA, herein designated VGAM RNA, also designated SEQ ID:4714.

[70507] Another function of VGAM2003 is therefore inhibition of Kruppel-like Factor 5 (intestinal) (KLF5, Accession NM_001730). Accordingly, utilities of VGAM2003 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KLF5. PRO0659 (Accession NM_014138) is another VGAM2003 host target gene. PRO0659 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by PRO0659, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of PRO0659 BINDING SITE, designated SEQ ID:15407, to the nucleotide sequence of VGAM2003 RNA,

herein designated VGAM RNA, also designated SEQ ID:4714.

[70508] Another function of VGAM2003 is therefore inhibition of PRO0659 (Accession NM_014138). Accordingly, utilities of VGAM2003 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PRO0659. LOC144453 (Accession XM_084869) is another VGAM2003 host target gene. LOC144453 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC144453, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC144453 BINDING SITE, designated SEQ ID:37748, to the nucleotide sequence of VGAM2003 RNA, herein designated VGAM RNA, also designated SEQ ID:4714.

[70509] Another function of VGAM2003 is therefore inhibition of LOC144453 (Accession XM_084869). Accordingly, utilities of VGAM2003 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC144453. LOC148223 (Accession XM_086101) is another VGAM2003 host target gene. LOC148223 BINDING SITE is HOST TARGET binding site found in the 3` un-

translated region of mRNA encoded by LOC148223, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC148223 BINDING SITE, designated SEQ ID:38495, to the nucleotide sequence of VGAM2003 RNA, herein designated VGAM RNA, also designated SEQ ID:4714.

[70510] Another function of VGAM2003 is therefore inhibition of LOC148223 (Accession XM_086101). Accordingly, utilities of VGAM2003 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC148223. LOC158819 (Accession XM_098995) is another VGAM2003 host target gene. LOC158819 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by LOC158819, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC158819 BINDING SITE, designated SEQ ID:42027, to the nucleotide sequence of VGAM2003 RNA, herein designated VGAM RNA, also designated SEQ ID:4714.

[70511] Another function of VGAM2003 is therefore inhibition of LOC158819 (Accession XM_098995). Accordingly, utilities

of VGAM2003 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC158819. LOC202934 (Accession XM_117486) is another VGAM2003 host target gene. LOC202934 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC202934, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC202934 BINDING SITE, designated SEQ ID:43462, to the nucleotide sequence of VGAM2003 RNA, herein designated VGAM RNA, also designated SEQ ID:4714.

[70512] Another function of VGAM2003 is therefore inhibition of LOC202934 (Accession XM_117486). Accordingly, utilities of VGAM2003 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC202934. LOC206426 (Accession XM_116505) is another VGAM2003 host target gene. LOC206426 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC206426, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences

of LOC206426 BINDING SITE, designated SEQ ID:43118, to the nucleotide sequence of VGAM2003 RNA, herein designated VGAM RNA, also designated SEQ ID:4714.

[70513] Another function of VGAM2003 is therefore inhibition of LOC206426 (Accession XM_116505). Accordingly, utilities of VGAM2003 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC206426. LOC255465 (Accession XM_173206) is another VGAM2003 host target gene. LOC255465 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC255465, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC255465 BINDING SITE, designated SEQ ID:46454, to the nucleotide sequence of VGAM2003 RNA, herein designated VGAM RNA, also designated SEQ ID:4714.

[70514] Another function of VGAM2003 is therefore inhibition of LOC255465 (Accession XM_173206). Accordingly, utilities of VGAM2003 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC255465. Fig. 1 further provides a conceptual description of a novel bioinformatically detected viral gene of the

present invention, referred to here as Viral Genomic Address Messenger 2004 (VGAM2004) viral gene, which modulates expression of respective host target genes thereof, the function and utility of which host target genes is known in the art.

[70515] VGAM2004 is a novel bioinformatically detected regulatory, non protein coding, viral micro RNA (miRNA) gene. The method by which VGAM2004 was detected is described hereinabove with reference to Figs. 1-8.

[70516] VGAM2004 gene, herein designated VGAM GENE, is a viral gene contained in the genome of Chimpanzee Cytomegalovirus. VGAM2004 host target gene, herein designated VGAM HOST TARGET GENE, is a human gene contained in the human genome.

[70517] VGAM2004 gene encodes a VGAM2004 precursor RNA, herein designated VGAM PRECURSOR RNA. Similar to other miRNA genes, and unlike most ordinary genes, VGAM2004 precursor RNA does not encode a protein. A nucleotide sequence identical or highly similar to the nucleotide sequence of VGAM2004 precursor RNA is designated SEQ ID:1990, and is provided hereinbelow with reference to the sequence listing part. Nucleotide sequence SEQ ID:1990 is located at position 177784 relative to the

genome of Chimpanzee Cytomegalovirus.

[70518] VGAM2004 precursor RNA folds onto itself, forming VGAM2004 folded precursor RNA, herein designated VGAM FOLDED PRECURSOR RNA, which has a two-dimensional `hairpin structure`. As is well known in the art, this `hairpin structure`, is typical of RNA encoded by miRNA genes, and is due to the fact that the nucleotide sequence of the first half of the RNA encoded by a miRNA gene is an accurate or partial inversed-reversed sequence of the nucleotide sequence of the second half thereof.

[70519] An enzyme complex designated DICER COMPLEX, `dices` the VGAM2004 folded precursor RNA into VGAM2004 RNA, herein designated VGAM RNA, a single stranded ~22 nt long RNA segment. As is known in the art, `dicing` of a hairpin structured RNA precursor product into a short ~22nt RNA segment is catalyzed by an enzyme complex comprising an enzyme called Dicer together with other necessary proteins. A probable (over 44%) nucleotide sequence of VGAM2004 RNA is designated SEQ ID:4715, and is provided hereinbelow with reference to the sequence listing part.

[70520] VGAM2004 host target gene, herein designated VGAM HOST TARGET GENE, encodes a corresponding messenger

RNA, VGAM2004 host target RNA, herein designated VGAM HOST TARGET RNA. VGAM2004 host target RNA comprises three regions, as is typical of mRNA of a protein coding gene: a 5` untranslated region, a protein coding region and a 3` untranslated region, designated 5`UTR, PROTEIN CODING and 3`UTR respectively.

[70521] VGAM2004 RNA, herein designated VGAM RNA, binds complementarily to one or more host target binding sites located in untranslated regions of VGAM2004 host target RNA, herein designated VGAM HOST TARGET RNA. This complementary binding is due to the fact that the nucleotide sequence of VGAM2004 RNA is an accurate or a partial inversed-reversed sequence of the nucleotide sequence of each of the host target binding sites. As an illustration, Fig. 1 shows three such host target binding sites, designated BINDING SITE I, BINDING SITE II and BINDING SITE III respectively. It is appreciated that the number of host target binding sites shown in Fig. 1 is meant as an illustration only, and is not meant to be limiting - VGAM2004 RNA, herein designated VGAM RNA, may have a different number of host target binding sites in untranslated regions of a VGAM2004 host target RNA, herein designated VGAM HOST TARGET RNA. It is further

appreciated that while Fig. 1 depicts host target binding sites in the 3`UTR region, this is meant as an example only - these host target binding sites may be located in the 3`UTR region, the 5`UTR region, or in both 3`UTR and 5`UTR regions.

[70522] The complementary binding of VGAM2004 RNA, herein designated VGAM RNA, to host target binding sites on VGAM2004 host target RNA, herein designated VGAM HOST TARGET RNA, such as BINDING SITE I, BINDING SITE II and BINDING SITE III, inhibits translation of VGAM2004 host target RNA into VGAM2004 host target protein, herein designated VGAM HOST TARGET PROTEIN. VGAM host target protein is therefore outlined by a broken line.

[70523] It is appreciated that VGAM2004 host target gene, herein designated VGAM HOST TARGET GENE, in fact represents a plurality of VGAM2004 host target genes. The mRNA of each one of this plurality of VGAM2004 host target genes comprises one or more host target binding sites, each having a nucleotide sequence which is at least partly complementary to VGAM2004 RNA, herein designated VGAM RNA, and which when bound by VGAM2004 RNA causes inhibition of translation of respective one or more VGAM2004 host target proteins.

[70524] It is further appreciated by one skilled in the art that the mode of translational inhibition illustrated by Fig. 1 with specific reference to translational inhibition exerted by VGAM2004 gene, herein designated VGAM GENE, on one or more VGAM2004 host target gene, herein designated VGAM HOST TARGET GENE, is in fact common to other known non-viral miRNA genes. As mentioned hereinabove with reference to the background section, although a specific complementary binding site has been demonstrated only for some of the known miRNA genes (primarily Lin-4 and Let-7), all other recently discovered miRNA genes are also believed by those skilled in the art to modulate expression of other genes by complementary binding, although specific complementary binding sites of these other miRNA genes have not yet been found (Ruvkun G., `Perspective: Glimpses of a tiny RNA world`, Science 294,779 (2001)).

[70525] It is yet further appreciated that a function of VGAM2004 is inhibition of expression of host target genes, as part of a novel viral mechanism of attacking a host. Accordingly, utilities of VGAM2004 include diagnosis, prevention and treatment of viral infection by Chimpanzee Cytomegalovirus. Specific functions, and accordingly utili-

ties, of VGAM2004 correlate with, and may be deduced from, the identity of the host target genes which VGAM2004 binds and inhibits, and the function of these host target genes, as elaborated hereinbelow.

[70526] Nucleotide sequences of the VGAM2004 precursor RNA, herein designated VGAM PRECURSOR RNA, and of the `diced` VGAM2004 RNA, herein designated VGAM RNA, and a schematic representation of the secondary folding of VGAM2004 folded precursor RNA, herein designated VGAM FOLDED PRECURSOR RNA, of VGAM2004 are further described hereinbelow with reference to Table 1.

[70527] Nucleotide sequences of host target binding sites, such as BINDING SITE-I, BINDING SITE-II and BINDING SITE-III of Fig. 1, found on VGAM2004 host target RNA, and schematic representation of the complementarity of each of these host target binding sites to VGAM2004 RNA, herein designated VGAM RNA, are described hereinbelow with reference to Table 2.

[70528] As mentioned hereinabove with reference to Fig. 1, a function of VGAM2004 gene, herein designated VGAM is inhibition of expression of VGAM2004 target genes. It is appreciated that specific functions, and accordingly utilities, of VGAM2004 correlate with, and may be deduced

from, the identity of the target genes which VGAM2004 binds and inhibits, and the function of these target genes, as elaborated hereinbelow.

[70529] G Protein-coupled Receptor 61 (GPR61, Accession XM_086232) is a VGAM2004 host target gene. GPR61 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by GPR61, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of GPR61 BINDING SITE, designated SEQ ID:38564, to the nucleotide sequence of VGAM2004 RNA, herein designated VGAM RNA, also designated SEQ ID:4715.

[70530] A function of VGAM2004 is therefore inhibition of G Protein-coupled Receptor 61 (GPR61, Accession XM_086232), a gene which transduces extracellular signals through heterotrimeric G proteins. Accordingly, utilities of VGAM2004 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GPR61. The function of GPR61 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM1958.Fig. 1 further provides a conceptual de-

scription of a novel bioinformatically detected viral gene of the present invention, referred to here as Viral Genomic Address Messenger 2005 (VGAM2005) viral gene, which modulates expression of respective host target genes thereof, the function and utility of which host target genes is known in the art.

[70531] VGAM2005 is a novel bioinformatically detected regulatory, non protein coding, viral micro RNA (miRNA) gene. The method by which VGAM2005 was detected is described hereinabove with reference to Figs. 1-8.

[70532] VGAM2005 gene, herein designated VGAM GENE, is a viral gene contained in the genome of Chimpanzee Cytomegalovirus. VGAM2005 host target gene, herein designated VGAM HOST TARGET GENE, is a human gene contained in the human genome.

[70533] VGAM2005 gene encodes a VGAM2005 precursor RNA, herein designated VGAM PRECURSOR RNA. Similar to other miRNA genes, and unlike most ordinary genes, VGAM2005 precursor RNA does not encode a protein. A nucleotide sequence identical or highly similar to the nucleotide sequence of VGAM2005 precursor RNA is designated SEQ ID:1991, and is provided hereinbelow with reference to the sequence listing part. Nucleotide sequence

SEQ ID:1991 is located at position 177914 relative to the genome of Chimpanzee Cytomegalovirus.

[70534] VGAM2005 precursor RNA folds onto itself, forming VGAM2005 folded precursor RNA, herein designated VGAM FOLDED PRECURSOR RNA, which has a two-dimensional `hairpin structure`. As is well known in the art, this `hairpin structure`, is typical of RNA encoded by miRNA genes, and is due to the fact that the nucleotide sequence of the first half of the RNA encoded by a miRNA gene is an accurate or partial inversed-reversed sequence of the nucleotide sequence of the second half thereof.

[70535] An enzyme complex designated DICER COMPLEX, `dices` the VGAM2005 folded precursor RNA into VGAM2005 RNA, herein designated VGAM RNA, a single stranded ~22 nt long RNA segment. As is known in the art, `dicing` of a hairpin structured RNA precursor product into a short ~22nt RNA segment is catalyzed by an enzyme complex comprising an enzyme called Dicer together with other necessary proteins. A probable (over 80%) nucleotide sequence of VGAM2005 RNA is designated SEQ ID:4716, and is provided hereinbelow with reference to the sequence listing part.

[70536] VGAM2005 host target gene, herein designated VGAM

HOST TARGET GENE, encodes a corresponding messenger RNA, VGAM2005 host target RNA, herein designated VGAM HOST TARGET RNA. VGAM2005 host target RNA comprises three regions, as is typical of mRNA of a protein coding gene: a 5` untranslated region, a protein coding region and a 3` untranslated region, designated 5`UTR, PROTEIN CODING and 3`UTR respectively.

[70537] VGAM2005 RNA, herein designated VGAM RNA, binds complementarily to one or more host target binding sites located in untranslated regions of VGAM2005 host target RNA, herein designated VGAM HOST TARGET RNA. This complementary binding is due to the fact that the nucleotide sequence of VGAM2005 RNA is an accurate or a partial inversed-reversed sequence of the nucleotide sequence of each of the host target binding sites. As an illustration, Fig. 1 shows three such host target binding sites, designated BINDING SITE I, BINDING SITE II and BINDING SITE III respectively. It is appreciated that the number of host target binding sites shown in Fig. 1 is meant as an illustration only, and is not meant to be limiting - VGAM2005 RNA, herein designated VGAM RNA, may have a different number of host target binding sites in untranslated regions of a VGAM2005 host target RNA,

herein designated VGAM HOST TARGET RNA. It is further appreciated that while Fig. 1 depicts host target binding sites in the 3`UTR region, this is meant as an example only - these host target binding sites may be located in the 3`UTR region, the 5`UTR region, or in both 3`UTR and 5`UTR regions.

[70538] The complementary binding of VGAM2005 RNA, herein designated VGAM RNA, to host target binding sites on VGAM2005 host target RNA, herein designated VGAM HOST TARGET RNA, such as BINDING SITE I, BINDING SITE II and BINDING SITE III, inhibits translation of VGAM2005 host target RNA into VGAM2005 host target protein, herein designated VGAM HOST TARGET PROTEIN. VGAM host target protein is therefore outlined by a broken line.

[70539] It is appreciated that VGAM2005 host target gene, herein designated VGAM HOST TARGET GENE, in fact represents a plurality of VGAM2005 host target genes. The mRNA of each one of this plurality of VGAM2005 host target genes comprises one or more host target binding sites, each having a nucleotide sequence which is at least partly complementary to VGAM2005 RNA, herein designated VGAM RNA, and which when bound by VGAM2005 RNA causes inhibition of translation of respective one or more

VGAM2005 host target proteins.

[70540] It is further appreciated by one skilled in the art that the mode of translational inhibition illustrated by Fig. 1 with specific reference to translational inhibition exerted by VGAM2005 gene, herein designated VGAM GENE, on one or more VGAM2005 host target gene, herein designated VGAM HOST TARGET GENE, is in fact common to other known non-viral miRNA genes. As mentioned hereinabove with reference to the background section, although a specific complementary binding site has been demonstrated only for some of the known miRNA genes (primarily Lin-4 and Let-7), all other recently discovered miRNA genes are also believed by those skilled in the art to modulate expression of other genes by complementary binding, although specific complementary binding sites of these other miRNA genes have not yet been found (Ruvkun G., `Perspective: Glimpses of a tiny RNA world`, Science 294,779 (2001)).

[70541] It is yet further appreciated that a function of VGAM2005 is inhibition of expression of host target genes, as part of a novel viral mechanism of attacking a host. Accordingly, utilities of VGAM2005 include diagnosis, prevention and treatment of viral infection by Chimpanzee Cy-

tomegalovirus. Specific functions, and accordingly utilities, of VGAM2005 correlate with, and may be deduced from, the identity of the host target genes which VGAM2005 binds and inhibits, and the function of these host target genes, as elaborated hereinbelow.

[70542] Nucleotide sequences of the VGAM2005 precursor RNA, herein designated VGAM PRECURSOR RNA, and of the `diced` VGAM2005 RNA, herein designated VGAM RNA, and a schematic representation of the secondary folding of VGAM2005 folded precursor RNA, herein designated VGAM FOLDED PRECURSOR RNA, of VGAM2005 are further described hereinbelow with reference to Table 1.

[70543] Nucleotide sequences of host target binding sites, such as BINDING SITE-I, BINDING SITE-II and BINDING SITE-III of Fig. 1, found on VGAM2005 host target RNA, and schematic representation of the complementarity of each of these host target binding sites to VGAM2005 RNA, herein designated VGAM RNA, are described hereinbelow with reference to Table 2.

[70544] As mentioned hereinabove with reference to Fig. 1, a function of VGAM2005 gene, herein designated VGAM is inhibition of expression of VGAM2005 target genes. It is appreciated that specific functions, and accordingly utili-

ties, of VGAM2005 correlate with, and may be deduced from, the identity of the target genes which VGAM2005 binds and inhibits, and the function of these target genes, as elaborated hereinbelow.

[70545] V-akt Murine Thymoma Viral Oncogene Homolog 2 (AKT2, Accession NM_001626) is a VGAM2005 host target gene. AKT2 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by AKT2, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of AKT2 BINDING SITE, designated SEQ ID:7338, to the nucleotide sequence of VGAM2005 RNA, herein designated VGAM RNA, also designated SEQ ID:4716.

[70546] A function of VGAM2005 is therefore inhibition of V-akt Murine Thymoma Viral Oncogene Homolog 2 (AKT2, Accession NM_001626). Accordingly, utilities of VGAM2005 include diagnosis, prevention and treatment of diseases and clinical conditions associated with AKT2. Tec Protein Tyrosine Kinase (TEC, Accession NM_003215) is another VGAM2005 host target gene. TEC BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by TEC, corresponding to a HOST TAR-

GET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of TEC BINDING SITE, designated SEQ ID:9218, to the nucleotide sequence of VGAM2005 RNA, herein designated VGAM RNA, also designated SEQ ID:4716.

[70547] Another function of VGAM2005 is therefore inhibition of Tec Protein Tyrosine Kinase (TEC, Accession NM_003215). Accordingly, utilities of VGAM2005 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TEC. KIAA0429 (Accession NM_014751) is another VGAM2005 host target gene. KIAA0429 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by KIAA0429, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of KIAA0429 BINDING SITE, designated SEQ ID:16473, to the nucleotide sequence of VGAM2005 RNA, herein designated VGAM RNA, also designated SEQ ID:4716.

[70548] Another function of VGAM2005 is therefore inhibition of KIAA0429 (Accession NM_014751). Accordingly, utilities

of VGAM2005 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0429. LOC147841 (Accession XM_085924) is another VGAM2005 host target gene. LOC147841 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by LOC147841, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC147841 BINDING SITE, designated SEQ ID:38399, to the nucleotide sequence of VGAM2005 RNA, herein designated VGAM RNA, also designated SEQ ID:4716.

[70549] Another function of VGAM2005 is therefore inhibition of LOC147841 (Accession XM_085924). Accordingly, utilities of VGAM2005 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC147841. LOC152048 (Accession XM_098158) is another VGAM2005 host target gene. LOC152048 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC152048, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences

of LOC152048 BINDING SITE, designated SEQ ID:41425, to the nucleotide sequence of VGAM2005 RNA, herein designated VGAM RNA, also designated SEQ ID:4716.

[70550] Another function of VGAM2005 is therefore inhibition of LOC152048 (Accession XM_098158). Accordingly, utilities of VGAM2005 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC152048. LOC152271 (Accession XM_087419) is another VGAM2005 host target gene. LOC152271 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC152271, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC152271 BINDING SITE, designated SEQ ID:39240, to the nucleotide sequence of VGAM2005 RNA, herein designated VGAM RNA, also designated SEQ ID:4716.

[70551] Another function of VGAM2005 is therefore inhibition of LOC152271 (Accession XM_087419). Accordingly, utilities of VGAM2005 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC152271. LOC199796 (Accession XM_058994) is another VGAM2005 host target gene. LOC199796 BINDING

SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by LOC199796, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC199796 BINDING SITE, designated SEQ ID:36811, to the nucleotide sequence of VGAM2005 RNA, herein designated VGAM RNA, also designated SEQ ID:4716.

[70552] Another function of VGAM2005 is therefore inhibition of LOC199796 (Accession XM_058994). Accordingly, utilities of VGAM2005 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC199796. LOC56270 (Accession NM_019613) is another VGAM2005 host target gene. LOC56270 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC56270, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC56270 BINDING SITE, designated SEQ ID:21232, to the nucleotide sequence of VGAM2005 RNA, herein designated VGAM RNA, also designated SEQ ID:4716.

[70553] Another function of VGAM2005 is therefore inhibition of

LOC56270 (Accession NM_019613). Accordingly, utilities of VGAM2005 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC56270. Fig. 1 further provides a conceptual description of a novel bioinformatically detected viral gene of the present invention, referred to here as Viral Genomic Address Messenger 2006 (VGAM2006) viral gene, which modulates expression of respective host target genes thereof, the function and utility of which host target genes is known in the art.

[70554] VGAM2006 is a novel bioinformatically detected regulatory, non protein coding, viral micro RNA (miRNA) gene. The method by which VGAM2006 was detected is described hereinabove with reference to Figs. 1-8.

[70555] VGAM2006 gene, herein designated VGAM GENE, is a viral gene contained in the genome of Chimpanzee Cytomegalovirus. VGAM2006 host target gene, herein designated VGAM HOST TARGET GENE, is a human gene contained in the human genome.

[70556] VGAM2006 gene encodes a VGAM2006 precursor RNA, herein designated VGAM PRECURSOR RNA. Similar to other miRNA genes, and unlike most ordinary genes, VGAM2006 precursor RNA does not encode a protein. A

nucleotide sequence identical or highly similar to the nucleotide sequence of VGAM2006 precursor RNA is designated SEQ ID:1992, and is provided hereinbelow with reference to the sequence listing part. Nucleotide sequence SEQ ID:1992 is located at position 191561 relative to the genome of Chimpanzee Cytomegalovirus.

[70557] VGAM2006 precursor RNA folds onto itself, forming VGAM2006 folded precursor RNA, herein designated VGAM FOLDED PRECURSOR RNA, which has a two-dimensional `hairpin structure`. As is well known in the art, this `hairpin structure`, is typical of RNA encoded by miRNA genes, and is due to the fact that the nucleotide sequence of the first half of the RNA encoded by a miRNA gene is an accurate or partial inversed-reversed sequence of the nucleotide sequence of the second half thereof.

[70558] An enzyme complex designated DICER COMPLEX, `dices` the VGAM2006 folded precursor RNA into VGAM2006 RNA, herein designated VGAM RNA, a single stranded ~22 nt long RNA segment. As is known in the art, `dicing` of a hairpin structured RNA precursor product into a short ~22nt RNA segment is catalyzed by an enzyme complex comprising an enzyme called Dicer together with other necessary proteins. A probable (over 71%) nucleotide se-

quence of VGAM2006 RNA is designated SEQ ID:4717, and is provided hereinbelow with reference to the sequence listing part.

[70559] VGAM2006 host target gene, herein designated VGAM HOST TARGET GENE, encodes a corresponding messenger RNA, VGAM2006 host target RNA, herein designated VGAM HOST TARGET RNA. VGAM2006 host target RNA comprises three regions, as is typical of mRNA of a protein coding gene: a 5` untranslated region, a protein coding region and a 3` untranslated region, designated 5`UTR, PROTEIN CODING and 3`UTR respectively.

[70560] VGAM2006 RNA, herein designated VGAM RNA, binds complementarily to one or more host target binding sites located in untranslated regions of VGAM2006 host target RNA, herein designated VGAM HOST TARGET RNA. This complementary binding is due to the fact that the nucleotide sequence of VGAM2006 RNA is an accurate or a partial inversed-reversed sequence of the nucleotide sequence of each of the host target binding sites. As an illustration, Fig. 1 shows three such host target binding sites, designated BINDING SITE I, BINDING SITE II and BINDING SITE III respectively. It is appreciated that the number of host target binding sites shown in Fig. 1 is

meant as an illustration only, and is not meant to be limiting - VGAM2006 RNA, herein designated VGAM RNA, may have a different number of host target binding sites in untranslated regions of a VGAM2006 host target RNA, herein designated VGAM HOST TARGET RNA. It is further appreciated that while Fig. 1 depicts host target binding sites in the 3`UTR region, this is meant as an example only - these host target binding sites may be located in the 3`UTR region, the 5`UTR region, or in both 3`UTR and 5`UTR regions.

[70561] The complementary binding of VGAM2006 RNA, herein designated VGAM RNA, to host target binding sites on VGAM2006 host target RNA, herein designated VGAM HOST TARGET RNA, such as BINDING SITE I, BINDING SITE II and BINDING SITE III, inhibits translation of VGAM2006 host target RNA into VGAM2006 host target protein, herein designated VGAM HOST TARGET PROTEIN. VGAM host target protein is therefore outlined by a broken line.

[70562] It is appreciated that VGAM2006 host target gene, herein designated VGAM HOST TARGET GENE, in fact represents a plurality of VGAM2006 host target genes. The mRNA of each one of this plurality of VGAM2006 host target genes comprises one or more host target binding sites, each

having a nucleotide sequence which is at least partly complementary to VGAM2006 RNA, herein designated VGAM RNA, and which when bound by VGAM2006 RNA causes inhibition of translation of respective one or more VGAM2006 host target proteins.

[70563] It is further appreciated by one skilled in the art that the mode of translational inhibition illustrated by Fig. 1 with specific reference to translational inhibition exerted by VGAM2006 gene, herein designated VGAM GENE, on one or more VGAM2006 host target gene, herein designated VGAM HOST TARGET GENE, is in fact common to other known non-viral miRNA genes. As mentioned hereinabove with reference to the background section, although a specific complementary binding site has been demonstrated only for some of the known miRNA genes (primarily Lin-4 and Let-7), all other recently discovered miRNA genes are also believed by those skilled in the art to modulate expression of other genes by complementary binding, although specific complementary binding sites of these other miRNA genes have not yet been found (Ruvkun G., `Perspective: Glimpses of a tiny RNA world`, Science 294,779 (2001)).

[70564] It is yet further appreciated that a function of VGAM2006

is inhibition of expression of host target genes, as part of a novel viral mechanism of attacking a host. Accordingly, utilities of VGAM2006 include diagnosis, prevention and treatment of viral infection by Chimpanzee Cytomegalovirus. Specific functions, and accordingly utilities, of VGAM2006 correlate with, and may be deduced from, the identity of the host target genes which VGAM2006 binds and inhibits, and the function of these host target genes, as elaborated hereinbelow.

[70565] Nucleotide sequences of the VGAM2006 precursor RNA, herein designated VGAM PRECURSOR RNA, and of the `diced` VGAM2006 RNA, herein designated VGAM RNA, and a schematic representation of the secondary folding of VGAM2006 folded precursor RNA, herein designated VGAM FOLDED PRECURSOR RNA, of VGAM2006 are further described hereinbelow with reference to Table 1.

[70566] Nucleotide sequences of host target binding sites, such as BINDING SITE-I, BINDING SITE-II and BINDING SITE-III of Fig. 1, found on VGAM2006 host target RNA, and schematic representation of the complementarity of each of these host target binding sites to VGAM2006 RNA, herein designated VGAM RNA, are described hereinbelow with reference to Table 2.

[70567] As mentioned hereinabove with reference to Fig. 1, a function of VGAM2006 gene, herein designated VGAM is inhibition of expression of VGAM2006 target genes. It is appreciated that specific functions, and accordingly utilities, of VGAM2006 correlate with, and may be deduced from, the identity of the target genes which VGAM2006 binds and inhibits, and the function of these target genes, as elaborated hereinbelow.

[70568] Formin 2 (FMN2, Accession XM_086525) is a VGAM2006 host target gene. FMN2 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by FMN2, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of FMN2 BINDING SITE, designated SEQ ID:38741, to the nucleotide sequence of VGAM2006 RNA, herein designated VGAM RNA, also designated SEQ ID:4717.

[70569] A function of VGAM2006 is therefore inhibition of Formin 2 (FMN2, Accession XM_086525). Accordingly, utilities of VGAM2006 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FMN2. Homeo Box C13 (HOXC13, Accession XM_006804) is an-

other VGAM2006 host target gene. HOXC13 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by HOXC13, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of HOXC13 BINDING SITE, designated SEQ ID:30015, to the nucleotide sequence of VGAM2006 RNA, herein designated VGAM RNA, also designated SEQ ID:4717.

[70570] Another function of VGAM2006 is therefore inhibition of Homeo Box C13 (HOXC13, Accession XM_006804). Accordingly, utilities of VGAM2006 include diagnosis, prevention and treatment of diseases and clinical conditions associated with HOXC13. Hypoxia Up-regulated 1 (HYOU1, Accession XM_006464) is another VGAM2006 host target gene. HYOU1 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by HYOU1, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of HYOU1 BINDING SITE, designated SEQ ID:30003, to the nucleotide sequence of VGAM2006 RNA, herein designated VGAM RNA, also des-

ignated SEQ ID:4717.

[70571] Another function of VGAM2006 is therefore inhibition of Hypoxia Up-regulated 1 (HYOU1, Accession XM_006464). Accordingly, utilities of VGAM2006 include diagnosis, prevention and treatment of diseases and clinical conditions associated with HYOU1. RAP1, GTPase Activating Protein 1 (RAP1GA1, Accession NM_002885) is another VGAM2006 host target gene. RAP1GA1 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by RAP1GA1, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of RAP1GA1 BINDING SITE, designated SEQ ID:8796, to the nucleotide sequence of VGAM2006 RNA, herein designated VGAM RNA, also designated SEQ ID:4717.

[70572] Another function of VGAM2006 is therefore inhibition of RAP1, GTPase Activating Protein 1 (RAP1GA1, Accession NM_002885). Accordingly, utilities of VGAM2006 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RAP1GA1. DKFZP434E2318 (Accession NM_032138) is another VGAM2006 host target gene. DKFZP434E2318 BINDING SITE is HOST TARGET

binding site found in the 5` untranslated region of mRNA encoded by DKFZP434E2318, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of DKFZP434E2318 BINDING SITE, designated SEQ ID:25816, to the nucleotide sequence of VGAM2006 RNA, herein designated VGAM RNA, also designated SEQ ID:4717.

[70573] Another function of VGAM2006 is therefore inhibition of DKFZP434E2318 (Accession NM_032138). Accordingly, utilities of VGAM2006 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZP434E2318. Family with Sequence Similarity 3, Member A (FAM3A, Accession NM_021806) is another VGAM2006 host target gene. FAM3A BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by FAM3A, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of FAM3A BINDING SITE, designated SEQ ID:22357, to the nucleotide sequence of VGAM2006 RNA, herein designated VGAM RNA, also designated SEQ ID:4717.

[70574] Another function of VGAM2006 is therefore inhibition of Family with Sequence Similarity 3, Member A (FAM3A, Accession NM_021806). Accordingly, utilities of VGAM2006 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FAM3A. FGD1 Family, Member 3 (FGD3, Accession XM_053487) is another VGAM2006 host target gene. FGD3 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by FGD3, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of FGD3 BINDING SITE, designated SEQ ID:36090, to the nucleotide sequence of VGAM2006 RNA, herein designated VGAM RNA, also designated SEQ ID:4717.

[70575] Another function of VGAM2006 is therefore inhibition of FGD1 Family, Member 3 (FGD3, Accession XM_053487). Accordingly, utilities of VGAM2006 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FGD3. KIAA0014 (Accession NM_014665) is another VGAM2006 host target gene. KIAA0014 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by

KIAA0014, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of KIAA0014 BINDING SITE, designated SEQ ID:16114, to the nucleotide sequence of VGAM2006 RNA, herein designated VGAM RNA, also designated SEQ ID:4717.

[70576] Another function of VGAM2006 is therefore inhibition of KIAA0014 (Accession NM_014665). Accordingly, utilities of VGAM2006 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0014. KIAA0152 (Accession NM_014730) is another VGAM2006 host target gene. KIAA0152 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by KIAA0152, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of KIAA0152 BINDING SITE, designated SEQ ID:16335, to the nucleotide sequence of VGAM2006 RNA, herein designated VGAM RNA, also designated SEQ ID:4717.

[70577] Another function of VGAM2006 is therefore inhibition of KIAA0152 (Accession NM_014730). Accordingly, utilities

of VGAM2006 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0152. KIAA0753 (Accession NM_014804) is another VGAM2006 host target gene. KIAA0753 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by KIAA0753, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of KIAA0753 BINDING SITE, designated SEQ ID:16735, to the nucleotide sequence of VGAM2006 RNA, herein designated VGAM RNA, also designated SEQ ID:4717.

[70578] Another function of VGAM2006 is therefore inhibition of KIAA0753 (Accession NM_014804). Accordingly, utilities of VGAM2006 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0753. KIAA1404 (Accession XM_030494) is another VGAM2006 host target gene. KIAA1404 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by KIAA1404, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of

KIAA1404 BINDING SITE, designated SEQ ID:31051, to the nucleotide sequence of VGAM2006 RNA, herein designated VGAM RNA, also designated SEQ ID:4717.

[70579] Another function of VGAM2006 is therefore inhibition of KIAA1404 (Accession XM_030494). Accordingly, utilities of VGAM2006 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1404. KIAA1987 (Accession XM_113870) is another VGAM2006 host target gene. KIAA1987 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by KIAA1987, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of KIAA1987 BINDING SITE, designated SEQ ID:42495, to the nucleotide sequence of VGAM2006 RNA, herein designated VGAM RNA, also designated SEQ ID:4717.

[70580] Another function of VGAM2006 is therefore inhibition of KIAA1987 (Accession XM_113870). Accordingly, utilities of VGAM2006 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1987. Neuron Navigator 3 (NAV3, Accession NM_014903) is another VGAM2006 host target gene.

NAV3 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by NAV3, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of NAV3 BINDING SITE, designated SEQ ID:17090, to the nucleotide sequence of VGAM2006 RNA, herein designated VGAM RNA, also designated SEQ ID:4717.

[70581] Another function of VGAM2006 is therefore inhibition of Neuron Navigator 3 (NAV3, Accession NM_014903). Accordingly, utilities of VGAM2006 include diagnosis, prevention and treatment of diseases and clinical conditions associated with NAV3. PDEF (Accession NM_012391) is another VGAM2006 host target gene. PDEF BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by PDEF, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of PDEF BINDING SITE, designated SEQ ID:14746, to the nucleotide sequence of VGAM2006 RNA, herein designated VGAM RNA, also designated SEQ ID:4717.

[70582] Another function of VGAM2006 is therefore inhibition of

PDEF (Accession NM_012391). Accordingly, utilities of VGAM2006 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PDEF. RoXaN (Accession NM_025013) is another VGAM2006 host target gene. RoXaN BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by RoXaN, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of RoXaN BINDING SITE, designated SEQ ID:24603, to the nucleotide sequence of VGAM2006 RNA, herein designated VGAM RNA, also designated SEQ ID:4717.

[70583] Another function of VGAM2006 is therefore inhibition of RoXaN (Accession NM_025013). Accordingly, utilities of VGAM2006 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RoXaN. LOC145813 (Accession XM_096873) is another VGAM2006 host target gene. LOC145813 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by LOC145813, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the

complementarity of the nucleotide sequences of LOC145813 BINDING SITE, designated SEQ ID:40598, to the nucleotide sequence of VGAM2006 RNA, herein designated VGAM RNA, also designated SEQ ID:4717.

[70584] Another function of VGAM2006 is therefore inhibition of LOC145813 (Accession XM_096873). Accordingly, utilities of VGAM2006 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC145813. LOC152426 (Accession XM_098225) is another VGAM2006 host target gene. LOC152426 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by LOC152426, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC152426 BINDING SITE, designated SEQ ID:41498, to the nucleotide sequence of VGAM2006 RNA, herein designated VGAM RNA, also designated SEQ ID:4717.

[70585] Another function of VGAM2006 is therefore inhibition of LOC152426 (Accession XM_098225). Accordingly, utilities of VGAM2006 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC152426. LOC157254 (Accession XM_088279) is an-

other VGAM2006 host target gene. LOC157254 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by LOC157254, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC157254 BINDING SITE, designated SEQ ID:39579, to the nucleotide sequence of VGAM2006 RNA, herein designated VGAM RNA, also designated SEQ ID:4717.

[70586] Another function of VGAM2006 is therefore inhibition of LOC157254 (Accession XM_088279). Accordingly, utilities of VGAM2006 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC157254. LOC158382 (Accession XM_098931) is another VGAM2006 host target gene. LOC158382 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC158382, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC158382 BINDING SITE, designated SEQ ID:41964, to the nucleotide sequence of VGAM2006 RNA, herein designated VGAM RNA, also designated SEQ ID:4717.

[70587] Another function of VGAM2006 is therefore inhibition of LOC158382 (Accession XM_098931). Accordingly, utilities of VGAM2006 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC158382. LOC221393 (Accession XM_166435) is another VGAM2006 host target gene. LOC221393 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC221393, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC221393 BINDING SITE, designated SEQ ID:44337, to the nucleotide sequence of VGAM2006 RNA, herein designated VGAM RNA, also designated SEQ ID:4717.

[70588] Another function of VGAM2006 is therefore inhibition of LOC221393 (Accession XM_166435). Accordingly, utilities of VGAM2006 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC221393. LOC51285 (Accession NM_016563) is another VGAM2006 host target gene. LOC51285 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC51285, corresponding to a HOST TARGET binding site such as BINDING

SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC51285 BINDING SITE, designated SEQ ID:18638, to the nucleotide sequence of VGAM2006 RNA, herein designated VGAM RNA, also designated SEQ ID:4717.

[70589] Another function of VGAM2006 is therefore inhibition of LOC51285 (Accession NM_016563). Accordingly, utilities of VGAM2006 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC51285. LOC90342 (Accession XM_031009) is another VGAM2006 host target gene. LOC90342 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by LOC90342, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC90342 BINDING SITE, designated SEQ ID:31253, to the nucleotide sequence of VGAM2006 RNA, herein designated VGAM RNA, also designated SEQ ID:4717.

[70590] Another function of VGAM2006 is therefore inhibition of LOC90342 (Accession XM_031009). Accordingly, utilities of VGAM2006 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

LOC90342. Fig. 1 further provides a conceptual description of a novel bioinformatically detected viral gene of the present invention, referred to here as Viral Genomic Address Messenger 2007 (VGAM2007) viral gene, which modulates expression of respective host target genes thereof, the function and utility of which host target genes is known in the art.

[70591] VGAM2007 is a novel bioinformatically detected regulatory, non protein coding, viral micro RNA (miRNA) gene. The method by which VGAM2007 was detected is described hereinabove with reference to Figs. 1-8.

[70592] VGAM2007 gene, herein designated VGAM GENE, is a viral gene contained in the genome of Reston Ebola Virus (REBOV). VGAM2007 host target gene, herein designated VGAM HOST TARGET GENE, is a human gene contained in the human genome.

[70593] VGAM2007 gene encodes a VGAM2007 precursor RNA, herein designated VGAM PRECURSOR RNA. Similar to other miRNA genes, and unlike most ordinary genes, VGAM2007 precursor RNA does not encode a protein. A nucleotide sequence identical or highly similar to the nucleotide sequence of VGAM2007 precursor RNA is designated SEQ ID:1993, and is provided hereinbelow with ref-

erence to the sequence listing part. Nucleotide sequence SEQ ID:1993 is located at position 5965 relative to the genome of Reston Ebola Virus (REBOV).

[70594] VGAM2007 precursor RNA folds onto itself, forming VGAM2007 folded precursor RNA, herein designated VGAM FOLDED PRECURSOR RNA, which has a two-dimensional `hairpin structure`. As is well known in the art, this `hairpin structure`, is typical of RNA encoded by miRNA genes, and is due to the fact that the nucleotide sequence of the first half of the RNA encoded by a miRNA gene is an accurate or partial inversed-reversed sequence of the nucleotide sequence of the second half thereof.

[70595] An enzyme complex designated DICER COMPLEX, `dices` the VGAM2007 folded precursor RNA into VGAM2007 RNA, herein designated VGAM RNA, a single stranded ~22 nt long RNA segment. As is known in the art, `dicing` of a hairpin structured RNA precursor product into a short ~22nt RNA segment is catalyzed by an enzyme complex comprising an enzyme called Dicer together with other necessary proteins. A probable (over 79%) nucleotide sequence of VGAM2007 RNA is designated SEQ ID:4718, and is provided hereinbelow with reference to the sequence listing part.

[70596] VGAM2007 host target gene, herein designated VGAM HOST TARGET GENE, encodes a corresponding messenger RNA, VGAM2007 host target RNA, herein designated VGAM HOST TARGET RNA. VGAM2007 host target RNA comprises three regions, as is typical of mRNA of a protein coding gene: a 5` untranslated region, a protein coding region and a 3` untranslated region, designated 5`UTR, PROTEIN CODING and 3`UTR respectively.

[70597] VGAM2007 RNA, herein designated VGAM RNA, binds complementarily to one or more host target binding sites located in untranslated regions of VGAM2007 host target RNA, herein designated VGAM HOST TARGET RNA. This complementary binding is due to the fact that the nucleotide sequence of VGAM2007 RNA is an accurate or a partial inversed-reversed sequence of the nucleotide sequence of each of the host target binding sites. As an illustration, Fig. 1 shows three such host target binding sites, designated BINDING SITE I, BINDING SITE II and BINDING SITE III respectively. It is appreciated that the number of host target binding sites shown in Fig. 1 is meant as an illustration only, and is not meant to be limiting - VGAM2007 RNA, herein designated VGAM RNA, may have a different number of host target binding sites in

untranslated regions of a VGAM2007 host target RNA, herein designated VGAM HOST TARGET RNA. It is further appreciated that while Fig. 1 depicts host target binding sites in the 3`UTR region, this is meant as an example only - these host target binding sites may be located in the 3`UTR region, the 5`UTR region, or in both 3`UTR and 5`UTR regions.

[70598] The complementary binding of VGAM2007 RNA, herein designated VGAM RNA, to host target binding sites on VGAM2007 host target RNA, herein designated VGAM HOST TARGET RNA, such as BINDING SITE I, BINDING SITE II and BINDING SITE III, inhibits translation of VGAM2007 host target RNA into VGAM2007 host target protein, herein designated VGAM HOST TARGET PROTEIN. VGAM host target protein is therefore outlined by a broken line.

[70599] It is appreciated that VGAM2007 host target gene, herein designated VGAM HOST TARGET GENE, in fact represents a plurality of VGAM2007 host target genes. The mRNA of each one of this plurality of VGAM2007 host target genes comprises one or more host target binding sites, each having a nucleotide sequence which is at least partly complementary to VGAM2007 RNA, herein designated VGAM RNA, and which when bound by VGAM2007 RNA causes

inhibition of translation of respective one or more VGAM2007 host target proteins.

[70600] It is further appreciated by one skilled in the art that the mode of translational inhibition illustrated by Fig. 1 with specific reference to translational inhibition exerted by VGAM2007 gene, herein designated VGAM GENE, on one or more VGAM2007 host target gene, herein designated VGAM HOST TARGET GENE, is in fact common to other known non-viral miRNA genes. As mentioned hereinabove with reference to the background section, although a specific complementary binding site has been demonstrated only for some of the known miRNA genes (primarily Lin-4 and Let-7), all other recently discovered miRNA genes are also believed by those skilled in the art to modulate expression of other genes by complementary binding, although specific complementary binding sites of these other miRNA genes have not yet been found (Ruvkun G., `Perspective: Glimpses of a tiny RNA world`, Science 294,779 (2001)).

[70601] It is yet further appreciated that a function of VGAM2007 is inhibition of expression of host target genes, as part of a novel viral mechanism of attacking a host. Accordingly, utilities of VGAM2007 include diagnosis, prevention and

treatment of viral infection by Reston Ebola Virus (REBOV). Specific functions, and accordingly utilities, of VGAM2007 correlate with, and may be deduced from, the identity of the host target genes which VGAM2007 binds and inhibits, and the function of these host target genes, as elaborated hereinbelow.

[70602] Nucleotide sequences of the VGAM2007 precursor RNA, herein designated VGAM PRECURSOR RNA, and of the `diced` VGAM2007 RNA, herein designated VGAM RNA, and a schematic representation of the secondary folding of VGAM2007 folded precursor RNA, herein designated VGAM FOLDED PRECURSOR RNA, of VGAM2007 are further described hereinbelow with reference to Table 1.

[70603] Nucleotide sequences of host target binding sites, such as BINDING SITE-I, BINDING SITE-II and BINDING SITE-III of Fig. 1, found on VGAM2007 host target RNA, and schematic representation of the complementarity of each of these host target binding sites to VGAM2007 RNA, herein designated VGAM RNA, are described hereinbelow with reference to Table 2.

[70604] As mentioned hereinabove with reference to Fig. 1, a function of VGAM2007 gene, herein designated VGAM is inhibition of expression of VGAM2007 target genes. It is

appreciated that specific functions, and accordingly utilities, of VGAM2007 correlate with, and may be deduced from, the identity of the target genes which VGAM2007 binds and inhibits, and the function of these target genes, as elaborated hereinbelow.

[70605] Adenylate Cyclase 8 (brain) (ADCY8, Accession NM_001115) is a VGAM2007 host target gene. ADCY8 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by ADCY8, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of ADCY8 BINDING SITE, designated SEQ ID:6787, to the nucleotide sequence of VGAM2007 RNA, herein designated VGAM RNA, also designated SEQ ID:4718.

[70606] A function of VGAM2007 is therefore inhibition of Adenylate Cyclase 8 (brain) (ADCY8, Accession NM_001115), a gene which this a membrane-bound, ca(2+)-inhibitable adenylyl cyclase. Accordingly, utilities of VGAM2007 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ADCY8. The function of ADCY8 and its association with various diseases and clinical conditions, has been established by previous studies,

as described hereinabove with reference to VGAM1169.Aldehyde Dehydrogenase 3 Family, Member B1 (ALDH3B1, Accession XM_166190) is another VGAM2007 host target gene. ALDH3B1 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by ALDH3B1, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of ALDH3B1 BINDING SITE, designated SEQ ID:44002, to the nucleotide sequence of VGAM2007 RNA, herein designated VGAM RNA, also designated SEQ ID:4718.

[70607] Another function of VGAM2007 is therefore inhibition of Aldehyde Dehydrogenase 3 Family, Member B1 (ALDH3B1, Accession XM_166190), a gene which may play a major role in the detoxification of aldehydes generated by alcohol metabolism and lipid peroxidation. Accordingly, utilities of VGAM2007 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ALDH3B1. The function of ALDH3B1 has been established by previous studies. The aldehyde dehydrogenases are a family of isozymes that may play a major role in the detoxification of aldehydes generated by alcohol

metabolism and lipid peroxidation. Hsu et al. (1994) reported the cloning and sequencing of a cDNA encoding a new human ALDH, designated ALDH7. Degenerate oligodeoxyribonucleotides derived from conserved regions of known ALDH cDNAs amplified a 408-bp product from human kidney total RNA by the reverse transcription-PCR procedure. This PCR product was subcloned, selected, and used as a probe to screen a human kidney cDNA library. The full-length human kidney cDNA of ALDH7 is 2,791 bp long and contains an open reading frame encoding 468 amino acids. The deduced sequence of ALDH7 was longer than that of human stomach ALDH3 (OMIM Ref. No. 100660) by 15 amino acids at the C terminus. The degree of identity between the 2 isozymes was 52% with a positional alignment of 453 amino acids. Northern blot analysis demonstrated that lung is another major tissue expressing ALDH7. Hsu et al. (1997) determined the structure of the ALDH7 and ALDH8 (OMIM Ref. No. 601917) genes. The ALDH7 gene spans about 20 kb of genomic DNA and is composed of 9 coding exons. The ALDH8 gene is over 10 kb in length and consists of at least 10 exons. The ALDH8 gene contains an in-frame stop codon at the seventeenth codon position from the

first initiator Met. The coding region of the ALDH7 gene shows about 86% nucleotide identity with the corresponding region of the ALDH8 gene. The numbers and positions of the introns of the 2 genes are conserved, suggesting that gene duplication is involved in the expansion of the ALDH gene family. The human ALDH7 and ALDH8 genes have a close evolutionary relationship with human ALDH3. The International Radiation Hybrid Mapping Consortium mapped the ALDH7 gene to chromosome 11 (RH69713).

[70608] Full details of the abovementioned studies are described in the following publications, the disclosure of which are hereby incorporated by reference:

[70609] Hsu, L. C.; Chang, W.-C.; Yoshida, A. : Human aldehyde dehydrogenase genes, ALDH7 and ALDH8: genomic organization and gene structure comparison. Gene 189: 89-94, 1997. ; and

[70610] Hsu, L. C.; Chang, W.-C.; Yoshida, A. : Cloning of a cDNA encoding human ALDH7, a new member of the aldehyde dehydrogenase family. Gene 151: 285-289, 1994.

[70611] Further studies establishing the function and utilities of ALDH3B1 are found in John Hopkins OMIM database record ID 600466, and in sited publications numbered 7732-7733 listed in the bibliography section hereinbelow,

which are also hereby incorporated by reference.Aprataxin (APTX, Accession NM_017692) is another VGAM2007 host target gene. APTX BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by APTX, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of APTX BINDING SITE, designated SEQ ID:19249, to the nucleotide sequence of VGAM2007 RNA, herein designated VGAM RNA, also designated SEQ ID:4718.

[70612] Another function of VGAM2007 is therefore inhibition of Aprataxin (APTX, Accession NM_017692). Accordingly, utilities of VGAM2007 include diagnosis, prevention and treatment of diseases and clinical conditions associated with APTX. UDP-Gal:betaGlcNAc Beta 1,4- Galactosyl-transferase, Polypeptide 6 (B4GALT6, Accession XM_008799) is another VGAM2007 host target gene. B4GALT6 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by B4GALT6, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide

sequences of B4GALT6 BINDING SITE, designated SEQ ID:30093, to the nucleotide sequence of VGAM2007 RNA, herein designated VGAM RNA, also designated SEQ ID:4718.

[70613] Another function of VGAM2007 is therefore inhibition of UDP-Gal:betaGlcNAc Beta 1,4- Galactosyltransferase, Polypeptide 6 (B4GALT6, Accession XM_008799). Accordingly, utilities of VGAM2007 include diagnosis, prevention and treatment of diseases and clinical conditions associated with B4GALT6. Collagen, Type V, Alpha 3 (COL5A3, Accession NM_015719) is another VGAM2007 host target gene. COL5A3 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by COL5A3, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of COL5A3 BINDING SITE, designated SEQ ID:17932, to the nucleotide sequence of VGAM2007 RNA, herein designated VGAM RNA, also designated SEQ ID:4718.

[70614] Another function of VGAM2007 is therefore inhibition of Collagen, Type V, Alpha 3 (COL5A3, Accession NM_015719). Accordingly, utilities of VGAM2007 include

diagnosis, prevention and treatment of diseases and clinical conditions associated with COL5A3. Enamelin (ENAM, Accession NM_031889) is another VGAM2007 host target gene. ENAM BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by ENAM, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of ENAM BINDING SITE, designated SEQ ID:25634, to the nucleotide sequence of VGAM2007 RNA, herein designated VGAM RNA, also designated SEQ ID:4718.

[70615] Another function of VGAM2007 is therefore inhibition of Enamelin (ENAM, Accession NM_031889). Accordingly, utilities of VGAM2007 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ENAM. FBJ Murine Osteosarcoma Viral Oncogene Homolog B (FOSB, Accession NM_006732) is another VGAM2007 host target gene. FOSB BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by FOSB, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of FOSB BINDING SITE,

designated SEQ ID:13584, to the nucleotide sequence of VGAM2007 RNA, herein designated VGAM RNA, also designated SEQ ID:4718.

[70616] Another function of VGAM2007 is therefore inhibition of FBJ Murine Osteosarcoma Viral Oncogene Homolog B (FOSB, Accession NM_006732), a gene which interacts with jun proteins enhancing their dna binding activity. Accordingly, utilities of VGAM2007 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FOSB. The function of FOSB and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM747.Interleukin 1, Beta (IL1B, Accession NM_000576) is another VGAM2007 host target gene. IL1B BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by IL1B, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of IL1B BINDING SITE, designated SEQ ID:6176, to the nucleotide sequence of VGAM2007 RNA, herein designated VGAM RNA, also designated SEQ ID:4718.

[70617] Another function of VGAM2007 is therefore inhibition of

Interleukin 1, Beta (IL1B, Accession NM_000576), a gene which stimulates thymocyte proliferation. Accordingly, utilities of VGAM2007 include diagnosis, prevention and treatment of diseases and clinical conditions associated with IL1B. The function of IL1B has been established by previous studies. Interleukin-1, produced mainly by blood monocytes, mediates the panoply of host reactions collectively known as acute phase response. It is identical to endogenous pyrogen. The multiple biologic activities that define IL1 are properties of a 15- to 18-kD protein that is derived from a 30- to 35-kD precursor. El-Omar et al. (2000) reported that interleukin-1 gene cluster polymorphisms suspected of enhancing production of interleukin-1-beta are associated with an increased risk of both hypochlorhydria induced by Helicobacter pylori and gastric cancer. Two of these polymorphisms are in near-complete linkage disequilibrium, and 1 is a TATA-box polymorphism that markedly affects DNA-protein interactions in vitro. The association with disease may be explained by the biologic properties of interleukin-1-beta, which is an important proinflammatory cytokine and a powerful inhibitor of gastric acid secretion. Host genetic factors that affect interleukin-1-beta may determine why

some individuals infected with H. pylori develop gastric cancer while others do not. IL1-beta is upregulated in the presence of H. pylori and is important in initiating and amplifying the inflammatory response to this infection. Three diallelic polymorphisms in IL1B have been reported, all representing C-to-T base transitions, at positions -511, -31, and +3954 basepairs from the transcriptional start site. To determine whether these polymorphisms are important with respect to different outcomes of H. pylori infections, El-Omar et al. (2000) studied their effects on gastric physiology in healthy subjects. Carriers of the ILB -31T allele (147720.0001) had an age-adjusted odds ratio of 9.1 (95% confidence interval, 2.2-37) for low acid secretion, and there was little difference between homozygous and heterozygous carriers. The IL1B +3954 genotype was not associated with the risk of hypochlorhydria. Carriers of IL1B -31T had an increased gastric cancer risk at an odds ratio of 1.9 (95% confidence interval, 1.5-2.6), with no significant difference between homozygotes and heterozygotes Hamajima et al. (2001) determined that the C-to-T transition at position -31, creating a TATA box, is associated with vulnerability to persistent H. pylori infection, and that the susceptibility is modified by smoking

Animal model experiments lend further support to the function of IL1B. Mature IL1-beta levels are a sensitive and specific indicator of caspase-1 (OMIM Ref. No. 147678) activation. Ona et al. (1999) studied the effect of inhibition of caspase-1 on the progression of Huntington disease (OMIM Ref. No. 143100) in the mouse model developed by Mangiarini et al. (1996), which they called R6/2 mice. Ona et al. (1999) crossed R6/2 mice with a well-characterized transgenic mouse strain expressing a dominant-negative mutant of caspase-1 in the brain (NSE M17Z). Double mutant mice showed extended survival and delayed appearance of neuronal inclusions, neurotransmitter receptor alterations, and onset of symptoms, indicating that caspase-1 is important in the pathogenesis of Huntington disease. Mature IL1-beta levels in R6/2 mice were elevated to 268% of those in wildtype controls. This increase was significantly inhibited in the R6/2-NSE M17Z mice. IL1-beta levels in the brains of human patients also exhibited significant increases, to 213% of those in normal controls

[70618] It is appreciated that the abovementioned animal model for IL1B is acknowledged by those skilled in the art as a scientifically valid animal model, as can be further appre-

ciated from the publications sited hereinbelow.

[70619] Full details of the abovementioned studies are described in the following publications, the disclosure of which are hereby incorporated by reference:

[70620] El-Omar, E. M.; Carrington, M.; Chow, W.-H.; McColl, K. E. L.; Bream, J. H.; Young, H. A.; Herrera, J.; Lissowska, J.; Yuan, C.-C.; Rothman, N.; Lanyon, G.; Martin, M.; Fraumeni, J. F., Jr.; Rabkin, C. S. : Interleukin-1 polymorphisms associated with increased risk of gastric cancer. Nature 404: 398-402, 2000. Note: Erratum: Nature 412: 99 only, 2001. ; and

[70621] Ona, V. O.; Li, M.; Vonsattel, J. P. G.; Andrews, L. J.; Khan, S. Q.; Chung, W. M.; Frey, A. S.; Menon, A. S.; Li, X.-J.; Stieg, P. E.; Yuan, J.; Penney, J. B.; Young, A. B.; Cha, J.-H.

[70622] Further studies establishing the function and utilities of IL1B are found in John Hopkins OMIM database record ID 147720, and in sited publications numbered 5261, 11182-11184, 11189-11186, 472, 11187, 11188, 4805, 11170, 1119 and 11191-11192 listed in the bibliography section hereinbelow, which are also hereby incorporated by reference.Membrane Protein, Palmitoylated 2 (MAGUK p55 subfamily member 2) (MPP2, Accession XM_008355) is another VGAM2007 host target gene. MPP2 BINDING

SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by MPP2, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of MPP2 BINDING SITE, designated SEQ ID:30085, to the nucleotide sequence of VGAM2007 RNA, herein designated VGAM RNA, also designated SEQ ID:4718.

[70623] Another function of VGAM2007 is therefore inhibition of Membrane Protein, Palmitoylated 2 (MAGUK p55 subfamily member 2) (MPP2, Accession XM_008355). Accordingly, utilities of VGAM2007 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MPP2. Male-specific Lethal 3-like 1 (Drosophila) (MSL3L1, Accession NM_078628) is another VGAM2007 host target gene. MSL3L1 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by MSL3L1, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of MSL3L1 BINDING SITE, designated SEQ ID:27812, to the nucleotide sequence of VGAM2007 RNA, herein designated VGAM RNA, also des-

ignated SEQ ID:4718.

[70624] Another function of VGAM2007 is therefore inhibition of Male-specific Lethal 3-like 1 (Drosophila) (MSL3L1, Accession NM_078628). Accordingly, utilities of VGAM2007 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MSL3L1. Mature T-cell Proliferation 1 (MTCP1, Accession NM_014221) is another VGAM2007 host target gene. MTCP1 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by MTCP1, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of MTCP1 BINDING SITE, designated SEQ ID:15491, to the nucleotide sequence of VGAM2007 RNA, herein designated VGAM RNA, also designated SEQ ID:4718.

[70625] Another function of VGAM2007 is therefore inhibition of Mature T-cell Proliferation 1 (MTCP1, Accession NM_014221). Accordingly, utilities of VGAM2007 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MTCP1. SRGAP1 (Accession XM_051143) is another VGAM2007 host target gene. SRGAP1 BINDING SITE is HOST TARGET binding site found in

the 3` untranslated region of mRNA encoded by SRGAP1, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of SRGAP1 BINDING SITE, designated SEQ ID:35760, to the nucleotide sequence of VGAM2007 RNA, herein designated VGAM RNA, also designated SEQ ID:4718.

[70626] Another function of VGAM2007 is therefore inhibition of SRGAP1 (Accession XM_051143). Accordingly, utilities of VGAM2007 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SRGAP1. C(27)-3BETA-HSD (Accession NM_025193) is another VGAM2007 host target gene. C(27)-3BETA-HSD BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by C(27)-3BETA-HSD, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of C(27)-3BETA-HSD BINDING SITE, designated SEQ ID:24850, to the nucleotide sequence of VGAM2007 RNA, herein designated VGAM RNA, also designated SEQ ID:4718.

[70627] Another function of VGAM2007 is therefore inhibition of C(27)-3BETA-HSD (Accession NM_025193). Accordingly, utilities of VGAM2007 include diagnosis, prevention and treatment of diseases and clinical conditions associated with C(27)-3BETA-HSD. DKFZp547M072 (Accession XM_028067) is another VGAM2007 host target gene. DKFZp547M072 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by DKFZp547M072, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of DKFZp547M072 BINDING SITE, designated SEQ ID:30619, to the nucleotide sequence of VGAM2007 RNA, herein designated VGAM RNA, also designated SEQ ID:4718.

[70628] Another function of VGAM2007 is therefore inhibition of DKFZp547M072 (Accession XM_028067). Accordingly, utilities of VGAM2007 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZp547M072. FLJ14594 (Accession NM_032808) is another VGAM2007 host target gene. FLJ14594 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by FLJ14594, corre-

sponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of FLJ14594 BINDING SITE, designated SEQ ID:26568, to the nucleotide sequence of VGAM2007 RNA, herein designated VGAM RNA, also designated SEQ ID:4718.

[70629] Another function of VGAM2007 is therefore inhibition of FLJ14594 (Accession NM_032808). Accordingly, utilities of VGAM2007 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ14594. FUS Interacting Protein (serine-arginine rich) 1 (FUSIP1, Accession NM_006625) is another VGAM2007 host target gene. FUSIP1 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by FUSIP1, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of FUSIP1 BINDING SITE, designated SEQ ID:13411, to the nucleotide sequence of VGAM2007 RNA, herein designated VGAM RNA, also designated SEQ ID:4718.

[70630] Another function of VGAM2007 is therefore inhibition of FUS Interacting Protein (serine-arginine rich) 1 (FUSIP1,

Accession NM_006625). Accordingly, utilities of VGAM2007 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FUSIP1. KIAA0193 (Accession NM_014766) is another VGAM2007 host target gene. KIAA0193 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by KIAA0193, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of KIAA0193 BINDING SITE, designated SEQ ID:16548, to the nucleotide sequence of VGAM2007 RNA, herein designated VGAM RNA, also designated SEQ ID:4718.

[70631] Another function of VGAM2007 is therefore inhibition of KIAA0193 (Accession NM_014766). Accordingly, utilities of VGAM2007 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0193. KIAA0435 (Accession NM_014801) is another VGAM2007 host target gene. KIAA0435 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by KIAA0435, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the

complementarity of the nucleotide sequences of KIAA0435 BINDING SITE, designated SEQ ID:16724, to the nucleotide sequence of VGAM2007 RNA, herein designated VGAM RNA, also designated SEQ ID:4718.

[70632] Another function of VGAM2007 is therefore inhibition of KIAA0435 (Accession NM_014801). Accordingly, utilities of VGAM2007 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0435. KIAA1755 (Accession XM_028810) is another VGAM2007 host target gene. KIAA1755 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by KIAA1755, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of KIAA1755 BINDING SITE, designated SEQ ID:30753, to the nucleotide sequence of VGAM2007 RNA, herein designated VGAM RNA, also designated SEQ ID:4718.

[70633] Another function of VGAM2007 is therefore inhibition of KIAA1755 (Accession XM_028810). Accordingly, utilities of VGAM2007 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1755. Lysosomal-associated Membrane Protein 3

(LAMP3, Accession XM_003022) is another VGAM2007 host target gene. LAMP3 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LAMP3, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LAMP3 BINDING SITE, designated SEQ ID:29917, to the nucleotide sequence of VGAM2007 RNA, herein designated VGAM RNA, also designated SEQ ID:4718.

[70634] Another function of VGAM2007 is therefore inhibition of Lysosomal-associated Membrane Protein 3 (LAMP3, Accession XM_003022). Accordingly, utilities of VGAM2007 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LAMP3. MacGAP (Accession NM_033515) is another VGAM2007 host target gene. MacGAP BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by MacGAP, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of MacGAP BINDING SITE, designated SEQ ID:27290, to the nucleotide sequence of VGAM2007 RNA,

herein designated VGAM RNA, also designated SEQ ID:4718.

[70635] Another function of VGAM2007 is therefore inhibition of MacGAP (Accession NM_033515). Accordingly, utilities of VGAM2007 include diagnosis, prevention and treatment of diseases and clinical conditions associated with Mac-GAP. MGC12217 (Accession NM_032771) is another VGAM2007 host target gene. MGC12217 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by MGC12217, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of MGC12217 BINDING SITE, designated SEQ ID:26518, to the nucleotide sequence of VGAM2007 RNA, herein desig-nated VGAM RNA, also designated SEQ ID:4718.

[70636] Another function of VGAM2007 is therefore inhibition of MGC12217 (Accession NM_032771). Accordingly, utilities of VGAM2007 include diagnosis, prevention and treat-ment of diseases and clinical conditions associated with MGC12217. Protein Tyrosine Phosphatase, Receptor Type, F Polypeptide (PTPRF), Interacting Protein (liprin), Alpha 4 (PPFIA4, Accession XM_046751) is another VGAM2007

host target gene. PPFIA4 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by PPFIA4, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of PPFIA4 BINDING SITE, designated SEQ ID:34822, to the nucleotide sequence of VGAM2007 RNA, herein designated VGAM RNA, also designated SEQ ID:4718.

[70637] Another function of VGAM2007 is therefore inhibition of Protein Tyrosine Phosphatase, Receptor Type, F Polypeptide (PTPRF), Interacting Protein (liprin), Alpha 4 (PPFIA4, Accession XM_046751). Accordingly, utilities of VGAM2007 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PPFIA4. RAB6C, Member RAS Oncogene Family (RAB6C, Accession NM_032144) is another VGAM2007 host target gene. RAB6C BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by RAB6C, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of RAB6C BINDING SITE, designated SEQ

ID:25837, to the nucleotide sequence of VGAM2007 RNA, herein designated VGAM RNA, also designated SEQ ID:4718.

[70638] Another function of VGAM2007 is therefore inhibition of RAB6C, Member RAS Oncogene Family (RAB6C, Accession NM_032144). Accordingly, utilities of VGAM2007 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RAB6C. SARM (Accession NM_015077) is another VGAM2007 host target gene. SARM BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by SARM, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of SARM BINDING SITE, designated SEQ ID:17463, to the nucleotide sequence of VGAM2007 RNA, herein designated VGAM RNA, also designated SEQ ID:4718.

[70639] Another function of VGAM2007 is therefore inhibition of SARM (Accession NM_015077). Accordingly, utilities of VGAM2007 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SARM. LOC148823 (Accession NM_145278) is another VGAM2007 host target gene. LOC148823 BINDING SITE is

HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC148823, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC148823 BINDING SITE, designated SEQ ID:29791, to the nucleotide sequence of VGAM2007 RNA, herein designated VGAM RNA, also designated SEQ ID:4718.

[70640] Another function of VGAM2007 is therefore inhibition of LOC148823 (Accession NM_145278). Accordingly, utilities of VGAM2007 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC148823. LOC159121 (Accession XM_099028) is another VGAM2007 host target gene. LOC159121 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by LOC159121, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC159121 BINDING SITE, designated SEQ ID:42065, to the nucleotide sequence of VGAM2007 RNA, herein designated VGAM RNA, also designated SEQ ID:4718.

[70641] Another function of VGAM2007 is therefore inhibition of

LOC159121 (Accession XM_099028). Accordingly, utilities of VGAM2007 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC159121. LOC164955 (Accession XM_092265) is another VGAM2007 host target gene. LOC164955 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC164955, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC164955 BINDING SITE, designated SEQ ID:40114, to the nucleotide sequence of VGAM2007 RNA, herein designated VGAM RNA, also designated SEQ ID:4718.

[70642] Another function of VGAM2007 is therefore inhibition of LOC164955 (Accession XM_092265). Accordingly, utilities of VGAM2007 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC164955. LOC200269 (Accession XM_114175) is another VGAM2007 host target gene. LOC200269 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by LOC200269, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 il-

lustrates the complementarity of the nucleotide sequences of LOC200269 BINDING SITE, designated SEQ ID:42758, to the nucleotide sequence of VGAM2007 RNA, herein designated VGAM RNA, also designated SEQ ID:4718.

[70643] Another function of VGAM2007 is therefore inhibition of LOC200269 (Accession XM_114175). Accordingly, utilities of VGAM2007 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC200269. LOC200830 (Accession XM_117287) is another VGAM2007 host target gene. LOC200830 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC200830, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC200830 BINDING SITE, designated SEQ ID:43348, to the nucleotide sequence of VGAM2007 RNA, herein designated VGAM RNA, also designated SEQ ID:4718.

[70644] Another function of VGAM2007 is therefore inhibition of LOC200830 (Accession XM_117287). Accordingly, utilities of VGAM2007 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC200830. LOC256946 (Accession XM_170543) is an-

other VGAM2007 host target gene. LOC256946 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC256946, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC256946 BINDING SITE, designated SEQ ID:45361, to the nucleotide sequence of VGAM2007 RNA, herein designated VGAM RNA, also designated SEQ ID:4718.

[70645] Another function of VGAM2007 is therefore inhibition of LOC256946 (Accession XM_170543). Accordingly, utilities of VGAM2007 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC256946. LOC85414 (Accession NM_033102) is another VGAM2007 host target gene. LOC85414 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC85414, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC85414 BINDING SITE, designated SEQ ID:26949, to the nucleotide sequence of VGAM2007 RNA, herein designated VGAM RNA, also designated SEQ ID:4718.

[70646] Another function of VGAM2007 is therefore inhibition of LOC85414 (Accession NM_033102). Accordingly, utilities of VGAM2007 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC85414. LOC90110 (Accession XM_029046) is another VGAM2007 host target gene. LOC90110 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by LOC90110, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC90110 BINDING SITE, designated SEQ ID:30841, to the nucleotide sequence of VGAM2007 RNA, herein designated VGAM RNA, also designated SEQ ID:4718.

[70647] Another function of VGAM2007 is therefore inhibition of LOC90110 (Accession XM_029046). Accordingly, utilities of VGAM2007 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC90110. LOC92659 (Accession XM_046434) is another VGAM2007 host target gene. LOC92659 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by LOC92659, corresponding to a HOST TARGET binding site such as BINDING SITE I,

BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC92659 BINDING SITE, designated SEQ ID:34716, to the nucleotide sequence of VGAM2007 RNA, herein designated VGAM RNA, also designated SEQ ID:4718.

[70648] Another function of VGAM2007 is therefore inhibition of LOC92659 (Accession XM_046434). Accordingly, utilities of VGAM2007 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC92659. Fig. 1 further provides a conceptual description of a novel bioinformatically detected viral gene of the present invention, referred to here as Viral Genomic Address Messenger 2008 (VGAM2008) viral gene, which modulates expression of respective host target genes thereof, the function and utility of which host target genes is known in the art.

[70649] VGAM2008 is a novel bioinformatically detected regulatory, non protein coding, viral micro RNA (miRNA) gene. The method by which VGAM2008 was detected is described hereinabove with reference to Figs. 1-8.

[70650] VGAM2008 gene, herein designated VGAM GENE, is a viral gene contained in the genome of Reston Ebola Virus (REBOV). VGAM2008 host target gene, herein designated

VGAM HOST TARGET GENE, is a human gene contained in the human genome.

[70651] VGAM2008 gene encodes a VGAM2008 precursor RNA, herein designated VGAM PRECURSOR RNA. Similar to other miRNA genes, and unlike most ordinary genes, VGAM2008 precursor RNA does not encode a protein. A nucleotide sequence identical or highly similar to the nucleotide sequence of VGAM2008 precursor RNA is designated SEQ ID:1994, and is provided hereinbelow with reference to the sequence listing part. Nucleotide sequence SEQ ID:1994 is located at position 11658 relative to the genome of Reston Ebola Virus (REBOV).

[70652] VGAM2008 precursor RNA folds onto itself, forming VGAM2008 folded precursor RNA, herein designated VGAM FOLDED PRECURSOR RNA, which has a two-dimensional `hairpin structure`. As is well known in the art, this `hairpin structure`, is typical of RNA encoded by miRNA genes, and is due to the fact that the nucleotide sequence of the first half of the RNA encoded by a miRNA gene is an accurate or partial inversed-reversed sequence of the nucleotide sequence of the second half thereof.

[70653] An enzyme complex designated DICER COMPLEX, `dices` the VGAM2008 folded precursor RNA into VGAM2008

RNA, herein designated VGAM RNA, a single stranded ~22 nt long RNA segment. As is known in the art, `dicing` of a hairpin structured RNA precursor product into a short ~22nt RNA segment is catalyzed by an enzyme complex comprising an enzyme called Dicer together with other necessary proteins. A probable (over 45%) nucleotide sequence of VGAM2008 RNA is designated SEQ ID:4719, and is provided hereinbelow with reference to the sequence listing part.

[70654] VGAM2008 host target gene, herein designated VGAM HOST TARGET GENE, encodes a corresponding messenger RNA, VGAM2008 host target RNA, herein designated VGAM HOST TARGET RNA. VGAM2008 host target RNA comprises three regions, as is typical of mRNA of a protein coding gene: a 5` untranslated region, a protein coding region and a 3` untranslated region, designated 5`UTR, PROTEIN CODING and 3`UTR respectively.

[70655] VGAM2008 RNA, herein designated VGAM RNA, binds complementarily to one or more host target binding sites located in untranslated regions of VGAM2008 host target RNA, herein designated VGAM HOST TARGET RNA. This complementary binding is due to the fact that the nucleotide sequence of VGAM2008 RNA is an accurate or a

partial inversed-reversed sequence of the nucleotide sequence of each of the host target binding sites. As an illustration, Fig. 1 shows three such host target binding sites, designated BINDING SITE I, BINDING SITE II and BINDING SITE III respectively. It is appreciated that the number of host target binding sites shown in Fig. 1 is meant as an illustration only, and is not meant to be limiting - VGAM2008 RNA, herein designated VGAM RNA, may have a different number of host target binding sites in untranslated regions of a VGAM2008 host target RNA, herein designated VGAM HOST TARGET RNA. It is further appreciated that while Fig. 1 depicts host target binding sites in the 3`UTR region, this is meant as an example only - these host target binding sites may be located in the 3`UTR region, the 5`UTR region, or in both 3`UTR and 5`UTR regions.

[70656] The complementary binding of VGAM2008 RNA, herein designated VGAM RNA, to host target binding sites on VGAM2008 host target RNA, herein designated VGAM HOST TARGET RNA, such as BINDING SITE I, BINDING SITE II and BINDING SITE III, inhibits translation of VGAM2008 host target RNA into VGAM2008 host target protein, herein designated VGAM HOST TARGET PROTEIN. VGAM

host target protein is therefore outlined by a broken line.

[70657] It is appreciated that VGAM2008 host target gene, herein designated VGAM HOST TARGET GENE, in fact represents a plurality of VGAM2008 host target genes. The mRNA of each one of this plurality of VGAM2008 host target genes comprises one or more host target binding sites, each having a nucleotide sequence which is at least partly complementary to VGAM2008 RNA, herein designated VGAM RNA, and which when bound by VGAM2008 RNA causes inhibition of translation of respective one or more VGAM2008 host target proteins.

[70658] It is further appreciated by one skilled in the art that the mode of translational inhibition illustrated by Fig. 1 with specific reference to translational inhibition exerted by VGAM2008 gene, herein designated VGAM GENE, on one or more VGAM2008 host target gene, herein designated VGAM HOST TARGET GENE, is in fact common to other known non-viral miRNA genes. As mentioned hereinabove with reference to the background section, although a specific complementary binding site has been demonstrated only for some of the known miRNA genes (primarily Lin-4 and Let-7), all other recently discovered miRNA genes are also believed by those skilled in the art to modulate ex-

pression of other genes by complementary binding, although specific complementary binding sites of these other miRNA genes have not yet been found (Ruvkun G., `Perspective: Glimpses of a tiny RNA world`, Science 294,779 (2001)).

[70659] It is yet further appreciated that a function of VGAM2008 is inhibition of expression of host target genes, as part of a novel viral mechanism of attacking a host. Accordingly, utilities of VGAM2008 include diagnosis, prevention and treatment of viral infection by Reston Ebola Virus (REBOV). Specific functions, and accordingly utilities, of VGAM2008 correlate with, and may be deduced from, the identity of the host target genes which VGAM2008 binds and inhibits, and the function of these host target genes, as elaborated hereinbelow.

[70660] Nucleotide sequences of the VGAM2008 precursor RNA, herein designated VGAM PRECURSOR RNA, and of the `diced` VGAM2008 RNA, herein designated VGAM RNA, and a schematic representation of the secondary folding of VGAM2008 folded precursor RNA, herein designated VGAM FOLDED PRECURSOR RNA, of VGAM2008 are further described hereinbelow with reference to Table 1.

[70661] Nucleotide sequences of host target binding sites, such as

BINDING SITE-I, BINDING SITE-II and BINDING SITE-III of Fig. 1, found on VGAM2008 host target RNA, and schematic representation of the complementarity of each of these host target binding sites to VGAM2008 RNA, herein designated VGAM RNA, are described hereinbelow with reference to Table 2.

[70662] As mentioned hereinabove with reference to Fig. 1, a function of VGAM2008 gene, herein designated VGAM is inhibition of expression of VGAM2008 target genes. It is appreciated that specific functions, and accordingly utilities, of VGAM2008 correlate with, and may be deduced from, the identity of the target genes which VGAM2008 binds and inhibits, and the function of these target genes, as elaborated hereinbelow.

[70663] Chromosome 8 Open Reading Frame 1 (C8orf1, Accession NM_004337) is a VGAM2008 host target gene. C8orf1 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by C8orf1, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of C8orf1 BINDING SITE, designated SEQ ID:10530, to the nucleotide sequence of VGAM2008 RNA, herein desig-

nated VGAM RNA, also designated SEQ ID:4719.

[70664] A function of VGAM2008 is therefore inhibition of Chromosome 8 Open Reading Frame 1 (C8orf1, Accession NM_004337). Accordingly, utilities of VGAM2008 include diagnosis, prevention and treatment of diseases and clinical conditions associated with C8orf1. Synaptotagmin I (SYT1, Accession NM_005639) is another VGAM2008 host target gene. SYT1 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by SYT1, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of SYT1 BINDING SITE, designated SEQ ID:12169, to the nucleotide sequence of VGAM2008 RNA, herein designated VGAM RNA, also designated SEQ ID:4719.

[70665] Another function of VGAM2008 is therefore inhibition of Synaptotagmin I (SYT1, Accession NM_005639), a gene which may have a regulatory role in the membrane interactions during trafficking of synaptic vesicles at the active zone of the synapse. Accordingly, utilities of VGAM2008 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SYT1. The function

of SYT1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM739.Carbohydrate (chondroitin 6) Sulfotransferase 3 (CHST3, Accession NM_004273) is another VGAM2008 host target gene. CHST3 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by CHST3, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of CHST3 BINDING SITE, designated SEQ ID:10474, to the nucleotide sequence of VGAM2008 RNA, herein designated VGAM RNA, also designated SEQ ID:4719.

[70666] Another function of VGAM2008 is therefore inhibition of Carbohydrate (chondroitin 6) Sulfotransferase 3 (CHST3, Accession NM_004273). Accordingly, utilities of VGAM2008 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CHST3. KIAA1055 (Accession XM_038509) is another VGAM2008 host target gene. KIAA1055 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by KIAA1055, corresponding to a HOST TARGET

binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of KIAA1055 BINDING SITE, designated SEQ ID:32849, to the nucleotide sequence of VGAM2008 RNA, herein designated VGAM RNA, also designated SEQ ID:4719.

[70667] Another function of VGAM2008 is therefore inhibition of KIAA1055 (Accession XM_038509). Accordingly, utilities of VGAM2008 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1055. Syndecan 3 (N-syndecan) (SDC3, Accession NM_014654) is another VGAM2008 host target gene. SDC3 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by SDC3, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of SDC3 BINDING SITE, designated SEQ ID:16077, to the nucleotide sequence of VGAM2008 RNA, herein designated VGAM RNA, also designated SEQ ID:4719.

[70668] Another function of VGAM2008 is therefore inhibition of Syndecan 3 (N-syndecan) (SDC3, Accession NM_014654). Accordingly, utilities of VGAM2008 include diagnosis,

prevention and treatment of diseases and clinical conditions associated with SDC3. Zinc Finger Protein 387 (ZNF387, Accession NM_014682) is another VGAM2008 host target gene. ZNF387 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by ZNF387, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of ZNF387 BINDING SITE, designated SEQ ID:16171, to the nucleotide sequence of VGAM2008 RNA, herein designated VGAM RNA, also designated SEQ ID:4719.

[70669] Another function of VGAM2008 is therefore inhibition of Zinc Finger Protein 387 (ZNF387, Accession NM_014682). Accordingly, utilities of VGAM2008 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ZNF387. LOC151234 (Accession XM_087136) is another VGAM2008 host target gene. LOC151234 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC151234, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nu-

cleotide sequences of LOC151234 BINDING SITE, designated SEQ ID:39078, to the nucleotide sequence of VGAM2008 RNA, herein designated VGAM RNA, also designated SEQ ID:4719.

[70670] Another function of VGAM2008 is therefore inhibition of LOC151234 (Accession XM_087136). Accordingly, utilities of VGAM2008 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC151234. LOC96597 (Accession XM_039922) is another VGAM2008 host target gene. LOC96597 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by LOC96597, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC96597 BINDING SITE, designated SEQ ID:33225, to the nucleotide sequence of VGAM2008 RNA, herein designated VGAM RNA, also designated SEQ ID:4719.

[70671] Another function of VGAM2008 is therefore inhibition of LOC96597 (Accession XM_039922). Accordingly, utilities of VGAM2008 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC96597. Fig. 1 further provides a conceptual descrip-

tion of a novel bioinformatically detected viral gene of the present invention, referred to here as Viral Genomic Address Messenger 2009 (VGAM2009) viral gene, which modulates expression of respective host target genes thereof, the function and utility of which host target genes is known in the art.

[70672] VGAM2009 is a novel bioinformatically detected regulatory, non protein coding, viral micro RNA (miRNA) gene. The method by which VGAM2009 was detected is described hereinabove with reference to Figs. 1-8.

[70673] VGAM2009 gene, herein designated VGAM GENE, is a viral gene contained in the genome of Reston Ebola Virus (REBOV). VGAM2009 host target gene, herein designated VGAM HOST TARGET GENE, is a human gene contained in the human genome.

[70674] VGAM2009 gene encodes a VGAM2009 precursor RNA, herein designated VGAM PRECURSOR RNA. Similar to other miRNA genes, and unlike most ordinary genes, VGAM2009 precursor RNA does not encode a protein. A nucleotide sequence identical or highly similar to the nucleotide sequence of VGAM2009 precursor RNA is designated SEQ ID:1995, and is provided hereinbelow with reference to the sequence listing part. Nucleotide sequence

SEQ ID:1995 is located at position 12590 relative to the genome of Reston Ebola Virus (REBOV).

[70675] VGAM2009 precursor RNA folds onto itself, forming VGAM2009 folded precursor RNA, herein designated VGAM FOLDED PRECURSOR RNA, which has a two-dimensional `hairpin structure`. As is well known in the art, this `hairpin structure`, is typical of RNA encoded by miRNA genes, and is due to the fact that the nucleotide sequence of the first half of the RNA encoded by a miRNA gene is an accurate or partial inversed-reversed sequence of the nucleotide sequence of the second half thereof.

[70676] An enzyme complex designated DICER COMPLEX, `dices` the VGAM2009 folded precursor RNA into VGAM2009 RNA, herein designated VGAM RNA, a single stranded ~22 nt long RNA segment. As is known in the art, `dicing` of a hairpin structured RNA precursor product into a short ~22nt RNA segment is catalyzed by an enzyme complex comprising an enzyme called Dicer together with other necessary proteins. A probable (over 40%) nucleotide sequence of VGAM2009 RNA is designated SEQ ID:4720, and is provided hereinbelow with reference to the sequence listing part.

[70677] VGAM2009 host target gene, herein designated VGAM

HOST TARGET GENE, encodes a corresponding messenger RNA, VGAM2009 host target RNA, herein designated VGAM HOST TARGET RNA. VGAM2009 host target RNA comprises three regions, as is typical of mRNA of a protein coding gene: a 5` untranslated region, a protein coding region and a 3` untranslated region, designated 5`UTR, PROTEIN CODING and 3`UTR respectively.

[70678] VGAM2009 RNA, herein designated VGAM RNA, binds complementarily to one or more host target binding sites located in untranslated regions of VGAM2009 host target RNA, herein designated VGAM HOST TARGET RNA. This complementary binding is due to the fact that the nucleotide sequence of VGAM2009 RNA is an accurate or a partial inversed-reversed sequence of the nucleotide sequence of each of the host target binding sites. As an illustration, Fig. 1 shows three such host target binding sites, designated BINDING SITE I, BINDING SITE II and BINDING SITE III respectively. It is appreciated that the number of host target binding sites shown in Fig. 1 is meant as an illustration only, and is not meant to be limiting - VGAM2009 RNA, herein designated VGAM RNA, may have a different number of host target binding sites in untranslated regions of a VGAM2009 host target RNA,

herein designated VGAM HOST TARGET RNA. It is further appreciated that while Fig. 1 depicts host target binding sites in the 3`UTR region, this is meant as an example only - these host target binding sites may be located in the 3`UTR region, the 5`UTR region, or in both 3`UTR and 5`UTR regions.

[70679] The complementary binding of VGAM2009 RNA, herein designated VGAM RNA, to host target binding sites on VGAM2009 host target RNA, herein designated VGAM HOST TARGET RNA, such as BINDING SITE I, BINDING SITE II and BINDING SITE III, inhibits translation of VGAM2009 host target RNA into VGAM2009 host target protein, herein designated VGAM HOST TARGET PROTEIN. VGAM host target protein is therefore outlined by a broken line.

[70680] It is appreciated that VGAM2009 host target gene, herein designated VGAM HOST TARGET GENE, in fact represents a plurality of VGAM2009 host target genes. The mRNA of each one of this plurality of VGAM2009 host target genes comprises one or more host target binding sites, each having a nucleotide sequence which is at least partly complementary to VGAM2009 RNA, herein designated VGAM RNA, and which when bound by VGAM2009 RNA causes inhibition of translation of respective one or more

VGAM2009 host target proteins.

[70681] It is further appreciated by one skilled in the art that the mode of translational inhibition illustrated by Fig. 1 with specific reference to translational inhibition exerted by VGAM2009 gene, herein designated VGAM GENE, on one or more VGAM2009 host target gene, herein designated VGAM HOST TARGET GENE, is in fact common to other known non-viral miRNA genes. As mentioned hereinabove with reference to the background section, although a specific complementary binding site has been demonstrated only for some of the known miRNA genes (primarily Lin-4 and Let-7), all other recently discovered miRNA genes are also believed by those skilled in the art to modulate expression of other genes by complementary binding, although specific complementary binding sites of these other miRNA genes have not yet been found (Ruvkun G., `Perspective: Glimpses of a tiny RNA world`, Science 294,779 (2001)).

[70682] It is yet further appreciated that a function of VGAM2009 is inhibition of expression of host target genes, as part of a novel viral mechanism of attacking a host. Accordingly, utilities of VGAM2009 include diagnosis, prevention and treatment of viral infection by Reston Ebola Virus (REBOV).

Specific functions, and accordingly utilities, of VGAM2009 correlate with, and may be deduced from, the identity of the host target genes which VGAM2009 binds and inhibits, and the function of these host target genes, as elaborated hereinbelow.

[70683] Nucleotide sequences of the VGAM2009 precursor RNA, herein designated VGAM PRECURSOR RNA, and of the `diced` VGAM2009 RNA, herein designated VGAM RNA, and a schematic representation of the secondary folding of VGAM2009 folded precursor RNA, herein designated VGAM FOLDED PRECURSOR RNA, of VGAM2009 are further described hereinbelow with reference to Table 1.

[70684] Nucleotide sequences of host target binding sites, such as BINDING SITE-I, BINDING SITE-II and BINDING SITE-III of Fig. 1, found on VGAM2009 host target RNA, and schematic representation of the complementarity of each of these host target binding sites to VGAM2009 RNA, herein designated VGAM RNA, are described hereinbelow with reference to Table 2.

[70685] As mentioned hereinabove with reference to Fig. 1, a function of VGAM2009 gene, herein designated VGAM is inhibition of expression of VGAM2009 target genes. It is appreciated that specific functions, and accordingly utili-

ties, of VGAM2009 correlate with, and may be deduced from, the identity of the target genes which VGAM2009 binds and inhibits, and the function of these target genes, as elaborated hereinbelow.

[70686] Phosphoinositide-3-kinase, Regulatory Subunit, Polypeptide 1 (p85 alpha) (PIK3R1, Accession XM_043865) is a VGAM2009 host target gene. PIK3R1 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by PIK3R1, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of PIK3R1 BINDING SITE, designated SEQ ID:34039, to the nucleotide sequence of VGAM2009 RNA, herein designated VGAM RNA, also designated SEQ ID:4720.

[70687] A function of VGAM2009 is therefore inhibition of Phosphoinositide-3-kinase, Regulatory Subunit, Polypeptide 1 (p85 alpha) (PIK3R1, Accession XM_043865), a gene which acts as an adapter, for the insulin-stimulated increase in glucose uptake and glycogen synthesis. Accordingly, utilities of VGAM2009 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PIK3R1. The function of PIK3R1 and its association

with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM826.Suppression of Tumorigenicity 7 (ST7, Accession NM_013437) is another VGAM2009 host target gene. ST7 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by ST7, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of ST7 BINDING SITE, designated SEQ ID:15099, to the nucleotide sequence of VGAM2009 RNA, herein designated VGAM RNA, also designated SEQ ID:4720.

[70688] Another function of VGAM2009 is therefore inhibition of Suppression of Tumorigenicity 7 (ST7, Accession NM_013437), a gene which has a role in regulating cell-environment or cell-cell interactions. Accordingly, utilities of VGAM2009 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ST7. The function of ST7 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM107.Supervillin (SVIL, Accession NM_003174) is another VGAM2009 host target gene. SVIL BINDING SITE1

and SVIL BINDING SITE2 are HOST TARGET binding sites found in untranslated regions of mRNA encoded by SVIL, corresponding to HOST TARGET binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of SVIL BINDING SITE1 and SVIL BINDING SITE2, designated SEQ ID:9151 and SEQ ID:22348 respectively, to the nucleotide sequence of VGAM2009 RNA, herein designated VGAM RNA, also designated SEQ ID:4720.

[70689] Another function of VGAM2009 is therefore inhibition of Supervillin (SVIL, Accession NM_003174), a gene which binds actin, links filamentous actin with the plasma membrane; and contains putative nuclear localization signals. Accordingly, utilities of VGAM2009 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SVIL. The function of SVIL and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM1459.GNB4 (Accession NM_021629) is another VGAM2009 host target gene. GNB4 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by GNB4, corresponding to a HOST TARGET binding site such as

BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of GNB4 BINDING SITE, designated SEQ ID:22269, to the nucleotide sequence of VGAM2009 RNA, herein designated VGAM RNA, also designated SEQ ID:4720.

[70690] Another function of VGAM2009 is therefore inhibition of GNB4 (Accession NM_021629). Accordingly, utilities of VGAM2009 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GNB4. KIAA0530 (Accession XM_048070) is another VGAM2009 host target gene. KIAA0530 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by KIAA0530, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of KIAA0530 BINDING SITE, designated SEQ ID:35099, to the nucleotide sequence of VGAM2009 RNA, herein designated VGAM RNA, also designated SEQ ID:4720.

[70691] Another function of VGAM2009 is therefore inhibition of KIAA0530 (Accession XM_048070). Accordingly, utilities of VGAM2009 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

KIAA0530. KIAA1265 (Accession XM_047707) is another VGAM2009 host target gene. KIAA1265 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by KIAA1265, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of KIAA1265 BINDING SITE, designated SEQ ID:35032, to the nucleotide sequence of VGAM2009 RNA, herein designated VGAM RNA, also designated SEQ ID:4720.

[70692] Another function of VGAM2009 is therefore inhibition of KIAA1265 (Accession XM_047707). Accordingly, utilities of VGAM2009 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1265. Testis-specific Transcript, Y-linked 9 (TTTY9, Accession NM_031927) is another VGAM2009 host target gene. TTTY9 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by TTTY9, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of TTTY9 BINDING SITE, designated SEQ ID:25677, to the nucleotide sequence of VGAM2009 RNA,

herein designated VGAM RNA, also designated SEQ ID:4720.

[70693] Another function of VGAM2009 is therefore inhibition of Testis-specific Transcript, Y-linked 9 (TTTY9, Accession NM_031927). Accordingly, utilities of VGAM2009 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TTTY9. LOC120856 (Accession XM_058509) is another VGAM2009 host target gene. LOC120856 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC120856, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC120856 BINDING SITE, designated SEQ ID:36634, to the nucleotide sequence of VGAM2009 RNA, herein designated VGAM RNA, also designated SEQ ID:4720.

[70694] Another function of VGAM2009 is therefore inhibition of LOC120856 (Accession XM_058509). Accordingly, utilities of VGAM2009 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC120856. LOC157278 (Accession XM_098741) is another VGAM2009 host target gene. LOC157278 BINDING

SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC157278, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC157278 BINDING SITE, designated SEQ ID:41777, to the nucleotide sequence of VGAM2009 RNA, herein designated VGAM RNA, also designated SEQ ID:4720.

[70695] Another function of VGAM2009 is therefore inhibition of LOC157278 (Accession XM_098741). Accordingly, utilities of VGAM2009 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC157278. LOC221962 (Accession XM_166554) is another VGAM2009 host target gene. LOC221962 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC221962, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC221962 BINDING SITE, designated SEQ ID:44528, to the nucleotide sequence of VGAM2009 RNA, herein designated VGAM RNA, also designated SEQ ID:4720.

[70696] Another function of VGAM2009 is therefore inhibition of

LOC221962 (Accession XM_166554). Accordingly, utilities of VGAM2009 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC221962. LOC255461 (Accession XM_173207) is another VGAM2009 host target gene. LOC255461 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC255461, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC255461 BINDING SITE, designated SEQ ID:46463, to the nucleotide sequence of VGAM2009 RNA, herein designated VGAM RNA, also designated SEQ ID:4720.

[70697] Another function of VGAM2009 is therefore inhibition of LOC255461 (Accession XM_173207). Accordingly, utilities of VGAM2009 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC255461. LOC255516 (Accession XM_173212) is another VGAM2009 host target gene. LOC255516 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC255516, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 il-

lustrates the complementarity of the nucleotide sequences of LOC255516 BINDING SITE, designated SEQ ID:46469, to the nucleotide sequence of VGAM2009 RNA, herein designated VGAM RNA, also designated SEQ ID:4720.

[70698] Another function of VGAM2009 is therefore inhibition of LOC255516 (Accession XM_173212). Accordingly, utilities of VGAM2009 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC255516. Fig. 1 further provides a conceptual description of a novel bioinformatically detected viral gene of the present invention, referred to here as Viral Genomic Address Messenger 2010 (VGAM2010) viral gene, which modulates expression of respective host target genes thereof, the function and utility of which host target genes is known in the art.

[70699] VGAM2010 is a novel bioinformatically detected regulatory, non protein coding, viral micro RNA (miRNA) gene. The method by which VGAM2010 was detected is described hereinabove with reference to Figs. 1-8.

[70700] VGAM2010 gene, herein designated VGAM GENE, is a viral gene contained in the genome of Reston Ebola Virus (REBOV). VGAM2010 host target gene, herein designated VGAM HOST TARGET GENE, is a human gene contained in

the human genome.

[70701] VGAM2010 gene encodes a VGAM2010 precursor RNA, herein designated VGAM PRECURSOR RNA. Similar to other miRNA genes, and unlike most ordinary genes, VGAM2010 precursor RNA does not encode a protein. A nucleotide sequence identical or highly similar to the nucleotide sequence of VGAM2010 precursor RNA is designated SEQ ID:1996, and is provided hereinbelow with reference to the sequence listing part. Nucleotide sequence SEQ ID:1996 is located at position 17622 relative to the genome of Reston Ebola Virus (REBOV).

[70702] VGAM2010 precursor RNA folds onto itself, forming VGAM2010 folded precursor RNA, herein designated VGAM FOLDED PRECURSOR RNA, which has a two-dimensional `hairpin structure`. As is well known in the art, this `hairpin structure`, is typical of RNA encoded by miRNA genes, and is due to the fact that the nucleotide sequence of the first half of the RNA encoded by a miRNA gene is an accurate or partial inversed-reversed sequence of the nucleotide sequence of the second half thereof.

[70703] An enzyme complex designated DICER COMPLEX, `dices` the VGAM2010 folded precursor RNA into VGAM2010 RNA, herein designated VGAM RNA, a single stranded ~22

nt long RNA segment. As is known in the art, `dicing` of a hairpin structured RNA precursor product into a short ~22nt RNA segment is catalyzed by an enzyme complex comprising an enzyme called Dicer together with other necessary proteins. A probable (over 61%) nucleotide sequence of VGAM2010 RNA is designated SEQ ID:4721, and is provided hereinbelow with reference to the sequence listing part.

[70704] VGAM2010 host target gene, herein designated VGAM HOST TARGET GENE, encodes a corresponding messenger RNA, VGAM2010 host target RNA, herein designated VGAM HOST TARGET RNA. VGAM2010 host target RNA comprises three regions, as is typical of mRNA of a protein coding gene: a 5` untranslated region, a protein coding region and a 3` untranslated region, designated 5`UTR, PROTEIN CODING and 3`UTR respectively.

[70705] VGAM2010 RNA, herein designated VGAM RNA, binds complementarily to one or more host target binding sites located in untranslated regions of VGAM2010 host target RNA, herein designated VGAM HOST TARGET RNA. This complementary binding is due to the fact that the nucleotide sequence of VGAM2010 RNA is an accurate or a partial inversed-reversed sequence of the nucleotide se-

quence of each of the host target binding sites. As an illustration, Fig. 1 shows three such host target binding sites, designated BINDING SITE I, BINDING SITE II and BINDING SITE III respectively. It is appreciated that the number of host target binding sites shown in Fig. 1 is meant as an illustration only, and is not meant to be limiting - VGAM2010 RNA, herein designated VGAM RNA, may have a different number of host target binding sites in untranslated regions of a VGAM2010 host target RNA, herein designated VGAM HOST TARGET RNA. It is further appreciated that while Fig. 1 depicts host target binding sites in the 3`UTR region, this is meant as an example only - these host target binding sites may be located in the 3`UTR region, the 5`UTR region, or in both 3`UTR and 5`UTR regions.

[70706] The complementary binding of VGAM2010 RNA, herein designated VGAM RNA, to host target binding sites on VGAM2010 host target RNA, herein designated VGAM HOST TARGET RNA, such as BINDING SITE I, BINDING SITE II and BINDING SITE III, inhibits translation of VGAM2010 host target RNA into VGAM2010 host target protein, herein designated VGAM HOST TARGET PROTEIN. VGAM host target protein is therefore outlined by a broken line.

[70707] It is appreciated that VGAM2010 host target gene, herein designated VGAM HOST TARGET GENE, in fact represents a plurality of VGAM2010 host target genes. The mRNA of each one of this plurality of VGAM2010 host target genes comprises one or more host target binding sites, each having a nucleotide sequence which is at least partly complementary to VGAM2010 RNA, herein designated VGAM RNA, and which when bound by VGAM2010 RNA causes inhibition of translation of respective one or more VGAM2010 host target proteins.

[70708] It is further appreciated by one skilled in the art that the mode of translational inhibition illustrated by Fig. 1 with specific reference to translational inhibition exerted by VGAM2010 gene, herein designated VGAM GENE, on one or more VGAM2010 host target gene, herein designated VGAM HOST TARGET GENE, is in fact common to other known non-viral miRNA genes. As mentioned hereinabove with reference to the background section, although a specific complementary binding site has been demonstrated only for some of the known miRNA genes (primarily Lin-4 and Let-7), all other recently discovered miRNA genes are also believed by those skilled in the art to modulate expression of other genes by complementary binding, al-

though specific complementary binding sites of these other miRNA genes have not yet been found (Ruvkun G., `Perspective: Glimpses of a tiny RNA world`, Science 294,779 (2001)).

[70709] It is yet further appreciated that a function of VGAM2010 is inhibition of expression of host target genes, as part of a novel viral mechanism of attacking a host. Accordingly, utilities of VGAM2010 include diagnosis, prevention and treatment of viral infection by Reston Ebola Virus (REBOV). Specific functions, and accordingly utilities, of VGAM2010 correlate with, and may be deduced from, the identity of the host target genes which VGAM2010 binds and inhibits, and the function of these host target genes, as elaborated hereinbelow.

[70710] Nucleotide sequences of the VGAM2010 precursor RNA, herein designated VGAM PRECURSOR RNA, and of the `diced` VGAM2010 RNA, herein designated VGAM RNA, and a schematic representation of the secondary folding of VGAM2010 folded precursor RNA, herein designated VGAM FOLDED PRECURSOR RNA, of VGAM2010 are further described hereinbelow with reference to Table 1.

[70711] Nucleotide sequences of host target binding sites, such as BINDING SITE-I, BINDING SITE-II and BINDING SITE-III of

Fig. 1, found on VGAM2010 host target RNA, and schematic representation of the complementarity of each of these host target binding sites to VGAM2010 RNA, herein designated VGAM RNA, are described hereinbelow with reference to Table 2.

[70712] As mentioned hereinabove with reference to Fig. 1, a function of VGAM2010 gene, herein designated VGAM is inhibition of expression of VGAM2010 target genes. It is appreciated that specific functions, and accordingly utilities, of VGAM2010 correlate with, and may be deduced from, the identity of the target genes which VGAM2010 binds and inhibits, and the function of these target genes, as elaborated hereinbelow.

[70713] Complement Component (3b/4b) Receptor 1, Including Knops Blood Group System (CR1, Accession NM_000573) is a VGAM2010 host target gene. CR1 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by CR1, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of CR1 BINDING SITE, designated SEQ ID:6173, to the nucleotide sequence of VGAM2010 RNA, herein designated VGAM RNA, also

designated SEQ ID:4721.

[70714] A function of VGAM2010 is therefore inhibition of Complement Component (3b/4b) Receptor 1, Including Knops Blood Group System (CR1, Accession NM_000573). Accordingly, utilities of VGAM2010 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CR1. Interleukin-1 Receptor-associated Kinase 1 (IRAK1, Accession NM_001569) is another VGAM2010 host target gene. IRAK1 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by IRAK1, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of IRAK1 BINDING SITE, designated SEQ ID:7299, to the nucleotide sequence of VGAM2010 RNA, herein designated VGAM RNA, also designated SEQ ID:4721.

[70715] Another function of VGAM2010 is therefore inhibition of Interleukin-1 Receptor-associated Kinase 1 (IRAK1, Accession NM_001569). Accordingly, utilities of VGAM2010 include diagnosis, prevention and treatment of diseases and clinical conditions associated with IRAK1. DKFZp547I014 (Accession NM_020217) is another

VGAM2010 host target gene. DKFZp547I014 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by DKFZp547I014, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of DKFZp547I014 BINDING SITE, designated SEQ ID:21470, to the nucleotide sequence of VGAM2010 RNA, herein designated VGAM RNA, also designated SEQ ID:4721.

[70716] Another function of VGAM2010 is therefore inhibition of DKFZp547I014 (Accession NM_020217). Accordingly, utilities of VGAM2010 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZp547I014. Erythroblast Membrane-associated Protein (ERMAP, Accession NM_018538) is another VGAM2010 host target gene. ERMAP BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by ERMAP, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of ERMAP BINDING SITE, designated SEQ ID:20605, to the nucleotide sequence of VGAM2010 RNA, herein designated VGAM RNA, also des-

ignated SEQ ID:4721.

[70717] Another function of VGAM2010 is therefore inhibition of Erythroblast Membrane-associated Protein (ERMAP, Accession NM_018538). Accordingly, utilities of VGAM2010 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ERMAP. KIAA0527 (Accession XM_171054) is another VGAM2010 host target gene. KIAA0527 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by KIAA0527, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of KIAA0527 BINDING SITE, designated SEQ ID:45849, to the nucleotide sequence of VGAM2010 RNA, herein designated VGAM RNA, also designated SEQ ID:4721.

[70718] Another function of VGAM2010 is therefore inhibition of KIAA0527 (Accession XM_171054). Accordingly, utilities of VGAM2010 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0527. Rab11-FIP2 (Accession NM_014904) is another VGAM2010 host target gene. Rab11-FIP2 BINDING SITE is HOST TARGET binding site found in the 3` untranslated

region of mRNA encoded by Rab11-FIP2, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of Rab11-FIP2 BINDING SITE, designated SEQ ID:17096, to the nucleotide sequence of VGAM2010 RNA, herein designated VGAM RNA, also designated SEQ ID:4721.

[70719] Another function of VGAM2010 is therefore inhibition of Rab11-FIP2 (Accession NM_014904). Accordingly, utilities of VGAM2010 include diagnosis, prevention and treatment of diseases and clinical conditions associated with Rab11-FIP2. RING1 and YY1 Binding Protein (RYBP, Accession XM_002853) is another VGAM2010 host target gene. RYBP BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by RYBP, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of RYBP BINDING SITE, designated SEQ ID:29908, to the nucleotide sequence of VGAM2010 RNA, herein designated VGAM RNA, also designated SEQ ID:4721.

[70720] Another function of VGAM2010 is therefore inhibition of RING1 and YY1 Binding Protein (RYBP, Accession

XM_002853). Accordingly, utilities of VGAM2010 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RYBP. LOC221035 (Accession XM_167640) is another VGAM2010 host target gene. LOC221035 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC221035, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC221035 BINDING SITE, designated SEQ ID:44744, to the nucleotide sequence of VGAM2010 RNA, herein designated VGAM RNA, also designated SEQ ID:4721.

[70721] Another function of VGAM2010 is therefore inhibition of LOC221035 (Accession XM_167640). Accordingly, utilities of VGAM2010 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC221035. Fig. 1 further provides a conceptual description of a novel bioinformatically detected viral gene of the present invention, referred to here as Viral Genomic Address Messenger 2011 (VGAM2011) viral gene, which modulates expression of respective host target genes thereof, the function and utility of which host target genes

is known in the art.

[70722] VGAM2011 is a novel bioinformatically detected regulatory, non protein coding, viral micro RNA (miRNA) gene. The method by which VGAM2011 was detected is described hereinabove with reference to Figs. 1-8.

[70723] VGAM2011 gene, herein designated VGAM GENE, is a viral gene contained in the genome of Reston Ebola Virus (REBOV). VGAM2011 host target gene, herein designated VGAM HOST TARGET GENE, is a human gene contained in the human genome.

[70724] VGAM2011 gene encodes a VGAM2011 precursor RNA, herein designated VGAM PRECURSOR RNA. Similar to other miRNA genes, and unlike most ordinary genes, VGAM2011 precursor RNA does not encode a protein. A nucleotide sequence identical or highly similar to the nucleotide sequence of VGAM2011 precursor RNA is designated SEQ ID:1997, and is provided hereinbelow with reference to the sequence listing part. Nucleotide sequence SEQ ID:1997 is located at position 4098 relative to the genome of Reston Ebola Virus (REBOV).

[70725] VGAM2011 precursor RNA folds onto itself, forming VGAM2011 folded precursor RNA, herein designated VGAM FOLDED PRECURSOR RNA, which has a two-

dimensional `hairpin structure`. As is well known in the art, this `hairpin structure`, is typical of RNA encoded by miRNA genes, and is due to the fact that the nucleotide sequence of the first half of the RNA encoded by a miRNA gene is an accurate or partial inversed-reversed sequence of the nucleotide sequence of the second half thereof.

[70726] An enzyme complex designated DICER COMPLEX, `dices` the VGAM2011 folded precursor RNA into VGAM2011 RNA, herein designated VGAM RNA, a single stranded ~22 nt long RNA segment. As is known in the art, `dicing` of a hairpin structured RNA precursor product into a short ~22nt RNA segment is catalyzed by an enzyme complex comprising an enzyme called Dicer together with other necessary proteins. A probable (over 52%) nucleotide sequence of VGAM2011 RNA is designated SEQ ID:4722, and is provided hereinbelow with reference to the sequence listing part.

[70727] VGAM2011 host target gene, herein designated VGAM HOST TARGET GENE, encodes a corresponding messenger RNA, VGAM2011 host target RNA, herein designated VGAM HOST TARGET RNA. VGAM2011 host target RNA comprises three regions, as is typical of mRNA of a protein coding gene: a 5` untranslated region, a protein cod-

ing region and a 3` untranslated region, designated 5`UTR, PROTEIN CODING and 3`UTR respectively.

[70728] VGAM2011 RNA, herein designated VGAM RNA, binds complementarily to one or more host target binding sites located in untranslated regions of VGAM2011 host target RNA, herein designated VGAM HOST TARGET RNA. This complementary binding is due to the fact that the nucleotide sequence of VGAM2011 RNA is an accurate or a partial inversed-reversed sequence of the nucleotide sequence of each of the host target binding sites. As an illustration, Fig. 1 shows three such host target binding sites, designated BINDING SITE I, BINDING SITE II and BINDING SITE III respectively. It is appreciated that the number of host target binding sites shown in Fig. 1 is meant as an illustration only, and is not meant to be limiting - VGAM2011 RNA, herein designated VGAM RNA, may have a different number of host target binding sites in untranslated regions of a VGAM2011 host target RNA, herein designated VGAM HOST TARGET RNA. It is further appreciated that while Fig. 1 depicts host target binding sites in the 3`UTR region, this is meant as an example only - these host target binding sites may be located in the 3`UTR region, the 5`UTR region, or in both 3`UTR

and 5`UTR regions.

[70729] The complementary binding of VGAM2011 RNA, herein designated VGAM RNA, to host target binding sites on VGAM2011 host target RNA, herein designated VGAM HOST TARGET RNA, such as BINDING SITE I, BINDING SITE II and BINDING SITE III, inhibits translation of VGAM2011 host target RNA into VGAM2011 host target protein, herein designated VGAM HOST TARGET PROTEIN. VGAM host target protein is therefore outlined by a broken line.

[70730] It is appreciated that VGAM2011 host target gene, herein designated VGAM HOST TARGET GENE, in fact represents a plurality of VGAM2011 host target genes. The mRNA of each one of this plurality of VGAM2011 host target genes comprises one or more host target binding sites, each having a nucleotide sequence which is at least partly complementary to VGAM2011 RNA, herein designated VGAM RNA, and which when bound by VGAM2011 RNA causes inhibition of translation of respective one or more VGAM2011 host target proteins.

[70731] It is further appreciated by one skilled in the art that the mode of translational inhibition illustrated by Fig. 1 with specific reference to translational inhibition exerted by VGAM2011 gene, herein designated VGAM GENE, on one

or more VGAM2011 host target gene, herein designated VGAM HOST TARGET GENE, is in fact common to other known non-viral miRNA genes. As mentioned hereinabove with reference to the background section, although a specific complementary binding site has been demonstrated only for some of the known miRNA genes (primarily Lin-4 and Let-7), all other recently discovered miRNA genes are also believed by those skilled in the art to modulate expression of other genes by complementary binding, although specific complementary binding sites of these other miRNA genes have not yet been found (Ruvkun G., `Perspective: Glimpses of a tiny RNA world`, Science 294,779 (2001)).

[70732] It is yet further appreciated that a function of VGAM2011 is inhibition of expression of host target genes, as part of a novel viral mechanism of attacking a host. Accordingly, utilities of VGAM2011 include diagnosis, prevention and treatment of viral infection by Reston Ebola Virus (REBOV). Specific functions, and accordingly utilities, of VGAM2011 correlate with, and may be deduced from, the identity of the host target genes which VGAM2011 binds and inhibits, and the function of these host target genes, as elaborated hereinbelow.

[70733] Nucleotide sequences of the VGAM2011 precursor RNA, herein designated VGAM PRECURSOR RNA, and of the `diced` VGAM2011 RNA, herein designated VGAM RNA, and a schematic representation of the secondary folding of VGAM2011 folded precursor RNA, herein designated VGAM FOLDED PRECURSOR RNA, of VGAM2011 are further described hereinbelow with reference to Table 1.

[70734] Nucleotide sequences of host target binding sites, such as BINDING SITE-I, BINDING SITE-II and BINDING SITE-III of Fig. 1, found on VGAM2011 host target RNA, and schematic representation of the complementarity of each of these host target binding sites to VGAM2011 RNA, herein designated VGAM RNA, are described hereinbelow with reference to Table 2.

[70735] As mentioned hereinabove with reference to Fig. 1, a function of VGAM2011 gene, herein designated VGAM is inhibition of expression of VGAM2011 target genes. It is appreciated that specific functions, and accordingly utilities, of VGAM2011 correlate with, and may be deduced from, the identity of the target genes which VGAM2011 binds and inhibits, and the function of these target genes, as elaborated hereinbelow.

[70736] Cold Shock Domain Protein A (CSDA, Accession

NM_003651) is a VGAM2011 host target gene. CSDA BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by CSDA, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of CSDA BINDING SITE, designated SEQ ID:9728, to the nucleotide sequence of VGAM2011 RNA, herein designated VGAM RNA, also designated SEQ ID:4722.

[70737] A function of VGAM2011 is therefore inhibition of Cold Shock Domain Protein A (CSDA, Accession NM_003651), a gene which binds to the gm-csf promoter and seems to act as a repressor. Accordingly, utilities of VGAM2011 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CSDA. The function of CSDA and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM1615.Leucine-zipper-like Transcriptional Regulator, 1 (LZTR1, Accession NM_006767) is another VGAM2011 host target gene. LZTR1 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LZTR1, corresponding to a HOST TARGET

binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LZTR1 BINDING SITE, designated SEQ ID:13636, to the nucleotide sequence of VGAM2011 RNA, herein designated VGAM RNA, also designated SEQ ID:4722.

[70738] Another function of VGAM2011 is therefore inhibition of Leucine-zipper-like Transcriptional Regulator, 1 (LZTR1, Accession NM_006767). Accordingly, utilities of VGAM2011 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LZTR1. SORCS2 (Accession NM_020777) is another VGAM2011 host target gene. SORCS2 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by SORCS2, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of SORCS2 BINDING SITE, designated SEQ ID:21872, to the nucleotide sequence of VGAM2011 RNA, herein designated VGAM RNA, also designated SEQ ID:4722.

[70739] Another function of VGAM2011 is therefore inhibition of SORCS2 (Accession NM_020777). Accordingly, utilities of

VGAM2011 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SORCS2. KIAA1922 (Accession XM_057040) is another VGAM2011 host target gene. KIAA1922 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by KIAA1922, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of KIAA1922 BINDING SITE, designated SEQ ID:36456, to the nucleotide sequence of VGAM2011 RNA, herein designated VGAM RNA, also designated SEQ ID:4722.

[70740] Another function of VGAM2011 is therefore inhibition of KIAA1922 (Accession XM_057040). Accordingly, utilities of VGAM2011 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1922. MGC19556 (Accession NM_033551) is another VGAM2011 host target gene. MGC19556 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by MGC19556, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of

MGC19556 BINDING SITE, designated SEQ ID:27315, to the nucleotide sequence of VGAM2011 RNA, herein designated VGAM RNA, also designated SEQ ID:4722.

[70741] Another function of VGAM2011 is therefore inhibition of MGC19556 (Accession NM_033551). Accordingly, utilities of VGAM2011 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC19556. NY-REN-25 (Accession XM_027116) is another VGAM2011 host target gene. NY-REN-25 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by NY-REN-25, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of NY-REN-25 BINDING SITE, designated SEQ ID:30415, to the nucleotide sequence of VGAM2011 RNA, herein designated VGAM RNA, also designated SEQ ID:4722.

[70742] Another function of VGAM2011 is therefore inhibition of NY-REN-25 (Accession XM_027116). Accordingly, utilities of VGAM2011 include diagnosis, prevention and treatment of diseases and clinical conditions associated with NY-REN-25. PF1 (Accession XM_170828) is another VGAM2011 host target gene. PF1 BINDING SITE is HOST

TARGET binding site found in the 5` untranslated region of mRNA encoded by PF1, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of PF1 BINDING SITE, designated SEQ ID:45603, to the nucleotide sequence of VGAM2011 RNA, herein designated VGAM RNA, also designated SEQ ID:4722.

[70743] Another function of VGAM2011 is therefore inhibition of PF1 (Accession XM_170828). Accordingly, utilities of VGAM2011 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PF1. SARM (Accession NM_015077) is another VGAM2011 host target gene. SARM BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by SARM, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of SARM BINDING SITE, designated SEQ ID:17459, to the nucleotide sequence of VGAM2011 RNA, herein designated VGAM RNA, also designated SEQ ID:4722.

[70744] Another function of VGAM2011 is therefore inhibition of

SARM (Accession NM_015077). Accordingly, utilities of VGAM2011 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SARM. SCAMP-4 (Accession NM_079834) is another VGAM2011 host target gene. SCAMP-4 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by SCAMP-4, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of SCAMP-4 BINDING SITE, designated SEQ ID:27820, to the nucleotide sequence of VGAM2011 RNA, herein designated VGAM RNA, also designated SEQ ID:4722.

[70745] Another function of VGAM2011 is therefore inhibition of SCAMP-4 (Accession NM_079834). Accordingly, utilities of VGAM2011 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SCAMP-4. WIT-1 (Accession NM_015855) is another VGAM2011 host target gene. WIT-1 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by WIT-1, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complemen-

tarity of the nucleotide sequences of WIT-1 BINDING SITE, designated SEQ ID:17989, to the nucleotide sequence of VGAM2011 RNA, herein designated VGAM RNA, also designated SEQ ID:4722.

[70746] Another function of VGAM2011 is therefore inhibition of WIT-1 (Accession NM_015855). Accordingly, utilities of VGAM2011 include diagnosis, prevention and treatment of diseases and clinical conditions associated with WIT-1. LOC149271 (Accession XM_086475) is another VGAM2011 host target gene. LOC149271 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by LOC149271, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC149271 BINDING SITE, designated SEQ ID:38673, to the nucleotide sequence of VGAM2011 RNA, herein designated VGAM RNA, also designated SEQ ID:4722.

[70747] Another function of VGAM2011 is therefore inhibition of LOC149271 (Accession XM_086475). Accordingly, utilities of VGAM2011 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC149271. LOC221288 (Accession XM_168058) is an-

other VGAM2011 host target gene. LOC221288 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC221288, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC221288 BINDING SITE, designated SEQ ID:44967, to the nucleotide sequence of VGAM2011 RNA, herein designated VGAM RNA, also designated SEQ ID:4722.

[70748] Another function of VGAM2011 is therefore inhibition of LOC221288 (Accession XM_168058). Accordingly, utilities of VGAM2011 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC221288. LOC255299 (Accession XM_173564) is another VGAM2011 host target gene. LOC255299 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by LOC255299, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC255299 BINDING SITE, designated SEQ ID:46548, to the nucleotide sequence of VGAM2011 RNA, herein designated VGAM RNA, also designated SEQ ID:4722.

[70749] Another function of VGAM2011 is therefore inhibition of LOC255299 (Accession XM_173564). Accordingly, utilities of VGAM2011 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC255299. LOC90092 (Accession XM_028862) is another VGAM2011 host target gene. LOC90092 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by LOC90092, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC90092 BINDING SITE, designated SEQ ID:30788, to the nucleotide sequence of VGAM2011 RNA, herein designated VGAM RNA, also designated SEQ ID:4722.

[70750] Another function of VGAM2011 is therefore inhibition of LOC90092 (Accession XM_028862). Accordingly, utilities of VGAM2011 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC90092. Fig. 1 further provides a conceptual description of a novel bioinformatically detected viral gene of the present invention, referred to here as Viral Genomic Address Messenger 2012 (VGAM2012) viral gene, which modulates expression of respective host target genes

thereof, the function and utility of which host target genes is known in the art.

[70751] VGAM2012 is a novel bioinformatically detected regulatory, non protein coding, viral micro RNA (miRNA) gene. The method by which VGAM2012 was detected is described hereinabove with reference to Figs. 1-8.

[70752] VGAM2012 gene, herein designated VGAM GENE, is a viral gene contained in the genome of Reston Ebola Virus (REBOV). VGAM2012 host target gene, herein designated VGAM HOST TARGET GENE, is a human gene contained in the human genome.

[70753] VGAM2012 gene encodes a VGAM2012 precursor RNA, herein designated VGAM PRECURSOR RNA. Similar to other miRNA genes, and unlike most ordinary genes, VGAM2012 precursor RNA does not encode a protein. A nucleotide sequence identical or highly similar to the nucleotide sequence of VGAM2012 precursor RNA is designated SEQ ID:1998, and is provided hereinbelow with reference to the sequence listing part. Nucleotide sequence SEQ ID:1998 is located at position 16890 relative to the genome of Reston Ebola Virus (REBOV).

[70754] VGAM2012 precursor RNA folds onto itself, forming VGAM2012 folded precursor RNA, herein designated

VGAM FOLDED PRECURSOR RNA, which has a two-dimensional `hairpin structure`. As is well known in the art, this `hairpin structure`, is typical of RNA encoded by miRNA genes, and is due to the fact that the nucleotide sequence of the first half of the RNA encoded by a miRNA gene is an accurate or partial inversed-reversed sequence of the nucleotide sequence of the second half thereof.

[70755] An enzyme complex designated DICER COMPLEX, `dices` the VGAM2012 folded precursor RNA into VGAM2012 RNA, herein designated VGAM RNA, a single stranded ~22 nt long RNA segment. As is known in the art, `dicing` of a hairpin structured RNA precursor product into a short ~22nt RNA segment is catalyzed by an enzyme complex comprising an enzyme called Dicer together with other necessary proteins. A probable (over 40%) nucleotide sequence of VGAM2012 RNA is designated SEQ ID:4723, and is provided hereinbelow with reference to the sequence listing part.

[70756] VGAM2012 host target gene, herein designated VGAM HOST TARGET GENE, encodes a corresponding messenger RNA, VGAM2012 host target RNA, herein designated VGAM HOST TARGET RNA. VGAM2012 host target RNA comprises three regions, as is typical of mRNA of a pro-

tein coding gene: a 5` untranslated region, a protein coding region and a 3` untranslated region, designated 5`UTR, PROTEIN CODING and 3`UTR respectively.

[70757] VGAM2012 RNA, herein designated VGAM RNA, binds complementarily to one or more host target binding sites located in untranslated regions of VGAM2012 host target RNA, herein designated VGAM HOST TARGET RNA. This complementary binding is due to the fact that the nucleotide sequence of VGAM2012 RNA is an accurate or a partial inversed-reversed sequence of the nucleotide sequence of each of the host target binding sites. As an illustration, Fig. 1 shows three such host target binding sites, designated BINDING SITE I, BINDING SITE II and BINDING SITE III respectively. It is appreciated that the number of host target binding sites shown in Fig. 1 is meant as an illustration only, and is not meant to be limiting - VGAM2012 RNA, herein designated VGAM RNA, may have a different number of host target binding sites in untranslated regions of a VGAM2012 host target RNA, herein designated VGAM HOST TARGET RNA. It is further appreciated that while Fig. 1 depicts host target binding sites in the 3`UTR region, this is meant as an example only - these host target binding sites may be located in

the 3`UTR region, the 5`UTR region, or in both 3`UTR and 5`UTR regions.

[70758] The complementary binding of VGAM2012 RNA, herein designated VGAM RNA, to host target binding sites on VGAM2012 host target RNA, herein designated VGAM HOST TARGET RNA, such as BINDING SITE I, BINDING SITE II and BINDING SITE III, inhibits translation of VGAM2012 host target RNA into VGAM2012 host target protein, herein designated VGAM HOST TARGET PROTEIN. VGAM host target protein is therefore outlined by a broken line.

[70759] It is appreciated that VGAM2012 host target gene, herein designated VGAM HOST TARGET GENE, in fact represents a plurality of VGAM2012 host target genes. The mRNA of each one of this plurality of VGAM2012 host target genes comprises one or more host target binding sites, each having a nucleotide sequence which is at least partly complementary to VGAM2012 RNA, herein designated VGAM RNA, and which when bound by VGAM2012 RNA causes inhibition of translation of respective one or more VGAM2012 host target proteins.

[70760] It is further appreciated by one skilled in the art that the mode of translational inhibition illustrated by Fig. 1 with specific reference to translational inhibition exerted by

VGAM2012 gene, herein designated VGAM GENE, on one or more VGAM2012 host target gene, herein designated VGAM HOST TARGET GENE, is in fact common to other known non-viral miRNA genes. As mentioned hereinabove with reference to the background section, although a specific complementary binding site has been demonstrated only for some of the known miRNA genes (primarily Lin-4 and Let-7), all other recently discovered miRNA genes are also believed by those skilled in the art to modulate expression of other genes by complementary binding, although specific complementary binding sites of these other miRNA genes have not yet been found (Ruvkun G., `Perspective: Glimpses of a tiny RNA world`, Science 294,779 (2001)).

[70761] It is yet further appreciated that a function of VGAM2012 is inhibition of expression of host target genes, as part of a novel viral mechanism of attacking a host. Accordingly, utilities of VGAM2012 include diagnosis, prevention and treatment of viral infection by Reston Ebola Virus (REBOV). Specific functions, and accordingly utilities, of VGAM2012 correlate with, and may be deduced from, the identity of the host target genes which VGAM2012 binds and inhibits, and the function of these host target genes, as

elaborated hereinbelow.

[70762] Nucleotide sequences of the VGAM2012 precursor RNA, herein designated VGAM PRECURSOR RNA, and of the `diced` VGAM2012 RNA, herein designated VGAM RNA, and a schematic representation of the secondary folding of VGAM2012 folded precursor RNA, herein designated VGAM FOLDED PRECURSOR RNA, of VGAM2012 are further described hereinbelow with reference to Table 1.

[70763] Nucleotide sequences of host target binding sites, such as BINDING SITE-I, BINDING SITE-II and BINDING SITE-III of Fig. 1, found on VGAM2012 host target RNA, and schematic representation of the complementarity of each of these host target binding sites to VGAM2012 RNA, herein designated VGAM RNA, are described hereinbelow with reference to Table 2.

[70764] As mentioned hereinabove with reference to Fig. 1, a function of VGAM2012 gene, herein designated VGAM is inhibition of expression of VGAM2012 target genes. It is appreciated that specific functions, and accordingly utilities, of VGAM2012 correlate with, and may be deduced from, the identity of the target genes which VGAM2012 binds and inhibits, and the function of these target genes, as elaborated hereinbelow.

[70765] Beclin 1 (coiled-coil, myosin-like BCL2 interacting protein) (BECN1, Accession NM_003766) is a VGAM2012 host target gene. BECN1 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by BECN1, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of BECN1 BINDING SITE, designated SEQ ID:9844, to the nucleotide sequence of VGAM2012 RNA, herein designated VGAM RNA, also designated SEQ ID:4723.

[70766] A function of VGAM2012 is therefore inhibition of Beclin 1 (coiled-coil, myosin-like BCL2 interacting protein) (BECN1, Accession NM_003766), a gene which protects cell from viral-induced apoptosis. Accordingly, utilities of VGAM2012 include diagnosis, prevention and treatment of diseases and clinical conditions associated with BECN1. The function of BECN1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM1246.Dmx-like 1 (DMXL1, Accession NM_005509) is another VGAM2012 host target gene. DMXL1 BINDING SITE is HOST TARGET binding site found

in the 3` untranslated region of mRNA encoded by DMXL1, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of DMXL1 BINDING SITE, designated SEQ ID:12023, to the nucleotide sequence of VGAM2012 RNA, herein designated VGAM RNA, also designated SEQ ID:4723.

[70767] Another function of VGAM2012 is therefore inhibition of Dmx-like 1 (DMXL1, Accession NM_005509). Accordingly, utilities of VGAM2012 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DMXL1. Nuclear Transcription Factor Y, Gamma (NFYC, Accession NM_014223) is another VGAM2012 host target gene. NFYC BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by NFYC, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of NFYC BINDING SITE, designated SEQ ID:15493, to the nucleotide sequence of VGAM2012 RNA, herein designated VGAM RNA, also designated SEQ ID:4723.

[70768] Another function of VGAM2012 is therefore inhibition of Nuclear Transcription Factor Y, Gamma (NFYC, Accession NM_014223). Accordingly, utilities of VGAM2012 include diagnosis, prevention and treatment of diseases and clinical conditions associated with NFYC. Plastin 3 (T isoform) (PLS3, Accession NM_005032) is another VGAM2012 host target gene. PLS3 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by PLS3, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of PLS3 BINDING SITE, designated SEQ ID:11471, to the nucleotide sequence of VGAM2012 RNA, herein designated VGAM RNA, also designated SEQ ID:4723.

[70769] Another function of VGAM2012 is therefore inhibition of Plastin 3 (T isoform) (PLS3, Accession NM_005032), a gene which binds actin. Accordingly, utilities of VGAM2012 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PLS3. The function of PLS3 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to

VGAM1754.Protein Tyrosine Phosphatase, Receptor Type, J (PTPRJ, Accession NM_002843) is another VGAM2012 host target gene. PTPRJ BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by PTPRJ, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of PTPRJ BINDING SITE, designated SEQ ID:8730, to the nucleotide sequence of VGAM2012 RNA, herein designated VGAM RNA, also designated SEQ ID:4723.

[70770] Another function of VGAM2012 is therefore inhibition of Protein Tyrosine Phosphatase, Receptor Type, J (PTPRJ, Accession NM_002843), a gene which Receptor-type protein tyrosine phosphatase J. Accordingly, utilities of VGAM2012 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PTPRJ. The function of PTPRJ and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM552.JDD1 (Accession XM_032515) is another VGAM2012 host target gene. JDD1 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region

of mRNA encoded by JDD1, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of JDD1 BINDING SITE, designated SEQ ID:31666, to the nucleotide sequence of VGAM2012 RNA, herein designated VGAM RNA, also designated SEQ ID:4723.

[70771] Another function of VGAM2012 is therefore inhibition of JDD1 (Accession XM_032515). Accordingly, utilities of VGAM2012 include diagnosis, prevention and treatment of diseases and clinical conditions associated with JDD1. KIAA1878 (Accession XM_166256) is another VGAM2012 host target gene. KIAA1878 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by KIAA1878, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of KIAA1878 BINDING SITE, designated SEQ ID:44077, to the nucleotide sequence of VGAM2012 RNA, herein designated VGAM RNA, also designated SEQ ID:4723.

[70772] Another function of VGAM2012 is therefore inhibition of KIAA1878 (Accession XM_166256). Accordingly, utilities

of VGAM2012 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1878. LOC157867 (Accession XM_098831) is another VGAM2012 host target gene. LOC157867 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by LOC157867, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC157867 BINDING SITE, designated SEQ ID:41854, to the nucleotide sequence of VGAM2012 RNA, herein designated VGAM RNA, also designated SEQ ID:4723.

[70773] Another function of VGAM2012 is therefore inhibition of LOC157867 (Accession XM_098831). Accordingly, utilities of VGAM2012 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC157867. Fig. 1 further provides a conceptual description of a novel bioinformatically detected viral gene of the present invention, referred to here as Viral Genomic Address Messenger 2013 (VGAM2013) viral gene, which modulates expression of respective host target genes thereof, the function and utility of which host target genes is known in the art.

[70774] VGAM2013 is a novel bioinformatically detected regulatory, non protein coding, viral micro RNA (miRNA) gene. The method by which VGAM2013 was detected is described hereinabove with reference to Figs. 1-8.

[70775] VGAM2013 gene, herein designated VGAM GENE, is a viral gene contained in the genome of Reston Ebola Virus (REBOV). VGAM2013 host target gene, herein designated VGAM HOST TARGET GENE, is a human gene contained in the human genome.

[70776] VGAM2013 gene encodes a VGAM2013 precursor RNA, herein designated VGAM PRECURSOR RNA. Similar to other miRNA genes, and unlike most ordinary genes, VGAM2013 precursor RNA does not encode a protein. A nucleotide sequence identical or highly similar to the nucleotide sequence of VGAM2013 precursor RNA is designated SEQ ID:1999, and is provided hereinbelow with reference to the sequence listing part. Nucleotide sequence SEQ ID:1999 is located at position 12733 relative to the genome of Reston Ebola Virus (REBOV).

[70777] VGAM2013 precursor RNA folds onto itself, forming VGAM2013 folded precursor RNA, herein designated VGAM FOLDED PRECURSOR RNA, which has a two-dimensional `hairpin structure`. As is well known in the

art, this `hairpin structure`, is typical of RNA encoded by miRNA genes, and is due to the fact that the nucleotide sequence of the first half of the RNA encoded by a miRNA gene is an accurate or partial inversed-reversed sequence of the nucleotide sequence of the second half thereof.

[70778] An enzyme complex designated DICER COMPLEX, `dices` the VGAM2013 folded precursor RNA into VGAM2013 RNA, herein designated VGAM RNA, a single stranded ~22 nt long RNA segment. As is known in the art, `dicing` of a hairpin structured RNA precursor product into a short ~22nt RNA segment is catalyzed by an enzyme complex comprising an enzyme called Dicer together with other necessary proteins. A probable (over 41%) nucleotide sequence of VGAM2013 RNA is designated SEQ ID:4724, and is provided hereinbelow with reference to the sequence listing part.

[70779] VGAM2013 host target gene, herein designated VGAM HOST TARGET GENE, encodes a corresponding messenger RNA, VGAM2013 host target RNA, herein designated VGAM HOST TARGET RNA. VGAM2013 host target RNA comprises three regions, as is typical of mRNA of a protein coding gene: a 5` untranslated region, a protein coding region and a 3` untranslated region, designated

5`UTR, PROTEIN CODING and 3`UTR respectively.

[70780] VGAM2013 RNA, herein designated VGAM RNA, binds complementarily to one or more host target binding sites located in untranslated regions of VGAM2013 host target RNA, herein designated VGAM HOST TARGET RNA. This complementary binding is due to the fact that the nucleotide sequence of VGAM2013 RNA is an accurate or a partial inversed-reversed sequence of the nucleotide sequence of each of the host target binding sites. As an illustration, Fig. 1 shows three such host target binding sites, designated BINDING SITE I, BINDING SITE II and BINDING SITE III respectively. It is appreciated that the number of host target binding sites shown in Fig. 1 is meant as an illustration only, and is not meant to be limiting - VGAM2013 RNA, herein designated VGAM RNA, may have a different number of host target binding sites in untranslated regions of a VGAM2013 host target RNA, herein designated VGAM HOST TARGET RNA. It is further appreciated that while Fig. 1 depicts host target binding sites in the 3`UTR region, this is meant as an example only - these host target binding sites may be located in the 3`UTR region, the 5`UTR region, or in both 3`UTR and 5`UTR regions.

[70781] The complementary binding of VGAM2013 RNA, herein designated VGAM RNA, to host target binding sites on VGAM2013 host target RNA, herein designated VGAM HOST TARGET RNA, such as BINDING SITE I, BINDING SITE II and BINDING SITE III, inhibits translation of VGAM2013 host target RNA into VGAM2013 host target protein, herein designated VGAM HOST TARGET PROTEIN. VGAM host target protein is therefore outlined by a broken line.

[70782] It is appreciated that VGAM2013 host target gene, herein designated VGAM HOST TARGET GENE, in fact represents a plurality of VGAM2013 host target genes. The mRNA of each one of this plurality of VGAM2013 host target genes comprises one or more host target binding sites, each having a nucleotide sequence which is at least partly complementary to VGAM2013 RNA, herein designated VGAM RNA, and which when bound by VGAM2013 RNA causes inhibition of translation of respective one or more VGAM2013 host target proteins.

[70783] It is further appreciated by one skilled in the art that the mode of translational inhibition illustrated by Fig. 1 with specific reference to translational inhibition exerted by VGAM2013 gene, herein designated VGAM GENE, on one or more VGAM2013 host target gene, herein designated

VGAM HOST TARGET GENE, is in fact common to other known non-viral miRNA genes. As mentioned hereinabove with reference to the background section, although a specific complementary binding site has been demonstrated only for some of the known miRNA genes (primarily Lin-4 and Let-7), all other recently discovered miRNA genes are also believed by those skilled in the art to modulate expression of other genes by complementary binding, although specific complementary binding sites of these other miRNA genes have not yet been found (Ruvkun G., `Perspective: Glimpses of a tiny RNA world`, Science 294,779 (2001)).

[70784] It is yet further appreciated that a function of VGAM2013 is inhibition of expression of host target genes, as part of a novel viral mechanism of attacking a host. Accordingly, utilities of VGAM2013 include diagnosis, prevention and treatment of viral infection by Reston Ebola Virus (REBOV). Specific functions, and accordingly utilities, of VGAM2013 correlate with, and may be deduced from, the identity of the host target genes which VGAM2013 binds and inhibits, and the function of these host target genes, as elaborated hereinbelow.

[70785] Nucleotide sequences of the VGAM2013 precursor RNA,

herein designated VGAM PRECURSOR RNA, and of the `diced` VGAM2013 RNA, herein designated VGAM RNA, and a schematic representation of the secondary folding of VGAM2013 folded precursor RNA, herein designated VGAM FOLDED PRECURSOR RNA, of VGAM2013 are further described hereinbelow with reference to Table 1.

[70786] Nucleotide sequences of host target binding sites, such as BINDING SITE-I, BINDING SITE-II and BINDING SITE-III of Fig. 1, found on VGAM2013 host target RNA, and schematic representation of the complementarity of each of these host target binding sites to VGAM2013 RNA, herein designated VGAM RNA, are described hereinbelow with reference to Table 2.

[70787] As mentioned hereinabove with reference to Fig. 1, a function of VGAM2013 gene, herein designated VGAM is inhibition of expression of VGAM2013 target genes. It is appreciated that specific functions, and accordingly utilities, of VGAM2013 correlate with, and may be deduced from, the identity of the target genes which VGAM2013 binds and inhibits, and the function of these target genes, as elaborated hereinbelow.

[70788] Collagen, Type XIX, Alpha 1 (COL19A1, Accession NM_001858) is a VGAM2013 host target gene. COL19A1

BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by COL19A1, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of COL19A1 BINDING SITE, designated SEQ ID:7593, to the nucleotide sequence of VGAM2013 RNA, herein designated VGAM RNA, also designated SEQ ID:4724.

[70789] A function of VGAM2013 is therefore inhibition of Collagen, Type XIX, Alpha 1 (COL19A1, Accession NM_001858), a gene which may act as a cross-bridge between fibrils and other extracellular matrix molecules. Accordingly, utilities of VGAM2013 include diagnosis, prevention and treatment of diseases and clinical conditions associated with COL19A1. The function of COL19A1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM19.Filamin B, Beta (actin binding protein 278) (FLNB, Accession XM_030806) is another VGAM2013 host target gene. FLNB BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by FLNB, corresponding to a

HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of FLNB BINDING SITE, designated SEQ ID:31145, to the nucleotide sequence of VGAM2013 RNA, herein designated VGAM RNA, also designated SEQ ID:4724.

[70790] Another function of VGAM2013 is therefore inhibition of Filamin B, Beta (actin binding protein 278) (FLNB, Accession XM_030806), a gene which Filamin B, beta; binds actin, interacts with cytoplasmic domain of Ibalpha. Accordingly, utilities of VGAM2013 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLNB. The function of FLNB and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM416.FLJ23322 (Accession XM_114207) is another VGAM2013 host target gene. FLJ23322 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by FLJ23322, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of FLJ23322 BINDING SITE, designated SEQ

ID:42799, to the nucleotide sequence of VGAM2013 RNA, herein designated VGAM RNA, also designated SEQ ID:4724.

[70791] Another function of VGAM2013 is therefore inhibition of FLJ23322 (Accession XM_114207). Accordingly, utilities of VGAM2013 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ23322. KIAA1317 (Accession XM_098368) is another VGAM2013 host target gene. KIAA1317 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by KIAA1317, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of KIAA1317 BINDING SITE, designated SEQ ID:41622, to the nucleotide sequence of VGAM2013 RNA, herein designated VGAM RNA, also designated SEQ ID:4724.

[70792] Another function of VGAM2013 is therefore inhibition of KIAA1317 (Accession XM_098368). Accordingly, utilities of VGAM2013 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1317. Testis-specific Transcript, Y-linked 9 (TTTY9, Accession NM_031927) is another VGAM2013 host target

gene. TTTY9 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by TTTY9, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of TTTY9 BINDING SITE, designated SEQ ID:25676, to the nucleotide sequence of VGAM2013 RNA, herein designated VGAM RNA, also designated SEQ ID:4724.

[70793] Another function of VGAM2013 is therefore inhibition of Testis-specific Transcript, Y-linked 9 (TTTY9, Accession NM_031927). Accordingly, utilities of VGAM2013 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TTTY9. LOC146287 (Accession XM_096967) is another VGAM2013 host target gene. LOC146287 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by LOC146287, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC146287 BINDING SITE, designated SEQ ID:40688, to the nucleotide sequence of VGAM2013 RNA, herein designated VGAM RNA, also des-

ignated SEQ ID:4724.

[70794] Another function of VGAM2013 is therefore inhibition of LOC146287 (Accession XM_096967). Accordingly, utilities of VGAM2013 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC146287. LOC253039 (Accession XM_171203) is another VGAM2013 host target gene. LOC253039 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC253039, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC253039 BINDING SITE, designated SEQ ID:45992, to the nucleotide sequence of VGAM2013 RNA, herein designated VGAM RNA, also designated SEQ ID:4724.

[70795] Another function of VGAM2013 is therefore inhibition of LOC253039 (Accession XM_171203). Accordingly, utilities of VGAM2013 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC253039. LOC257235 (Accession XM_173124) is another VGAM2013 host target gene. LOC257235 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by LOC257235, cor-

responding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC257235 BINDING SITE, designated SEQ ID:46371, to the nucleotide sequence of VGAM2013 RNA, herein designated VGAM RNA, also designated SEQ ID:4724.

[70796] Another function of VGAM2013 is therefore inhibition of LOC257235 (Accession XM_173124). Accordingly, utilities of VGAM2013 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC257235. Fig. 1 further provides a conceptual description of a novel bioinformatically detected viral gene of the present invention, referred to here as Viral Genomic Address Messenger 2014 (VGAM2014) viral gene, which modulates expression of respective host target genes thereof, the function and utility of which host target genes is known in the art.

[70797] VGAM2014 is a novel bioinformatically detected regulatory, non protein coding, viral micro RNA (miRNA) gene. The method by which VGAM2014 was detected is described hereinabove with reference to Figs. 1-8.

[70798] VGAM2014 gene, herein designated VGAM GENE, is a viral gene contained in the genome of Reston Ebola Virus

(REBOV). VGAM2014 host target gene, herein designated VGAM HOST TARGET GENE, is a human gene contained in the human genome.

[70799] VGAM2014 gene encodes a VGAM2014 precursor RNA, herein designated VGAM PRECURSOR RNA. Similar to other miRNA genes, and unlike most ordinary genes, VGAM2014 precursor RNA does not encode a protein. A nucleotide sequence identical or highly similar to the nucleotide sequence of VGAM2014 precursor RNA is designated SEQ ID:2000, and is provided hereinbelow with reference to the sequence listing part. Nucleotide sequence SEQ ID:2000 is located at position 13026 relative to the genome of Reston Ebola Virus (REBOV).

[70800] VGAM2014 precursor RNA folds onto itself, forming VGAM2014 folded precursor RNA, herein designated VGAM FOLDED PRECURSOR RNA, which has a two-dimensional `hairpin structure`. As is well known in the art, this `hairpin structure`, is typical of RNA encoded by miRNA genes, and is due to the fact that the nucleotide sequence of the first half of the RNA encoded by a miRNA gene is an accurate or partial inversed-reversed sequence of the nucleotide sequence of the second half thereof.

[70801] An enzyme complex designated DICER COMPLEX, `dices`

the VGAM2014 folded precursor RNA into VGAM2014 RNA, herein designated VGAM RNA, a single stranded ~22 nt long RNA segment. As is known in the art, `dicing` of a hairpin structured RNA precursor product into a short ~22nt RNA segment is catalyzed by an enzyme complex comprising an enzyme called Dicer together with other necessary proteins. A probable (over 40%) nucleotide sequence of VGAM2014 RNA is designated SEQ ID:4725, and is provided hereinbelow with reference to the sequence listing part.

[70802] VGAM2014 host target gene, herein designated VGAM HOST TARGET GENE, encodes a corresponding messenger RNA, VGAM2014 host target RNA, herein designated VGAM HOST TARGET RNA. VGAM2014 host target RNA comprises three regions, as is typical of mRNA of a protein coding gene: a 5` untranslated region, a protein coding region and a 3` untranslated region, designated 5`UTR, PROTEIN CODING and 3`UTR respectively.

[70803] VGAM2014 RNA, herein designated VGAM RNA, binds complementarily to one or more host target binding sites located in untranslated regions of VGAM2014 host target RNA, herein designated VGAM HOST TARGET RNA. This complementary binding is due to the fact that the nu-

cleotide sequence of VGAM2014 RNA is an accurate or a partial inversed-reversed sequence of the nucleotide sequence of each of the host target binding sites. As an illustration, Fig. 1 shows three such host target binding sites, designated BINDING SITE I, BINDING SITE II and BINDING SITE III respectively. It is appreciated that the number of host target binding sites shown in Fig. 1 is meant as an illustration only, and is not meant to be limiting - VGAM2014 RNA, herein designated VGAM RNA, may have a different number of host target binding sites in untranslated regions of a VGAM2014 host target RNA, herein designated VGAM HOST TARGET RNA. It is further appreciated that while Fig. 1 depicts host target binding sites in the 3`UTR region, this is meant as an example only - these host target binding sites may be located in the 3`UTR region, the 5`UTR region, or in both 3`UTR and 5`UTR regions.

[70804] The complementary binding of VGAM2014 RNA, herein designated VGAM RNA, to host target binding sites on VGAM2014 host target RNA, herein designated VGAM HOST TARGET RNA, such as BINDING SITE I, BINDING SITE II and BINDING SITE III, inhibits translation of VGAM2014 host target RNA into VGAM2014 host target protein,

herein designated VGAM HOST TARGET PROTEIN. VGAM host target protein is therefore outlined by a broken line.

[70805] It is appreciated that VGAM2014 host target gene, herein designated VGAM HOST TARGET GENE, in fact represents a plurality of VGAM2014 host target genes. The mRNA of each one of this plurality of VGAM2014 host target genes comprises one or more host target binding sites, each having a nucleotide sequence which is at least partly complementary to VGAM2014 RNA, herein designated VGAM RNA, and which when bound by VGAM2014 RNA causes inhibition of translation of respective one or more VGAM2014 host target proteins.

[70806] It is further appreciated by one skilled in the art that the mode of translational inhibition illustrated by Fig. 1 with specific reference to translational inhibition exerted by VGAM2014 gene, herein designated VGAM GENE, on one or more VGAM2014 host target gene, herein designated VGAM HOST TARGET GENE, is in fact common to other known non-viral miRNA genes. As mentioned hereinabove with reference to the background section, although a specific complementary binding site has been demonstrated only for some of the known miRNA genes (primarily Lin-4 and Let-7), all other recently discovered miRNA genes are

also believed by those skilled in the art to modulate expression of other genes by complementary binding, although specific complementary binding sites of these other miRNA genes have not yet been found (Ruvkun G., `Perspective: Glimpses of a tiny RNA world`, Science 294,779 (2001)).

[70807] It is yet further appreciated that a function of VGAM2014 is inhibition of expression of host target genes, as part of a novel viral mechanism of attacking a host. Accordingly, utilities of VGAM2014 include diagnosis, prevention and treatment of viral infection by Reston Ebola Virus (REBOV). Specific functions, and accordingly utilities, of VGAM2014 correlate with, and may be deduced from, the identity of the host target genes which VGAM2014 binds and inhibits, and the function of these host target genes, as elaborated hereinbelow.

[70808] Nucleotide sequences of the VGAM2014 precursor RNA, herein designated VGAM PRECURSOR RNA, and of the `diced` VGAM2014 RNA, herein designated VGAM RNA, and a schematic representation of the secondary folding of VGAM2014 folded precursor RNA, herein designated VGAM FOLDED PRECURSOR RNA, of VGAM2014 are further described hereinbelow with reference to Table 1.

[70809] Nucleotide sequences of host target binding sites, such as BINDING SITE-I, BINDING SITE-II and BINDING SITE-III of Fig. 1, found on VGAM2014 host target RNA, and schematic representation of the complementarity of each of these host target binding sites to VGAM2014 RNA, herein designated VGAM RNA, are described hereinbelow with reference to Table 2.

[70810] As mentioned hereinabove with reference to Fig. 1, a function of VGAM2014 gene, herein designated VGAM is inhibition of expression of VGAM2014 target genes. It is appreciated that specific functions, and accordingly utilities, of VGAM2014 correlate with, and may be deduced from, the identity of the target genes which VGAM2014 binds and inhibits, and the function of these target genes, as elaborated hereinbelow.

[70811] ATPase, Ca++ Transporting, Plasma Membrane 2 (ATP2B2, Accession NM_001683) is a VGAM2014 host target gene. ATP2B2 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by ATP2B2, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of ATP2B2 BINDING SITE, designated SEQ

ID:7405, to the nucleotide sequence of VGAM2014 RNA, herein designated VGAM RNA, also designated SEQ ID:4725.

[70812] A function of VGAM2014 is therefore inhibition of ATPase, Ca++ Transporting, Plasma Membrane 2 (ATP2B2, Accession NM_001683), a gene which catalyzes the hydrolysis of ATP coupled with the transport of the calcium out of the cell . Accordingly, utilities of VGAM2014 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ATP2B2. The function of ATP2B2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM711.Ceroid-lipofuscinosis, Neuronal 5 (CLN5, Accession NM_006493) is another VGAM2014 host target gene. CLN5 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by CLN5, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of CLN5 BINDING SITE, designated SEQ ID:13232, to the nucleotide sequence of VGAM2014 RNA, herein designated VGAM RNA, also designated SEQ ID:4725.

[70813] Another function of VGAM2014 is therefore inhibition of Ceroid-lipofuscinosis, Neuronal 5 (CLN5, Accession NM_006493). Accordingly, utilities of VGAM2014 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CLN5. Cathepsin B (CTSB, Accession XM_035662) is another VGAM2014 host target gene. CTSB BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by CTSB, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of CTSB BINDING SITE, designated SEQ ID:32329, to the nucleotide sequence of VGAM2014 RNA, herein designated VGAM RNA, also designated SEQ ID:4725.

[70814] Another function of VGAM2014 is therefore inhibition of Cathepsin B (CTSB, Accession XM_035662). Accordingly, utilities of VGAM2014 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CTSB. Engrailed Homolog 1 (EN1, Accession NM_001426) is another VGAM2014 host target gene. EN1 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by EN1, corresponding to a HOST TARGET binding site such as BINDING

SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of EN1 BINDING SITE, designated SEQ ID:7142, to the nucleotide sequence of VGAM2014 RNA, herein designated VGAM RNA, also designated SEQ ID:4725.

[70815] Another function of VGAM2014 is therefore inhibition of Engrailed Homolog 1 (EN1, Accession NM_001426), a gene which is a member of the homeodomain family of DNA binding proteins; may regulate gene expression, morphogenesis, and differentiation;. Accordingly, utilities of VGAM2014 include diagnosis, prevention and treatment of diseases and clinical conditions associated with EN1. The function of EN1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM1615.Potassium Voltage-gated Channel, Shaker-related Subfamily, Member 6 (KCNA6, Accession NM_002235) is another VGAM2014 host target gene. KCNA6 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by KCNA6, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide

sequences of KCNA6 BINDING SITE, designated SEQ ID:8019, to the nucleotide sequence of VGAM2014 RNA, herein designated VGAM RNA, also designated SEQ ID:4725.

[70816] Another function of VGAM2014 is therefore inhibition of Potassium Voltage-gated Channel, Shaker-related Subfamily, Member 6 (KCNA6, Accession NM_002235), a gene which mediates the voltage-dependent potassium ion permeability of excitable membranes. Accordingly, utilities of VGAM2014 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KCNA6. The function of KCNA6 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM893.Ryanodine Receptor 3 (RYR3, Accession NM_001036) is another VGAM2014 host target gene. RYR3 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by RYR3, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of RYR3 BINDING SITE, designated SEQ ID:6701, to the nucleotide sequence of VGAM2014 RNA, herein

designated VGAM RNA, also designated SEQ ID:4725.

[70817] Another function of VGAM2014 is therefore inhibition of Ryanodine Receptor 3 (RYR3, Accession NM_001036), a gene which is involved in communication between transverse-tubules and sarcoplasmic reticulum. Accordingly, utilities of VGAM2014 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RYR3. The function of RYR3 has been established by previous studies. Ryanodine receptors are intracellular calcium ion release channels responsible for the release of Ca(2+) from intracellular stores following transduction of many different extracellular stimuli. Hakamata et al. (1992) deduced the complete amino acid sequence of a novel ryanodine receptor/calcium release channel from rabbit brain by cloning and sequence analysis of the cDNA. The protein was composed of 4,872 amino acids and shared characteristic structural features with the skeletal muscle (RYR1; 180901) and cardiac (RYR2; 180902) ryanodine receptors. RNA blot hybridization analysis showed that the brain ryanodine receptor is abundantly expressed in corpus striatum, thalamus, and hippocampus, whereas the cardiac ryanodine receptor is more uniformly expressed in the brain. The brain ryan-

odine receptor gene was also transcribed in smooth muscle. Leeb and Brenig (1998) isolated overlapping human RYR3 clones from a random primed fetal brain cDNA library. The gene encodes a 4,870-amino acid polypeptide that contains 4 RYR repeats, 3 SPRY domains, an ATP/GTP binding site consensus sequence, and 3 potential calmodulin-binding sites. They identified an alternatively spliced transcript that encodes a truncated protein. By isotopic in situ hybridization, Sorrentino et al. (1993) mapped the RYR3 gene to 15q14-q15; 15q15 is a probable location. By in situ hybridization, Mattei et al. (1994) mapped the type 3 ryanodine receptor to mouse chromosome 2E5-2F3. Richard et al. (1994) presented an integrated physical, expression, and genetic map of chromosome 15. They found that the RYR3 gene fell in their region I: 15pter-q14 Animal model experiments lend further support to the function of RYR3. Takeshima et al. (1996), Bertocchini et al. (1997), and Futatsugi et al. (1999) independently generated Ryr3-deficient mice. In all cases, the homozygous mutant mice were fertile and displayed no gross abnormalities. Takeshima et al. (1996) detected increased locomotor activity in Ryr3 knockout mice compared to that of the control mice and concluded that the

lack of Ryr3-mediated Ca(2+) signaling results in abnormalities of certain neurons in the central nervous system. Bertocchini et al. (1997) detected normal Ryr3 expression in murine skeletal muscles during the postnatal phase of muscle development, but not in muscles of adult mice, with the exception of the diaphragm and soleus muscles. The authors demonstrated that skeletal muscle contraction in Ryr3 knockout mice was impaired during the first weeks after birth. They concluded that Ryr3 has a physiologic role in excitation-contraction coupling of neonatal skeletal muscles. Futatsugi et al. (1999) measured the electrophysiologic and pharmacologic properties of synaptic plasticity in the CA1 area of Ryr3-deficient mice. The results suggested that Ryr3-mediated intracellular calcium release from endoplasmic reticulum may inhibit hippocampal LTP and spatial learning. Barone et al. (1998) generated double mutant mice carrying a targeted disruption of both the Ryr1 and Ryr3 genes. Skeletal muscles from mice homozygous for both mutations did not contract in response to caffeine or ryanodine. In addition, these muscles showed very low tension when directly activated with micromolar ionized calcium after membrane permeabilization, indicating either poor development or

degeneration of the myofibrils. This was confirmed by biochemical analysis of contractile proteins. Electron microscopy confirmed small size of myofibrils and showed complete absence of feet (RyRs) in the junctional sarcoplasmic reticulum.

[70818] It is appreciated that the abovementioned animal model for RYR3 is acknowledged by those skilled in the art as a scientifically valid animal model, as can be further appreciated from the publications sited hereinbelow.

[70819] Full details of the abovementioned studies are described in the following publications, the disclosure of which are hereby incorporated by reference:

[70820] Bertocchini, F.; Ovitt, C. E.; Conti, A.; Barone, V.; Scholer, H. R.; Bottinelli, R.; Reggiani, C.; Sorrentino, V. : Requirement for the ryanodine receptor type 3 for efficient contraction in neonatal skeletal muscles. EMBO J. 16: 6956-6963, 1997. ; and

[70821] Futatsugi, A.; Kato, K.; Ogura, H.; Li, S.-T.; Nagata, E.; Kuwajima, G.; Tanaka, K.; Itohara, S.; Mikoshiba, K. : Facilitation of NMDAR-independent LTP and spatial learning in mutant mic.

[70822] Further studies establishing the function and utilities of RYR3 are found in John Hopkins OMIM database record ID

180903, and in sited publications numbered 10477-10276, 1027 and 10277-10278 listed in the bibliography section hereinbelow, which are also hereby incorporated by reference.Transmembrane Protein 2 (TMEM2, Accession NM_013390) is another VGAM2014 host target gene. TMEM2 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by TMEM2, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of TMEM2 BINDING SITE, designated SEQ ID:15043, to the nucleotide sequence of VGAM2014 RNA, herein designated VGAM RNA, also designated SEQ ID:4725.

[70823] Another function of VGAM2014 is therefore inhibition of Transmembrane Protein 2 (TMEM2, Accession NM_013390). Accordingly, utilities of VGAM2014 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TMEM2. Tumor Necrosis Factor Receptor Superfamily, Member 9 (TNFRSF9, Accession NM_001561) is another VGAM2014 host target gene. TNFRSF9 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by TN-

FRSF9, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of TNFRSF9 BINDING SITE, designated SEQ ID:7290, to the nucleotide sequence of VGAM2014 RNA, herein designated VGAM RNA, also designated SEQ ID:4725.

[70824] Another function of VGAM2014 is therefore inhibition of Tumor Necrosis Factor Receptor Superfamily, Member 9 (TNFRSF9, Accession NM_001561), a gene which inhibits proliferation of activated T lymphocytes. Accordingly, utilities of VGAM2014 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TNFRSF9. The function of TNFRSF9 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM1954.Chromosome 20 Open Reading Frame 29 (C20orf29, Accession NM_018347) is another VGAM2014 host target gene. C20orf29 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by C20orf29, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III.

Table 2 illustrates the complementarity of the nucleotide sequences of C20orf29 BINDING SITE, designated SEQ ID:20359, to the nucleotide sequence of VGAM2014 RNA, herein designated VGAM RNA, also designated SEQ ID:4725.

[70825] Another function of VGAM2014 is therefore inhibition of Chromosome 20 Open Reading Frame 29 (C20orf29, Accession NM_018347). Accordingly, utilities of VGAM2014 include diagnosis, prevention and treatment of diseases and clinical conditions associated with C20orf29. DJ971N18.2 (Accession NM_021156) is another VGAM2014 host target gene. DJ971N18.2 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by DJ971N18.2, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of DJ971N18.2 BINDING SITE, designated SEQ ID:22137, to the nucleotide sequence of VGAM2014 RNA, herein designated VGAM RNA, also designated SEQ ID:4725.

[70826] Another function of VGAM2014 is therefore inhibition of DJ971N18.2 (Accession NM_021156). Accordingly, utilities of VGAM2014 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with DJ971N18.2. DKFZP434A0131 (Accession NM_018991) is another VGAM2014 host target gene. DKFZP434A0131 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by DKFZP434A0131, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of DKFZP434A0131 BINDING SITE, designated SEQ ID:21064, to the nucleotide sequence of VGAM2014 RNA, herein designated VGAM RNA, also designated SEQ ID:4725.

[70827] Another function of VGAM2014 is therefore inhibition of DKFZP434A0131 (Accession NM_018991). Accordingly, utilities of VGAM2014 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZP434A0131. Endothelial Cell-specific Molecule 1 (ESM1, Accession NM_007036) is another VGAM2014 host target gene. ESM1 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by ESM1, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity

of the nucleotide sequences of ESM1 BINDING SITE, designated SEQ ID:13915, to the nucleotide sequence of VGAM2014 RNA, herein designated VGAM RNA, also designated SEQ ID:4725.

[70828] Another function of VGAM2014 is therefore inhibition of Endothelial Cell-specific Molecule 1 (ESM1, Accession NM_007036). Accordingly, utilities of VGAM2014 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ESM1. FLJ13910 (Accession NM_022780) is another VGAM2014 host target gene. FLJ13910 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by FLJ13910, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of FLJ13910 BINDING SITE, designated SEQ ID:23058, to the nucleotide sequence of VGAM2014 RNA, herein designated VGAM RNA, also designated SEQ ID:4725.

[70829] Another function of VGAM2014 is therefore inhibition of FLJ13910 (Accession NM_022780). Accordingly, utilities of VGAM2014 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

FLJ13910. Golgi Associated, Gamma Adaptin Ear Containing, ARF Binding Protein 2 (GGA2, Accession NM_015044) is another VGAM2014 host target gene. GGA2 BINDING SITE1 and GGA2 BINDING SITE2 are HOST TARGET binding sites found in untranslated regions of mRNA encoded by GGA2, corresponding to HOST TARGET binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of GGA2 BINDING SITE1 and GGA2 BINDING SITE2, designated SEQ ID:17403 and SEQ ID:28925 respectively, to the nucleotide sequence of VGAM2014 RNA, herein designated VGAM RNA, also designated SEQ ID:4725.

[70830] Another function of VGAM2014 is therefore inhibition of Golgi Associated, Gamma Adaptin Ear Containing, ARF Binding Protein 2 (GGA2, Accession NM_015044). Accordingly, utilities of VGAM2014 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GGA2. HSU24186 (Accession NM_013347) is another VGAM2014 host target gene. HSU24186 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by HSU24186, corresponding to a HOST TARGET binding site such as BINDING

SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of HSU24186 BINDING SITE, designated SEQ ID:14992, to the nucleotide sequence of VGAM2014 RNA, herein designated VGAM RNA, also designated SEQ ID:4725.

[70831] Another function of VGAM2014 is therefore inhibition of HSU24186 (Accession NM_013347). Accordingly, utilities of VGAM2014 include diagnosis, prevention and treatment of diseases and clinical conditions associated with HSU24186. KIAA0057 (Accession NM_012288) is another VGAM2014 host target gene. KIAA0057 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by KIAA0057, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of KIAA0057 BINDING SITE, designated SEQ ID:14629, to the nucleotide sequence of VGAM2014 RNA, herein designated VGAM RNA, also designated SEQ ID:4725.

[70832] Another function of VGAM2014 is therefore inhibition of KIAA0057 (Accession NM_012288). Accordingly, utilities of VGAM2014 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

KIAA0057. KIAA0483 (Accession NM_015176) is another VGAM2014 host target gene. KIAA0483 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by KIAA0483, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of KIAA0483 BINDING SITE, designated SEQ ID:17531, to the nucleotide sequence of VGAM2014 RNA, herein designated VGAM RNA, also designated SEQ ID:4725.

[70833] Another function of VGAM2014 is therefore inhibition of KIAA0483 (Accession NM_015176). Accordingly, utilities of VGAM2014 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0483. MGC10960 (Accession NM_032653) is another VGAM2014 host target gene. MGC10960 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by MGC10960, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of MGC10960 BINDING SITE, designated SEQ ID:26385, to the nucleotide sequence of VGAM2014 RNA, herein desig-

nated VGAM RNA, also designated SEQ ID:4725.

[70834] Another function of VGAM2014 is therefore inhibition of MGC10960 (Accession NM_032653). Accordingly, utilities of VGAM2014 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC10960. MGC13159 (Accession NM_032927) is another VGAM2014 host target gene. MGC13159 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by MGC13159, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of MGC13159 BINDING SITE, designated SEQ ID:26753, to the nucleotide sequence of VGAM2014 RNA, herein designated VGAM RNA, also designated SEQ ID:4725.

[70835] Another function of VGAM2014 is therefore inhibition of MGC13159 (Accession NM_032927). Accordingly, utilities of VGAM2014 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC13159. MGC2721 (Accession NM_032737) is another VGAM2014 host target gene. MGC2721 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by MGC2721, corresponding to

a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of MGC2721 BINDING SITE, designated SEQ ID:26464, to the nucleotide sequence of VGAM2014 RNA, herein designated VGAM RNA, also designated SEQ ID:4725.

[70836] Another function of VGAM2014 is therefore inhibition of MGC2721 (Accession NM_032737). Accordingly, utilities of VGAM2014 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC2721. MGC29937 (Accession NM_144597) is another VGAM2014 host target gene. MGC29937 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by MGC29937, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of MGC29937 BINDING SITE, designated SEQ ID:29411, to the nucleotide sequence of VGAM2014 RNA, herein designated VGAM RNA, also designated SEQ ID:4725.

[70837] Another function of VGAM2014 is therefore inhibition of MGC29937 (Accession NM_144597). Accordingly, utilities of VGAM2014 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with MGC29937. Phosphodiesterase 8A (PDE8A, Accession XM_031443) is another VGAM2014 host target gene. PDE8A BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by PDE8A, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of PDE8A BINDING SITE, designated SEQ ID:31381, to the nucleotide sequence of VGAM2014 RNA, herein designated VGAM RNA, also designated SEQ ID:4725.

[70838] Another function of VGAM2014 is therefore inhibition of Phosphodiesterase 8A (PDE8A, Accession XM_031443). Accordingly, utilities of VGAM2014 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PDE8A. Ras Association (RalGDS/AF-6) Domain Family 2 (RASSF2, Accession NM_014737) is another VGAM2014 host target gene. RASSF2 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by RASSF2, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III.

Table 2 illustrates the complementarity of the nucleotide sequences of RASSF2 BINDING SITE, designated SEQ ID:16399, to the nucleotide sequence of VGAM2014 RNA, herein designated VGAM RNA, also designated SEQ ID:4725.

[70839] Another function of VGAM2014 is therefore inhibition of Ras Association (RalGDS/AF-6) Domain Family 2 (RASSF2, Accession NM_014737). Accordingly, utilities of VGAM2014 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RASSF2. RYK Receptor-like Tyrosine Kinase (RYK, Accession XM_093692) is another VGAM2014 host target gene. RYK BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by RYK, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of RYK BINDING SITE, designated SEQ ID:40207, to the nucleotide sequence of VGAM2014 RNA, herein designated VGAM RNA, also designated SEQ ID:4725.

[70840] Another function of VGAM2014 is therefore inhibition of RYK Receptor-like Tyrosine Kinase (RYK, Accession XM_093692). Accordingly, utilities of VGAM2014 include

diagnosis, prevention and treatment of diseases and clinical conditions associated with RYK. VMP1 (Accession NM_030938) is another VGAM2014 host target gene. VMP1 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by VMP1, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of VMP1 BINDING SITE, designated SEQ ID:25207, to the nucleotide sequence of VGAM2014 RNA, herein designated VGAM RNA, also designated SEQ ID:4725.

[70841] Another function of VGAM2014 is therefore inhibition of VMP1 (Accession NM_030938). Accordingly, utilities of VGAM2014 include diagnosis, prevention and treatment of diseases and clinical conditions associated with VMP1. LOC151647 (Accession XM_087261) is another VGAM2014 host target gene. LOC151647 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC151647, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC151647 BINDING SITE, designated SEQ ID:39159, to

the nucleotide sequence of VGAM2014 RNA, herein designated VGAM RNA, also designated SEQ ID:4725.

[70842] Another function of VGAM2014 is therefore inhibition of LOC151647 (Accession XM_087261). Accordingly, utilities of VGAM2014 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC151647. LOC158263 (Accession XM_088530) is another VGAM2014 host target gene. LOC158263 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC158263, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC158263 BINDING SITE, designated SEQ ID:39800, to the nucleotide sequence of VGAM2014 RNA, herein designated VGAM RNA, also designated SEQ ID:4725.

[70843] Another function of VGAM2014 is therefore inhibition of LOC158263 (Accession XM_088530). Accordingly, utilities of VGAM2014 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC158263. LOC158714 (Accession XM_088650) is another VGAM2014 host target gene. LOC158714 BINDING SITE is HOST TARGET binding site found in the 5` un-

translated region of mRNA encoded by LOC158714, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC158714 BINDING SITE, designated SEQ ID:39887, to the nucleotide sequence of VGAM2014 RNA, herein designated VGAM RNA, also designated SEQ ID:4725.

[70844] Another function of VGAM2014 is therefore inhibition of LOC158714 (Accession XM_088650). Accordingly, utilities of VGAM2014 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC158714. LOC168667 (Accession XM_166592) is another VGAM2014 host target gene. LOC168667 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC168667, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC168667 BINDING SITE, designated SEQ ID:44570, to the nucleotide sequence of VGAM2014 RNA, herein designated VGAM RNA, also designated SEQ ID:4725.

[70845] Another function of VGAM2014 is therefore inhibition of LOC168667 (Accession XM_166592). Accordingly, utilities

of VGAM2014 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC168667. LOC201229 (Accession XM_113925) is another VGAM2014 host target gene. LOC201229 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by LOC201229, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC201229 BINDING SITE, designated SEQ ID:42545, to the nucleotide sequence of VGAM2014 RNA, herein designated VGAM RNA, also designated SEQ ID:4725.

[70846] Another function of VGAM2014 is therefore inhibition of LOC201229 (Accession XM_113925). Accordingly, utilities of VGAM2014 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC201229. LOC256821 (Accession XM_175144) is another VGAM2014 host target gene. LOC256821 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by LOC256821, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences

of LOC256821 BINDING SITE, designated SEQ ID:46639, to the nucleotide sequence of VGAM2014 RNA, herein designated VGAM RNA, also designated SEQ ID:4725.

[70847] Another function of VGAM2014 is therefore inhibition of LOC256821 (Accession XM_175144). Accordingly, utilities of VGAM2014 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC256821. LOC51141 (Accession XM_043953) is another VGAM2014 host target gene. LOC51141 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by LOC51141, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC51141 BINDING SITE, designated SEQ ID:34049, to the nucleotide sequence of VGAM2014 RNA, herein designated VGAM RNA, also designated SEQ ID:4725.

[70848] Another function of VGAM2014 is therefore inhibition of LOC51141 (Accession XM_043953). Accordingly, utilities of VGAM2014 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC51141. Fig. 1 further provides a conceptual description of a novel bioinformatically detected viral gene of the

present invention, referred to here as Viral Genomic Address Messenger 2015 (VGAM2015) viral gene, which modulates expression of respective host target genes thereof, the function and utility of which host target genes is known in the art.

[70849] VGAM2015 is a novel bioinformatically detected regulatory, non protein coding, viral micro RNA (miRNA) gene. The method by which VGAM2015 was detected is described hereinabove with reference to Figs. 1-8.

[70850] VGAM2015 gene, herein designated VGAM GENE, is a viral gene contained in the genome of Kyuri Green Mottle Mosaic Virus. VGAM2015 host target gene, herein designated VGAM HOST TARGET GENE, is a human gene contained in the human genome.

[70851] VGAM2015 gene encodes a VGAM2015 precursor RNA, herein designated VGAM PRECURSOR RNA. Similar to other miRNA genes, and unlike most ordinary genes, VGAM2015 precursor RNA does not encode a protein. A nucleotide sequence identical or highly similar to the nucleotide sequence of VGAM2015 precursor RNA is designated SEQ ID:2001, and is provided hereinbelow with reference to the sequence listing part. Nucleotide sequence SEQ ID:2001 is located at position 4081 relative to the

genome of Kyuri Green Mottle Mosaic Virus.

[70852] VGAM2015 precursor RNA folds onto itself, forming VGAM2015 folded precursor RNA, herein designated VGAM FOLDED PRECURSOR RNA, which has a two-dimensional `hairpin structure`. As is well known in the art, this `hairpin structure`, is typical of RNA encoded by miRNA genes, and is due to the fact that the nucleotide sequence of the first half of the RNA encoded by a miRNA gene is an accurate or partial inversed-reversed sequence of the nucleotide sequence of the second half thereof.

[70853] An enzyme complex designated DICER COMPLEX, `dices` the VGAM2015 folded precursor RNA into VGAM2015 RNA, herein designated VGAM RNA, a single stranded ~22 nt long RNA segment. As is known in the art, `dicing` of a hairpin structured RNA precursor product into a short ~22nt RNA segment is catalyzed by an enzyme complex comprising an enzyme called Dicer together with other necessary proteins. A probable (over 58%) nucleotide sequence of VGAM2015 RNA is designated SEQ ID:4726, and is provided hereinbelow with reference to the sequence listing part.

[70854] VGAM2015 host target gene, herein designated VGAM HOST TARGET GENE, encodes a corresponding messenger

RNA, VGAM2015 host target RNA, herein designated VGAM HOST TARGET RNA. VGAM2015 host target RNA comprises three regions, as is typical of mRNA of a protein coding gene: a 5` untranslated region, a protein coding region and a 3` untranslated region, designated 5`UTR, PROTEIN CODING and 3`UTR respectively.

[70855] VGAM2015 RNA, herein designated VGAM RNA, binds complementarily to one or more host target binding sites located in untranslated regions of VGAM2015 host target RNA, herein designated VGAM HOST TARGET RNA. This complementary binding is due to the fact that the nucleotide sequence of VGAM2015 RNA is an accurate or a partial inversed-reversed sequence of the nucleotide sequence of each of the host target binding sites. As an illustration, Fig. 1 shows three such host target binding sites, designated BINDING SITE I, BINDING SITE II and BINDING SITE III respectively. It is appreciated that the number of host target binding sites shown in Fig. 1 is meant as an illustration only, and is not meant to be limiting - VGAM2015 RNA, herein designated VGAM RNA, may have a different number of host target binding sites in untranslated regions of a VGAM2015 host target RNA, herein designated VGAM HOST TARGET RNA. It is further

appreciated that while Fig. 1 depicts host target binding sites in the 3`UTR region, this is meant as an example only - these host target binding sites may be located in the 3`UTR region, the 5`UTR region, or in both 3`UTR and 5`UTR regions.

[70856] The complementary binding of VGAM2015 RNA, herein designated VGAM RNA, to host target binding sites on VGAM2015 host target RNA, herein designated VGAM HOST TARGET RNA, such as BINDING SITE I, BINDING SITE II and BINDING SITE III, inhibits translation of VGAM2015 host target RNA into VGAM2015 host target protein, herein designated VGAM HOST TARGET PROTEIN. VGAM host target protein is therefore outlined by a broken line.

[70857] It is appreciated that VGAM2015 host target gene, herein designated VGAM HOST TARGET GENE, in fact represents a plurality of VGAM2015 host target genes. The mRNA of each one of this plurality of VGAM2015 host target genes comprises one or more host target binding sites, each having a nucleotide sequence which is at least partly complementary to VGAM2015 RNA, herein designated VGAM RNA, and which when bound by VGAM2015 RNA causes inhibition of translation of respective one or more VGAM2015 host target proteins.

[70858] It is further appreciated by one skilled in the art that the mode of translational inhibition illustrated by Fig. 1 with specific reference to translational inhibition exerted by VGAM2015 gene, herein designated VGAM GENE, on one or more VGAM2015 host target gene, herein designated VGAM HOST TARGET GENE, is in fact common to other known non-viral miRNA genes. As mentioned hereinabove with reference to the background section, although a specific complementary binding site has been demonstrated only for some of the known miRNA genes (primarily Lin-4 and Let-7), all other recently discovered miRNA genes are also believed by those skilled in the art to modulate expression of other genes by complementary binding, although specific complementary binding sites of these other miRNA genes have not yet been found (Ruvkun G., `Perspective: Glimpses of a tiny RNA world`, Science 294,779 (2001)).

[70859] It is yet further appreciated that a function of VGAM2015 is inhibition of expression of host target genes, as part of a novel viral mechanism of attacking a host. Accordingly, utilities of VGAM2015 include diagnosis, prevention and treatment of viral infection by Kyuri Green Mottle Mosaic Virus. Specific functions, and accordingly utilities, of

VGAM2015 correlate with, and may be deduced from, the identity of the host target genes which VGAM2015 binds and inhibits, and the function of these host target genes, as elaborated hereinbelow.

[70860] Nucleotide sequences of the VGAM2015 precursor RNA, herein designated VGAM PRECURSOR RNA, and of the `diced` VGAM2015 RNA, herein designated VGAM RNA, and a schematic representation of the secondary folding of VGAM2015 folded precursor RNA, herein designated VGAM FOLDED PRECURSOR RNA, of VGAM2015 are further described hereinbelow with reference to Table 1.

[70861] Nucleotide sequences of host target binding sites, such as BINDING SITE-I, BINDING SITE-II and BINDING SITE-III of Fig. 1, found on VGAM2015 host target RNA, and schematic representation of the complementarity of each of these host target binding sites to VGAM2015 RNA, herein designated VGAM RNA, are described hereinbelow with reference to Table 2.

[70862] As mentioned hereinabove with reference to Fig. 1, a function of VGAM2015 gene, herein designated VGAM is inhibition of expression of VGAM2015 target genes. It is appreciated that specific functions, and accordingly utilities, of VGAM2015 correlate with, and may be deduced

from, the identity of the target genes which VGAM2015 binds and inhibits, and the function of these target genes, as elaborated hereinbelow.

[70863] Vacuolar Protein Sorting 26 (yeast) (VPS26, Accession NM_004896) is a VGAM2015 host target gene. VPS26 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by VPS26, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of VPS26 BINDING SITE, designated SEQ ID:11325, to the nucleotide sequence of VGAM2015 RNA, herein designated VGAM RNA, also designated SEQ ID:4726.

[70864] A function of VGAM2015 is therefore inhibition of Vacuolar Protein Sorting 26 (yeast) (VPS26, Accession NM_004896), a gene which is a sorting protein- ensures the proper delivery of organelle-specific proteins. Accordingly, utilities of VGAM2015 include diagnosis, prevention and treatment of diseases and clinical conditions associated with VPS26. The function of VPS26 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM315.Chromosome 20

Open Reading Frame 42 (C20orf42, Accession NM_017671) is another VGAM2015 host target gene. C20orf42 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by C20orf42, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of C20orf42 BINDING SITE, designated SEQ ID:19214, to the nucleotide sequence of VGAM2015 RNA, herein designated VGAM RNA, also designated SEQ ID:4726.

[70865] Another function of VGAM2015 is therefore inhibition of Chromosome 20 Open Reading Frame 42 (C20orf42, Accession NM_017671). Accordingly, utilities of VGAM2015 include diagnosis, prevention and treatment of diseases and clinical conditions associated with C20orf42. HCGIV.9 (Accession NM_018985) is another VGAM2015 host target gene. HCGIV.9 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by HCGIV.9, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of HCGIV.9 BINDING SITE, designated SEQ

ID:21055, to the nucleotide sequence of VGAM2015 RNA, herein designated VGAM RNA, also designated SEQ ID:4726.

[70866] Another function of VGAM2015 is therefore inhibition of HCGIV.9 (Accession NM_018985). Accordingly, utilities of VGAM2015 include diagnosis, prevention and treatment of diseases and clinical conditions associated with HCGIV.9. V-maf Musculoaponeurotic Fibrosarcoma Oncogene Homolog B (avian) (MAFB, Accession NM_005461) is another VGAM2015 host target gene. MAFB BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by MAFB, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of MAFB BINDING SITE, designated SEQ ID:11942, to the nucleotide sequence of VGAM2015 RNA, herein designated VGAM RNA, also designated SEQ ID:4726.

[70867] Another function of VGAM2015 is therefore inhibition of V-maf Musculoaponeurotic Fibrosarcoma Oncogene Homolog B (avian) (MAFB, Accession NM_005461). Accordingly, utilities of VGAM2015 include diagnosis, prevention and treatment of diseases and clinical conditions associ-

ated with MAFB. Proline-serine-threonine Phosphatase Interacting Protein 2 (PSTPIP2, Accession NM_024430) is another VGAM2015 host target gene. PSTPIP2 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by PSTPIP2, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of PSTPIP2 BINDING SITE, designated SEQ ID:23681, to the nucleotide sequence of VGAM2015 RNA, herein designated VGAM RNA, also designated SEQ ID:4726.

[70868] Another function of VGAM2015 is therefore inhibition of Proline-serine-threonine Phosphatase Interacting Protein 2 (PSTPIP2, Accession NM_024430). Accordingly, utilities of VGAM2015 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PSTPIP2. LOC148195 (Accession XM_097419) is another VGAM2015 host target gene. LOC148195 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by LOC148195, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of

LOC148195 BINDING SITE, designated SEQ ID:40876, to the nucleotide sequence of VGAM2015 RNA, herein designated VGAM RNA, also designated SEQ ID:4726.

[70869] Another function of VGAM2015 is therefore inhibition of LOC148195 (Accession XM_097419). Accordingly, utilities of VGAM2015 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC148195. LOC253981 (Accession XM_171064) is another VGAM2015 host target gene. LOC253981 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC253981, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC253981 BINDING SITE, designated SEQ ID:45864, to the nucleotide sequence of VGAM2015 RNA, herein designated VGAM RNA, also designated SEQ ID:4726.

[70870] Another function of VGAM2015 is therefore inhibition of LOC253981 (Accession XM_171064). Accordingly, utilities of VGAM2015 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC253981. LOC90183 (Accession XM_029709) is another VGAM2015 host target gene. LOC90183 BINDING

SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC90183, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC90183 BINDING SITE, designated SEQ ID:30925, to the nucleotide sequence of VGAM2015 RNA, herein designated VGAM RNA, also designated SEQ ID:4726.

[70871] Another function of VGAM2015 is therefore inhibition of LOC90183 (Accession XM_029709). Accordingly, utilities of VGAM2015 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC90183. Fig. 1 further provides a conceptual description of a novel bioinformatically detected viral gene of the present invention, referred to here as Viral Genomic Address Messenger 2016 (VGAM2016) viral gene, which modulates expression of respective host target genes thereof, the function and utility of which host target genes is known in the art.

[70872] VGAM2016 is a novel bioinformatically detected regulatory, non protein coding, viral micro RNA (miRNA) gene. The method by which VGAM2016 was detected is described hereinabove with reference to Figs. 1-8.

[70873] VGAM2016 gene, herein designated VGAM GENE, is a viral gene contained in the genome of Kyuri Green Mottle Mosaic Virus. VGAM2016 host target gene, herein designated VGAM HOST TARGET GENE, is a human gene contained in the human genome.

[70874] VGAM2016 gene encodes a VGAM2016 precursor RNA, herein designated VGAM PRECURSOR RNA. Similar to other miRNA genes, and unlike most ordinary genes, VGAM2016 precursor RNA does not encode a protein. A nucleotide sequence identical or highly similar to the nucleotide sequence of VGAM2016 precursor RNA is designated SEQ ID:2002, and is provided hereinbelow with reference to the sequence listing part. Nucleotide sequence SEQ ID:2002 is located at position 1496 relative to the genome of Kyuri Green Mottle Mosaic Virus.

[70875] VGAM2016 precursor RNA folds onto itself, forming VGAM2016 folded precursor RNA, herein designated VGAM FOLDED PRECURSOR RNA, which has a two-dimensional `hairpin structure`. As is well known in the art, this `hairpin structure`, is typical of RNA encoded by miRNA genes, and is due to the fact that the nucleotide sequence of the first half of the RNA encoded by a miRNA gene is an accurate or partial inversed-reversed sequence

of the nucleotide sequence of the second half thereof.

[70876] An enzyme complex designated DICER COMPLEX, `dices` the VGAM2016 folded precursor RNA into VGAM2016 RNA, herein designated VGAM RNA, a single stranded ~22 nt long RNA segment. As is known in the art, `dicing` of a hairpin structured RNA precursor product into a short ~22nt RNA segment is catalyzed by an enzyme complex comprising an enzyme called Dicer together with other necessary proteins. A probable (over 46%) nucleotide sequence of VGAM2016 RNA is designated SEQ ID:4727, and is provided hereinbelow with reference to the sequence listing part.

[70877] VGAM2016 host target gene, herein designated VGAM HOST TARGET GENE, encodes a corresponding messenger RNA, VGAM2016 host target RNA, herein designated VGAM HOST TARGET RNA. VGAM2016 host target RNA comprises three regions, as is typical of mRNA of a protein coding gene: a 5` untranslated region, a protein coding region and a 3` untranslated region, designated 5`UTR, PROTEIN CODING and 3`UTR respectively.

[70878] VGAM2016 RNA, herein designated VGAM RNA, binds complementarily to one or more host target binding sites located in untranslated regions of VGAM2016 host target

RNA, herein designated VGAM HOST TARGET RNA. This complementary binding is due to the fact that the nucleotide sequence of VGAM2016 RNA is an accurate or a partial inversed-reversed sequence of the nucleotide sequence of each of the host target binding sites. As an illustration, Fig. 1 shows three such host target binding sites, designated BINDING SITE I, BINDING SITE II and BINDING SITE III respectively. It is appreciated that the number of host target binding sites shown in Fig. 1 is meant as an illustration only, and is not meant to be limiting - VGAM2016 RNA, herein designated VGAM RNA, may have a different number of host target binding sites in untranslated regions of a VGAM2016 host target RNA, herein designated VGAM HOST TARGET RNA. It is further appreciated that while Fig. 1 depicts host target binding sites in the 3`UTR region, this is meant as an example only - these host target binding sites may be located in the 3`UTR region, the 5`UTR region, or in both 3`UTR and 5`UTR regions.

[70879] The complementary binding of VGAM2016 RNA, herein designated VGAM RNA, to host target binding sites on VGAM2016 host target RNA, herein designated VGAM HOST TARGET RNA, such as BINDING SITE I, BINDING SITE

II and BINDING SITE III, inhibits translation of VGAM2016 host target RNA into VGAM2016 host target protein, herein designated VGAM HOST TARGET PROTEIN. VGAM host target protein is therefore outlined by a broken line.

[70880] It is appreciated that VGAM2016 host target gene, herein designated VGAM HOST TARGET GENE, in fact represents a plurality of VGAM2016 host target genes. The mRNA of each one of this plurality of VGAM2016 host target genes comprises one or more host target binding sites, each having a nucleotide sequence which is at least partly complementary to VGAM2016 RNA, herein designated VGAM RNA, and which when bound by VGAM2016 RNA causes inhibition of translation of respective one or more VGAM2016 host target proteins.

[70881] It is further appreciated by one skilled in the art that the mode of translational inhibition illustrated by Fig. 1 with specific reference to translational inhibition exerted by VGAM2016 gene, herein designated VGAM GENE, on one or more VGAM2016 host target gene, herein designated VGAM HOST TARGET GENE, is in fact common to other known non-viral miRNA genes. As mentioned hereinabove with reference to the background section, although a specific complementary binding site has been demonstrated

only for some of the known miRNA genes (primarily Lin-4 and Let-7), all other recently discovered miRNA genes are also believed by those skilled in the art to modulate expression of other genes by complementary binding, although specific complementary binding sites of these other miRNA genes have not yet been found (Ruvkun G., `Perspective: Glimpses of a tiny RNA world`, Science 294,779 (2001)).

[70882] It is yet further appreciated that a function of VGAM2016 is inhibition of expression of host target genes, as part of a novel viral mechanism of attacking a host. Accordingly, utilities of VGAM2016 include diagnosis, prevention and treatment of viral infection by Kyuri Green Mottle Mosaic Virus. Specific functions, and accordingly utilities, of VGAM2016 correlate with, and may be deduced from, the identity of the host target genes which VGAM2016 binds and inhibits, and the function of these host target genes, as elaborated hereinbelow.

[70883] Nucleotide sequences of the VGAM2016 precursor RNA, herein designated VGAM PRECURSOR RNA, and of the `diced` VGAM2016 RNA, herein designated VGAM RNA, and a schematic representation of the secondary folding of VGAM2016 folded precursor RNA, herein designated

VGAM FOLDED PRECURSOR RNA, of VGAM2016 are further described hereinbelow with reference to Table 1.

[70884] Nucleotide sequences of host target binding sites, such as BINDING SITE-I, BINDING SITE-II and BINDING SITE-III of Fig. 1, found on VGAM2016 host target RNA, and schematic representation of the complementarity of each of these host target binding sites to VGAM2016 RNA, herein designated VGAM RNA, are described hereinbelow with reference to Table 2.

[70885] As mentioned hereinabove with reference to Fig. 1, a function of VGAM2016 gene, herein designated VGAM is inhibition of expression of VGAM2016 target genes. It is appreciated that specific functions, and accordingly utilities, of VGAM2016 correlate with, and may be deduced from, the identity of the target genes which VGAM2016 binds and inhibits, and the function of these target genes, as elaborated hereinbelow.

[70886] Fibroblast Growth Factor Receptor 1 (fms-related tyrosine kinase 2, Pfeiffer syndrome) (FGFR1, Accession NM_023107) is a VGAM2016 host target gene. FGFR1 BINDING SITE1 and FGFR1 BINDING SITE2 are HOST TARGET binding sites found in untranslated regions of mRNA encoded by FGFR1, corresponding to HOST TARGET bind-

ing sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of FGFR1 BINDING SITE1 and FGFR1 BINDING SITE2, designated SEQ ID:23360 and SEQ ID:23365 respectively, to the nucleotide sequence of VGAM2016 RNA, herein designated VGAM RNA, also designated SEQ ID:4727.

[70887] A function of VGAM2016 is therefore inhibition of Fibroblast Growth Factor Receptor 1 (fms-related tyrosine kinase 2, Pfeiffer syndrome) (FGFR1, Accession NM_023107). Accordingly, utilities of VGAM2016 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FGFR1. Protease, Serine, 8 (prostasin) (PRSS8, Accession NM_002773) is another VGAM2016 host target gene. PRSS8 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by PRSS8, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of PRSS8 BINDING SITE, designated SEQ ID:8663, to the nucleotide sequence of VGAM2016 RNA, herein designated VGAM RNA, also designated SEQ ID:4727.

[70888] Another function of VGAM2016 is therefore inhibition of Protease, Serine, 8 (prostasin) (PRSS8, Accession NM_002773), a gene which is a transmembrane serine protease. Accordingly, utilities of VGAM2016 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PRSS8. The function of PRSS8 has been established by previous studies. Human seminal fluid contains a variety of proteolytic enzymes, including prostate-specific antigen (OMIM Ref. No. 176820) and acrosin (OMIM Ref. No. 102480). These enzymes are involved in the postejaculatory hydrolysis of proteins and in semen coagulation and liquefaction. Yu et al. (1995) obtained partial amino acid sequence of a 40-kD protein isolated from seminal fluid originally by Yu et al. (1994). Yu et al. (1995) designed degenerate primers based on the amino acid sequence and used to screen a human prostate cDNA library by PCR. The 3-prime end of the cDNA was obtained by the RACE (rapid amplification of cDNA ends) method. A 1.8-kb cDNA sequence was assembled encoding a predicted protein of 343 amino acids which contains a 32-amino acid signal peptide. The protein, designated serine protease-8 (PRSS8), was called prostasin by the authors. The precursor, proprostasin, is

cleaved between residues 12 and 13 to produce a 12-amino acid light chain and a 299-amino acid heavy chain which are associated through a disulfide bond. The predicted amino acid sequence is between 34 and 42% identical to human acrosin, plasma kallikrein (OMIM Ref. No. 229000), and hepsin (OMIM Ref. No. 142440). The deduced protein has a hydrophobic domain at the C terminus, indicating to the authors that it may be membrane anchored. The authors showed that the hydrophobic region is cleaved between residues 290 and 291 during secretion. Expression levels of the prostasin mRNA were assayed by Southern blots of RT-PCR products. Expression was noted in a wide variety of tissues. In the prostate gland, expression was localized to the epithelial cells. Donaldson et al. (2002) found evidence for the regulation of the epithelial sodium channel (ENaC; OMIM Ref. No. 600228) by prostasin. They cloned prostasin in their search for a human homolog of a channel-activating protease (xCAP1) of Xenopus kidney epithelial cells. They determined that prostasin shares 41% sequence identity with the Xenopus protease and 76% identity with the mouse homolog. --FUNCTION Donaldson et al. (2002) found that coexpression of prostasin with either Xenopus or rat ENaC

in Xenopus oocytes resulted in a 60 to 80% increase in amiloride-sensitive sodium currents, and that the addition of aprotinin, a serine protease inhibitor, completely prevented this activation. By in situ hybridization, they determined that both prostasin and TMPRSS2 (OMIM Ref. No. 602060) show a tissue distribution in human airway epithelia consistent with a role in ENaC regulation. Both had strong expression in superficial epithelial cells lining the nose, trachea, and distal airways, and both were expressed at the alveolar level, most notably at alveolar junctions in a distribution characteristic of type II pneumocytes. Expression was also pronounced in submucosal glands associated with nasal, tracheal, and bronchial tissues. Donaldson et al. (2002) suggested that prostasin is likely to be the more physiologically relevant protease.

[70889] Full details of the abovementioned studies are described in the following publications, the disclosure of which are hereby incorporated by reference:

[70890] Donaldson, S. H.; Hirsh, A.; Li, D. C.; Holloway, G.; Chao, J.; Boucher, R. C.; Gabriel, S. E. : Regulation of the epithelial sodium channel by serine proteases in human airways. J. Biol. Chem. 277: 8338-8345, 2002. ; and

[70891] Yu, J. X.; Chao, L.; Ward, D. C.; Chao, J. : Structure and

chromosomal localization of the human prostasin (PRSS8) gene. Genomics 32: 334-340, 1996.

[70892] Further studies establishing the function and utilities of PRSS8 are found in John Hopkins OMIM database record ID 600823, and in sited publications numbered 755 and 7772-7774 listed in the bibliography section hereinbelow, which are also hereby incorporated by reference.DKFZP564K0322 (Accession NM_032040) is another VGAM2016 host target gene. DKFZP564K0322 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by DKFZP564K0322, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of DKFZP564K0322 BINDING SITE, designated SEQ ID:25740, to the nucleotide sequence of VGAM2016 RNA, herein designated VGAM RNA, also designated SEQ ID:4727.

[70893] Another function of VGAM2016 is therefore inhibition of DKFZP564K0322 (Accession NM_032040). Accordingly, utilities of VGAM2016 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZP564K0322. FLJ23511 (Accession NM_032239)

is another VGAM2016 host target gene. FLJ23511 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by FLJ23511, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of FLJ23511 BINDING SITE, designated SEQ ID:25966, to the nucleotide sequence of VGAM2016 RNA, herein designated VGAM RNA, also designated SEQ ID:4727.

[70894] Another function of VGAM2016 is therefore inhibition of FLJ23511 (Accession NM_032239). Accordingly, utilities of VGAM2016 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ23511. MGC12904 (Accession NM_031219) is another VGAM2016 host target gene. MGC12904 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by MGC12904, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of MGC12904 BINDING SITE, designated SEQ ID:25267, to the nucleotide sequence of VGAM2016 RNA, herein designated VGAM RNA, also designated SEQ ID:4727.

[70895] Another function of VGAM2016 is therefore inhibition of MGC12904 (Accession NM_031219). Accordingly, utilities of VGAM2016 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC12904. Solute Carrier Family 5 (choline transporter), Member 7 (SLC5A7, Accession NM_021815) is another VGAM2016 host target gene. SLC5A7 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by SLC5A7, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of SLC5A7 BINDING SITE, designated SEQ ID:22391, to the nucleotide sequence of VGAM2016 RNA, herein designated VGAM RNA, also designated SEQ ID:4727.

[70896] Another function of VGAM2016 is therefore inhibition of Solute Carrier Family 5 (choline transporter), Member 7 (SLC5A7, Accession NM_021815). Accordingly, utilities of VGAM2016 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SLC5A7. Spir-1 (Accession XM_035640) is another VGAM2016 host target gene. Spir-1 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region

of mRNA encoded by Spir-1, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of Spir-1 BINDING SITE, designated SEQ ID:32307, to the nucleotide sequence of VGAM2016 RNA, herein designated VGAM RNA, also designated SEQ ID:4727.

[70897] Another function of VGAM2016 is therefore inhibition of Spir-1 (Accession XM_035640). Accordingly, utilities of VGAM2016 include diagnosis, prevention and treatment of diseases and clinical conditions associated with Spir-1. LOC163682 (Accession XM_099402) is another VGAM2016 host target gene. LOC163682 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC163682, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC163682 BINDING SITE, designated SEQ ID:42092, to the nucleotide sequence of VGAM2016 RNA, herein designated VGAM RNA, also designated SEQ ID:4727.

[70898] Another function of VGAM2016 is therefore inhibition of LOC163682 (Accession XM_099402). Accordingly, utilities

of VGAM2016 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC163682. LOC93589 (Accession XM_052387) is another VGAM2016 host target gene. LOC93589 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC93589, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC93589 BINDING SITE, designated SEQ ID:35979, to the nucleotide sequence of VGAM2016 RNA, herein designated VGAM RNA, also designated SEQ ID:4727.

[70899] Another function of VGAM2016 is therefore inhibition of LOC93589 (Accession XM_052387). Accordingly, utilities of VGAM2016 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC93589. Fig. 1 further provides a conceptual description of a novel bioinformatically detected viral gene of the present invention, referred to here as Viral Genomic Address Messenger 2017 (VGAM2017) viral gene, which modulates expression of respective host target genes thereof, the function and utility of which host target genes is known in the art.

[70900] VGAM2017 is a novel bioinformatically detected regulatory, non protein coding, viral micro RNA (miRNA) gene. The method by which VGAM2017 was detected is described hereinabove with reference to Figs. 1-8.

[70901] VGAM2017 gene, herein designated VGAM GENE, is a viral gene contained in the genome of Zaire Ebola Virus (ZEBOV). VGAM2017 host target gene, herein designated VGAM HOST TARGET GENE, is a human gene contained in the human genome.

[70902] VGAM2017 gene encodes a VGAM2017 precursor RNA, herein designated VGAM PRECURSOR RNA. Similar to other miRNA genes, and unlike most ordinary genes, VGAM2017 precursor RNA does not encode a protein. A nucleotide sequence identical or highly similar to the nucleotide sequence of VGAM2017 precursor RNA is designated SEQ ID:2003, and is provided hereinbelow with reference to the sequence listing part. Nucleotide sequence SEQ ID:2003 is located at position 15595 relative to the genome of Zaire Ebola Virus (ZEBOV).

[70903] VGAM2017 precursor RNA folds onto itself, forming VGAM2017 folded precursor RNA, herein designated VGAM FOLDED PRECURSOR RNA, which has a two-dimensional `hairpin structure`. As is well known in the

art, this `hairpin structure`, is typical of RNA encoded by miRNA genes, and is due to the fact that the nucleotide sequence of the first half of the RNA encoded by a miRNA gene is an accurate or partial inversed-reversed sequence of the nucleotide sequence of the second half thereof.

[70904] An enzyme complex designated DICER COMPLEX, `dices` the VGAM2017 folded precursor RNA into VGAM2017 RNA, herein designated VGAM RNA, a single stranded ~22 nt long RNA segment. As is known in the art, `dicing` of a hairpin structured RNA precursor product into a short ~22nt RNA segment is catalyzed by an enzyme complex comprising an enzyme called Dicer together with other necessary proteins. A probable (over 61%) nucleotide sequence of VGAM2017 RNA is designated SEQ ID:4728, and is provided hereinbelow with reference to the sequence listing part.

[70905] VGAM2017 host target gene, herein designated VGAM HOST TARGET GENE, encodes a corresponding messenger RNA, VGAM2017 host target RNA, herein designated VGAM HOST TARGET RNA. VGAM2017 host target RNA comprises three regions, as is typical of mRNA of a protein coding gene: a 5` untranslated region, a protein coding region and a 3` untranslated region, designated

5`UTR, PROTEIN CODING and 3`UTR respectively.

[70906] VGAM2017 RNA, herein designated VGAM RNA, binds complementarily to one or more host target binding sites located in untranslated regions of VGAM2017 host target RNA, herein designated VGAM HOST TARGET RNA. This complementary binding is due to the fact that the nucleotide sequence of VGAM2017 RNA is an accurate or a partial inversed-reversed sequence of the nucleotide sequence of each of the host target binding sites. As an illustration, Fig. 1 shows three such host target binding sites, designated BINDING SITE I, BINDING SITE II and BINDING SITE III respectively. It is appreciated that the number of host target binding sites shown in Fig. 1 is meant as an illustration only, and is not meant to be limiting - VGAM2017 RNA, herein designated VGAM RNA, may have a different number of host target binding sites in untranslated regions of a VGAM2017 host target RNA, herein designated VGAM HOST TARGET RNA. It is further appreciated that while Fig. 1 depicts host target binding sites in the 3`UTR region, this is meant as an example only - these host target binding sites may be located in the 3`UTR region, the 5`UTR region, or in both 3`UTR and 5`UTR regions.

[70907] The complementary binding of VGAM2017 RNA, herein designated VGAM RNA, to host target binding sites on VGAM2017 host target RNA, herein designated VGAM HOST TARGET RNA, such as BINDING SITE I, BINDING SITE II and BINDING SITE III, inhibits translation of VGAM2017 host target RNA into VGAM2017 host target protein, herein designated VGAM HOST TARGET PROTEIN. VGAM host target protein is therefore outlined by a broken line.

[70908] It is appreciated that VGAM2017 host target gene, herein designated VGAM HOST TARGET GENE, in fact represents a plurality of VGAM2017 host target genes. The mRNA of each one of this plurality of VGAM2017 host target genes comprises one or more host target binding sites, each having a nucleotide sequence which is at least partly complementary to VGAM2017 RNA, herein designated VGAM RNA, and which when bound by VGAM2017 RNA causes inhibition of translation of respective one or more VGAM2017 host target proteins.

[70909] It is further appreciated by one skilled in the art that the mode of translational inhibition illustrated by Fig. 1 with specific reference to translational inhibition exerted by VGAM2017 gene, herein designated VGAM GENE, on one or more VGAM2017 host target gene, herein designated

VGAM HOST TARGET GENE, is in fact common to other known non-viral miRNA genes. As mentioned hereinabove with reference to the background section, although a specific complementary binding site has been demonstrated only for some of the known miRNA genes (primarily Lin-4 and Let-7), all other recently discovered miRNA genes are also believed by those skilled in the art to modulate expression of other genes by complementary binding, although specific complementary binding sites of these other miRNA genes have not yet been found (Ruvkun G., `Perspective: Glimpses of a tiny RNA world`, Science 294,779 (2001)).

[70910] It is yet further appreciated that a function of VGAM2017 is inhibition of expression of host target genes, as part of a novel viral mechanism of attacking a host. Accordingly, utilities of VGAM2017 include diagnosis, prevention and treatment of viral infection by Zaire Ebola Virus (ZEBOV). Specific functions, and accordingly utilities, of VGAM2017 correlate with, and may be deduced from, the identity of the host target genes which VGAM2017 binds and inhibits, and the function of these host target genes, as elaborated hereinbelow.

[70911] Nucleotide sequences of the VGAM2017 precursor RNA,

herein designated VGAM PRECURSOR RNA, and of the `diced` VGAM2017 RNA, herein designated VGAM RNA, and a schematic representation of the secondary folding of VGAM2017 folded precursor RNA, herein designated VGAM FOLDED PRECURSOR RNA, of VGAM2017 are further described hereinbelow with reference to Table 1.

[70912] Nucleotide sequences of host target binding sites, such as BINDING SITE-I, BINDING SITE-II and BINDING SITE-III of Fig. 1, found on VGAM2017 host target RNA, and schematic representation of the complementarity of each of these host target binding sites to VGAM2017 RNA, herein designated VGAM RNA, are described hereinbelow with reference to Table 2.

[70913] As mentioned hereinabove with reference to Fig. 1, a function of VGAM2017 gene, herein designated VGAM is inhibition of expression of VGAM2017 target genes. It is appreciated that specific functions, and accordingly utilities, of VGAM2017 correlate with, and may be deduced from, the identity of the target genes which VGAM2017 binds and inhibits, and the function of these target genes, as elaborated hereinbelow.

[70914] Fibroblast Growth Factor 2 (basic) (FGF2, Accession NM_002006) is a VGAM2017 host target gene. FGF2

BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by FGF2, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of FGF2 BINDING SITE, designated SEQ ID:7734, to the nucleotide sequence of VGAM2017 RNA, herein designated VGAM RNA, also designated SEQ ID:4728.

[70915] A function of VGAM2017 is therefore inhibition of Fibroblast Growth Factor 2 (basic) (FGF2, Accession NM_002006), a gene which probably involved in nervous system development and function. Accordingly, utilities of VGAM2017 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FGF2. The function of FGF2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM51.Protein Phosphatase 1, Regulatory (inhibitor) Subunit 3A (glycogen and sarcoplasmic reticulum binding subunit, skeletal muscle) (PPP1R3A, Accession NM_002711) is another VGAM2017 host target gene. PPP1R3A BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by

PPP1R3A, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of PPP1R3A BINDING SITE, designated SEQ ID:8565, to the nucleotide sequence of VGAM2017 RNA, herein designated VGAM RNA, also designated SEQ ID:4728.

[70916] Another function of VGAM2017 is therefore inhibition of Protein Phosphatase 1, Regulatory (inhibitor) Subunit 3A (glycogen and sarcoplasmic reticulum binding subunit, skeletal muscle) (PPP1R3A, Accession NM_002711), a gene which regulates phosphatase activity towards glycogen synthase, active in skeletal muscle. Accordingly, utilities of VGAM2017 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PPP1R3A. The function of PPP1R3A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM1872.Ubiquitin-like 3 (UBL3, Accession NM_007106) is another VGAM2017 host target gene. UBL3 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by UBL3, corresponding to a HOST TARGET binding site such

as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of UBL3 BINDING SITE, designated SEQ ID:13964, to the nucleotide sequence of VGAM2017 RNA, herein designated VGAM RNA, also designated SEQ ID:4728.

[70917] Another function of VGAM2017 is therefore inhibition of Ubiquitin-like 3 (UBL3, Accession NM_007106), a gene which appears to have a diverse range of cellular functions. Accordingly, utilities of VGAM2017 include diagnosis, prevention and treatment of diseases and clinical conditions associated with UBL3. The function of UBL3 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM459.Nup43 (Accession NM_024647) is another VGAM2017 host target gene. Nup43 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by Nup43, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of Nup43 BINDING SITE, designated SEQ ID:23933, to the nucleotide sequence of VGAM2017 RNA, herein designated VGAM RNA, also designated SEQ

ID:4728.

[70918] Another function of VGAM2017 is therefore inhibition of Nup43 (Accession NM_024647). Accordingly, utilities of VGAM2017 include diagnosis, prevention and treatment of diseases and clinical conditions associated with Nup43. Protein Phosphatase 1, Regulatory (inhibitor) Subunit 13B (PPP1R13B, Accession NM_015316) is another VGAM2017 host target gene. PPP1R13B BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by PPP1R13B, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of PPP1R13B BINDING SITE, designated SEQ ID:17632, to the nucleotide sequence of VGAM2017 RNA, herein designated VGAM RNA, also designated SEQ ID:4728.

[70919] Another function of VGAM2017 is therefore inhibition of Protein Phosphatase 1, Regulatory (inhibitor) Subunit 13B (PPP1R13B, Accession NM_015316). Accordingly, utilities of VGAM2017 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PPP1R13B. LOC148932 (Accession XM_086372) is another VGAM2017 host target gene. LOC148932 BINDING SITE is

HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC148932, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC148932 BINDING SITE, designated SEQ ID:38623, to the nucleotide sequence of VGAM2017 RNA, herein designated VGAM RNA, also designated SEQ ID:4728.

[70920] Another function of VGAM2017 is therefore inhibition of LOC148932 (Accession XM_086372). Accordingly, utilities of VGAM2017 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC148932. LOC158376 (Accession XM_098934) is another VGAM2017 host target gene. LOC158376 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by LOC158376, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC158376 BINDING SITE, designated SEQ ID:41972, to the nucleotide sequence of VGAM2017 RNA, herein designated VGAM RNA, also designated SEQ ID:4728.

[70921] Another function of VGAM2017 is therefore inhibition of

LOC158376 (Accession XM_098934). Accordingly, utilities of VGAM2017 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC158376. LOC221042 (Accession XM_167669) is another VGAM2017 host target gene. LOC221042 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by LOC221042, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC221042 BINDING SITE, designated SEQ ID:44751, to the nucleotide sequence of VGAM2017 RNA, herein designated VGAM RNA, also designated SEQ ID:4728.

[70922] Another function of VGAM2017 is therefore inhibition of LOC221042 (Accession XM_167669). Accordingly, utilities of VGAM2017 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC221042. Fig. 1 further provides a conceptual description of a novel bioinformatically detected viral gene of the present invention, referred to here as Viral Genomic Address Messenger 2018 (VGAM2018) viral gene, which modulates expression of respective host target genes thereof, the function and utility of which host target genes

is known in the art.

[70923] VGAM2018 is a novel bioinformatically detected regulatory, non protein coding, viral micro RNA (miRNA) gene. The method by which VGAM2018 was detected is described hereinabove with reference to Figs. 1-8.

[70924] VGAM2018 gene, herein designated VGAM GENE, is a viral gene contained in the genome of Zaire Ebola Virus (ZEBOV). VGAM2018 host target gene, herein designated VGAM HOST TARGET GENE, is a human gene contained in the human genome.

[70925] VGAM2018 gene encodes a VGAM2018 precursor RNA, herein designated VGAM PRECURSOR RNA. Similar to other miRNA genes, and unlike most ordinary genes, VGAM2018 precursor RNA does not encode a protein. A nucleotide sequence identical or highly similar to the nucleotide sequence of VGAM2018 precursor RNA is designated SEQ ID:2004, and is provided hereinbelow with reference to the sequence listing part. Nucleotide sequence SEQ ID:2004 is located at position 13583 relative to the genome of Zaire Ebola Virus (ZEBOV).

[70926] VGAM2018 precursor RNA folds onto itself, forming VGAM2018 folded precursor RNA, herein designated VGAM FOLDED PRECURSOR RNA, which has a two-

dimensional `hairpin structure`. As is well known in the art, this `hairpin structure`, is typical of RNA encoded by miRNA genes, and is due to the fact that the nucleotide sequence of the first half of the RNA encoded by a miRNA gene is an accurate or partial inversed-reversed sequence of the nucleotide sequence of the second half thereof.

[70927] An enzyme complex designated DICER COMPLEX, `dices` the VGAM2018 folded precursor RNA into VGAM2018 RNA, herein designated VGAM RNA, a single stranded ~22 nt long RNA segment. As is known in the art, `dicing` of a hairpin structured RNA precursor product into a short ~22nt RNA segment is catalyzed by an enzyme complex comprising an enzyme called Dicer together with other necessary proteins. A probable (over 75%) nucleotide sequence of VGAM2018 RNA is designated SEQ ID:4729, and is provided hereinbelow with reference to the sequence listing part.

[70928] VGAM2018 host target gene, herein designated VGAM HOST TARGET GENE, encodes a corresponding messenger RNA, VGAM2018 host target RNA, herein designated VGAM HOST TARGET RNA. VGAM2018 host target RNA comprises three regions, as is typical of mRNA of a protein coding gene: a 5` untranslated region, a protein cod-

ing region and a 3` untranslated region, designated 5`UTR, PROTEIN CODING and 3`UTR respectively.

[70929] VGAM2018 RNA, herein designated VGAM RNA, binds complementarily to one or more host target binding sites located in untranslated regions of VGAM2018 host target RNA, herein designated VGAM HOST TARGET RNA. This complementary binding is due to the fact that the nucleotide sequence of VGAM2018 RNA is an accurate or a partial inversed-reversed sequence of the nucleotide sequence of each of the host target binding sites. As an illustration, Fig. 1 shows three such host target binding sites, designated BINDING SITE I, BINDING SITE II and BINDING SITE III respectively. It is appreciated that the number of host target binding sites shown in Fig. 1 is meant as an illustration only, and is not meant to be limiting - VGAM2018 RNA, herein designated VGAM RNA, may have a different number of host target binding sites in untranslated regions of a VGAM2018 host target RNA, herein designated VGAM HOST TARGET RNA. It is further appreciated that while Fig. 1 depicts host target binding sites in the 3`UTR region, this is meant as an example only - these host target binding sites may be located in the 3`UTR region, the 5`UTR region, or in both 3`UTR

and 5`UTR regions.

[70930] The complementary binding of VGAM2018 RNA, herein designated VGAM RNA, to host target binding sites on VGAM2018 host target RNA, herein designated VGAM HOST TARGET RNA, such as BINDING SITE I, BINDING SITE II and BINDING SITE III, inhibits translation of VGAM2018 host target RNA into VGAM2018 host target protein, herein designated VGAM HOST TARGET PROTEIN. VGAM host target protein is therefore outlined by a broken line.

[70931] It is appreciated that VGAM2018 host target gene, herein designated VGAM HOST TARGET GENE, in fact represents a plurality of VGAM2018 host target genes. The mRNA of each one of this plurality of VGAM2018 host target genes comprises one or more host target binding sites, each having a nucleotide sequence which is at least partly complementary to VGAM2018 RNA, herein designated VGAM RNA, and which when bound by VGAM2018 RNA causes inhibition of translation of respective one or more VGAM2018 host target proteins.

[70932] It is further appreciated by one skilled in the art that the mode of translational inhibition illustrated by Fig. 1 with specific reference to translational inhibition exerted by VGAM2018 gene, herein designated VGAM GENE, on one

or more VGAM2018 host target gene, herein designated VGAM HOST TARGET GENE, is in fact common to other known non-viral miRNA genes. As mentioned hereinabove with reference to the background section, although a specific complementary binding site has been demonstrated only for some of the known miRNA genes (primarily Lin-4 and Let-7), all other recently discovered miRNA genes are also believed by those skilled in the art to modulate expression of other genes by complementary binding, although specific complementary binding sites of these other miRNA genes have not yet been found (Ruvkun G., `Perspective: Glimpses of a tiny RNA world`, Science 294,779 (2001)).

[70933] It is yet further appreciated that a function of VGAM2018 is inhibition of expression of host target genes, as part of a novel viral mechanism of attacking a host. Accordingly, utilities of VGAM2018 include diagnosis, prevention and treatment of viral infection by Zaire Ebola Virus (ZEBOV). Specific functions, and accordingly utilities, of VGAM2018 correlate with, and may be deduced from, the identity of the host target genes which VGAM2018 binds and inhibits, and the function of these host target genes, as elaborated hereinbelow.

[70934] Nucleotide sequences of the VGAM2018 precursor RNA, herein designated VGAM PRECURSOR RNA, and of the `diced` VGAM2018 RNA, herein designated VGAM RNA, and a schematic representation of the secondary folding of VGAM2018 folded precursor RNA, herein designated VGAM FOLDED PRECURSOR RNA, of VGAM2018 are further described hereinbelow with reference to Table 1.

[70935] Nucleotide sequences of host target binding sites, such as BINDING SITE-I, BINDING SITE-II and BINDING SITE-III of Fig. 1, found on VGAM2018 host target RNA, and schematic representation of the complementarity of each of these host target binding sites to VGAM2018 RNA, herein designated VGAM RNA, are described hereinbelow with reference to Table 2.

[70936] As mentioned hereinabove with reference to Fig. 1, a function of VGAM2018 gene, herein designated VGAM is inhibition of expression of VGAM2018 target genes. It is appreciated that specific functions, and accordingly utilities, of VGAM2018 correlate with, and may be deduced from, the identity of the target genes which VGAM2018 binds and inhibits, and the function of these target genes, as elaborated hereinbelow.

[70937] Early Growth Response 3 (EGR3, Accession XM_005040) is

a VGAM2018 host target gene. EGR3 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by EGR3, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of EGR3 BINDING SITE, designated SEQ ID:29957, to the nucleotide sequence of VGAM2018 RNA, herein designated VGAM RNA, also designated SEQ ID:4729.

[70938] A function of VGAM2018 is therefore inhibition of Early Growth Response 3 (EGR3, Accession XM_005040), a gene which is a putative transcription factor. Accordingly, utilities of VGAM2018 include diagnosis, prevention and treatment of diseases and clinical conditions associated with EGR3. The function of EGR3 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM189.Inositol Hexaphosphate Kinase 3 (IHPK3, Accession NM_054111) is another VGAM2018 host target gene. IHPK3 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by IHPK3, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or

BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of IHPK3 BINDING SITE, designated SEQ ID:27657, to the nucleotide sequence of VGAM2018 RNA, herein designated VGAM RNA, also designated SEQ ID:4729.

[70939] Another function of VGAM2018 is therefore inhibition of Inositol Hexaphosphate Kinase 3 (IHPK3, Accession NM_054111). Accordingly, utilities of VGAM2018 include diagnosis, prevention and treatment of diseases and clinical conditions associated with IHPK3. Meis1, Myeloid Ecotropic Viral Integration Site 1 Homolog 2 (mouse) (MEIS2, Accession NM_020149) is another VGAM2018 host target gene. MEIS2 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by MEIS2, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of MEIS2 BINDING SITE, designated SEQ ID:21347, to the nucleotide sequence of VGAM2018 RNA, herein designated VGAM RNA, also designated SEQ ID:4729.

[70940] Another function of VGAM2018 is therefore inhibition of Meis1, Myeloid Ecotropic Viral Integration Site 1 Homolog

2 (mouse) (MEIS2, Accession NM_020149), a gene which may regulate gene expression and control cell differentiation. Accordingly, utilities of VGAM2018 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MEIS2. The function of MEIS2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM1244.Proprotein Convertase Subtilisin/kexin Type 2 (PCSK2, Accession NM_002594) is another VGAM2018 host target gene. PCSK2 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by PCSK2, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of PCSK2 BINDING SITE, designated SEQ ID:8456, to the nucleotide sequence of VGAM2018 RNA, herein designated VGAM RNA, also designated SEQ ID:4729.

[70941] Another function of VGAM2018 is therefore inhibition of Proprotein Convertase Subtilisin/kexin Type 2 (PCSK2, Accession NM_002594), a gene which is involved in the processing of hormone and other protein precursors at sites

comprised of pairs of basic amino acid residues. Accordingly, utilities of VGAM2018 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PCSK2. The function of PCSK2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM1120.TAP Binding Protein (tapasin) (TAPBP, Accession NM_003190) is another VGAM2018 host target gene. TAPBP BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by TAPBP, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of TAPBP BINDING SITE, designated SEQ ID:9178, to the nucleotide sequence of VGAM2018 RNA, herein designated VGAM RNA, also designated SEQ ID:4729.

[70942] Another function of VGAM2018 is therefore inhibition of TAP Binding Protein (tapasin) (TAPBP, Accession NM_003190), a gene which is involved in MHC class I-restricted antigen processing. Accordingly, utilities of VGAM2018 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TAPBP.

The function of TAPBP and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM122.KIAA0934 (Accession XM_034536) is another VGAM2018 host target gene. KIAA0934 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by KIAA0934, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of KIAA0934 BINDING SITE, designated SEQ ID:32119, to the nucleotide sequence of VGAM2018 RNA, herein designated VGAM RNA, also designated SEQ ID:4729.

[70943] Another function of VGAM2018 is therefore inhibition of KIAA0934 (Accession XM_034536). Accordingly, utilities of VGAM2018 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0934. KIAA1184 (Accession NM_022572) is another VGAM2018 host target gene. KIAA1184 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by KIAA1184, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the

complementarity of the nucleotide sequences of KIAA1184 BINDING SITE, designated SEQ ID:22895, to the nucleotide sequence of VGAM2018 RNA, herein designated VGAM RNA, also designated SEQ ID:4729.

[70944] Another function of VGAM2018 is therefore inhibition of KIAA1184 (Accession NM_022572). Accordingly, utilities of VGAM2018 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1184. Protein Phosphatase 1, Regulatory (inhibitor) Subunit 16B (PPP1R16B, Accession XM_028840) is another VGAM2018 host target gene. PPP1R16B BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by PPP1R16B, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of PPP1R16B BINDING SITE, designated SEQ ID:30777, to the nucleotide sequence of VGAM2018 RNA, herein designated VGAM RNA, also designated SEQ ID:4729.

[70945] Another function of VGAM2018 is therefore inhibition of Protein Phosphatase 1, Regulatory (inhibitor) Subunit 16B (PPP1R16B, Accession XM_028840). Accordingly, utilities of VGAM2018 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with PPP1R16B. Ribosomal Protein S6 Kinase, 52kDa, Polypeptide 1 (RPS6KC1, Accession NM_012424) is another VGAM2018 host target gene. RPS6KC1 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by RPS6KC1, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of RPS6KC1 BINDING SITE, designated SEQ ID:14799, to the nucleotide sequence of VGAM2018 RNA, herein designated VGAM RNA, also designated SEQ ID:4729.

[70946] Another function of VGAM2018 is therefore inhibition of Ribosomal Protein S6 Kinase, 52kDa, Polypeptide 1 (RPS6KC1, Accession NM_012424). Accordingly, utilities of VGAM2018 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RPS6KC1. LOC157421 (Accession XM_098756) is another VGAM2018 host target gene. LOC157421 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by LOC157421, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the

complementarity of the nucleotide sequences of LOC157421 BINDING SITE, designated SEQ ID:41794, to the nucleotide sequence of VGAM2018 RNA, herein designated VGAM RNA, also designated SEQ ID:4729.

[70947] Another function of VGAM2018 is therefore inhibition of LOC157421 (Accession XM_098756). Accordingly, utilities of VGAM2018 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC157421. LOC158267 (Accession XM_088528) is another VGAM2018 host target gene. LOC158267 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC158267, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC158267 BINDING SITE, designated SEQ ID:39795, to the nucleotide sequence of VGAM2018 RNA, herein designated VGAM RNA, also designated SEQ ID:4729.

[70948] Another function of VGAM2018 is therefore inhibition of LOC158267 (Accession XM_088528). Accordingly, utilities of VGAM2018 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC158267. Fig. 1 further provides a conceptual descrip-

tion of a novel bioinformatically detected viral gene of the present invention, referred to here as Viral Genomic Address Messenger 2019 (VGAM2019) viral gene, which modulates expression of respective host target genes thereof, the function and utility of which host target genes is known in the art.

[70949] VGAM2019 is a novel bioinformatically detected regulatory, non protein coding, viral micro RNA (miRNA) gene. The method by which VGAM2019 was detected is described hereinabove with reference to Figs. 1-8.

[70950] VGAM2019 gene, herein designated VGAM GENE, is a viral gene contained in the genome of Kyuri Green Mottle Mosaic Virus. VGAM2019 host target gene, herein designated VGAM HOST TARGET GENE, is a human gene contained in the human genome.

[70951] VGAM2019 gene encodes a VGAM2019 precursor RNA, herein designated VGAM PRECURSOR RNA. Similar to other miRNA genes, and unlike most ordinary genes, VGAM2019 precursor RNA does not encode a protein. A nucleotide sequence identical or highly similar to the nucleotide sequence of VGAM2019 precursor RNA is designated SEQ ID:2005, and is provided hereinbelow with reference to the sequence listing part. Nucleotide sequence

SEQ ID:2005 is located at position 3691 relative to the genome of Kyuri Green Mottle Mosaic Virus.

[70952] VGAM2019 precursor RNA folds onto itself, forming VGAM2019 folded precursor RNA, herein designated VGAM FOLDED PRECURSOR RNA, which has a two-dimensional `hairpin structure`. As is well known in the art, this `hairpin structure`, is typical of RNA encoded by miRNA genes, and is due to the fact that the nucleotide sequence of the first half of the RNA encoded by a miRNA gene is an accurate or partial inversed-reversed sequence of the nucleotide sequence of the second half thereof.

[70953] An enzyme complex designated DICER COMPLEX, `dices` the VGAM2019 folded precursor RNA into VGAM2019 RNA, herein designated VGAM RNA, a single stranded ~22 nt long RNA segment. As is known in the art, `dicing` of a hairpin structured RNA precursor product into a short ~22nt RNA segment is catalyzed by an enzyme complex comprising an enzyme called Dicer together with other necessary proteins. A probable (over 66%) nucleotide sequence of VGAM2019 RNA is designated SEQ ID:4730, and is provided hereinbelow with reference to the sequence listing part.

[70954] VGAM2019 host target gene, herein designated VGAM

HOST TARGET GENE, encodes a corresponding messenger RNA, VGAM2019 host target RNA, herein designated VGAM HOST TARGET RNA. VGAM2019 host target RNA comprises three regions, as is typical of mRNA of a protein coding gene: a 5` untranslated region, a protein coding region and a 3` untranslated region, designated 5`UTR, PROTEIN CODING and 3`UTR respectively.

[70955] VGAM2019 RNA, herein designated VGAM RNA, binds complementarily to one or more host target binding sites located in untranslated regions of VGAM2019 host target RNA, herein designated VGAM HOST TARGET RNA. This complementary binding is due to the fact that the nucleotide sequence of VGAM2019 RNA is an accurate or a partial inversed-reversed sequence of the nucleotide sequence of each of the host target binding sites. As an illustration, Fig. 1 shows three such host target binding sites, designated BINDING SITE I, BINDING SITE II and BINDING SITE III respectively. It is appreciated that the number of host target binding sites shown in Fig. 1 is meant as an illustration only, and is not meant to be limiting - VGAM2019 RNA, herein designated VGAM RNA, may have a different number of host target binding sites in untranslated regions of a VGAM2019 host target RNA,

herein designated VGAM HOST TARGET RNA. It is further appreciated that while Fig. 1 depicts host target binding sites in the 3`UTR region, this is meant as an example only - these host target binding sites may be located in the 3`UTR region, the 5`UTR region, or in both 3`UTR and 5`UTR regions.

[70956] The complementary binding of VGAM2019 RNA, herein designated VGAM RNA, to host target binding sites on VGAM2019 host target RNA, herein designated VGAM HOST TARGET RNA, such as BINDING SITE I, BINDING SITE II and BINDING SITE III, inhibits translation of VGAM2019 host target RNA into VGAM2019 host target protein, herein designated VGAM HOST TARGET PROTEIN. VGAM host target protein is therefore outlined by a broken line.

[70957] It is appreciated that VGAM2019 host target gene, herein designated VGAM HOST TARGET GENE, in fact represents a plurality of VGAM2019 host target genes. The mRNA of each one of this plurality of VGAM2019 host target genes comprises one or more host target binding sites, each having a nucleotide sequence which is at least partly complementary to VGAM2019 RNA, herein designated VGAM RNA, and which when bound by VGAM2019 RNA causes inhibition of translation of respective one or more

VGAM2019 host target proteins.

[70958] It is further appreciated by one skilled in the art that the mode of translational inhibition illustrated by Fig. 1 with specific reference to translational inhibition exerted by VGAM2019 gene, herein designated VGAM GENE, on one or more VGAM2019 host target gene, herein designated VGAM HOST TARGET GENE, is in fact common to other known non-viral miRNA genes. As mentioned hereinabove with reference to the background section, although a specific complementary binding site has been demonstrated only for some of the known miRNA genes (primarily Lin-4 and Let-7), all other recently discovered miRNA genes are also believed by those skilled in the art to modulate expression of other genes by complementary binding, although specific complementary binding sites of these other miRNA genes have not yet been found (Ruvkun G., `Perspective: Glimpses of a tiny RNA world`, Science 294,779 (2001)).

[70959] It is yet further appreciated that a function of VGAM2019 is inhibition of expression of host target genes, as part of a novel viral mechanism of attacking a host. Accordingly, utilities of VGAM2019 include diagnosis, prevention and treatment of viral infection by Kyuri Green Mottle Mosaic

Virus. Specific functions, and accordingly utilities, of VGAM2019 correlate with, and may be deduced from, the identity of the host target genes which VGAM2019 binds and inhibits, and the function of these host target genes, as elaborated hereinbelow.

[70960] Nucleotide sequences of the VGAM2019 precursor RNA, herein designated VGAM PRECURSOR RNA, and of the `diced` VGAM2019 RNA, herein designated VGAM RNA, and a schematic representation of the secondary folding of VGAM2019 folded precursor RNA, herein designated VGAM FOLDED PRECURSOR RNA, of VGAM2019 are further described hereinbelow with reference to Table 1.

[70961] Nucleotide sequences of host target binding sites, such as BINDING SITE-I, BINDING SITE-II and BINDING SITE-III of Fig. 1, found on VGAM2019 host target RNA, and schematic representation of the complementarity of each of these host target binding sites to VGAM2019 RNA, herein designated VGAM RNA, are described hereinbelow with reference to Table 2.

[70962] As mentioned hereinabove with reference to Fig. 1, a function of VGAM2019 gene, herein designated VGAM is inhibition of expression of VGAM2019 target genes. It is appreciated that specific functions, and accordingly utili-

ties, of VGAM2019 correlate with, and may be deduced from, the identity of the target genes which VGAM2019 binds and inhibits, and the function of these target genes, as elaborated hereinbelow.

[70963] Selenoprotein X, 1 (SEPX1, Accession NM_016332) is a VGAM2019 host target gene. SEPX1 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by SEPX1, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of SEPX1 BINDING SITE, designated SEQ ID:18457, to the nucleotide sequence of VGAM2019 RNA, herein designated VGAM RNA, also designated SEQ ID:4730.

[70964] A function of VGAM2019 is therefore inhibition of Selenoprotein X, 1 (SEPX1, Accession NM_016332). Accordingly, utilities of VGAM2019 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SEPX1. Solute Carrier Family 1 (glial high affinity glutamate transporter), Member 3 (SLC1A3, Accession NM_004172) is another VGAM2019 host target gene. SLC1A3 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by

SLC1A3, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of SLC1A3 BINDING SITE, designated SEQ ID:10383, to the nucleotide sequence of VGAM2019 RNA, herein designated VGAM RNA, also designated SEQ ID:4730.

[70965] Another function of VGAM2019 is therefore inhibition of Solute Carrier Family 1 (glial high affinity glutamate transporter), Member 3 (SLC1A3, Accession NM_004172), a gene which is a transporter molecule that regulates neurotransmitter concentrations at excitatory synapses of the mammalian cns. Accordingly, utilities of VGAM2019 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SLC1A3. The function of SLC1A3 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM294.TAR (HIV) RNA Binding Protein 2 (TARBP2, Accession NM_134324) is another VGAM2019 host target gene. TARBP2 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by TARBP2, corresponding to a HOST TARGET binding site

such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of TARBP2 BINDING SITE, designated SEQ ID:28628, to the nucleotide sequence of VGAM2019 RNA, herein designated VGAM RNA, also designated SEQ ID:4730.

[70966] Another function of VGAM2019 is therefore inhibition of TAR (HIV) RNA Binding Protein 2 (TARBP2, Accession NM_134324), a gene which is involved in the regulation of HIV replication. Accordingly, utilities of VGAM2019 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TARBP2. The function of TARBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to VGAM95.CEP3 (Accession NM_006449) is another VGAM2019 host target gene. CEP3 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by CEP3, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of CEP3 BINDING SITE, designated SEQ ID:13155, to the nucleotide sequence of

VGAM2019 RNA, herein designated VGAM RNA, also designated SEQ ID:4730.

[70967] Another function of VGAM2019 is therefore inhibition of CEP3 (Accession NM_006449). Accordingly, utilities of VGAM2019 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CEP3. FLJ20300 (Accession NM_017753) is another VGAM2019 host target gene. FLJ20300 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by FLJ20300, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of FLJ20300 BINDING SITE, designated SEQ ID:19365, to the nucleotide sequence of VGAM2019 RNA, herein designated VGAM RNA, also designated SEQ ID:4730.

[70968] Another function of VGAM2019 is therefore inhibition of FLJ20300 (Accession NM_017753). Accordingly, utilities of VGAM2019 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ20300. KIAA0433 (Accession NM_015216) is another VGAM2019 host target gene. KIAA0433 BINDING SITE is HOST TARGET binding site found in the 5` untranslated

region of mRNA encoded by KIAA0433, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of KIAA0433 BINDING SITE, designated SEQ ID:17546, to the nucleotide sequence of VGAM2019 RNA, herein designated VGAM RNA, also designated SEQ ID:4730.

[70969] Another function of VGAM2019 is therefore inhibition of KIAA0433 (Accession NM_015216). Accordingly, utilities of VGAM2019 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0433. Syntrophin, Gamma 1 (SNTG1, Accession NM_018967) is another VGAM2019 host target gene. SNTG1 BINDING SITE is HOST TARGET binding site found in the 5` untranslated region of mRNA encoded by SNTG1, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of SNTG1 BINDING SITE, designated SEQ ID:21038, to the nucleotide sequence of VGAM2019 RNA, herein designated VGAM RNA, also designated SEQ ID:4730.

[70970] Another function of VGAM2019 is therefore inhibition of

Syntrophin, Gamma 1 (SNTG1, Accession NM_018967). Accordingly, utilities of VGAM2019 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SNTG1. LOC150225 (Accession XM_097870) is another VGAM2019 host target gene. LOC150225 BINDING SITE is HOST TARGET binding site found in the 3` untranslated region of mRNA encoded by LOC150225, corresponding to a HOST TARGET binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III. Table 2 illustrates the complementarity of the nucleotide sequences of LOC150225 BINDING SITE, designated SEQ ID:41187, to the nucleotide sequence of VGAM2019 RNA, herein designated VGAM RNA, also designated SEQ ID:4730.
